Power is available at both ends of the run for charging the batteries, that at Bathurst being purchased from the Bathurst Lumber Co., which has a water power plant, and that at Campbellton being generated by a steam plant owned by the railway. That the batteries in the car are capable of showing an output in excess of the rating, which is 450 amp. hours, is evident by the fact that on one trip, where delay was experienced, 530 amp. hours were used, the car operating throughout on the one charging.

A question has been raised as to the car's ability to operate satisfactorily in winter, on account of snow. While the battery containers are hung quite low, the pilot is a little closer to the rail, and in winter it will be covered with iron sheathing, so as to resemble a plough. The battery containers clear the rail 10 1/2 in. The car's ability to operate in snow conditions under which steam trains can operate without trouble is not questioned; in fact the Cambria and Indiana Rd., a Pennsylvania coal road, uses a similar car, equipped with a pilot plough, to keep its tracks clear of snow.

It is probable that in view of the favorable results to date, the C.N.R. will get more cars of this type for branch line passenger service and have them built in Canada. It is also likely that the C.N.R. will get a gasoline-propelled passenger car, with seating capacity for 30 persons, and to be equipped with a 4-wheel leading truck, which will be tried thoroughly in the same manner as the storage battery car.

Railway Lands Patented—Letters patent were issued, during July, to the Canadian North Pacific Ry. for 7.36 acres of railway lands.

The Railway Wages Question in Canada and the United States.

The article on wages and working conditions in Canadian Railway and Marine World for August spoke of the differences which had arisen between the Pennsylvania System and the A. F. of L. Railway Employes' Department. System Federation 90, in connection with who should represent the employes in making of agreements with the railway to replace the national agreements, which had been ordered by the Labor Board to be abrogated July 1. The railway claimed that it could make agreements with the representatives of the employes who had been elected by as many of the employes as cared to vote for them, in accordance with a scheme of election supervised by the railway, and that it was under no obligation to recognize the labor organization. The organization claimed that it, as the representative of the majority of the employes, had the sole right to make the agreements for the entire craft. The dispute was brought before the Labor Board, and in a decision given early in August the railway was upheld in some particulars and the organization in others. The Board censured the railway for undertaking to assume control of the selection of the employes' representatives, and censured the organization for putting out a ballot of its own, with no provision for representation of non-union men, and men belonging to smaller organizations. It held that both elections of employes' representatives were illegal, and said: "Neither of the parties to this dispute can serve the country, or justify themselves in the eyes of the public, by any amount of propaganda, and that it is a controversy over small technicalities to interrupt commerce, and bring loss and suffering upon themselves and the public." The Labor Board forthwith ordered a new election of employes' representatives to be held in such a way that each employe would be furnished with a ballot on which he could indicate his desire to be represented by System Federation no. 90, by the American Federation of Railroad Workers (another organization with membership on the Pennsylvania), or, when at least 100 unorganized employes so desired, by an individual agreed upon. This decision makes it clear that railway labor organizations must be recognized in the U.S.; that an employe can use his own discretion about joining one; that he is entitled to representation in negotiating with the railways, whether he belongs to a union or not; that an organization representing the majority of a class of employes has not the right to negotiate for the entire class; that employes can be represented by an organization, or by an individual, as they wish, and that employes can be represented, if they so wish, by an individual who is not an employe of the road. A similar controversy arose when the Pennsylvania set out to negotiate a new agreement with its clerks, freight handlers, etc. The railroad conducted an election, at which the employes were invited to vote for their representatives. The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employes undertook to represent all the employes in those departments, and held an election also. The dispute was brought before the Labor Board, which held both elections illegal and void, and ordered a new one to be

held along the same lines as that for the shopenmen, as noted above.

Another development in the U.S. worthy of note was an unauthorized strike by 300 employes of the federated shop crafts in the Cincinnati, Indianapolis & Western shops in Indianapolis, who apparently forgot, or disregarded, what happened to the men undertaking out-law strikes last year. They went out on a Friday, and were all replaced by the following Wednesday. The railway refuses to discharge any of the new men taken on, and states that any of the strikers taken back will lose their seniority, and have to start as new men.

A new railway labor organization, the Yard, Engine and Trainmen's Association, has been formed in Chicago. It is said that it is an outlaw organization, and declares openly that its express purpose is to destroy the present brotherhoods.

It will be remembered that the U.S. Labor Board's last word concerning the national agreements continued them in effect with some modifications, until further hearing and notice. This action was taken after the Board had ordered them abrogated, because the various railways and their employes could not agree, in attempting to draft new agreements, to replace the national agreements. Hearings concerning these disputes, particularly as applying to the piece work vs. day work issue, were held before the Board during August, but no decision has been announced up to the time of writing (Aug. 25). The Erie Rd. has leased its shops at Marion, Ohio, to a private company, and labor leaders claim this is an attempt to defeat the purposes of the Transportation Act and to deprive the employes of benefits secured for them by schedules negotiated previously. They speak of complaining to the Labor Board concerning the Erie's action.

Briefly the U.S. situation is that the railways and their shop employes are still unable to come to an agreement re working conditions, with the case still before the Board. The wage reduction ordered by the Labor Board has been in effect since July 1, and a Cleveland press report of Aug. 23 stated that ballots were being sent out to 409,000 members of the big four brotherhoods in connection with the proposed vote, prior to Sept. 1, concerning the reduction.

In Canada, as was stated in Canadian Railway and Marine World for August, wage reductions corresponding to those contained in the U.S. Railroad Labor Board's order were put into effect on July 15. On July 28 and 29, railway executives and the chiefs of the big four brotherhoods met at Montreal to discuss wage matters. The railways were represented by Grant Hall, Vice President, C.P.R.; S. J. Illungerford, Vice President, Operation and Maintenance, Canadian National Rys.; W. D. Robb, Vice President, G.T.R.; J. H. Walsh, General Manager, Quebec Central Ry., and the four brotherhoods were represented by W. S. Carter, President, Brotherhood of Railroad Trainmen; W. S. Carter, President, Brotherhood of Locomotive Firemen and Enginemen; W. S. Stone, President, Brotherhood of Locomotive Engineers, and L. E. Sheppard, President, Order Railway Conductors. The Order of Railway Telegraphers was also represented, and numerous general chair-

men of labor organizations were present. The labor representatives asked that the railways suspend the recent wage reductions and give assurances that no further reductions would be made and that existing schedules would not be modified unfavorably to the employes. After discussion, the railway executives made it plain that they could not accede to these requests, and that the recent reductions in rates of pay would have to remain in effect, pending a review of the whole matter during the negotiating of the next regular schedules. They pointed out that the employes are amply protected, as, in case of any finding that the reductions were not justified, they would be in position to recover, through a retroactive award. But in case a conference covering the whole matter showed that the reductions were reasonable and justified, the railways would scarcely be in a position to collect money they had paid out in wages, so that the fact of the reductions going into effect prior to the renewal of regular schedules could be regarded as a means of affording the necessary protection to the railways.

The Canadian Brotherhood of Railway Employes, through its "Grand President," A. R. Mosher, has expressed great dissatisfaction with the wage reductions. The name of this organization is very misleading. It does not embrace in its membership railway employes of all classes throughout the country, as the title would indicate, but the membership is confined to clerks, freight handlers, etc., on the Canadian National and Grand Trunk Rys. Its executive claimed that the matter of wage reductions should go to arbitration, under the Industrial Disputes Investigation Act, and that the reductions affected its membership more adversely than the higher paid employes in railway service. The result of a meeting of the organization's officers at Ottawa in the latter part of July, attended by A. R. Mosher, R. Dykes, Winnipeg, General Chairman, Western Lines, C. H. Minchen, Calgary, Secretary, Western Lines; C. E. Cole and E. Leger, Moncton, Chairman and Secretary respectively of Eastern Lines, and J. McGuire and C. Corbin, Chairmen of the Erie and Grand Trunk Rys., was that an application was made to the Labor Department for a board of conciliation to consider the wage reduction, under the Industrial Disputes Investigation Act. President Hanna, of the Canadian National Rys., refused to join in the application for a board of conciliation when asked to do so by the organization, pointing out that, so far as the Government railways are concerned, the act does not apply except by consent, and stating that, as the reduction was only tentative and subject to revision at the usual meetings and conferences necessary for permanent schedule adjustment, the time was not opportune for a board of conciliation. He also pointed out that the reductions took effect after the expiry of the notice required for the opening of negotiations, and that more than 10 days had expired between the putting into effect of the new rates and the application for a board of conciliation by the C.B.R.E., which meant that the reduced rates of pay would have to be accepted as the prevailing rate, as defined by the Industrial Disputes Investigation Act in any hearing before a board. Mr.

Hanna also pointed out that it would be unfair and discriminatory to afford a board of conciliation to one class of railway employees while other classes were not similarly favored. However, on Aug. 10 the Labor Department granted the organization a board of conciliation under the terms of the "Act Respecting Conciliation and Labor," which act was in effect prior to the passing of the Industrial Disputes Investigation Act, but which was not repealed by it. The employees nominated ex-Mayor Harold Fisher, of Ottawa, as their representative, and the Canadian National Rys. management has nominated Geo. D. Kelley, of Ottawa, as its representative. At the time of writing, Aug. 25, no move toward getting the arbitration under way had been made, nor has a chairman for the board been selected.

After the meeting with the railway executives in Montreal on July 28 and 29, the big four brotherhoods, joined in their action by the telegraphers, left a committee in Montreal in charge of affairs, W. G. Chester, of Winnipeg, and W. G. Atkinson, of Moncton, being chairman and secretary respectively. This committee, as representing the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Fireman and En-

gether and agree on a representative for such a board. The employees, as represented by the five organizations, have appointed David Campbell, barrister, of Regina, Sask., as their representative. It is not known, at the time of writing (Aug. 25) what action will be taken by the railways on this latest request of the Labor Department, and in the meantime the reduced wages remain in effect.

The Trades and Labor Congress of Canada on Aug. 24 in a general meeting at Winnipeg, decided by 394 to 151 to revoke the Canadian Brotherhood of Railway Employees' charter and cancel that body's affiliation with the Congress. The principle involved is that only one organization of each class of labor can retain affiliation with the Congress, and that where an international body exists, it shall have the preference. It will be remembered that the executive of the Congress expelled the C.B.R.E. some time ago, but the latter body appealed to a court and was reinstated. In the discussion prior to the vote, A. R. Mosher, "Grand President" of the C.B.R.E., claimed that his organization existed in Canada prior to the organization of the international body covering similar classes of labor, viz., the International Brotherhood of Railway and Steamship Clerks,

rectors' report, presented at the annual meeting recently, stated that, during the past year, 60 new freight cars were bought, and the locomotives and other rolling stock were largely rebuilt and repaired, this being necessitated by the extremely strenuous service of the previous five years. The company owns and operates the Sydney & Louisburg Ry., and the Cumberland Ry. & Coal Co., in Nova Scotia.

The Trinidad Government Rys. 6 ten-wheel locomotives, built by Montreal Locomotive Works, recently, one of which is illustrated herewith, have the following chief details:—

Gauge	4 ft. 8½ in.
Weight on drivers	70,000 lb.
Weight on engine truck	22,000 lb.
Weight, total	92,000 lb.
Weight on tender	71,000 lb.
Cylinders, diam. and stroke	16 x 24 in.
Wheel base, driving	16 ft.
Wheel base, total engine	20 ft.
Wheel base, engine and tender	46 ft. 8½ in.
Driving wheels, diam.	51½ in.
Journals, no. and diam.	84 2 in.; 14—2½ in.
Track wheels, diam.	28 in.
Journals, +	4½ x 8 in.
Boiler, type	Straight top
Boiler, inside diam.	50 in.
Boiler pressure	180 lb.
Firebox, length and width	72 x 42½ in.
Tubs, no. and diam.	84 2 in.; 14—2½ in.
Tubs, length	12 ft.
Heating surface, tubes	524 sq. ft.

Ten-wheel Locomotive, for Trinidad Government Railways, built by Montreal Locomotive Works.

ginemen, Brotherhood of Railroad Trainmen, Order of Railway Conductors, and Order of Railroad Telegraphers, made application on Aug. 4 to the Minister of Labor for a board of conciliation to thoroughly investigate and report on the matter of wages on Canadian railways, under the provisions of the Industrial Disputes Investigation Act. The Minister granted the request and stated that a board would be formed; and the Railway Association of Canada, as representing the railways concerned, was requested to name a representative of the railways for the board. The Railway Association replied that it was not in a position to represent the individual railways in matters of this kind. The Labor Department then said that the act provided for a number of employers being represented by a single association of employers, and that for the purposes of the act the Railway Association was in a position to represent all the member railways. The Railway Association replied to this, that its powers and constitution would not permit it to act for the member railways, in matters affecting the relations between each railway and its employees, and that it would be impossible for it to appoint a representative on the board. The last communication from the Labor Department conceded the point to the Railway Association, but asked that the member railways get to-

gether and agree on a representative for such a board. The employees, as represented by the five organizations, have appointed David Campbell, barrister, of Regina, Sask., as their representative. It is not known, at the time of writing (Aug. 25) what action will be taken by the railways on this latest request of the Labor Department, and in the meantime the reduced wages remain in effect.

Railway Rolling Stock Orders and Deliveries.

The C.P.R., between July 13 and Aug. 14, received 5 steel sleeping cars, the frames of which were built by Canadian Car & Foundry Co., and the interior finished at Angus shops, Montreal; also 290 hopper bottom box cars, 60½ tons capacity, from National Steel Car Corporation.

The Sydney & Louisburg Ry. (British Empire Steel Corporation), is having three locomotives rebuilt at Halifax Shipyards, Halifax, N.S. Two have been completed and returned to service, and the third is expected to be completed shortly. The locomotives, which were built originally by the American Locomotive Co., were entirely dismantled, and rebuilt, with new rear ends, boilers and tanks.

The Dominion Steel Corporation's di-

Heating surface, flues	235 sq. ft.
Heating surface, firebox	89 sq. ft.
Heating surface, total	848 sq. ft.
Heating surface, superheater	198 sq. ft.
Graze area	211 sq. ft.
Tractive power	18,400 lb.
Factor of adhesion	3.8
Superheater	The Superheater Co.
Reverse gear	Hand lever
Cab	Steel plate
Capacity, water	3,000 gals.
Capacity, coal	6 tons

American Railway Engineering Association directors' meeting in Montreal.—It was stated in Canadian Railway and Marine World for August, that after this meeting, on July 13, the directors were entertained at dinner in the evening by a number of Montreal engineers. A subscriber writes us that the hosts of the dinner were not Montreal engineers only, but that it was given by some of the American Railway Engineering Association's Canadian members. It was presided over by J. M. R. Fairbairn, President, Engineering Institute of Canada, and the welcome extended was acknowledged by L. A. Downs, President, American Railway Engineering Association, and Vice President and General Manager, Central of Georgia Ry. The visitors were also entertained at luncheon by Mr. Fairbairn, and visited Shawinigan Falls, under the guidance of Julian C. Smith, of the Shawinigan Falls Water & Power Co.,

The Cost of Stopping a Train.

By Edwin Winfield, Assistant Editor, Canadian Railway and Marine World.

An elementary principle in the science of railroading is to the effect that once a train leaves its initial station, the fewer stops it has to make before reaching the other end of the division, the better it is from an operating viewpoint. Although this point is no doubt universally recognized in railway circles, and its importance in any scheme of operation which aspires to be characterized as efficient is realized, yet there exists a great deal of misapprehension as to the cost, in dollars and cents, of stopping a train of known tonnage, and accelerating it again to its original speed. Opinion varies a great deal as to what this cost is, the majority of guesses falling between 50c. on the one hand and \$5 on the other.

As a matter of actual fact, a determination of the exact amount is obviously impossible, on account of inability to determine, with any degree of accuracy, the monetary loss occasioned by stopping and starting a train in so far as wear and tear of equipment is concerned. Data showing the cost, maintenance expense, and life in years, of a car are readily obtainable, but to try to figure the amount of depreciation occasioned by a train stop would be useless. Although the strains imposed upon draft gear, car bodies and trucks, and the wear of brake shoes, and wheels, or tires, for example, may involve certain costs, this item, because of inability of exact determination, will not be taken into account. But it lurks in the background, a faithful and ever present supporter of the principle that stops should be cut down to a minimum.

The other two items of cost are:—1. The amount of steam used by the air compressor in recharging the train line and auxiliaries, after the application of the brakes. 2. The amount of coal consumed in lifting the train and accelerating it back to former speed, less the amount of coal which would have been burned by the locomotive, between the point of first reduction of speed and the point where the original speed is again attained, if the stop had not been made.

We will consider a train of 1,600 tons, pulled by a locomotive for which the coal consumption curves are shown in the accompanying chart. These curves represent the consumption of various quantities of coal per hour. A point taken on any one of the curves, and the ordinates drawn in, will indicate what drawbar pull the locomotive can exert at the indicated speed, when worked at a cut-off and throttle opening which requires that rate of combustion to supply the steam. For example, take the point A on the 1,800 lb. curve; if the locomotive is so worked as to require the consumption of 1,800 lb. of coal an hour, it can exert a tractive effort of 20,000 lb. at 10 m.p.h.

The variation of train resistance with speed is also shown on this chart by the curve B C D, which represents the train resistance of a 1,600 ton train on a 0.25% grade. Tractive effort figures, for use with the first set of curves, and train resistance figures, for use with the curve B C D, coincide.

The train of 1,600 tons is in 40 cars, and the locomotive is handling it on a 0.25% grade, exerting its maximum power. The fact of the 7,200 lb. coal

consumption line cutting the train resistance curve at point E shows that 23 m.p.h. is the best speed it can make.

A stop is now to be made. Steam is shut off and the brakes applied. If the application requires 1.5 cu. ft. of free air per car, and 12 cu. ft. for the locomotive and tender, 72 cu. ft. in all, to be exhausted from the train line, the air compressor has to replace this. The compressor, compressing to main reservoir pressure 3 cu. ft. of free air per lb. of steam used, will use 24 lb. of steam. Figuring a good average of 6 lb. of steam for 1 lb. of coal burned, this is 4 lb. of coal. It therefore requires 4 lb. of coal to brake the train to a stop.

In what distance will the train come

Calculation discloses that this will stop the train in 207 ft.

The following analysis, based on the study of a chapter in Henderson's "Cost of Locomotive Operation," shows how the amount of coal necessary to accelerate the train back to 23 m.p.h. is arrived at. Referring to fig. 1, the middle ordinate for speed between 0 and 5 miles an hour, extending between the power and resistance line (F to F1) shows the excess of power over resistance on the average between 0 and 5 m.p.h. This is 18,800 lb., and because it represents the difference between the resistance to be overcome, and the power available to overcome it with, it must represent the amount of power which is available for

to a stop? Assuming that the weight of the freight and the weight of the cars are each 800 tons, which would be a good average for a 40 car train; calculating braking power as 70% of light weight, and brake shoe friction as 0.2, it may be shown that for the locomotive and train (locomotive 150 tons) the brake retardation is 166 lb. a ton. Add a retarding force of 8 lb. a ton due to train resistance, and a retarding force of 5 lb. a ton due to grade resistance (the resistance of a 1% grade being 20 lb. a ton, and therefore of a 0.25% grade being one fourth of this, or 5 lb. a ton), the total retarding force is 179 lb. a ton.

accelerating the train. This excess power amounts to 18,800 divided by 1,750, which is equal to 10.7 lb. a ton. Calculation demonstrates that this will take 44.6 seconds to accelerate the train from 0 to 5 m.p.h., and that it is done in 163.4 ft. The figure gives the coal consumption rate as 1,250 lb. an hour, making the coal burned 16 lb. From 5 to 10 m.p.h., where the coal consumption rate, as indicated by the figure, is 4,200 lb. an hour, the time of acceleration is 36.5 sec., the distance 401.3 ft., and the coal burned 43 lb., the excess of power over resistance on the average being 23,000 lb. Proceeding similarly, the following table

may be constructed.

From	To	Time	Distance	Coal used
5	10 m.p.h.	16.5 sec.	16.5 ft.	43 lb.
10	15 m.p.h.	36.5 sec.	40.1 ft.	43 lb.
15	20 m.p.h.	46.4 sec.	85.0 ft.	93 lb.
20	25 m.p.h.	59.3 sec.	2,532 ft.	197 lb.
25	30 m.p.h.	251 sec.	7,911 ft.	592 lb.
			11,848 ft.	851 lb.

Counting the 4 lb. used in braking the train, the stop cost 851 lb. of coal. Counting the 207 ft. used in braking the train, the distance of the stop and acceleration is 12,055 ft. If the stop had not been made, the locomotive would have burned (12,055 divided by 5,280) times (7,200 divided by 23), or 714 lb. of coal. The extra coal consumed by the stop is 855—714, or 141 lb.

While these figures and calculations may be correct theoretically, my experience is to the effect that they show a quantity which is too small, and the following considerations may help to account for this. First, they take no account of the drivers slipping while lifting the train, which is often the case. Second, they take no account of the great rider losses which are occasioned by the frequent necessity of building up a fire quickly when the locomotive is exhausting heavily. Instead of taking a coal consumption rate of 1,250 lb. between 0 and 5 m.p.h., and of 4,200 lb. between 5 and 10 m.p.h., as is theoretically correct, if a coal rate of 7,200 lb. were figured on as applying during the lift, the resulting figures would be nearly as possible represent the true state of affairs. Instead of 16 and 43 lb. of coal in the first two lines of the preceding table, there would be 89 and 73 lb., and the extra coal consumed in making the stop would be 244 lb. instead of 141. Assuming coal as being worth \$12 a ton at the firebox door, the cost of the stop is \$1.46. This, of course, does not figure in wear and tear of equipment, as previously noted, nor train crew's wages, the latter item being of consequence only when the train is in detention, or when the stop will aid in making it go into detention.

When a locomotive crew is trying to do a clean cut job in the line of fuel economy, about the most discouraging thing in the world is to have to stop the train to register it at a station out of which it is uphill in both directions. Instead of drifting through at 25 or 30 m.p.h. and having a good swing for the other hill, which could be got over with a few light fires, it is necessary to make heavy brake applications to stop the train, to lift it on an opposing grade, and work the locomotive at near maximum power all the way up, while the coal consumed makes the above figures look too small by about 300%. It seems reasonable to suppose that if an operator is competent to handle 31 orders affecting passenger trains, he is equally competent to catch a hoop with a ticket on it from the conductor of a freight train, and register the train for him. Another rule that is in the same category regarding stops is the one that requires a train to come to a full stop when certain signals are against it, and then proceed under control. The special rule requiring all but 1st and 2nd class trains to approach and pass passing tracks with caution and prepared to stop, unless the main track is seen to be clear, is another offender in this connection. The effect on operating expense of the practice of giving the full tonnage trains switching to do, at several passing tracks on its trip over the division, is obvious.

The foregoing has been written as a

matter of general interest, and to demonstrate that when a full tonnage train is stopped eight or ten times over a division for orders, for water, for registering train, and for other purposes, the expense of operation is increased considerably. The necessity of stopping a train for a 19 order, instead of the order and clearance being ready on a hoop, means that a ton of freight has to be hauled 150 miles to pay the bill. Any influence which may arise, or which represents

continual practice with only precedent for an excuse, the effect of which is lost sight of in the routine of operation, and which causes frequent and unnecessary stopping of trains, also causes loss, and any improvement in operation which will cut out a stop, and often a consequent delay to the train concerned, and a wave of delays extending over the entire division and affecting every train on it, is something worth striving for in the interests of efficiency and economy.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Canadian Express Co. — See under "Consolidation of Canadian National Express, and Canadian Express Co's." on another page of this issue.

Canadian National Rys. — H. V. CALDWELL, heretofore Passenger and Advertising Agent, Grand Trunk Railway, London, Eng., has been appointed District Passenger Agent, Canadian National-Grand Trunk Rys. Office, Cunard Building, Liverpool, Eng.

G. E. COWIE, heretofore General Freight Agent, Canadian National Rys., London, Eng., has been appointed General Freight Agent, Canadian National-Grand Trunk Rys., in charge of United Kingdom freight traffic. Office, 17 Cockspur St., London, Eng.

P. A. CLEWS, heretofore General Agent, and Assistant to European Traffic Manager, G.T.R., London, Eng., has been appointed General Freight Agent, Canadian National-Grand Trunk Rys., in charge of European Freight Traffic, except the United Kingdom. Office, 17 Cockspur St., London, Eng.

J. DEED, heretofore District Freight Agent, Canadian National Rys., London, Eng., has been appointed City Freight and Passenger Agent, Canadian National-Grand Trunk Rys. Office, 44 Leadenhall St., London, Eng.

J. D. McCLELLAND, heretofore Assistant General Passenger Agent, Canadian National Rys., London, Eng., has been appointed District Passenger Agent, Canadian National-Grand Trunk Rys. Office, 17 Cockspur St., London, Eng.

R. J. McEWAN, heretofore District Agent, Freight and Passenger Departments, Canadian National Rys., Glasgow, Scotland, has been appointed District Agent, Canadian National-Grand Trunk Rys. at Manchester, Eng.

WM. PHILLIPS, heretofore European Manager, Canadian National Rys., with office at Orient House, 42 New Broad St., London, Eng., has been appointed European Manager, Canadian National-Grand Trunk Rys. Office, 17 Cockspur St., London, Eng. **F. C. Salter**, heretofore European Traffic Manager, G.T.R., London, Eng., will, it is said, be transferred to Canada, and will probably be appointed to a position in the Canadian National Express Co's service.

E. L. ROBER, heretofore District Agent, Freight and Passenger Departments, Canadian National Rys., Liverpool, Eng., has been appointed District Freight Agent, Canadian National-Grand Trunk Rys. Office, Cunard Building, Liverpool.

R. O. STEWART, heretofore Assistant Bridge Engineer, Moncton, N.B., has been appointed Assistant Engineer of

Standards in connection with Bridge Standards, reporting to Engineer of Standards, Operation and Maintenance Department, Office, Toronto. Owing to an omission and a typographical error, this appointment was wrongly announced in our last issue.

J. G. SWALWELL, heretofore Auditor Miscellaneous Accounts, C.N.R., Toronto, having been appointed Assistant General Auditor, Canadian National Express Co., Montreal, Canadian Railway and Marine World has been advised that the vacancy will not be filled, at least for the present.

J. M. WALKER, heretofore General Agent, G.T.R., Glasgow, Scotland, has been appointed District Agent, Canadian National-Grand Trunk Rys. Office, 75 Union St., Glasgow, Scotland.

Canadian Pacific Rys. — **M. KENNEDY**, heretofore Night Forman, Schreiber, Ont., has been assigned Locomotive Foreman, McAdam, N.B., vice J. McLean, assigned to other duties there.

W. J. McKAY, heretofore Night Foreman, Brownville Jet, Me., has been appointed Night Foreman, Schreiber, Ont., vice J. McLean, promoted.

Grand Trunk Rys. — **J. C. GARDEN** has been appointed General Superintendent, Motive Power and Car Departments, lines east of Detroit and St. Clair Rivers, and not Superintendent, as mentioned in our last issue.

Reid Newfoundland Co. — No announcement has been made as to the appointment of a General Manager, in pursuance of the agreement between the company and the Newfoundland Government, as summarized in Canadian Railway and Marine World for August, which provides that the company shall secure the services of a competent person, from Canada or the United States, as General Manager, the appointment to be subject to the Government's approval. Canadian Railway and Marine World is aware that certain officials of Canadian railways have been approached in this connection, and that a salary of \$15,000 a year for 5 years, has been offered. A Winnipeg paper states that R. C. Morgan, Superintendent, Winnipeg Terminal Division, C. P.R., has been offered the position, and, having been granted a month's leave of absence, left Winnipeg, Aug. 21, for Newfoundland to decide whether to accept or not.

Exchange and Surcharges on International Freight and Passenger Business.

In accordance with a Railway Commissioners' order of June 14, the surcharge on freight shipments between Canada and the United States from Aug. 1 to 31 was 7%. The rate of exchange to determine additional collection on international passenger business was from Aug. 1 to 14, 12%, and from Aug. 15 to 31, 11%.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway Harbor and
Canal Contractors' Interests.

The Railway Employees' Wages Situation.

It is not Canadian Railway and Marine World's policy to undertake to criticize the actions of railways, or their employees, in connection with rates of pay and working conditions. Rather our aim has been to confine ourselves to recording the developments which have taken place in this department of railway activity from time to time. Firm in the belief that all our readers, among officers and employees of railways, are far advanced in thought beyond the stage wherein they would pay serious attention to charges of "Big interests control," "millions of watered stock," "Intentional restriction of business by capitalistic interests," and similar absurdities, on the one hand, and, "gross inefficiency of railway labor" and "Robbery of the public by organized labor" and similar foolishness on the other hand; equipped with a knowledge that railway work involves dangers, discomforts, and responsibilities much greater than the ordinary; pleased to note the degree of co-operation existing between Canadian railways and their employees for years past, and thoroughly convinced that this co-operation offers a much better solution to the problem of industrial relations than does warfare, based on a lack of human understanding and understanding of the operation of economic causes and effects alike, as between labor and capital, we have considered it the part of wisdom to refrain from taking sides, one way or the other, in this question.

It is with some hesitation, therefore, that we undertake to state, and attempt to demonstrate, a proposition, although it may be pointed out that our action involves no departure from our original policy. Our proposition is that Canadian railways' employees will be farther ahead, in the long run, by working on the reduced scale of wages decided on recently, than if they continued to work at the higher rates. Convinced that fairness and justice should form the basis for dealings between man and man everywhere, we would not state that proposition unless we believed it to be absolutely correct.

Accounts appearing in previous issues of Canadian Railway and Marine World have shown, clearly and unmistakably, the condition in which the railway industry in North America has been, and is. They have shown that in the latter part of 1920, practically all of the United States roads operated at a loss; that, so far in 1921, they have earned only about 20% on their capitalization, which, according to the findings of the Interstate Commerce Commission's Valuation Department, is much lower than their property value, and that they would have earned nothing at all if maintenance of way and equipment had been kept up as they should have been. Our comment on the performance of Canadian railways in 1920, elsewhere in this issue, shows the situation in this country. The Canadian Pacific made barely enough to pay the investors for the loan of their capital, and the National roads incurred heavy deficits, the facts concerning which are known to all.

The railway industry, as an industry, is operating at a loss. It cannot charge any more for its product, the transportation of freight and passengers, because it is commonly felt that rates are as high

as they should go now, and many people are insistent in their demands that they should be reduced. No industry can exist and yield a fair living to those engaged in it, with either their capital or labor, unless it can fit in with all other industries and render its services at reasonable rates. If rates cannot be raised, expenses must be reduced, if the industry is going to survive. So, to survive, to escape the unhappy fate of "going broke," the railways set in to reduce expenses.

As a result of this enforced reduction of expenses, there are more than 600,000 railway men out of work in the U.S., and many thousand in Canada. Since the railways cannot buy equipment, machinery, etc., thousands of men, formerly employed by manufacturers, are similarly out of work. And it is an actual fact that many U.S. railways have owed equipment manufacturers for months and months, and have been unable to pay them. The banks have had to carry the equipment manufacturers, and have, therefore had much less credit to extend to merchants, and others, who need it, with the result that prosperity has suffered a severe blow. Under the situation, because the railways cannot retain about fifteen cents out of every dollar they earn, that they should be able to retain. They might use the few cents out of every dollar that they use for dividends when they can pay them, but capital refuses to work without pay, and that invested in the railways would soon be withdrawn and invested elsewhere.

The way that fifteen cents with the railways have got, but have not, has thrown industry out of gear is remarkable. But it is useless to trace the vicious circle further; reduced purchasing power, lack of new construction, and great manufacturing plants shut down are familiar to all. The U.S. Government has arranged to grant the railways of that country a measure of relief, as noted in this issue, but unless things are put on a proper permanent basis, it will be no more than a flash in the pan.

The greatest purchasers in this country are the farmers, but they are getting for their products little more than before the war. They are paying higher prices for everything they need, including transportation. The price of transportation for the farmers, as well as the price of many other things they have to buy, should be reduced; and the situation only when the railways can afford to reduce it. These rates were all right last autumn, when the prices of agricultural products were high, but the farmers have a greatly reduced purchasing power now, and when they are not buying, business and employment remain, and must remain, dead. Add to the farmers' partially reduced purchasing power the railways' totally reduced purchasing power, and we have at once one of the greatest underlying causes of unemployment and actual suffering in this country and the U.S.

It does not seem necessary to argue this thing further. We want to see every person engaged in the railway industry, whether they contribute labor, or capital, or both, get a fair return for what they give. But the industry has to be in gear with the other big industries of the country, before all the people in it can be prosperous. After all, it is not worth while to see a brother human being starve for the sake of a few extra dollars a

month, rather should the aim be a square deal to all, and a job for everyone who wants to work, at wages which will leave a little for new capital to finance under-

takings to create more jobs. The whole proposition is largely automatic, as is evident. We strive toward improvement eternally, and it is well that this is so;

but let us not be unwise and attempt to reap the fruits of greater improvement in our economic status than we have yet accomplished by hand and brain.

The Canadian Pacific Railway's Earnings and Expenses.

The C.P.R.'s statements of earnings and expenses for June and for the first six months of 1921, show that the company has been successful in reducing its operating expenses to meet the reduced traffic conditions which continue to prevail. The gross earnings, operating expenses, net earnings and increases, or decreases, as compared with corresponding months of 1920 are given in the table on page 484 of this issue.

That traffic in June kept up well, speaking relatively, as seen by an increase in gross revenue of \$569,598, and by the fact that the gross earnings of June were exceeded this year only in January and March. As compared with June 1920, however, this gross shows a decrease of \$2,018,932, and when the higher freight rates now prevailing are taken into consideration, it is readily seen that traffic has fallen off to a large extent. The same applies to the traffic handled in the first six months of this year, when compared with the corresponding months of 1920, the gross revenues, despite the increased rates, being lower in every case except that of January. Basing calculations on the statistics furnished by the Dominion Bureau of Statistics, which are available to the end of April only at the time of writing, the revenue traffic of the first four months, taken as indicating the trend for the six months, may be compared readily with that of the corresponding period of 1920. Adding the revenue freight ton miles to three times the passenger miles, and designating the result as traffic miles, the millions of traffic miles handled by the railway in Jan. 1921, was 1,125, against 1,389 in Jan. 1920; 846 in Feb. 1921, against 1,278 in Feb. 1920; 1,100 in March 1921, against 1,458 in March 1920, and 958 in April 1921, against 1,448 in April 1920, a total of 4,033 in the four months of 1921, against 5,573 in the four months of 1920, a decrease of 27.7%.

Despite the great falling off in traffic and the consequent reduction in gross earnings, the company has shown an increase in net for each of the first six months of 1921, as compared with the corresponding months of 1920, the total increase in net for the six months being \$1,521,980. This net was also greater than that earned in the first six months of 1919, by \$763,688, but was exceeded by the net earned in the first six months of each year from 1917 back to 1910. The favorable result for the first six months of this year, as compared with the results for the first six months of 1920 and 1919 must be put down to the enforcement of rigid economy in every possible direction, the fact of the property being in such a high state of maintenance and operating efficiency that these reductions in expenditure could be made, to suit conditions of reduced traffic, and to a slight improvement, over that existing during the major part of 1920, in the relation as between rates and expenses.

The Dominion Bureau of Statistics figures show large reductions in maintenance expenses for the first four months of 1921, compared with the first four months of 1920. For maintenance of

way and structures, \$9,051,550 was spent in the first four months of 1920, compared with \$6,615,165 this year. The figures for maintenance of equipment are \$15,487,527 and \$12,339,811 respectively. The transportation expenses, however, for the four months, were \$27,208,178 in 1920 and \$26,992,635 in 1921. Although these transportation expenses applied to a much smaller volume of traffic than was carried in 1920, the fact of the wage increases by the U.S. Labor Board must be taken into consideration in noting the small decrease in transportation expense. Further, the Bureau's statistics show that the payroll was 55.8% of total operating expenses in Jan. 1921, compared with 56.7% in Jan. 1920; 55.1% in Feb. 1921, compared with 57.7% in Feb. 1920; 55.4% in March 1921, compared with 57.9% in March 1920, and 58.8% in April 1921, compared with 56.7% in April 1920. This would indicate that other operating expenses increased during 1920 even more proportionately, than wages, and that they had not receded from their high levels, to any extent, up to the end of April. Taking into consideration further, the fact that train mileage cannot be reduced proportionately to a falling off in traffic and that many items of transportation expense are constant, regardless of traffic, it would be difficult to imagine a better showing than that made by the C.P.R. It may reasonably be anticipated that if traffic had continued at the high level of 1920, an even better showing would have been made in the first six months of 1921. While transportation expense cannot be reduced proportionately to a falling off in traffic, the converse proposition, viz., that transportation expenses should not increase proportionately to increases in traffic up to the maximum capacity of the road and its equipment, is equally tenable.

In view of the fact that other operating expenses applying in the first four months of this year show an increase about proportionate to, or only slightly greater in proportion than, the wage increase, and as the percentage of wage increase of May 1, 1920, was somewhat lower than the percentage of rate increase which was granted the company in Sept. 1920, it is evident that the rate increases slightly improved the unfavorable conditions which the C.P.R., in common with all other railways, occupied at the time, and aided, to some extent, efficient management and strict economy in effecting an improvement in the net. Had the rate increase gone into effect when it logically should have, coincident with the wage increase, the operating ratio for 1920 would have been more favorable.

The operating ratio for the year 1920 was 84.70. That for June 1921 was 78.53, which represents a large improvement. The ratio for Jan. 1921 was 95.5; Feb., 93.6; March, 83.6; April, 81.2, and May, 76.4. A steady improvement to the end of May, with but a very slight falling off in June, is thus evident.

Despite the fact that the comparatively favorable showing for June and the first six months of the year are due in part to decreases in the amounts spent

for maintenance, it may be taken for granted that the C.P.R. is not curtailing expenditure in this direction to an extent necessitating any deviation from its usual high maintenance standards, as the majority of U.S. roads have found it necessary to do. Taking everything into consideration, it may be confidently said that the C.P.R. has begun to "turn the corner" so far as its financial results are concerned. The recent reduction in wages, although counteracted to quite an extent by the restoration of passenger rates to the basis on which they were prior to the granting of the rate increases in Sept. 1920, will aid the company further in its efforts to get operations back on a normal basis. It must be pointed out, however, that although there has been an improvement, the operating ratio and net earnings must be a lot more favorable yet before they begin to correspond with those of pre-war years, and it is evident that no justification has as yet been seen in the operating results for the demands for large rate reductions which have been so insistent of late. Rather, the policy should be one of requiring individual rate reductions, as gradually decreasing operating expenses justify them, either in the national interest, as exemplified by the recent action in connection with the live stock industry, or to relieve existing inequalities, the result of previous horizontal increases. If such a policy be followed, it may reasonably be hoped that railway operation will quickly be restored to a normal financial basis, a basis upon which the railways will be enabled to maintain themselves in first class physical condition, and operating position, and be able to furnish capital for the extensions and improvements necessary for the country's growth and development.

Railway Manager Wanted by South Australia—Adelaide press dispatch:—"The South Australian Premier has announced that his government has decided to secure the assistance of a railway expert with the widest possible experience in England, Canada, the United States or Australia, to assume supreme control of the state railway system, which is to be taken entirely out of politics. South Australia has 3,400 miles of railway, including 600 miles of the Transcontinental R.R. which has been built from Port Augusta in South Australia to Kalbarrie in Western Australia, and which, in connection with various state lines, completes a through rail connection between Brisbane, on the east coast, and Fremantle, on the west coast."

Grand Trunk Ry. Arbitration Award. Ottawa press dispatch, Aug. 5.—"It will probably be some time before the Grand Trunk arbitrators are in a position to make an award. Sir Walter Cassels, Sir Thomas B. Thomas, and U.S. Chief Justice Wm. H. Taft, are, it is stated, examining the evidence taken. This will probably consume some time, but it is only preliminary to the meetings of the arbitrators at which the award will be discussed."

Steam Railway Statistics for Calendar Year 1920.

The following comparative table, for the calendar years 1920 and 1919, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics' Transportation Branch.

	All railways		Canadian Government		Canadian Northern		Dominion Pacific		Grand Trunk		Grand Trunk Pacific

The column headed "Canadian Pacific," includes all the Montreal and Atlantic, and Esquimaux & Nanaimo Rys. The column headed "Grand Trunk" includes its Canadian lines only.

The column headed "Canadian Northern," includes the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government.

The column headed "Canadian Government," includes the intercolonial, Prince Edward Island, National Transcontinental, and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government.

The Railway Operating Results for 1920.

These statistics are not only of the greatest interest to all who are connected, directly or indirectly, with the transportation industry, but are also of immediate concern to every citizen. They portray a condition in the railway industry, in which such large sums of the companies' wealth are invested, which demands most serious consideration and the bending of all effort toward the securing of an improvement. The fact of the capitalization of the railways being in excess of \$2,000,000,000 emphasizes the magnitude of the investment Canada has in her railways, and the fact of the people of this country paying almost \$500,000,000 in a single year for the transportation of themselves and their goods serves to indicate how great a part rail transportation plays in the country's economic life.

The Canadian Pacific in 1920, with its 13,308 miles of road, had a larger gross revenue than the Canadian Government Rys., Canadian Northern, Grand Trunk and Grand Trunk Pacific with their combined 20,211 miles. The significance of this is at once evident, and serves to show that the great need of the government owned railways is more traffic. They could be in an unfavorable position even if railway financial returns varied directly with the amount of traffic handled; they are in an even more unfavorable position, because this variation is not direct. Railway operation affords perhaps the best illustration of the effect on net earnings of so-called "overhead" costs, which cannot be eliminated when the volume of business handled is much smaller than can be taken care of by the facilities provided. With a business representing only one percent of the maximum capacity of the road and its equipment, the freight traffic offering must be carried in smaller trainloads, while the number of tons of revenue freight per loaded car mile tends to decrease. Locomotive freight train and passenger train, and freight and passenger car miles tend to decrease less rapidly than revenue freight ton miles and passenger miles, as shown by the figures, and maintenance of way and equipment expenses cannot be reduced at all in proportion to the reduced earnings. It is evident that railway operation is perhaps the best example of what political economists are pleased to call a "business of increasing and decreasing returns," and it is also evident that a great requisite for success in the national railway venture is a large increase in gross operating revenues, derived from a large increase in traffic handled.

The foregoing principle of railway operation is at once apparent, on comparing the maintenance of way, maintenance of equipment, and transportation expenses, in turn, with the total operating revenue, for each of the railways shown. For example, out of an operating revenue of \$217,000,000 the C.P.R. spent \$32,000,000 on maintenance of way and structures; out of an operating revenue of \$14,000,000, the G.T.P. found it necessary to expend \$4,000,000 on the same account. The same discrepancy arising from the limited traffic and consequent low earnings on the government roads is evident in all the figures to a more or less degree.

Concerning the transportation expenses of the different roads, and their relation to gross earnings, we can do no better than

quote from Lord Shaughnessy's letter to the Dominion Prime Minister in which he said:—"The train mileage on the Canadian National System is out of all proportion to the revenue, taking the C.P.R. as a standard. Were it possible to effect a reduction in train mileage on the National system, to make the ratio of train miles to earnings the same as that on the C.P.R., the saving in transportation alone would represent upward of \$22,000,000 a year. This, however, is out of the question, because, while there might be a substantial shrinkage of train mileage, without serious public inconvenience, the great mileage of the National system to be served, and the limited traffic available, prevent a proper relation between traffic and train miles. The C.P.R. handled traffic representing revenue 71% in excess of the Canadian National, with an additional cost of transportation of only 13%."

An examination of the transportation expenses in the table of page 479, and consideration of them in connection with the figures for train mileage, car mileage, revenue freight ton mileage and revenue passenger miles, amply demonstrates the accuracy of Lord Shaughnessy's statement, and the operation of the underlying principle of railway operation it contains.

In comparing the figures for 1920 with those for 1919, it is seen that although operating revenues increased by \$85,340,496 over 1919, the operating expenses increased by \$101,213,730, which meant a decrease in net operating revenue of \$17,873,265, and an increase in operating ratio of from 92.2 to 97.17. The state to which the railway industry was brought in 1920 is evident when it is remembered that the average operating ratio for the period from 1900 to 1917 inclusive was 71, the range for those 18 years being from 64.7 to 74.4. Students of railway economics say that a railway cannot have an operating ratio of much over 70 over a period of years, and continue to raise capital at reasonable rates, with which to provide the facilities necessary for adequate public service. Operating ratios of 123.46 for the Canadian Government Rys., 125.25 for the Canadian Northern, 93.13 for the Grand Trunk and 170.33 for the Grand Trunk Pacific, demonstrate the great task which faces the managements of these railways and the people of Canada in getting these properties on a proper financial basis. It may be said, however, that the operating ratio of 1920 is a direct and fully anticipated result of the vastly increased prices which the railways found it necessary to pay for labor, and materials, of all kinds, and of the delay until Sept. 1920 in allowing them to place rates on a basis which would make them more nearly compensatory.

Considering the railways as a whole, out of 56 reporting, 31 paid operating expenses and 25 had operating deficits. Of the 31 which paid operating expenses, 19 had a total corporate income of \$36,581,437, the corporate loss of the other 37 being \$79,669,825. While the figures shown for net loss for the Canadian Northern in the table include interest, interest on the Canadian Government lines funded and unfunded debt is not included. Only seven roads declared dividends, viz., Canada Southern, \$450,000; Canadian Pacific, \$29,227,276; Hereford

(Maine Central), \$32,000; Massawippi Valley (Boston & Maine), \$24,000; Naperville Jct., \$36,000; Quebec Central, \$169,080; Thousand Islands, \$4,200.

Extending the comparison further, as between 1919 and 1920, it is seen that the total corporate loss in 1920 was \$28,159,722 greater than in 1919. Over 56% of the increase in operating expenses was in salaries and wages, which increased about 25%, or \$57,108,147, thus reflecting the increases allowed the employees in consequence of the United States wage award which became effective May 1, 1920. The 6% increase in the number of employees is also to be noted. In comparing the traffic statistics, an 18% increase in the ton miles of revenue freight carried is evident, reflecting the great business activity which prevailed during the greater part of the year. Although the number of passengers carried in 1920 showed an increase over 1919, the average journey was much shorter, resulting in a lower figure for revenue passenger mileage. The operating statistics indicate that the traffic of 1920 was handled with as high a degree of efficiency as that of 1919, or even a higher degree. The figures showing the cost of fuel are merely representative of the increased prices which the railways were obliged to pay for everything. Comment on other operating statistics in the table appears unnecessary; they are but expressive of logical results of the conditions under which the railways operated, and combine to demonstrate that the railways require both large reductions in their operating expenses, and increased traffic, to put them on a proper basis.

Bad as were the operating results of Canadian railways for 1920, it is satisfactory to be able to identify the causes which produced these results, and of knowing that they have been but the local manifestations of conditions affecting the railway industry which have been world wide in their application. The United States railways earned the largest gross revenue in their history, operating expenses and taxes were the highest ever recorded, and more freight and passengers were transported than ever before, but the operating ratio was the highest, and the net operating income was the lowest, in the industry's history. In considering the performance of Canadian railways, it is well to take into consideration all the facts, and when this is done, it will be seen that the government owned railways, facing such high wages and material costs, and operating a large mileage of low traffic density road just emerging from the colonization stage, have produced results which are as good as was humanly possible.

An outstanding feature of the 1920 results, which emphasizes a principle of rail transportation not to be lost sight of, is found in the C.P.R. results. The manner in which this company has rendered transportation service to the Canadian people while it continued on a self-supporting basis at rates on which U.S. railways incurred deficits which had to be made up by the people of that country to the extent of one and a half billion dollars, is remarkable. In addition to speaking volumes for the high degree of efficiency with which the property has been operated, it shows clearly and unmistakably the wisdom of a policy of regulation wherein a railway is allowed

to earn a return on its investment sufficient to maintain it in a position of financial strength and first class physical condition. It is to be desired that the policy in this connection, so ably interpreted and put into operation by the Board of Railway Commissioners in its last year's rate judgment, will be continued, and that the people of this country will not be guilty of a policy of false economy in connection with its transportation systems, in demanding rates which are not compensatory.

The year 1920 was an extraordinary one for the railway industry, it has been called the worst the railways ever experienced, but it brought its lessons, and a change for the better is surely, if slowly, taking place. Economy is being practised in every direction, and although traffic has not yet resumed its former

volume, operating expenses are b-tag reduced appreciably. The great need of Canadian railways is greater traffic, which calls for increased population and more production and business activity. These must be obtained before the railway industry can be on a thoroughly sound basis. Comparing the traffic on the Canadian lines with that available for U.S. railways, and taking into consideration the advantage in operation which a large traffic inevitably affords, it is evident that our railways have been and are, operated with a high degree of efficiency, and with the increases in population and production which this country is justified in expecting, there is no reason why all of our railways should not be financially self supporting and able to maintain themselves in a high state of operating efficiency.

Birthdays of Transportation Men in September.

Many happy returns of the day to—
Wm. Aird, ex-Master Mechanic, Locomotive Works, G.T.R., Montreal, now of Barrie, Ont., born in London, Eng., Sept. 3, 1843.

W. B. Bamford, District Freight Agent, C.P.R., Nelson, B.C., born at Belleville, Ont., Sept. 10, 1863.

O. E. Becker, Chief Dispatcher, Canadian National Rys., Saskatoon, Sask., born at Montreal, Sept. 20, 1873.

G. T. Bell, Passenger Traffic Manager, G.T.R., Montreal, born there, Sept. 7, 1861.

W. H. Biggar, K.C., Vice President and General Counsel, G.T.R., Montreal, born at The Carrying Place, near Trenton, Ont., Sept. 19, 1852.

E. J. Blais, Foreman Tinsmith, Canadian National Rys., Transcona, Man., born Sept. 26, 1876.

A. T. Boulton, Assistant Superintendent, Chapleau Division, Algoma District, C.P.R., Chapleau, Ont., now of New York, born at Troy, N.Y., Sept. 9, 1888.

E. R. Bremner, ex-Division Freight Agent, Ottawa Division, G.T.R., Ottawa, born at Toronto, Sept. 9, 1875.

W. B. Bulling, ex-Assistant Freight Traffic Manager, Eastern Lines, C.P.R., now of Knowlton, Que., born at Montreal, Sept. 16, 1858.

H. E. Burk, Director of Transportation, Canada Steamship Lines, Montreal, born at Belleville, Ont., Sept. 23, 1881.

A. D. Cartwright, Secretary, Board of Railway Commissioners, Ottawa, born at Kingston, Ont., Sept. 30, 1864.

J. H. Corcoran, General Travelling Agent, Canadian National Rys., Moncton, N.B., born at Charlottetown, P.E.I., Sept. 18, 1874.

A. S. Dawson, Chief Engineer, Natural Resources Department, C.P.R., Calgary, Alta., born at Pictou, N.S., Sept. 6, 1871.

W. E. Duperon, General Passenger Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Stratford, Ont., Sept. 4, 1872.

R. S. Elworthy, General Agent, Passenger Department, Ocean Traffic, C.P.R., Chicago, Ill., born at London, Eng., Sept. 10, 1877.

H. G. Foreman, Assistant Treasurer, Canadian Northern Ry. System, Toronto, born there, Sept. 2, 1882.

C. B. Foster, Assistant Passenger Traffic Manager, Eastern Lines, C.P.R., Montreal, born at Kingston, N.B., Sept. 30, 1871.

G. J. Fox, Superintendent, Calgary Division, Alberta District, C.P.R., Calgary,

Alta., born at Montreal, Sept. 24, 1883.

W. H. Gordon, Trainmaster, C.P.R., Field, B.C., born at Montreal, Sept. 21, 1875.

R. S. Gosset, Auditor of Disbursements, Canadian Northern Ry., Toronto, born there, Sept. 28, 1879.

E. Goulet, Agent, C.P.R., New Westminster, B.C., born at Quebec, Que., Sept., 1865.

W. B. Howard, District Passenger Agent, C.P.R., Toronto, born at Chatham, N.B., Sept. 15, 1877.

W. R. Howard, dispatcher, C.P.R., Brownville Jct., Me., born at St. Andrews, N.B., Sept. 14, 1871.

Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., Montreal, born at Brockville, Ont., Sept. 15, 1858.

G. C. Jones, Assistant to President, G.T.R., Toronto, born at Clyde, N.Y., Sept. 24, 1869.

C. B. King, Manager, London St. Ry., London, Ont., born at Galena, Ind., Sept. 12, 1871.

S. King, London, Ont., born at Thetford, Norfolk, Eng., Sept. 12, 1853.

C. C. Labrie, Purchasing Agent, Canadian National Rys., Vancouver, B.C., born at Quebec, Que., Sept. 8, 1882.

R. E. Larmour, Acting Assistant Freight Traffic Manager, C.P.R., Montreal, born at Brantford, Ont., Sept. 26, 1880.

C. D. MacKintosh, Superintendent, Lethbridge Division, Alberta District, C.P.R., Lethbridge, Alta., born at Auckland, New Zealand, Sept. 24, 1882.

W. A. Mather, General Superintendent, Saskatchewan District, C.P.R., Moose Jaw, born at Oshawa, Ont., Sept. 1885.

J. A. Morice, Foreign Freight Agent, C.P.R., Toronto, born at Stratford, Ont., Sept. 17, 1878.

C. B. Murphy, Manager, Winnipeg Joint Terminals, Winnipeg, born at Napa, Cal., Sept. 11, 1866.

J. Paul, District Freight Agent, Canadian National Rys., Winnipeg, born in Euphrasia Tp., Ont., Sept. 13, 1858.

W. J. Pickrell, Master Mechanic, New Brunswick District, C.P.R., St. John, born at London, Ont., Sept. 15, 1880.

H. T. Rawlings, ex-Lake Forwarding Agent and Fuel Inspector, Canadian National Rys., now Vice President, Bairo Coal Co., Cleveland, Ohio, born at London, Eng., Sept. 27, 1883.

C. S. Richardson, District Freight Agent, C.P.R., Buffalo, N.Y., born at New York, Sept. 26, 1870.

W. D. Robb, Vice President, Transpor-

tation and Maintenance, G.T.R., Montreal, born at Longueuil, Que., Sept. 21, 1857.

A. Scott, Resident Engineer, Prince Edward Island Ry., Charlottetown, P.E.I., born at Kirkcaldy, Scotland, Sept. 6, 1884.

F. A. Shaw, General Agent, Freight Department, Canadian National-Grand Trunk Rys., Cleveland, Ohio, born at Smiths Falls, Ont., Sept. 29, 1872.

J. M. Silliman, ex-Engineer, Maintenance of Way, Susquehanna Division, Delaware & Hudson Rd., Oneonta, N.Y., now of Montreal, born at Easton, Pa., Sept. 8, 1885.

F. W. Sterling, ex-District Freight Agent, C.P.R., Edmonton, Alta., now of Quetch and Sterling, Vancouver, B.C., and Shanghai, China, born at Thornbury, Ont., Sept. 13, 1879.

Hon. L. C. Webster, President, Webster Steamship Co., President, Quebec Railway, Light & Power Co., and Second Vice President, Dominion Marine Association, born at Quebec, Que., Sept. 30, 1871.

F. G. Wood, Ontario Freight Agent, Canadian Government Merchant Marine, Toronto, born there, Sept. 15, 1890.

H. A. Young, Walford Forwarding Corporation, Toronto, born at Brooklyn, N.Y., Sept. 1, 1864.

Imperial Service Medals for Canadian Government Rys. Employees.

Imperial Service Medals have been granted to the following Canadian Government Rys. employees:—T. Anderson, brakeman, Moncton, N.B.; J. Bouthillier, conductor, Levis, Que.; I. Candie, locomotive wiper, Truro, N.S.; A. E. Clarke, station agent, Souris, P.E.I.; J. Colison, locomotive man, Sydney, N.S.; C. Cool, locomotive man, Dalhousie, N.B.; J. E. Cote, station agent, Trois Pistoles, Que.; D. Crowley, baggage master, Halifax, N.S.; J. A. Davidson, conductor, Moncton, N.B.; J. Donald, locomotive man, Moncton, N.B.; J. Devereaux, locomotive house foreman, Campbellton, N.B.; T. Dunn, station agent, Blackville, N.B.; W. H. Fielding, carpenter, Moncton, N.B.; J. Gallivan, locomotive man, Sydney, N.S.; W. W. Gordon, conductor, New Glasgow, N.S.; W. Hanway, fireman, Truro, N.S.; J. Hay, section foreman, Antigonish, N.S.; A. L. Leaman, machinist, Moncton, N.B.; J. L. Lyle, section foreman, Steveston, N.S.; C. J. McCarty, machinist, Moncton, N.B.; W. McClaflerty, conductor, Halifax, N.S.; D. McDorman, brakeman, Truro, N.S.; D. Marmen, extra gang foreman, Riviere du Loup, Que.; N. Merrill, constable, Moncton, N.B.; C. H. Morash, car carpenter, Chaudiere Jct., Que.; T. W. Lester, train baggage master, Truro, N.S.; M. Norman, locomotive man, Chaudiere Jct., Que.; J. Paradis, conductor, Levis, Que.; H. H. Pengilly, machinist, Moncton, N.B.; J. St. Onge, brakeman, Levis, Que.; T. L. Salterio, train baggage man, Halifax, N.S.; C. E. Sawyer, locomotive man, Riviere du Loup, Que.; R. W. Scribner, station agent, Cold Brook, N.S.; J. Stewart, brakeman, Charlottetown, P.E.I.; M. Steeves, assistant scrap foreman, Moncton, N.B.; W. Wall, section foreman, Riviere du Loup, Que.; F. L. Watts, conductor, Moncton, N.B.

G. T. Bell, Passenger Traffic Manager, G.T.R., Montreal, writes:—"The Canadian Railway and Marine World deserves its well known reputation for accuracy, in its particular field."

Steam Railway Operating Revenues, Expenses and Other Statistics for April.

The following comparative table, for April, 1921 and 1920, has been arranged in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics' Transportation Branch.

The figures in the column headed "All railways," include all steam railways with an annual operating revenue of \$500,000 and over, except the St. Lawrence and Adirondack Ry., which is not able to give the 1920 figures, and is therefore being omitted from 1921 reports, as its inclusion would not show a true comparison. The 1921 figures, however, will be available for comparative purposes for 1922.

The column headed "Canadian Gov. ernment," includes the Intercolonial, Prince Edward Island, National Trans-

	All railways		Canadian Government		Canadian Northern		Canadian Pacific etc.		Grand Total

continental and various local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern" included the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government.

The column headed "Canadian Pacific, etc., includes also the Montreal and Atlantic, and Esquimalt & Nanaimo Rys. The column headed "Grand Trunk" includes its Canadian lines only.

The Railways' Operating Results for April.

The gross earnings of Canadian railways for April, as given in the table on page 482, continue to reflect the unfavorable economic conditions which have prevailed, as is shown by a decrease in operating revenue of over \$2,000,000 from that of March, and of over \$1,000,000 from that of April, 1920. When it is seen that, despite the increased rates, as shown on a ton mile and passenger mile basis in the table, gross earnings have decreased, it is evident that the volume of business handled by the railways is a faithful indicator of the degree of economic prosperity enjoyed by the country as a whole. This is but natural, however, as transportation is an essential in all departments of industrial activity.

In comparing the operating revenues of the individual roads for April 1921 and 1920, it is seen that all except the Canadian Northern suffered a small decrease, this exception showing an increase of \$105,518. The Canadian Government Rys. show an increase in gross earnings from passengers, but this was more than wiped out by the decrease in freight handled. The G.T.P. freight earnings remained practically constant, and although a much greater tonnage was handled, the average receipt per ton mile was much lower than for April 1920. With the exceptions noted, the decrease in gross for all the roads arose from small decreases in both passenger and freight earnings on the individual roads.

An examination of the total operating expenses shows a substantial decrease. This, of course, is not in proportion to the falling off in traffic, for the reason that the U.S. wage award became effective on May 1, 1920, and therefore applied to April 1921, and also because a smaller traffic cannot be handled at a unit cost as low as can a traffic which is nearer to the maximum capacity of a railway. Less was spent on maintenance of way and structures by all roads except the G.T.R. In maintenance of equipment, the Canadian Government Rys., Canadian Northern and Grand Trunk Pacific spent more in April 1921 than in April 1920, but the Grand Trunk expended 19% less on this account than in 1920, while the C.P.R. cut its 1920 expenditure for maintenance equipment by 38%. Transportation expenses show a substantial increase on all roads except the C.P.R., on which they decreased 5%, indicating its strong operating position and the ability to meet conditions of reduced traffic with reductions in its operating costs. The large increase in transportation expenses on the Grand Trunk Pacific is not at all out of proportion to the increase in business handled, and taking into consideration the wage increases applying in April 1921, it is evident that the additional traffic was handled economically. The low ton mile rate applying to grain and other agricultural products is the chief reason for the increase in the operating ratio. It will be seen that all railways except the C.P.R. had larger operating expenses in April 1921 than in April 1920, but that the decrease in the C.P.R. figures more than compensated for the increase in those for all the

other railways.

For the railways as a whole, the operating expenses decreased a little more than the operating revenues, resulting in a slight improvement in the operating ratio. The figure for the month, 96.17%, is a little better than that for March 1921, when it was 96.64%. Although this improvement is so small as to be unimportant in itself, it nevertheless indicates a trend in the right direction. It must be acknowledged, however, that the C.P.R.'s comparatively low operating ratio influenced the figure for all the railways in a great degree, and in view of the fact that all the Government owned railways except the G.T.R. had an operating ratio much greater than 100, it is evident that the Canadian people are not yet in a position to congratulate themselves in connection with the financial returns of their railways.

In examining the traffic figures, the great falling off in freight business is at once evident. All the lines, except the Grand Trunk Pacific, show a decrease in tonnage handled, indicating perhaps better than anything else the extent to which business activity has been curtailed during the year. For the railways as a whole, the decrease in the number of tons of revenue freight handled was 22%, and the average haul also decreased. Although the average haul on the Canadian Government, Canadian Northern and Grand Trunk Pacific railways increased, the great decrease on the C.P.R., together with the small decrease on the Grand Trunk, more than counterbalanced these increases. Passenger traffic on all railways showed a large decrease also, as did the average passenger journey. The extent to which this may be accounted for by the 10% increase in fares, which remained in effect during April 1921, is problematical, but it is likely that this falling off in passenger business is due to the causes mentioned above. The great decrease in freight business, and is a logical result of the general economic situation.

The number of tons of freight handled one mile, for all railways, decreased 26% from that handled in April 1920. The number of freight train miles decreased but 22%, indicating that the tonnage handled had to be carried in smaller train loads, this being borne out by the figures for freight train loading, which show a reduction of 8%. It is worthy of note that the C.P.R., which suffered a decrease in revenue freight ton mileage of 38%, was able to reduce its freight train mileage 32%, as a result of its established traffic movement and strong operating position.

Passengers carried one mile decreased by 19% for all roads. Passenger train mileage decreased only 3%. Scheduled trains must be run, whether they are carrying to 100% capacity, or only 50%. It is evident that the cost of operating them does not vary materially. It is evident that this large decrease in passenger traffic means a large loss to the railways, and it is a loss which cannot be obviated to any extent by any increase in operating efficiency. The figures given in the table

for passenger car miles and average number of passengers carried per passenger train mile, further illustrate this important feature of railway operation.

The figures showing averages per mile of road operated further demonstrate the falling off in traffic which the railways have experienced, and show a smaller operating revenue per mile of road operated, despite increases in freight and passenger rates. The decrease in operating expenses per mile of road operated would be more encouraging if these expenses supplied transportation for the volume of traffic which was handled in April 1921, but with increased wages, material prices which were still relatively high, and higher unit costs of operation due to reduced traffic, a better performance would be difficult to secure.

While the increased rates on freight traffic compensated for the falling off in business, it is evident, on examining the passenger train mile figures, that the decrease in passenger business was not compensated for by the increased fares. Although the Canadian Government and Canadian Northern railways showed small increases in passenger train mile earnings, these were more than wiped out by the decreases suffered by the C.P.R., G.T.R., and Grand Trunk Pacific.

The disadvantage under which a railway is placed when it experiences a falling off in traffic is also shown by the figures for freight car loading. Not only does the revenue freight handled in each train tend to decrease, but the same is true of the revenue freight per car load. The average car loading for April 1920 was 24.6 tons, and for April 1921, it was but 23.7 tons.

The ratio of the payroll to total operating revenue, and to total operating expenses, decreased somewhat, although not materially. It is still a great deal higher than in pre-war years, but for all railways, as between April 1920 and April 1921, is evidence that the rate increases have served to compensate for wage increases, the more so since the tendency of a decrease in traffic is to increase the ratio of the payroll to revenue, despite rigid economies and reductions in the operating forces. The fact of the ratio of the payroll to revenues and expenses having shown a slight decrease, would also indicate that reductions in material costs and other items of expenses, had not begun to make themselves felt to an appreciable degree up to the end of April.

The last two figures serve to show clearly the effect of the freight and passenger rate increases which were granted by the Board of Railway Commissioners, effective Sept. 13, 1920. The increase in freight rates amounted, on the average, to 29.9%, and the increase in passenger rates and rates for associated services, to 11%, as between the two months.

The Wabash Rd. does not own any lines in Canada, but operates over 245.40 miles leased from the G.T.R. Its figures, which are not included in the table on page 482, owing to want of room, show some extraordinary changes. In operat-

ing revenues freight increased from \$191,574.95 in April 1920 to \$507,918.27 in 1921, passenger increased from \$11,010.59 to \$19,521.32; express decreased from \$13,765.11 to \$2,602 and the total revenue increased from \$219,072.84 to \$539,505.66. The total operating expenses increased from \$32,077.58 to \$421,199.17, a net operating deficit of \$101,698.74 was charged to net operating revenue of \$118,396.49 and the ratio of operating expenses was reduced from 146.42% to 78.06%.

Corrections for Railway Statistics Figures.

In the table of Steam Operating Revenues, Expenses and Statistics for February, published in Canadian Railway and Marine World for August, on pg. 403, under the heading "Average per passenger and mixed train mile," the passenger receipts for the Canadian Northern Ry. System were given as \$9.88 for Feb. 1921, and \$9.68 for Feb. 1920, while the average passenger receipts for all railways in Canada for Feb. 1921 were only \$1.49 and for Feb. 1920 \$1.44. Our attention having been called to the discrepancy, we took the matter up with the Dominion Statistician, who furnished the figures, and who has advised us that an error was made in the location of the decimal point, and that the correct figures for the Canadian Northern for Feb. 1921 are \$0.988 and Feb. 1920 \$0.968. The average passenger receipts per passenger and mixed train miles for the Canadian Government Rys. for March 1921 were \$128, instead of \$2.81, as stated in the Bureau of Statistics' original report.

Toronto, Hamilton & Buffalo Railway's Annual Report.

Following are extracts from the directors' report for the calendar year 1920. The report covers the operation of mileage as follows: Main line 79.88 miles; Branches 20.07 miles; lines operated under trackage rights 4.36 miles; total road operated 104.31 miles.

There was no change in the capital stock during the year, the amount authorized being \$5,500,000 and the amount outstanding remaining at \$4,512,500.00. The funded debt Dec. 31, 1919, was \$5,805,000.00. It has been decreased by payments, of 14th and 15th installments, on equipment trust notes of \$150,000.00 making the total funded debt at Dec. 31, 1920, \$5,655,000.00.

The total operating revenues were \$3,229,725.98, an increase over the previous year of \$728,809.20. Freight revenue totaled \$2,273,899.41, an increase of \$534,251.78, due to some extent to the increase in freight rates on merchandise, that became effective Sept. 13, 1920, and to a material increase in the volume of certain commodities handled, particularly bituminous coal. Passenger revenue totaled \$645,559.40, an increase of \$64,129.29, due in considerable part to the 20% increase in passenger rates that became effective Sept. 13, 1920. Express revenue totaled \$47,423.64, an increase of \$19,113.64, caused by increased rates and increased business. Switching revenue totaled \$157,307.36, an increase of \$63,148.12. This increase is the result of increased rates and a greater volume of business. Demurrage revenue totaled \$58,370.90, an increase of \$40,137.90. This increase represents an increase in

the demurrage rates of from 60c to 90c a day effective March 1, 1920, and a further increase from 90c to \$1 a day effective Nov. 1, 1920. Dining and buffet revenue totaled \$32,190.15, an increase of \$2,336.19 due to increase in passenger traffic. Operating expenses totaled \$2,757,917.52, an increase of \$368,019.76 and equalled 73.56% of operating revenues. This is 6.69% less than the operating ratio of 1919.

The fluctuations in operating expenses by groups were as follows: Maintenance of way and structures, increase \$83,551.01; maintenance of equipment, increase \$82,665.17; traffic expenses, increase \$13,559.45; transportation expenses, increase \$21,253.96; miscellaneous operations, increase \$8,046.10; general expenses, decrease \$60,545.93; net increase \$368,919.76. The increase in operating expenses reflects largely the general increase in wages granted to all classes of labor by the Board of Railway Commissioners, effective May 1, 1920, the increased cost of fuel and the increased cost of material. The decrease of \$60,545.93 in the general expenses group is accounted for by the fact that it was not necessary during 1920 to convert Canadian funds into United States funds with which to pay our obligation in the U.S., because we succeeded in collecting from U.S. railroads sufficient U.S. money to meet our obligations that were incurred in the U.S.

No dividends on outstanding capital stock were declared during the year. A surplus of \$660,195.52 was carried to profit and loss. The charges for road and equipment to Dec. 31, 1919, were \$12,943,745.41; the net additions during 1920 were \$34,369.79, making the total carried to Dec. 31, 1920 \$12,978,115.20.

The steel car ferry boat, Maitland No. 1, owned and operated by the Toronto, Hamilton & Buffalo Navigation Co. commenced operations in the third week of April, and operated continuously to the end of the year. The net income for 1920 amounted to \$27,257.51, an increase of \$20,839.30 over 1919, being 6.81% on the capital stock of the navigation company all of which is owned by the Toronto, Hamilton and Buffalo Ry. Co.

Railway Earnings.

Canadian National Railways.

Following are approximate monthly gross earnings for the Canadian Northern Ry. System and Canadian Government Rys., the latter including the Intercolonial Ry., Prince Edward Island Ry. and various local lines which have been acquired by the Dominion Govt. in the Maritime Provinces and in Quebec, enroute.

	1921	1920
January	\$8,781,830	\$7,267,662
February	6,510,411	6,516,698
March	9,497,740	7,761,236
April	8,164,955	7,937,478
May	7,794,147	8,306,850
June	7,896,548	8,085,488
July	8,837,354	9,063,674
	\$59,121,744	\$54,628,498

Approximate gross earnings for two weeks ended Aug. 14, \$116,681, against \$44,882 for same period 1920.

Canadian Northern Railway System.

Following are approximate monthly gross earnings for the Canadian Northern Railway System:

	1921	1920
January	\$5,094,100	\$4,200,700
February	4,804,300	3,862,300
March	6,119,700	4,887,700
April	4,978,500	4,732,623
May	4,742,200	4,863,500
June	4,988,000	4,863,500
July	5,506,900	5,168,500
	\$35,888,700	\$31,779,923

Following are total operating revenues, total operating expenses, and net operating deficits, for 1921 and 1920, as far as they are available, to date:—

	Revenue	Expenses	Net deficits
	1921	1921	1920
Jan.	\$5,851,229.3	7,538,756	\$1,686,527
Feb.	5,675,782	6,861,337	1,285,555
Mar.	5,812,790	7,646,912	1,834,122
Apr.	4,627,738	6,237,738	1,609,999
May	4,427,984	5,745,052	1,317,068

\$76,661,813 \$33,216,826 \$6,555,013 \$6,745,520

Decr. 4,343,352 4,152,845 190,507

Approximate gross earnings for two weeks ended Aug. 14, \$2,670,500, against \$2,852,100 for same period 1920.

Canadian Government Railways.

Following are total operating revenues, total operating expenses, and net operating deficits, for the Intercolonial, Prince Edward Island, National Transcontinental, and local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government and added to the Canadian Government Rys., as far as they are available to date.

	Revenue	Expenses	Net deficits
	1921	1921	1920
Jan.	\$3,327,304	\$4,347,728	\$820,423
Feb.	3,526,638	4,367,491	\$840,853
Mar.	3,090,144	4,538,904	\$1,448,760
Apr.	3,363,072	3,915,460	\$552,388
May	2,914,973	3,728,949	\$813,976

\$16,927,151 \$20,899,067 \$3,971,916 \$3,747,068

Decr. 1,323,870 1,548,718 224,848

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1921, compared with 1920:—

	Gross	Expenses	Net
	1921	1921	1920
Jan.	\$14,465,430	\$13,824,005	\$641,425
Feb.	12,768,987	11,955,505	\$813,392
Mar.	14,706,727	14,254,818	\$451,909
Apr.	13,761,840	11,125,818	\$2,636,022
May	13,892,045	10,598,493	\$3,293,552
June	14,461,643	11,556,885	\$3,104,758

\$84,055,671 \$71,105,505 \$12,950,166 \$13,221,980

Decr. \$8,001,915 \$9,888,000 \$1,886,085

Approximate gross earnings for July, \$15,263,000, and for two weeks ended Aug. 14, \$74,185,000, against \$16,845,000 and \$7,999,000 for same periods 1920.

Grand Trunk Railway.

Following are total operating revenue and total operating expenses for lines in Canada for 1921, 1920 and 1919, with increases or decreases in totals, as compared with the year 1920, as far as they are available to date:—

	Gross	Expenses	Net revenue or deficit
	1921	1921	1920
Jan.	\$6,187,539	\$6,836,930	\$609,391*

Electric Operation of Trains Wanted by Montreal.—The Montreal City Council requested the administrative commission recently to ask the Board of Railway Commissioners to prevent the railways crossing St. Gabriel and St. Henry Wards from operating their locomotives within the city limits otherwise than by electricity, so as to abate the smoke nuisance.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

31,274. July 15.—Authorizing C.P.R. to take certain lands of D. W. Buchanan and Petrie Mfg. Co., Winnipeg, for spur for Canada Life Assurance.

31,275. July 18.—Ordering that so long as present character of movements exists over crossing of C.P.R. at Deer (MacGregor), Man., the company is relieved from maintaining a signalman there on Sundays.

31,276. July 19.—Approving location and details of plans of G.T.R. station and dwelling at L'An, Ont.

31,277. July 20.—Extending to Dec. 31, time within which G.T.R. extension to siding for Swift Canadian Co., Ottawa, Ont., may be completed.

31,278. July 18.—Ordering that so long as present character of movement exists over crossing of Grand Trunk Pacific Rys. at L'An, Ont., P.R. at L'An, Alta., the companies be relieved from maintaining signalman there on Sundays.

31,279. July 19.—Declaring that for present, C.P.R. crossing mile 1.23, Mimico, Ont., at Toronto Terminals, Ont., is protected to Board's satisfaction.

31,280. July 18.—Relieving G.T.R. and C.P.R. from maintaining signalman on Sundays at crossing at Camrose, Alta., so long as present character of movements exists.

31,281. July 19.—Relieving Canadian National Rys. and Canadian Pacific Rys. from maintaining signalman on Sundays at crossing at Holmfield, Ont., so long as present character of movements exists.

31,282, 31,283. July 20.—Amending order 19,243, and order 21,878, authorizing Canadian National Rys. to cross G.T.R. at grade, in Galt, Ont., and Simcoe, Ont.

31,284. July 20.—Approving Hull Electric Ry. plan extending fence to erected along outgoing platform at Ottawa, Ont.

31,285, 31,286. July 18.—Approving Bell Telephone Co. agreement with Lake Charles Telephone Co., Grey County, Ont., and Brussels, Morris & Grey Municipal Telephone system, Huron County, Ont.

31,287. July 20.—Amending order 31,213, authorizing Ontario Highways Department to divert and widen highway across Toronto, Hamilton & Baiton Rys. lands at Hamilton and Ancaster Road crossing.

31,288. July 20.—Relieving Canadian National Rys. from G.T.R. crossing at Brooklin, Ont., so long as present character of movements over it exists, and approving modifications to interlocking plant there.

31,289. July 21.—Extending to Dec. 31, time within which Grand Trunk Pacific Ry. may complete station between Dominion and Quebec Sts., Prince George, B.C.

31,290. July 21.—Approving Canadian Northern Rys. plan showing bridge renewals, through trust lands over Metcalbridge River, at mile 181.0 from Quebec.

31,291. July 21.—Extending to Aug. 31, time within which Canadian National Rys. may install siding at crossing between St. Lawrence and 17, 21, Range 12, west 2nd meridian, Sask.

31,292. July 21.—Authorizing Canadian Northern Rys. to open for traffic, portion of Grand Trunk Medicine Hat Branch from near Bonar, Alta., mile 0 to 58.5, Sheerness Subdivision.

31,293. July 22.—Declaring that for present, C.P.R. crossing near St. Theres station, Que., is protected to the Board's satisfaction.

31,294, 31,295. July 21.—Approving Belle Telephone Co. agreement with Soulanges Rural Telephone Co., Soulanges and Vaudreuil Counties, Que., and Mississauga River Improvement Co., Alameda District, Ont.

31,296. July 21.—Relieving Grand Trunk Pacific Rys. from maintaining signalman at crossing at Forrest, Man., on Sundays, so long as present character of movements exists.

31,297. July 22.—Ordering Canadian National Rys. to appoint station agent at Mulvill station, Ont.

31,298. July 21.—Extending for 6 months time within which Canadian National Rys. may build siding at ballast pit at s.w. 1/4 Sec. 23, T. 23, Range 27, west 4th meridian, Alta., required under order 30,932.

31,299. July 21.—Extending for 6 months from date, time within which G.T.R. may build spur for Waterville Panel & Veneer Co., Waterville, Que.

31,300. July 21.—Extending to July 31, 1922, time within which interlocking plant may be built at crossing of C.P.R. and G.T.R., Kingston, Ont.

31,301. July 21.—Authorizing Quebec Provincial Roads Department to change location of highway cr. ssing over G.T.R. near Riviere du Loup.

31,302. July 23.—Authorizing C.P.R. to cross, divert and close within right of way limits road, between 1st and 2nd, 1st Sec. 19, T. 27, Range 18, west 3rd meridian, Bassano Eastern Branch, Alta.

31,303, 31,304. July 23.—Approving Bell Telephone Co. and United Telephone Co., Middlesex County, Ont., and Coldwater Municipal Telephone System, Simcoe County, Ont.

31,305. July 23.—Authorizing Fort William Municipal Ry. to operate one-man cars over C.P.R. spur at Syndicate Ave. and lane between Mary and Christina Sts., and operator to see that way is clear before crossing.

31,306. July 25.—Declaring that first public crossing over G.T.R. south of Camperdown, Ont., is protected to Board's satisfaction.

31,307. July 23.—Authorizing C.P.R. to build spur for Canadian Oil Cos. at Lethbridge, Alta.

31,308. July 25.—Extending to Aug. 31, time within which G.T.R. may install automatic bells with wigwag signals at Hagerty St. crossing, Newbury, Ont.

31,309. July 25.—Authorizing C.P.R. to operate over International Transit Co.'s tracks at Cathcart St. Sault Ste. Marie, Ont., without first stop.

31,310. July 27.—Authorizing increases in exchange rentals and charges for service to British Columbia Telephone Co. as set forth in Board's judgment.

31,311. July 26.—Dismissing application of Dominion Agriculture Department on behalf of British Columbia Telephone Co. for suspension of regulation governing partial unloading of earload shipments of fruits and vegetables as provided by Canadian and Dominion Express Cos.' tariffs effective May 1.

31,312. July 27.—Dismissing application of Pointe aux Trembles Ry. for order directing payment of penalty by Canadian Northern Railway Ry. for failure and neglect to comply with orders 21,592 and 29,513, re C.N.R. crossing over Pointe aux Trembles Terminal Ry., and amending order 21,592 re watchmen at interlocking plant.

31,313. July 26.—Dismissing application of Quebec Harbor Commissioners and Quebec Board of Trade for order directing that export rates on grain between Georgian Bay ports and Quebec be placed on same basis as Montreal.

31,314. July 27.—Dismissing application of Winnipeg Grain Exchange for order disallowing tariffs filed with respect to bulk shipments of flax from western points to Port Arthur and Fort William, Ont., and for the same to Fort William over the rate on wheat.

31,315. July 26.—Authorizing C.P.R. to build spur for Boyd Bros., Osceola, Ont.

31,316. July 27.—Authorizing C.P.R. to terminate agreement for building siding for J. H. Clary, at mile 117.5 Parry Sound Subdivision, Ont.

31,317. July 27.—Authorizing C.P.R. to increase rate of 20% in passenger fares, and ordering it to file monthly statements of earnings and expenses.

31,318. July 28.—Dismissing application of Canadian Manufacturers' Association on behalf of Canadian National Rys. for order requiring minimum weight of mixed carloads of office furniture, filing cases, and supplies.

31,319. July 26.—Ordering C.P.R. to build siding capable of handling 4 cars at Center between Stonewall and Balmoral, Alta., by Sept. 15.

31,320, 31,322. July 26.—Approving Belle Telephone Co., Pontiac County, Que.; Roxborough Municipal Telephone System, Stormont and Glenora Counties, Ont.; and The Bell Telephone Co. & East Lambton Telephone Co., Lambton County, Ont.

31,323. July 27.—Approving location of Canadian National Rys. Kamloops-Kelowna line from mile 66 to 69, near Armstrong, B.C.

31,324. July 27.—Reinstating order 28,953, Oct. 27, 1920, authorizing C.P.R. to build siding for Canadian Copper Co. from maintaining signalman at crossing at Copper Cliff, Ont.

31,325. July 27.—Authorizing C.P.R. to build spur for S. Venot, Joliette, Que.

31,326. July 28.—Dismissing application of Hamilton, Ont., for reconsideration of order 26,179, June 26, 1919, re distribution of cost of maintenance of protection at G.T.R. Victoria St. crossing, Thamesville, Ont., and for order to substitute new design for gate system and distributing cost of maintenance.

31,327. July 28.—Amending order 23,285, Feb. 10, 1921, declaring that St. George's, of Ardenneville Municipality, Que., maintain as well as build New Monty Road across C.P.R. and Canadian Northern Quebec Rys.

31,328. July 27.—Authorizing Canadian National Rys. to build spur for J. N. Hoff, in Montmoulin, P. T., Ont.

31,329. July 28.—Authorizing C.P.R. to cancel stop-off arrangements for freight at Place Victor, Montreal, and at Simcoe St. and Esplanade, Toronto; inspection to be retained in all cases as it now exists, and stop-off for inspection, change of destination, or for orders, to be retained at Outremont and West Toronto, or Lambton, as at present.

31,330. July 27.—Authorizing Canadian National Rys. to cross highway between Secs. 10 and 11, T. 23, Range 17, west 3rd meridian, Sask.

31,331. July 28.—Approving plan of G.T.R. bridge over Y at Burlington Heights, Hamilton, Ont., approved.

31,332. July 30.—Authorizing C.P.R. to reduce train service between Nelson and Slocan City, B.C. from mixed train daily, except Sunday, to mixed train three times a week.

31,333. July 30.—Authorizing Canadian Northern Ry. to open for traffic portion of its Moose Jaw Branch from Maple St. to connection with Grand Trunk Pacific Branch Lines Co.'s track mile 85.6 to 87, Sask.

31,334. July 27.—Authorizing City of Victoria, B.C., to build railway and traffic bascule bridge across portion of Victoria harbor from foot of Victoria St. to land formerly known as Sonchees Indian Reserve.

31,335. July 22.—Dismissing C.P.R. application to remove agent at Belle Isle station, Que.

31,336. July 25.—Authorizing C.P.R. application to remove agent at Lac La Poudre, St. Jean and Piedmont, Que., caretakers to be appointed.

31,339. July 22.—Dismissing C.P.R. application to remove agent at West Brome, Que.

31,340. July 25.—Authorizing C.P.R. to remove agent at Lavallée, Que.

Telegraph, Telephone and Cable Matters.

The Naval Service Department is arranging for the erection of a powerful continuous wave wireless telegraph station near Vancouver, to undertake land work and communicate with distant points up the coast, and to leave the present station at Point Grey to handle shipping business only.

Canadian National Telegraphs have opened offices at Delorme, Manoir Richelieu and Pointe aux Trembles, Que.; Minaki Inn and Wilkar, Ont.; Alberta Beach, Birch River, East Selkirk and Libau, Man.; and Burbank and Horburg, Alta., and have closed the offices at Agnone, Beardmore, Caramat and Fire River, Ont., and St. Martin, Man.

A new radiotelegraph station has been opened at Bull Harbor, Hope Island, Queen Charlotte Sound, B.C., and the Triangle Island radiotelegraph station has been closed. The call sign for the new station is VAG, and it has a normal range of 450 air miles, with transmitter of 480 sparks, and a normal wave length of 600 meters. The hours of service are continuous, and the station is operated for general public correspondence, by the Naval Service Department, with the same charges as obtained at the Triangle Island station.

The Western Union Telegraph Co. is planning the construction of an additional cable laying ship of 6,000 tons displacement, with Diesel-electric drive for propulsion and for cable laying. Specifications are reported to be in the hands of various U.S. shipbuilders for quotations, and it is expected that the order will be placed shortly, unless the prices quoted are prohibitive, in which case it may be built abroad. The main details are as follows, length 86 ft. 324 ft., breadth moulded 32 1/2 ft., depth moulded 25 ft.; gross tons 424, 2,000 shaft h.p., speed 12 knots, register, Lloyd's 100 A1.

Electric Railway Department

Toronto Transportation Commission Fixes Its Basic Fare at Seven Cents.

The Toronto Transportation Commission, at a conference with the City Board of Control, on Aug. 24, announced the fares to be put into effect after midnight on Aug. 31, when the Commission would take over the Toronto Ry. Co.'s lines for the city and operate them, and also operate the Toronto Civic Ry. The new fares are given below, with comparisons of those charged up to Aug. 31 by the Toronto Ry.

Day cash fares, 7c., heretofore 5c.
Day tickets, 4 for 25c., equal to 6¼c. each; 16 for \$1, equal to 6¼c. each; and 50 for \$3, equal to 6c. each; heretofore 6 for 25c. and 15c. for \$1.

Night fares, 15c. cash; heretofore 10c. Books of tickets for night fares will probably be issued, and may reduce the fare to about 12c.

Children, not in arms, and not over 51 in. high, 4c. cash, or 7 tickets for 25c., equal to 3 4/5 c. each; heretofore 3c. cash, or 10 tickets for 25c. Children's night fares same as for adults.

Free transfers as before, hereafter by the Toronto Ry., will be continued.

There will be no limited tickets, which have been sold heretofore by the Toronto Ry. as follows, good on week days from 5.30 to 8 a.m., and from 5 to 6.30 p.m., commonly known as "workmen's tickets," 8 for 25c.; Sunday tickets, good 5.30 a.m. to midnight, also good on week days from 5.30 to 8 a.m. and from 5 to 6.30 p.m., 7 for 25c.

The fares charged heretofore on the Toronto Civic Ry. have been as follows: Cash 2c., tickets, 6 for 10c.; children 1c. Beginning Sept. 1, one fare will cover both the Toronto Ry. Co.'s former lines, and the Toronto Civic Ry., and transfers will be given from one to the other.

In informing the City Board of Control of the new fares on Aug. 24, H. H. Couzens, General Manager, Toronto Transportation Commission, read the following memorandum:—

"These fares are only such as will provide for the necessary operation and maintenance costs, and for such capital and depreciation charges as are involved in the sums already invested and to be invested during the first year. They do not provide for complete rehabilitation of the system, which will be a gradual process. In considering the fares the Commission has been guided by the terms of the special act under which it operates. This act places on the Commission the following special duty, among others: 'To fix such tolls and fares so that the revenue of the Commission shall be sufficient to make all transportation facilities under its control and management self sustaining.'"

"It is clear beyond all doubt that the rate of fare must be such as to provide for all charges including operation, maintenance, renewals, depreciation and interest on the capital invested in the enterprise, as well as the redemptory debt at the maturity of the debentures raised to finance it. Subject to these considerations, the Commission's main aim and object is to furnish at the earliest possible moment an efficient and more adequate service at the lowest possible cost. This will require time and money, as obviously a system which has

been allowed to run down so badly cannot be rebuilt in a short time. Much of the work cannot be done during the winter, which will prevent continuous progress.

"It can be understood that the fares to be charged after Sept. 1 on the unified system have been given during the past few months most careful study by the members of the Commission. Valuable data has been collected from a large number of representative cities in Canada and the United States. Pending the completion of the arbitration proceedings there are many points which cannot be publicly discussed. Otherwise, the Commission, in its capacity as trustee for the public, would be glad to give out the information at its disposal, but a brief summary of some of the important problems may be of interest. The estimates before the Commission fully warrant fares in excess of those in the schedule

in others in order to obtain more efficient and economical operation conditions which will eventually follow. A thorough rehabilitation of the privately owned company's lines is among the first of these labors, and a large portion of the track and buildings will have to be reconstructed. The full benefit of improved service and economical operation will not be obtained until complete rehabilitation and reconstruction has been effected. This work will take a considerable time, particularly as the construction season of 1921 draws to a close so soon after Sept. 1.

"The standard of construction and maintenance in future must be higher, and though this will eventually be in the best interests of the city, it will be a burden at first, until the operating economies attendant on improved facilities can be realized. Deferred maintenance, so long neglected, must be taken care of to avoid danger and permit of proper operation.

"The object which the Commission is striving to attain is to give a more adequate service at the lowest possible cost, and not the least possible service at a fixed price. This will obviously result in increased passenger mileage, which is the unit of operating cost. The significance of this is more apparent when it is understood that operating costs form about 80% of the total of all charges, or nearly 5c. out of the 6c. fare.

"Extensions are required to unify the system, and to give the citizens in districts not now served, the service to which they are clearly entitled. This also involves more passenger mileage with its attendant heavy expenses, and practically no added revenue, as the passengers are carried a greater distance for the single fare. How much greater these distances are the citizens should have plainly in mind. Many statements have been made from time to time, based on existing fares in the city, entirely overlooking the difference between the conditions which now obtain and those which confront the Commission. Some of these have already been alluded to, but perhaps the chief is the fact that the Toronto Ry. Co. has operated almost entirely within the city limits of 1891, which comprises a compact area of less than 16½ square miles. This area is densely populated and more frequently traversed than the remainder of the city, and therefore provides a large revenue at a low operating cost. The Commission will be called on to serve the whole city area, which is 32½ square miles, as against 16½, or practically double that of the old city of 1891. The added area is less densely populated and less heavily travelled. In any event, this is a disadvantage, but with a universal fare, that is, the same charge regardless of distance, there is no compensating advantage.

"The financial side of the problem must be considered.—The Commission has to assume the capital indebtedness of the civic lines, about \$2,400,000. At the same time, with the universal fare, practically all the revenue previously obtained on these lines is lost. This revenue for 1920 was over \$543,000. Even with that revenue these lines did not meet operat-

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.

Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.

President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.

Vice President, Major P. D. Burpee, Manager, Ottawa Electric Railway.

Treasurer, A. Gaboury, Superintendent, Montreal Tramways Company.

Executive Committee, E. F. Coleman, General Manager, Dominion Power and Transmission Co.; H. H. Couzens, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Traction Co.; A. W. McLeimont, Vice President, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Ry., Light & Power Co.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Auditor, H. E. Weyman, Manager, Lewis County Railway.

Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co., Hull, Que.

Official Organ, Canadian Railway and Marine World, Toronto.

adopted, but it has been decided to charge these now fixed with the hope that they may return sufficient revenue to meet all obligations."

Rehabilitation Necessary. — "Citizens will appreciate the fact that it is their own property, and that they must now pay for the repairs which, under the old franchise, were neglected. Out of that neglect arises an enormous share of the outlay that must now be faced. The cost of rehabilitation of the assets to be taken over by the city from the company, many of which might more accurately be termed liabilities, will be a heavy burden, and will involve specially high charges, on account of the work having to be done under traffic, as against a new system being laid down where there would be no interference, and the work could proceed uninterrupted. Prices today are still high, which also tends to increase the cost. Much of the renewal work cannot be postponed, in some cases from the standpoint of safety of the public, and

ing expenses, let alone capital charges, with the most economical and efficient operation and under favorable conditions. The Commission will have to assume the capital indebtedness of lines owned by the city and operated by the company, such as Prince Edward viaduct, etc., and other expenditures incurred, or to be incurred, by the city in the purchase of those portions of the Toronto & York Radial Ry. within the city. These items total substantially \$1,000,000. The same conditions exist in the case of the last mentioned, as previously pointed out, viz., added car mileage without compensating revenue.

"The Commission has to provide interest and sinking fund on all capital expenditure in order to cover the cost of the money raised for financing the enterprise. Depreciation must be provided for unless the future is to be left to the care of itself. This will be a heavy item in the conditions under which the Commission will operate, although the Commission does not purpose to provide sufficient depreciation to renew all the assets at the maturity of the debentures.

"When the foregoing has been digested, the difficulties will be readily admitted, although fuller details would enable these to be more fully appreciated. There is a contention sometimes made, that the percentages and mileage charges paid by the Toronto Ry. Co. to the city, which will not be paid by the Commission, will afford a very large measure of relief. That this relief is only apparent and not real can be seen from the following:—The mileage charges paid by the company to cover the cost of work done by the city in connection with the track allowance averaged over the whole period of the franchise only about one-third of the expenditure incurred by the city for the work done. Under the agreement between the city and the Commission, the latter pays the cost of the extra foundations under the track allowance pavement. Under the agreement between the city and the Commission, the Commission bears the full cost of paving the track allowance where the street pavement is widened. The initial carrying charges on the capital expenditure which will be chargeable to the Commission are bound very greatly to exceed the total annual percentage charges paid by the company, and these capital charges must increase as the new work, which is absolutely necessary, is done. When these two great departments of expenditures are thus carefully considered, it will be found that the scale of fares adopted is a reasonable one, and actually based on the only true reason for charges exacted in a public utility—service at cost."

Children's Fares.—"In fixing the standard of height for children the basis taken was from statistics supplied by the city's Public Health Department and representing the average of 45,000 boys and 43,000 girls. The height adopted represents an age of 10 years or slightly over, which is more liberal to the extent of one year than the provision made in the Toronto Ry. Co.'s franchise. The reason for adopting a limit of height instead of age is to secure a standard that can be readily applied and determined, rather than one which causes friction between parents and conductors, and which tempts children to misstate their age."

Limited Tickets.—"The present limited tickets, which are unusual on this continent, are discontinued. They are contrary

to the spirit of the act under which the Commission operates, as the cost of giving service at these hours is much higher than at other times. They are most prejudicial in their effect on the traffic problem at rush hours, and tend to increase congestion and the consequent discomfort to those using the cars at those hours."

Zone Fares.—"The Commission looked very carefully into the question of zone fares, which are technically and logically correct. In view of experience elsewhere on this continent it did not feel justified in introducing them at present."

The Toronto City Council considered the fares question on Aug. 25 and passed a resolution urging that a straight 5c. or 6c. fare should be tried for a few months. This was followed by a conference between the City Council and the Transportation Commission, after which the following statement was issued:—"The Transportation Commission feels under the necessity of advising the City Council that it is not in a position to comply with the request contained in the resolution. It is advised that to do so would be illegal, but it would prefer to base its

non-compliance upon the fact that it cannot, as a business matter, assent to a course which would inevitably result in a heavy deficit. There can be not the shadow of doubt as to this."

On Aug. 26, the Mayor of Toronto stated that, in consequence of the Transportation Commission's insistence on a 7c. basic fare, he would not sign a bylaw to transfer the railway to the Commission on Sept. 1 and that it would be operated temporarily by the city, under Works Commissioner Harris, at the existing rates of fare, until it could be seen whether they would be sufficient or not. These statements were not accepted generally, at all seriously, but were looked on as the result of one of the Mayor's periodical brainstorms. At the time of writing (Aug. 27) a special meeting of the City Board of Control has been called for Aug. 30 to consider the whole question and it is said that Sir Adam Beck has been asked to attend and give his advice.

On Aug. 27 the Transportation Commission placed on sale at a number of points tickets issued under the new rates of fare.

Electric Railway Freight and Passenger Rates.

Fort William Electric Ry.-Port Arthur Civic Ry.—Under the provisions of an act passed at the Ontario Legislature's last session, Fort William and Port Arthur ratepayers were given power to vote on bylaws authorizing the two electric railways to increase their fares over and above the 5c. authorized by the original act. The voting took place July 27, when bylaws providing for a 7c. fare, which has been collected for some time past, were carried. The votes cast were:—Fort William, 594 for, 363 against; Port Arthur, 813 for, 390 against. The Port Arthur Public Utilities Commission did considerable advertising, advocating the passing of the bylaw, in which the cost of operation was shown to have increased from 14.3c. per car mile in 1916 to 21.98c. in 1920, and the capital charges to have decreased from 10.97c. per car mile in 1916, to 8.85c. per car mile in 1920. Within the same period the car mileage increased from 622,130 miles to 704,643. During the six months ended June 30, with a 7c. fare, the number of passengers carried was 1,637,753, giving a revenue of \$99,286.84, while for the corresponding six months of 1920, when the 5c. fare was in operation, 1,803,678 passengers were carried, giving a revenue of \$88,356.06.

Montreal & Southern Counties Ry.—In referring to the question of fares in connection with a proposed reduction of wages, W. B. Powell, General Manager, is reported to have stated that it is not proposed to reduce fares, as the railway is in a worse condition now than it was two years ago, and it is therefore out of the question to discuss a general reduction of fares.

New Brunswick Power Co.—On account of the saving in the cost of operation of one-man cars on the company's lines in St. John, 20 tickets for \$1 were put on sale Aug. 8. The single cash fare is 10c.

Nipissing Central Ry.—The Board of Railway Commissioners has authorized the following standard passenger tariff of minimum tolls, effective Aug. 8:—Between any point in Haileybury and any

point in New Liskeard or Cobalt, or between Cobalt and Kerr Lake, single fare, 12c.; except that between 11.30 p.m. and 5 a.m. the fare is 24c. Between all points in New Liskeard, 6c. Between all points in Haileybury, 6c. Between any point in Haileybury and any point in New Liskeard or Cobalt, or between Cobalt and Kerr Lake, between 5.30 and 7.30 a.m. and 7 p.m., 21 ride tickets for \$1.20. The tariff issued under this order contains in addition a rate of 21 tickets for \$2.40 available between New Liskeard, Cobalt and intermediate points; and the following rates for school children, tickets being sold only on presentation of principal's certificate, and available only going to and from school; 10 trip tickets for 30c., available between Cobalt and Haileybury; New Liskeard and Haileybury; and Cobalt and Kerr Lake. Canadian Railway and Marine World for May, pg. 266, contained a comparison of the then existing fares with those asked for by the company.

Toronto Transportation Commission.—See separate article, on another page.

Winnipeg Electric Ry.—Winnipeg City Council on July 22 adopted the report of a special sub-committee which had been negotiating a settlement of matters in dispute with the Winnipeg Electric Ry. The settlement puts an end to the controversy as to fares which has been going on for some time, and also to all litigation arising out of the Public Utilities Commissioner's decision, which both parties were appealing to the Privy Council stabilizes the relations between the company and the city authorities, and augurs well for harmony and continued co-operation between the company and the city for the future.

As stated in Canadian Railway and Marine World previously, the Manitoba Public Utilities Commissioner granted the company on three different occasions, higher fares. Exception was taken by the city council to the final order, which was issued Aug. 20, 1920, giving the company a 7c. cash fare, 4 tickets for 25c., seven children tickets for 25c., and abolishing cheap workmen's fares. Holding

that the Commissioner had no jurisdiction to alter fares which were stipulated in the original franchise, the city council went to the Manitoba Appeal Court to have the order set aside. The court's unanimous decision, given April 4, upheld the Commissioner's order, ruling that he had such jurisdiction; whereupon the city council decided to carry its case to the British Privy Council. In the meantime, however, negotiations were opened with the company, the council appointing a special sub-committee to try and effect a settlement of all transportation problems, dealing first with matters regarding which litigation was pending. A. W. McLimont, Vice President and General Manager of the company, and Edward Anderson, K.C., counsel for the company, met the sub-committee in a number of conferences, which resulted in a frank interchange of opinions and the finding of a common ground on which the company and the city could get together, and finally in the drawing up of an agreement as stated.

The agreement declares that the bylaw 543, and contract of June 4, 1892, between the company's predecessor and the city, shall continue to be in full force and virtue, except in regard to fares, which are revised as from Aug. 1, as follows:—Single fare zone cash fare, week days 7c., Sundays 5c. Tickets good at all times, 4 for 25c. Tickets, good week days 6 to 8 a.m., and 5 to 6.30 p.m. and all day Sunday, 9 for 50c. School children tickets, for children under 16 good at all times, 8 for 25c. Either party to the agreement may, between May 1 and 15 in any year, during the term of the agreement, apply to the other party for a variation of the fare schedule, and if an agreement cannot be reached, each party is to appoint an arbitrator, as provided by sec. 22 of bylaw 543, who shall fix "a just and reasonable schedule of fares, having regard among other things to the value of the company's property devoted to transportation purposes." Such new schedule of fares to come into operation on Aug. 1 following. Another section provides that, in so far as the parties have power so to agree, that notwithstanding anything to the contrary, in bylaw 543, any existing agreements varying it and this agreement, shall not be subject to variations or annulment by the Public Utilities Commissioner, but nevertheless the company, if it shall think it necessary to do so, may obtain an order from the Commissioner to change the fares set out in this agreement. The parties agree to join in obtaining legislation to confirm the agreement; both parties agree to withdraw and to discontinue all pending actions as to fares.

Regina Municipal Ry. Matters.—The Regina, Sask., Trades and Labor Council has protested against an alleged discrimination against working men in regard to the use of transfers, and the discontinuance of transfers on the Eleventh Ave. line; and has condemned the operation of one-man cars. In connection with the latter matter it was stated that a 5c. fare would be quite practicable if the two-man operation of cars was resumed. There was some discussion on the transfer matter at a meeting of the City Council recently, at which it was asserted that the transfer system was being abused and that stringent rules had to be adopted to stop it; also that some of the motormen were "bucking" the one-man cars.

Electric Railway Employes' Wages, Working Conditions, Etc.

Calgary Municipal Ry.—As a result of a conference between the employes grievance committee, Superintendent Brown, and the Calgary City Commissioners, an arrangement has been arrived at under which the car barn staff will each be given a day off each week. The conference was called as the result of a proposal of Superintendent Brown to effect a saving in operating cost by the staff working one hour less a day.

Hydro Electric Ry.—Essex Division, Ont.—The employes and the management are still at variance over wages and working conditions. The men have asked an increase of 5c. an hour from the present rates of 45c. for first year men to 50c. an hour for long service men, with an 8-hour day, time and a half for overtime and double pay for Sundays. The management will not concede these terms. The Windsor City Council having expressed its interest in favor of the wages asked, the Secretary of the Hydro Electric Power Commission of Ontario has advised the council that any increase in wages will mean increased fares. Not long ago the sale of 6 tickets for 25c. was dropped, making the fare 5c., and any increase of wages would mean a 6c. fare. Alderman A. Hooper, who is looking after the men's interests on behalf of the international union, has asked for the appointment of a board of local men to adjust the matter, but states that application will be made to the Labor Department for the authorization of a board of conciliation, if the local board is not appointed immediately.

The Montreal & Southern Counties Ry., which is a G.T.R. subsidiary, is reported to have notified its employes that on Sept. 1 the wages of conductors, motormen, trackmen and shopmen will be reduced 10%. The agreement was to expire July 31, and it is stated that it was intended to put a cut in force on Aug. 1, but it was later decided to delay doing so until Sept. 1. It is said that during the past 18 months the men's wages have been increased 41%, the first increase being 28%, and the second 13%. The number of employes affected is 145.

The Montreal Tramways Co.'s employes, as stated in Canadian Railway and Marine World for August, unanimously rejected on Aug. 14 the company's proposal to reduce wages 20% on Aug. 1. The scale payable under the agreement expired July 31, for motormen and conductors was:—First year, 45c. an hour; second year, 50c.; afterwards, 55c. These rates were fixed by a board of conciliation and the proposed 20% cut would bring the wages to approximately what they were prior to July 1, 1920. The matter has been the subject of negotiation between the company and the employes since July 14, and up to the time of writing a definite settlement has not been reached. As a means to a settlement the company offered to make the cut one of 12½% instead of 20%, but declined to enter into any specific contract as to time, and at a meeting of the men on Aug. 1, a proposal was considered favoring the acceptance of a 10% cut, with a contract. The Minister of Labor has been consulted by the men, and a representative of his Department has been in consultation with the parties. On Aug. 4 the men voted on three propositions, viz.:—(1) To accept a reduction in wages of 12½%,

both parties to enter into a contract to remain in effect until Jan. 1, 1922; (2) to accept a reduction of 15%, with a contract to remain in effect until June 30, 1922; (3) to submit the dispute to a board of arbitration. It is stated that the poll gave the following result:—For the first question, 18 votes; second question, 11 votes; third question, 2,220 votes. Following this application was made by the men for a board of conciliation. On Aug. 9 the company issued a notice to the effect that the 12½% reduction was the least it would make, and that it would go into effect on Aug. 16. The new scale as posted fixes conductors and motormen's wages as follows:—First year, 39½c. an hour; second year, 44c.; afterwards, 48c. Employes in charge of one-man cars, 4c. an hour above the regular rate. The men authorized their committee on Aug. 12 to make a further attempt at a settlement, and the matter was under discussion at another meeting on Aug. 17, when the men said they would accept only a 5% reduction, but would take the 12½% reduction pending the decision of a board of conciliation. The employes nominated A. Brossard, K.C., to represent them on a board of conciliation, the company declined to have anything to do with a board, and the Minister of Labor appointed A. P. Frigon to represent the company, and the Labor Department has under consideration the appointment of the third arbitrator.

The New Brunswick Power Co.—The company is reported to be operating an increasing service on its main lines in St. John with non-union men, and it was expected that the cars would be running to West St. John by Aug. 22. The union men formerly in the company's service are interested, either singly or in a company, in the operation of jitney and motor bus services. It was reported Aug. 20 that these services was being given along all the routes operated by the electric railway. Considerable friction is reported to have occurred in connection with the operation of these services, and at a meeting of the St. John City Council in committee Aug. 19 a communication was received from the company protesting against the jitney service being allowed.

Toronto Transportation Commission.—The question of wages to be paid to the conductors and motormen of the Toronto Civic Ry. and the Toronto Ry., when they come under the Commission's control on Sept. 1 was the subject of negotiation early in August. The Toronto Civic Ry. men have been getting about 6c. an hour higher pay, but the Toronto Ry. employes are said to have rather more favorable working conditions. After several conferences, it was arranged on Aug. 7 that the rates of wages paid by the Toronto Ry., viz., 55c. an hour for the first 3 months; 57½c. for the next 9 months, and 60c. afterwards, will prevail from Sept. 1, 1921, to March 31, 1922, on all the Commission's lines. One-man car operators are to get 5c. an hour extra. Time and a quarter is to be paid on Sundays, and time and a half on holidays, and overtime, but no overtime is to be work on Sundays or holidays.

Chas. Tait, a former Canadian Ex. Co. employee at Montreal, died at Toronto, Aug. 22. He retired in 1913 after 40 years with the company.

B.C. Electric Railway and the Change in the Rule of the Road.

The British Columbia Electric Railway is rapidly changing its cars, preparatory to the change in the rule of the road at the end of this year. At the end of July about 160 cars had been remodeled, and fitted with doors on the right hand side. By means of standardized parts, work has gone ahead rapidly on each type of car. Altogether in the City of Vancouver there are 235 cars to be changed, of which 40 are double-end and the rest single-end. The plan of working is to prepare steps and doors on the right hand side, but to board them up temporarily. When the change is made these boards will be taken off, and gates and doors on the left hand side fastened, an operation requiring only 15 minutes for each car. In the course of time the doors and gates on the left hand side will be removed and that side of the car enclosed. Some 15 cars are removed from service at present and they were immediately turned over to the stripping gangs. The work is being done at the Prior St. shops, room having been made available by the laying of five additional tracks on the second story of the Mt. Pleasant barn. It is not expected that all the cars can be adapted before the change is made, but it will be possible to use double end cars on the right hand side, with only a slight inconvenience. No changes are necessary on interurban cars. New Westminster and North Vancouver are operated entirely with double end cars, some of which are standard for right hand operation. Track work will not be begun on any scale until next year, and in the meantime it is probable that electric switches will be temporarily disconnected, and spring switches will be blocked up with pieces of wood, to allow operation in a contrary direction. Some 33 cross-overs must be taken out and replaced, but this will also be done next year. Among the other details changing the location of interurban stations where they are located at the side of level crossings, and where they are required to be on the near side; changing snow sweepers for the winter and changing overhead construction at curves. Considerable attention will have to be given to operating conditions when the change is made. Confusion is sure to arise, due to changing the stopping places. Traffic is expected to be slowed down in order to cut down inconvenience to a minimum, the change will probably be made on a Sunday, when traffic is at its lowest.

British Columbia Electric Ry.'s Vancouver Franchise.—No definite conclusion has been arrived at concerning the proposed service at cost agreement between the B.C.E. Ry. and the City of Vancouver, concerning street railway Vancouver, concerning gas service, when a correspondent wrote us on Aug. 9. The Board of Trade, at a public meeting, went on record as against the agreement and urged that the company be placed under the Dominion Board of Railway Commissioners. A number of large public bodies have expressed their opinion in the same way. Action by the City Council has been delayed owing to the Mayor's illness. A petition has been circulated for the extension of the Broadway Wood line but the company has replied that until a satisfactory franchise can be negotiated, no further capital expense can be made.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	June 1921	June 1920	1921	1920
Gross	\$750,963	\$719,214	\$719,214	\$719,214
Expenses	584,959	565,706	7,032,162	6,259,721
Net	165,948	144,414	2,471,909	2,477,411

Cape Breton Electric Co.—

	June 1921	June 1920	1921	1920
Gross	\$52,195	\$49,174	\$681,900	\$591,448
Expenses	40,135	44,026	500,418	497,974
Net	9,013	5,148	101,252	98,474

Edmonton Radial Ry.—While the Edmonton, Alta., public utilities are reported to have had a surplus of \$13,039 for July, the Edmonton Radial Ry. is stated to have had a deficit of \$5,838 for July, against a deficit of \$19,073 for July 1920.

Regina Municipal Ry.—The increasing deficit on this railway came before the Regina, Sask., City Council, Aug. 16, in the City Auditor's report, which is said to have shown that for the seven months ended July 31, the deficit was \$25,553, compared with an estimated deficit of \$10,000 for the entire year. It was stated that the increased deficit was largely due to decreased traffic.

Toronto Ry., Toronto & York Radial Ry., and allied companies:—

	June 1921	June 1920	1921	1920
Gross	\$1,295,701	\$1,127,239	\$7,483,186	\$7,045,748
Expenses	851,193	757,436	3,178,568	4,650,618
Net	444,508	369,803	2,469,618	2,395,130

The Toronto Ry., Ry.'s annual and special meetings which have been adjourned from time to time since February, were again adjourned, on Aug. 16, until Sept. 30. The reason for the repeated adjournments is that the agreement for the transfer of the company's hydro electric concerns and the Toronto & York Radial Ry. lines to the Hydro Electric Power Commission of Ontario and the City of Toronto have not been finally approved. The draft agreement has been completed, and it is reported that some amendments have been submitted by the H.E.P.C. which are under consideration. The question between the company and the Commission regarding the supply of power for the operation of the Toronto Ry. after Sept. 1, in the event of the agreement to take over the power companies not being completed, is reported to have been settled satisfactorily.

Winnipeg Electric Ry. and allied companies:—

	June 1921	June 1920	1921	1920
Gross	\$468,209	\$407,625	\$2,556,715	\$2,646,742
Expenses	327,475	289,022	2,146,609	1,935,021
Net	118,734	118,603	710,106	710,721

Toronto Transportation Commission Notes.

The Toronto Transportation Commission, which is to operate the Toronto Ry. Co.'s lines, after they are taken over by the city at midnight on Aug. 31, and also the Toronto Civic Ry., has not yet announced its complete staff and may not be able to do so for a short time. In addition to the General Manager, H. H. Couzens, the following officials have been on the staff for some time:—Solicitor, I. S. Fairty; Secretary to General Manager, C. S. Parker; Engineer of Way, A. T. Spencer; Consulting Engineer of Buildings, J. B. Carwell; Corporate Construction Department, A. E. Gibson. P. H. Lazenby, who has been acting as En-

gineer to the Commission, will be through with his special work in a short time.

It is probable that the Toronto Civic Ry. officials will all be absorbed by the Commission, and that D. W. Harvey, the Superintendent and Engineer, will most likely have the most important position next to the General Manager. The other Civic Ry. officials who are expected to be taken over are J. C. Coulthard, Chief Clerk; J. Metcalf, Traffic Manager, and M. Switzer, Master Mechanic.

It appears to be the desire of the Transportation Commission's management to take over as many of the Toronto Ry. officials as places may be available, and who may wish to transfer, but that may be interfered with to some extent, owing to the arbitration as to the price to be paid the company for its property not having been held, and a consequent desire by the Toronto Ry. management to keep some of its officials until it is over. It is expected that W. R. McRae, the Toronto Ry.'s Master Mechanic, will be put in charge of the Commission's rolling stock, shops, etc., and among the others who is anticipated will go over are F. L. Hubbard, Assistant to General Manager; J. H. Forrest, Claim Agent; J. H. Beasley, Purchasing Agent; M. J. Power, Master Car Builder; Jno. McCulloch, Traffic Superintendent, and Neil, Superintendent of Substations. R. J. Fleming, General Manager, will of course remain with the company, also J. C. Grace, Secretary and Treasurer, F. G. Clarke, Chief Engineer, and O. V. Anderson, Engineer of Overhead Construction, who are also officials of the Toronto & Niagara Power Co., will most likely remain with that company, at least until after the "clean up."

The Commission has decided to give an order, subject to the city providing the necessary funds, for 50 motor cars, making the total number ordered 150 motor cars and 60 trailers. They will be built at Preston, Ont., by the Canadian Brill Co. Ltd., which is said to be taking over the Preston Car & Coach Co.'s plant there.

The Commission has the following track construction under way:—Cowell Ave. extension, approximately 2,400 ft. of double track; second track from Gerrard St. to Danforth Ave., approximately 2,900 ft.; extension of tracks on Bloor St. west from Runnymede Road to Jane St., about 2,250 ft.; tracks on James and Albert Sts., to complete city hall loop, connecting line between the Toronto Civic Ry. and the Toronto Ry. at Danforth and Broadview Aves.

The Commission will start a motor bus service on Sept. 1 from Dundas St. along Humboldt Ave., Quebec Ave. and Annette St. to Runnymede Road. The Commission's car tickets will be accepted on the buses, and transfers will be given to and from the street cars.

The Toronto Civic Ry.'s St. Clair car house is being enlarged by the addition of two sheds, each 230 x 44½ ft., to the south, and a building 326 x 44½ ft. to the north, for offices, recreation rooms, locker rooms, lavatories, boiler room and a repair shop. The Danforth car house capacity is to be increased from 12 to 54 cars, and the yard accommodation from 27 to 149 cars.

F. R. Miller, Vice President, Roger Miller & Sons Ltd., contractors, Toronto, and a member of the Toronto Transportation Commission, has also been appointed a member of the Hydro Electric Power Commission of Ontario.

Royal Commission's Report on Proposed Hydro Electric Railways for Ontario.

On July 15, 1920, the Ontario Government appointed a royal commission, with duties defined as follows:—"1. To enquire into and report upon the whole question of hydro electric railways, and all matters which in the opinion of the commissioners are relevant thereto, with particular reference to the matters that are raised by and discussed in the government's statement issued on July 9 (and published in Canadian Railway and Marine World for Aug. 1920). 2. To make such suggestions and recommendations in connection with or arising out of any of the subjects thus indicated as in the opinion of the said commission may be desirable. That for such purposes the said commissioners be authorized and instructed to take such steps for the acquirement of information as may be in their opinion necessary."

The commission as appointed originally consisted of Mr. Justice R. Y. Sutherland, of the Ontario Supreme Court, High Court Division; W. A. Amos, Vice President, United Farmers of Ontario, Palmerston; Fred. Bancroft, a member of the Pattern Makers Union, and a reporter on the Toronto Daily Star; A. F. Macallum, B.A.Sc., C.E., City Commissioner of Works, Ottawa, and T. A. Russell, President Russell Motor Car Co., Toronto. A few days later Mr. Russell declined to act, owing to his position as a motor manufacturer having been criticized, and Eric, General C. H. Mitchell, C.B., C.M.G., D.S.O., LL.D., C.E., Dean of Toronto University's Applied Science Faculty, was appointed in his place. Beginning in July 1920 and ending June 27, 1921, the royal commission held 106 sittings, and on June 30 all the members, except F. Bancroft, signed their report to the Ontario Government. Mr. Bancroft submitting a separate report on Aug. 5. Only one copy of the majority report was signed, and it has not yet been made public in full, but the Government had the findings and recommendations and summaries of some portions of the main report supplied to the press on Aug. 12.

The Recommendations of Four of the Five Commissioners.

"1. The financial condition of electric railways in Ontario and the United States in and prior to 1920 has been so precarious and unsatisfactory, and the outlook for improvement so dubious, and we are of opinion that the construction of the proposed system of electric railways should not, in our judgment, be entered upon unless the evidence of competent operating experts fully justifies the conclusion that they will be self-supporting.

"2. Upon full consideration of the evidence, and the proper weight to be given to the witnesses, we are of the opinion that the proposed electric railways would not be self-supporting.

"3. We are of opinion that the construction of the proposed electric railways, paralleling and competing as they would with the Canadian National Rys. System, would be unwise and economically unsound, and would strike a serious blow at the success of Government ownership.

"4. We are of opinion that, until the Chippawa power scheme, now estimated to cost \$50,000,000 or upward, is completed, and has been in operation for sufficient length of time to be self-supporting, the province would not be justified in endorsing for the construction of an electric railway system at an initial esti-

mated cost of \$45,000,000.

"5. We are of opinion that the endorsement by the province of bonds of the Hydro Electric Power Commission for systems of electric railways in various parts of the province, at the instance of the municipalities concerned, is highly dangerous, and may lead the province into great financial difficulties. The endorsement for one locality would give rise to demands for the like accommodation for other localities, which it will be hard for any government to refuse, and might result in the province being drawn into serious financial liabilities, and we would therefore suggest that government endorsement of such bonds should be discontinued. To the risk involved in accommodation endorsements, it is no answer to say that they are mere matters of form involving no real liability. Individual and corporate experience is to the contrary.

"6. We are of opinion that the expenditure of \$2,000,000 improvement of public highways in the province having been begun, it would be unwise to commence the construction of the electric railways in question until the effect in the improvement of these highways has been ascertained, and the use of them by motor cars and motor trucks, whose competition with electric railways has been found so keen and difficult to meet elsewhere, is made clearly apparent.

"7. We are of opinion that the rapidly increasing debts and financial commitments of the Dominion, province and municipalities have aroused well founded apprehension in the minds of thoughtful citizens, and are a cogent reason against the embarkation at this time in the construction of the contemplated electric railways.

General Matters.—"There are, in addition, some general matters which it may be well to refer to, and deal with, before coming to the main reasons of our report.

"1. It is to be observed that we have under consideration:

"a. A plan or system of electric (or radial) railways, with original and supplemental estimates prepared by the Hydro Electric Power Commission of Ontario for the municipalities interested.

"b. A plan of Bion J. Arnold with substantial changes from the first, and estimates framed in connection therewith, as to which we intend our findings to equally apply.

"c. It has been suggested that if either of, or both, these proposed schemes were found to be financially unfeasible, some different or modified scheme of construction in the territory might be deduced from the evidence. We shall make reference to this later, under the head of 'Alternative Suggestions.'

"2. We had expected to complete our enquiry and make our report much earlier. We think it only fair to say that a considerable part of the delay, and much addition to the total expense, were occasioned by the course followed by the Hydro Electric Power Commission of Ontario, and the Municipal Hydro Electric Railway Association, in connection with the investigation. We in some detail statement setting forth in some detail the progress of the proceedings, by which we think this will be made apparent.

"3. The Hydro Electric Power Commission of Ontario made a fundamental er-

ror when preparing the original estimates, and it was repeated when the supplementary estimates were prepared, in not seeking and securing the assistance of experienced operating men, at all events in so far as operating costs and possible revenues were concerned.

"4. This radial railway enquiry was not one in any sense directed to the administration of hydro power operations by the commission in charge thereof. We are of opinion that the development and sale of power is an essential public utility that rightly tends to monopoly. We share the view that there has been a good measure of success under the Hydro Electric Power Commission in this regard, and that much credit should properly be given to the commissioners and to the officials, particularly to the Chief Engineer, F. A. Gaby.

"5. Admittedly electric railways are of great utility to the people and serve them in a very close and intimate way. The business of electric railway operation is largely a local one and very competitive, different in many respects from that of power supply. While the railway system proposed would be a convenience and of considerable utility and advantage for transportation within the territory, we consider it questionable whether it can, under all existing circumstances, be properly called an essential public utility or real necessity.

"6. One of the things that attracted our attention was the apparent inequalities in the division or apportionment among the municipalities of the capital cost in connection with the proposed system of electric railways. The large amounts allotted to some of the townships which had a comparatively small population to be served and benefited seemed difficult of explanation. This could not well be fully examined into. To the extent that it could, the result is shown in an appendix prepared by Price, Waterhouse & Co. for us, and dealing with the amounts inserted in the bylaws so far as submitted.

"7a. Canada's net debt increased from \$333,996,850.14 in 1914 to \$2,248,868,623.79 in 1920.

"b. Ontario's debt increased from \$50,052,876.57 (direct \$40,450,535.96, indirect \$9,647,340.61) in 1914 to \$159,752,053.73 (direct \$128,191,754.10, indirect \$31,560,299.57) in 1920. On June 15, 1921, this had increased to \$167,082,414.95.

"c. Toronto's net debt increased from \$60,564,385 in 1914 to \$75,452,881 in 1920.

"d. Advances by the province to the Hydro Electric Power Commission—To Oct. 31, 1920, \$66,312,501.10. Advanced in fiscal year 1921 to June 15, \$21,500,000. Total, \$87,812,501.10. A deduction there was appropriated at last session, and still unexpended at June 15, \$15,437,700.00. Grand total, \$103,240,281.10.

"8. Attention was drawn, in the argument before us, to the statement in a letter of Sir Adam Beck to the Prime Minister, with reference to the Port Credit & St. Catharines Ry., that the Hydro Electric Power Commission had issued bonds for \$11,000,000, all of which have been guaranteed by the province. A letter was sent by the Commission to the Attorney General, asking to be furnished with a statement of the moneys the

province had advanced to date on account of the railways under investigation, and the 'extent to which, if any, the bonds mentioned as said to have been thus endorsed by the province, had been pledged, or sold, or raised money thereon.' Some correspondence followed, which is given in an appendix.

"In the correspondence is included a letter of the auditor, G. T. Clarkson, dealing with these expenditures as elsewhere referred to. In appendix 13, the amount thereof, \$1,252,241.11, is given, with particulars. These expenditures have been made, notwithstanding that the question of whether the province would or would not endorse the bonds of the Hydro Electric Power Commission, for the entire scheme, had not yet been determined. It is to be noted, however, that under the late Government an order in council, dated Aug. 8, 1919, had been approved with reference to an issue of bonds from time to time for the amount required for the Port Credit, Hamilton & St. Catharines undertaking. It appears that \$1,200,000 of the issue have been pledged, in connection with such expenditures. In the correspondence a reference is also made to alleged authority for expenditures under a letter of Sir William Hearst, then Premier.

"If our view as to the inadvisability of the province endorsing the bonds for the construction of the project is given effect to, then the question of these expenditures so made will probably arise for consideration. The rights of way could, no doubt, be sold for substantial sums or otherwise dealt with, and the \$300,048.25 for ties, said to have been contracted for before July 21, could no doubt be repaid by sale thereof.

"The Government would have to deal with the question of any deficiency or loss in the whole matter, and also with the disposition to be made of the balance of the bonds, \$10,160,360, which are said to be in the Hydro Electric Power Commission's vaults unsigned and unsealed, and according to the present Government not at present available for expenditure unless it decides to proceed with the work. If, on the other hand, the municipalities, after full consideration of the facts as now disclosed, were to decide to go on with the project themselves, and at their own financial cost and risk, the entire amount of the expenditures could be recouped by them.

Inexperienced Officials.—"In a general way, Mr. Gaby had oversight of the preparation of the entire estimates. The Hydro Electric Power Commission had some experience in construction costs in connection with the London & Port Stanley R. Co. But Mr. Gaby had little practical experience to qualify him to undertake or supervise the preparation of estimates of probable operating costs and anticipated revenues in connection with a system of electric railways. The construction estimates were turned over to T. U. Fairlie, departmental head of railway engineering on the Hydro staff. He seems to be a man of experience. His estimates were prepared with care and detail, and have not been very seriously called in question. The road is designed to be of a high class, and one criticism of it is that the cost of construction per mile is greater than needed or warranted. With reference to the estimates for construction costs, some questions arose on the one hand with reference to the possible failure to make proper allowance for sinking fund, depreciation and the like, and

on the other as to whether in the light of changed conditions their total estimated cost might not be cut down by, say, 15%. A great deal of controversy, however, centered around the estimates for operating expenses and for revenues. The preparation of the estimates for these was entrusted to W. G. Hewson, a young electrical engineer on the Hydro staff, with considerable knowledge in electrical engineering matters, but without the experience which, in our opinion, was necessary to qualify him for the work thus laid on him.

"The proposed radial railways are singular in certain respects. The cost of construction per mile is admittedly high; the operating costs, upon the evidence as a whole, are low, and anticipated revenues are higher than experience has found to be attainable elsewhere except under unusual conditions. The per mile cost of operation is low. The operating ratio is high. Operating men of experience, we were told, could go over a territory, observe the number and location of the population, the character of the industries, and the like, and arrive at a fairly reasonable and reliable estimate of the business which might be expected to be done and the cost of operation of a road of a particular type. The Hydro Electric Power Commission, in fact, seem to have consulted no man of operating experience, but relied mainly on their own officials, who were inexperienced in this particular kind of work. It would appear to us that in setting out to obtain information on which to make estimates for projected electric railways, the natural and proper course would be to obtain the actual business done by the line derived from the roads in the territory in question. It is said, and probably with some truth, that they could not obtain from the existing steam and electric railways operating in the territory anything like full details of the business they were doing, as these would not be disclosed to them if enquiries were made, and thus, so far as they were concerned, they had in this respect to depend on published annual reports, regarded as incomplete.

"The second important source of information would appear to us to be that gained through enquiries as to roads operating elsewhere, either in Canada or the U.S.A., somewhat comparable in territory, population, industries and the like. An attempt appears to have been made to get considerable information of this kind. Information of this kind would seem to us to suggest a warning against too high expectations either as to low operating costs or high expected revenues.

Estimates Questioned.—"The third mode of procedure would be to make enquiries and surveys through the territory in question and thus endeavor to ascertain what was the passenger and freight business which could be reasonably expected to be derived therefrom. This was the course pursued in very considerable detail by the Hydro Electric Power Commission when preparing its original estimates and the results were also carried into its supplementary estimates. The same course seems to have largely been followed by Messrs. Arnold and Seager and their assistants in their investigations commencing in Aug. 1920, and continuing until June 1921. It would seem that only to the extent that such enquiries and investigations would approach the number of actual passengers carried through the territory by existing

transportation facilities, and the actual freight, carload and less than carload, and otherwise, handled by these would the results be likely to be reasonably accurate. If they appeared to go substantially beyond these, some doubt as to their accuracy would, as one would think, arise. Quite early in the investigation it appeared clearly necessary to us to obtain the results of the actual operations of the railways doing business in the territory. We would thus have actual and practical data which the Hydro Commission might not have been in a position to get and which was so desirable. For this reason, we called officials from all of the railways, steam and electric, in the territory, and obtained from them evidence and statistics of their operating costs and revenues. Notwithstanding that this was from then on available, no real attempt seems to have been made by the Hydro Electric Power Commission or the Municipal Hydro Electric Railway Association, or by Messrs. Arnold or Seager, to utilize or apply this evidence. Throughout their reliance seems to have been mainly placed on their enquiries and surveys. This, as it seems to us, was an error. While these surveys were made with care, and submitted in evidence with some detail, the figures resulting appeared to be too high and out of line with experience, and the mode of distribution of the freight between the various points in the system was left a good deal to the haphazard discretion of the people making the surveys.

"Upon the whole evidence, it seems clear that if these railways were constructed, they could not be operated at the cost estimated, and equally clear that the revenues expected could not be secured. One curious feature in this connection is the anticipation that in the first year of operation revenues would be obtained which elsewhere had not been realized, even after long years of operation and building up. We should not overlook to mention that an engineer of prominence, W. S. Murray, was in the spring of 1920 called in by the Hydro Commission to supervise the estimates which they had prepared. He made a written report. One cannot read it without coming to the conclusion that, on its very face, it shows him to have been too eager to endorse and to have made too little investigation to warrant him in doing so. As a curious example of his loose way of putting things, the following illustration from his report may be given: After quoting from a letter of Dr. Reid, Minister of Railways, to Sir Adam Beck, in part as follows: 'As you are of full age and of full legal capacity (the Toronto & Eastern). I think it is better that we do no more construction in the meantime, but of course it is urgent that a decision be arrived at at the earliest possible moment in order that the road be constructed as a feeder for the Canadian National Rys. as originally intended,' he (Murray) proceeds to draw this remarkable conclusion: 'The above is an excellent presentation of the Minister of Railways' point of view regarding the feeder relation of the steam road to the Toronto & Eastern Radial.' He was called as a witness, and it was then found that he had had little or no operating experience, and it was made plain that his examination of the whole project and of the estimates was a cursory and incomplete one, amounting to little more than what he himself termed it, 'a report on a report.' His endorsement of the esti-

mates lent little or no weight thereto.

Advantages Questioned.—The gradual evolution of the project from the early years until even the concluding weeks of the enquiry has introduced and developed various outstanding features. Some of these, brought to attention in the early periods of voting by the municipalities during the war, gave promise at that time of some advantage, especially to those municipalities which considered themselves disadvantageously situated or unfavorably dealt with by the then existing transportation systems. In the latter respects, it is to be noted that the situation has now very considerably changed by the acquisition of the Grand Trunk Ry. and the formation of the Canadian National Rys. by the Dominion Government. An certain other respects, some of the outstanding advantageous features claimed for the proposed system do not now appear to present the insistent appeal or necessity which loom as large as they did several years ago.

"As already indicated, the area proposed to be served by the projected system is not only the most populous or densest in Ontario, but to some extent surrounds and is tributary to the capital city, with its population of over 500,000. It is thus natural that the influence of the city with respect to the project of this new transportation should be very great. Its influence on the existing transportation systems has developed various features which have been, and will continue to be, prominent factors in transportation, especially with the publicly owned and operated steam railways recently acquired by the Dominion Government.

It is a curious fact in this connection, however, that there has, as yet, been no development of suburban service by the steam roads in Toronto, and this has doubtless had a strong influence toward encouraging the project of hydro radials.

"Out in the province, however, and especially in the area concerned, there is a very extensive network of steam and electric railways, and it is doubtful if an area of equal extent, density of population or business and industrial activity in Canada or the U.S. (except perhaps around the exceedingly large centers) is better served in this respect. The total mileage of the existing steam railway routes within the area, shown on the accompanying map, is 800 miles, of which the double trackage is about 200 miles. That of the existing electric railways in the same manner is about 250 miles. The total investment of the steam roads in this region might reach some such amount as \$50,000,000 to \$60,000,000, of which the government owned has perhaps about \$20,000,000 to \$35,000,000. That of the existing electric roads is about \$22,000,000. In view of this large extent of railway service throughout the region, it is for very serious consideration whether and how great a demand there is for additional transportation, even with the advantageous features claimed for this project; and further, if built, to what extent a newly constructed electric system would attract lucrative business and maintain itself in competition with these railways, especially as against the existing Government publicly owned system.

The type of electric railway proposed under the scheme is that of a high class steam road operating between large cities. It is proposed to combine both the main interurban passenger business with the shorter suburban and, in

some instances, local city services, all for passenger transportation, together with freight business doing heavy carload service along with the lighter less than carload business, and express service. These additional classes are proposed to be superimposed upon an interurban railway, thus loading it to a capacity limited only by the practical operating conditions of its various lines. The system is thus intended for the development of a rapid frequent service, for both passengers and freight, of a general and universal kind heretofore unattempted by any electric railway on this continent, or, to use the expressions employed by Mr. Arnold in his testimony, 'This road is entirely different from any other kind of road I know of anywhere in the U.S. . . . such a combination as I have never yet seen anywhere else.' The proposed system as thus outlined is obviously an experiment, there is nothing like it now existing in existence, and wholly to judge of its financial possibilities, or its practical operation. It will be new in type, and new in the field, in close competition with long established railways which have developed slowly through years of constructive operation. It will be dependent solely upon its new features with which to wrest business from these other lines or create new business of its own.

Competition.—"It is to have another distinct feature, new in electric interurban railways in that it is to be constructed and operated under co-operative public ownership. In this respect the proposed railway system is designed to be on similar lines to the publicly owned electric power system which has been operated with success since its early days when it, too, was an experiment. It is here suggested for fuller consideration however, that it may not be a matter of cleavage on public utilities between the development and sale of electric power from a great natural source of supply and the building and operation of electric railways which are entering a purely competitive field. It is questionable whether the experiment of electric interurban or radial railways will be the same kind of experiment and have the same kind of success as has that of electric power and transmission. In the latter case the field was almost entirely new, and the Hydro Commission, by its ownership of generating stations and transmission lines, and by making exclusive contracts with the municipalities for distribution, occupied a position which was largely non-competitive, and, as time has gone on, is almost entirely so. On the other hand, as has already been pointed out, the new electric railway lines will parallel existing lines, and, although proposing to offer frequent and fast service, will nevertheless be in a large field of other transportation systems, and practically every passenger and every pound of freight would be competitive business. The competitive nature of this business was recognized by Mr. Arnold in his evidence when speaking of the feature of the road. He said: 'This would be a public road, the public would be interested in it and would probably be more friendly to it, and again: 'They would ride on it, I believe, more frequently and ship their freight over it more frequently at the same rate than they would over a private road.'

"It may be unnecessary to point out that, however public spirited citizens may be, competition depends more upon

circumstances of time and place and pocket, and it is stated by experienced railway operating men that it is difficult to conceive anything more competitive than the railway business, providing there is more than one serving road. Every passenger will choose according to fares, service and accommodation on which line he will travel, and every shipper, if the decision lies with him, will route his freight according to his preferences at the time, and, as is well known, these preferences are highly varied and changeable by small circumstances. The only business upon which a railway can absolutely depend is traffic to points not served by competitors. On general considerations, we believe that, apart from the more frequent passenger service and in some cases faster light freight service expected to be performed by these electric railways, the special virtue of their being publicly owned and operated, in so far as it is a competitive concern, should not be unduly emphasized."

Construction Standard and Cost.—"Perhaps one of the most outstanding features of the proposed system of electric railways lies in the high standard of construction and cost which it is intended to adopt in their construction. It is proposed to construct the new lines on the standard of heavy permanent steam road construction with 80 lb. to the yard, with very heavy bridges, low grades, easy curves and all the attendant expense that these involve to attain highest speeds, at 60 miles an hour, for passenger trains and to haul long, heavy freight trains with the most powerful electric locomotive equipment obtainable for the purpose. There being expected an ample supply of power from Niagara Falls, all electric transmission and station equipment is provided for on the most generous of all types of cars, and their accommodation provided for in the estimates are expected to be the last word in design and quality. The terminal construction in the large towns and cities, as for instance, in Toronto, is to be of the highest standard of excellence, comparable with or even surpassing that of long established steam roads operating in the same localities, providing for grade separation with bridges and deep cuttings of highly expensive character. It is to be pointed out that, commendable though the best may be, there lies somewhere a line beyond which it may not be economical to go, having in mind the circumstances surrounding the project as to its prospects, the financial conditions of the time and the possibilities of subsequent development along progressive lines. An example of this is familiar to us in the case of the construction of the Grand Trunk Pacific, which, it is now universally acknowledged, was 'over constructed' for the times and the prospective business."

Service and Speed.—"The proposed frequency of passenger service which it is intended to inaugurate is a feature of undoubted advantage in a system of this nature, especially in competition with steam roads in suburban and interurban business, if it is possible to secure it in practice. It is on this basis that the project expects to attract passenger business. On some of the proposed divisions this frequency is expected to result in immediate business, owing to the infrequent, and, in some respects, alleged inadequate steam service now in operation. On through runs such as from Toronto to Hamilton, or Hamilton to St. Catharines, the competition will be keener at

certain times of the day, according to the schedules now in force on the steam roads. For intermediate stops and suburban services the advantages will lie with the frequent electric service, especially if the steam roads still refrain from putting on suburban trains, as, for instance, out from Toronto. Whether the electric passenger service is given in single cars or multiple unit trains, frequency will still be the controlling factor, the additional accommodation being provided only to adjust the service to the riding demand. Operating experts point out that this form of frequency and elasticity of service is one of the characteristics of electric railway operation.

Much is claimed in the project for the feat of high speed which it is expected will prove an attraction in securing business. In very large metropolitan cities, like New York and Chicago, speed in radial and interurban electric lines undoubtedly is an attractive feature in time saving and in competition with steam suburban lines. The tendency of today, especially in large cities, is fast and faster transportation, but it appears to be most popular, and probably necessary, where the regions surrounding such very large cities are of the commuting radius of the daily riding habit into the city is from 40 to 50 miles, and it appears that a ride of about an hour and a quarter, or a half, is the economical limit for such daily riding to business. On the very fast interurban line, the Chicago & North Shore, to Milwaukee, the first hour's run of the limited train with 9 stops carries one out only 21 miles from the terminus in Chicago over the elevated and private right of way roads. The practical limit of the large commuting suburban business on this line is at 35 miles, which distance the fast limited trains make in an hour and 25 minutes, which is at the rate of 24 miles an hour. No such problem exists around Toronto, where the size of the city and its probable growth and business of the near future will not, for a considerable time, demand a suburban riding radius of more than, say, 20 miles, or an hour at the outside (at moderate speed).

"In freight service it is claimed that the proposed system will not only handle carload freight more expeditiously, but will so far beat the present steam road services in less than carload lots that it will approximate to an express service, in other words give an express service at freight rates. It was brought out in evidence that many vexatious delays occurred on the steam railways in handling local freight of this nature, and, while in most cases brought to attention, the extreme delays were unexplainable, it would seem that such delays were most likely occasioned in passing through the yards at large terminals. These difficulties are proposed to be removed, and they doubtless can be to some extent, by an electric road having more elasticity than a steam road in its operation. In ordinary dispatch or express freight there is no doubt that the electric interurban freight operation will be advantageous compared with steam. With the utmost attention to details and to arrangement of freight operation on the shorter runs, it is to be expected, too, that the electric interurban and radial railway will provide a somewhat faster than carload freight service than the steam railway does now, but only on the condition that terminal deliveries are very much improved. It is likely, however, that with

a large volume of such business, when details of handling become more complex, especially when mixing freight operation with passenger business on the longer hauls, the tendency to delay will greatly increase, not only on the lines themselves, but in the yards and terminals."

Cheap Power.—"Obviously the advantage of cheap electric power within the area of the hydro radial project is a consideration. Compared with certain electric railways in the U.S., which require to be operated with steam generated electricity, the advantage lies with Ontario, with its cheap power. It is to be noted, however, that there is a considerable divergence in the prices paid by various roads in the U.S., depending on their location and the price of coal, etc. The evidence has disclosed that, taking in general the largest and most favorably situated roads and ones that in point of business have been at times used to compare with this project, the power costs are such that they would be generally cut from a third to a half if the hydro prices obtainable in Ontario were applied. As various witnesses have shown that the power costs from steam lie between .08 and .09 a car mile in the car operating costs, this means that the saving by using hydro power in this area will be not more than about 2 to 3c. a car mile, or, say 7% of the car operating costs, thus indicating that the factor of their cheaper power, while important, is not so vital as might at first appear.

It has been brought out in evidence that it has been represented at various times, especially in the earlier days of the voting, by the municipalities, that new hydro power supply, or cheaper rates for its supply, would follow the construction and operation of the hydro radials in certain localities. This appears to have been urged by hydro representatives as the outcome, or as being possible, by the construction of the proposed railways. In several instances this may be possible at the fringe of the area supplied by Niagara power, or at a point lying between two power systems, as, for instance, at Pickering, but it must be borne in mind, on the other hand, that practically the whole area concerned is now fully supplied with hydro power from either Niagara or other sources, and this advantage is thus only very local."

Revenue.—"Mr. Arnold's estimate for the main route extending from Bowmanville to Niagara Falls for passenger business, and for freight to nearly \$2,500,000 after deducting all out-of-pocket business. The actual passenger revenue derived by the existing steam roads and the Niagara, St. Catharines & Toronto electric road shows an aggregate local passenger business, exclusive of all through traffic, of nearly \$2,500,000 revenue in 1920. The freight revenue for the steam roads, omitting all through freight business and considering only local business with carload and less than carload lots, in 1920 was slightly over \$1,000,000, whereas that expected by the hydro radials in 1925, according to Mr. Arnold's report, will amount to about \$830,000."

Operating Costs.—"In the light of the foregoing it does not seem reasonable in our opinion to expect that the hydro radials can operate at the exceedingly low costs they anticipate. Not only do these comparisons indicate this, but various witnesses, especially Dr. Herdt and

Mr. Bailey, have given strong opinions which confirm them. While it is difficult to arrive at any figure which should be taken or an amount which should properly be added, so, to Mr. Arnold's estimate of 28.7c, we are of the opinion that this figure should be increased by several cents to bring it into reasonable line with roads actually operating, even considering all the various advantages claimed for the hydro project. As for the original figure in the hydro estimates of 32c, average over the system, if that is to be considered at all, it was based on conditions much more unfavorable than Mr. Arnold's, especially in certain divisions, and, taking these into consideration, we are of the opinion that this figure, too, ought similarly to be increased to a figure at least as high as 35 cents.

"Considering all the features of the expected passenger revenue in combination, we are of opinion that these revenues are too optimistic and not likely to be realized. They are based on populations which do not yet exist and hence are at least uncertain; they are higher than most roads of general similar passenger type now in operation, and are second only to those operating out of very large cities where the riding habit is higher; they expect passenger revenues per capita, especially on the interurban portions, which are in excess of those of some of the best passenger earning roads operating out of cities like Detroit and Cleveland; and they expect to obtain these high earnings within the first year of operation, compared with electric roads which have developed their business over a period of from 10 to 20 years."

"The expected freight revenues are too speculative and, under the conditions in which the hydro radial system will have to operate, cannot be expected to be realized. The method of computing freight tonnage on population does not appear practical, according to the evidence, and it is unwise to depend solely on this method. While the freight survey in the cases where thoroughly made is most useful, it is insufficient in itself, and should be supplemented or supported by actual tonnage moving on other railways in the region. The arbitrary manner in which various guesses were made as to the proportion of freight likely to be secured in each town, seems an unsafe procedure, especially where the margins concerned are so slender as the expectations of this system are shown to be. The expectation that the hydro radial system will suddenly enter each of these cities and towns as a new-comer, and, as it has been said, 'elbow its way' into the local freight business to the extent expected against established roads, appears highly improbable of attainment for some years to come."

Operating Ratio.—"The report then gives the actual operating ratio of several railways in Canada and in the U.S. and says: "From the foregoing table of roads already described and discussed herein, it is obvious that the hydro radial expectations of operating ratio are entirely out of line with existing roads in practical experience."

"It is evident that, considering the foregoing roads, the operating ratio need have no relation to the net earnings, as the operating ratio may vary from 60 to 80%, and yet the earnings may be the same. The point is, that to get an extreme operating ratio, very low (or

very high), there must be corresponding increases in either total revenues high (or low) or operating costs low (or high). In the case of the hydro radial project these extremes in their expectations have already been pointed out, and by comparing the two estimates submitted it is evident that Mr. Arnold realized these inconsistencies when he uniformly raised his operating ratios above the hydro estimates in the estimate. In the opinion of the writer the expectation of realizing such low operating ratios, in either estimate, in the light of experience, raises grave doubts as to the correctness both of the operation expenses, which should doubtless be higher, and secondly anticipated revenues, which doubtless should be lower. If both of these were adjusted to conform more to real experience, the operating ratios would undoubtedly be very much higher and more in line with practice.

"The net income or surplus arising from the operation of the proposed system is, under any circumstances, comparatively small. The hydro estimate submitted in Oct. and Sept. 1920, and against which much criticism was offered for its high revenue, low operating costs and high fixed charges, brought out a net income or surplus of about 10% of the total revenue or 'business done.' Mr. Arnold, in his estimate, submitted in May, 1921, with lower revenue, higher operating costs and slightly lower fixed charges, brought out a net income of only about 3.3% of the total revenue, and when still further reducing this, by reason of the mistake made in the revenue (as explained by Mr. Sager on his recall in evidence before commission on the termination of the enquiry) this is only 2.9%, an exceedingly small margin. It is fully evident that these expected amounts of net income do not present a rosy prospect for financial success even as they stand; a margin of 2.9% of surplus is a very slender inducement on which to embark on a project of such magnitude, and the fact that it is to be owned and operated at the public expense is all the more reason that a conservative margin of surplus should be assured. But it is much more evident from the foregoing discussion of the various factors which produce this small surplus, that even this is impossible of realization, especially when all these factors are taken in conjunction, or are acting simultaneously, as they undoubtedly would. These various factors, comprising cost of construction and fixed charges thereupon, passenger revenue, freight revenue and operating costs, must all work harmoniously or consistently, and it is only by such moderate and rational amounts or rates, in comparison with experience and performance of successful electric railway systems or the experience of men actually operating them, that the probable financial success of this proposed enterprise can be measured.

"With such dangerously small margins of surplus or net income anything may happen. It is true that it is proposed to operate this system at cost, that there are no carrying charges except interest on bonds or other borrowed money, and there are no dividends to pay. But such a slender margin is too slight for reasonable safety, and if the usual rules of business were applied in this to determine whether it is a sound financial project, it is quite obvious that it could not be looked on favorably or endorsed. There are too many

chances for something to happen on the wrong side of the ledger. A 3% decline in the revenue would alone bring a deficit. A 5% increase in operating expenses would alone bring about a deficit. A moderate combination of both of these would easily produce a deficit. Even the increase in operation costs per car mile alone of 1.5c. would produce a deficit.

"To enable the proposed electric railway system to be self-supporting it would have to pay annual carrying charges on construction costs much higher than usual, and would have to operate at annual operating charges much lower than normal, or than other experienced operating managers have been able to, are able to, or expect to be able to, operate at. It would require to secure revenues, passenger and freight, but particularly freight (after allowing all reasonable advantages attributable to the territory, the population, the rapid transit, entrance to Toronto, the element of cheaper power, cheaper operation costs per car mile, smaller operating ratio and the like), which experience has shown have not been secured and will not be realized in any territory which can be regarded as at all comparable. It appears to us, in the light of all the evidence, that such expectations could not be realized, and the system, if constructed, could not be operated so as to be self-supporting.

"To sum up, it will be quite clear that the competition with the electric railways of traffic on highways and good roads, particularly that of motors and motor trucks, has grown to be so extensive as to be a factor of great financial importance in considering the projection of any system of railways such as has been proposed for this part of the province.

"The London & Port Stanley Ry. is owned by the City of London and operated by a commission thereof. A rental of \$20,000 a year is charged. It seems clear that if any reasonable estimate were made of the cost of replacing the roadbed, and if interest were charged upon the same, the excess of the said rental would have resulted in the road running at a deficit up to the present."

Alternative Suggestions by the Commissioners.

"The natural question which first arises out of consideration of the projects put forward by both the hydro engineers and B. J. Arnold is whether, if the scheme in its entirety could be self-supporting, can any portion of it be so? A glance at the general project and the various estimates of its five divisions immediately discloses the fact that the system cannot be dismembered. Each division is dependent upon others for both passenger and freight revenue, to make it carry itself within the combination in fact that is the basic principle of the scheme, and one of the main arguments put forward to the municipalities which entered into the project throughout the territory. If it were thought desirable to build the Toronto-St. Catharines division alone, as being a trunk or through line, the fact that according to Mr. Arnold's estimate it was expected to make a surplus in 1925 of \$145,000, might at first make it appear a financial feasibility. It is to be observed, however, that within the revenue included on this line are large amounts expected to be derived from business coming to it off the Hamilton-Galt-

Guelph-Elmira division, the cutting off of which would deprive the Toronto-St. Catharines division of an amount of revenue over twice as much as the surplus shown, while the reduced cost of operation would be only slight by comparison; the high fixed charges would remain almost the same. It is thus evident that taking the most promising divisions of the system, they cannot be found to be as likely to be self-supporting as even the whole system.

"In examining the project from all sides, however, and in viewing the evidence of the various witnesses, the estimates and reports, we are driven to the conclusion that the most obvious alternative scheme of a constructive nature lies in and about the City of Toronto. The whole hydro radial project centers about this city, which is the largest partner in the proposed co-operative scheme of the municipalities. It became apparent too that, inasmuch as the Toronto situation naturally separated itself from the rest of the project out in the province, it should be treated as a purely local problem, and worked out with the view that the City of Toronto should undertake the construction and operation, as a municipal enterprise co-ordinated with the other undertakings of similar nature now in hand. The alternative suggestion crystallizes into a purely radial scheme based on Toronto. The term 'radial,' which has become so definitely attached to the hydro radial railway project, is peculiarly applicable to Toronto and in fact the project as put before us, obviously had its inception as conceived in and about Toronto, because the larger scheme appears to have grown outward from this center.

"This Toronto radial scheme has already had a constructive impetus in the recent negotiation, now believed to be almost consummated, for the acquisition by the city of the three privately owned suburban lines, which are included in the so-called 'clean up' of the power situation in Toronto. These three lines being thrown into the scale are, in our opinion, very instrumental in not only emphasizing the desirability of a purely Toronto radial project, but in making possible the adoption of those portions of the larger hydro radial project which lie in and around Toronto. All of these in combination, three portions of the hydro radial lines within or close to the city, and the three other lines about to be acquired, together can probably be merged into a practical and economical scheme for the project to be operated in conjunction with the City of Toronto street railway system, now also about to be acquired. We consequently suggest this as an alternative scheme. This suggested scheme embraces first the use of that portion of the Toronto Eastern Ry. within the city which, in Mr. Arnold's report, is called the rapid transit suburban section, about 6 miles long, out as far as the Danforth Valley crossing. This section, according to Mr. Arnold, if operated independently of the city (i.e., as a hydro road), would produce a very good revenue from suburban and local sources; owned and operated by the city as a part of its city system, it should be even more remunerative. The Toronto Suburban Ry. to Guelph, while still remaining under public ownership of the Dominion, would have, as brought out in evidence, a great advantage, if given access for its interurban cars from Guelph, and also from Weston and Woodbridge, direct or by transfer, down the center of the city. Such a connection is

proposed under the plans of the radial project and if this short section were built by the City of Keel, Str. down the Humber valley to Sunnyside, it would provide the means desired, and at the same time enable the city street railway system to have a rapid transit line around the western part of the city similar to that already suggested for the eastern side. That portion of the Toronto-St. Catharines line as proposed within the city limits could be made immediately useful as forming the desired entrance to the city from the west. This would permit access to Bay St., for cars coming in both from the west and the northwest, as already provided for in the hydro plan for this part of the scheme, and would embrace the advantages already pointed out in this respect. It is obvious that the very costly construction proposed in the hydro scheme cannot economically be followed, for such a line as this, within the city, desirable though it may appear, would have the handicap of high fixed charges and would be too heavy to carry. Construction might be arranged so that, as business developed and warranted, improvements could be undertaken. With the acquisition by the city of the Toronto & York Radial Ry.'s Mimico Division, now operating from Sunnyside to Port Credit, a means is already at hand for serving that suburban portion of the city to the west of the Humber River. This we have at present various structural disadvantages, such as curves and wide gauge, and while its location on the highway may require slower speed, as claimed, it has the advantage of offering more convenient access to the residents. Certain changes might be made in location, and other betterments would be required, to place the road on a good working basis comparable with other parts of the Toronto system. It is to his honor, therefore, that the City, even as it now exists, is the best paying suburban railway in the vicinity of Toronto.

"It is here suggested that a logical course to be pursued is the construction of the missing link between Port Credit and Oakville: why this has never yet been done was not clearly brought out. Such an extension would serve not only the suburban locality and the town of Oakville, which is much such as such service, but would permit a through electric car run from Toronto to Hamilton even as the lines now exist; this is without considering the possibility of a shorter line being built from Burlington to Hamilton, when demanded. It is suggested that in order to bring about the Credit and Oakville, which ought to be built of high standard, there might be some co-operation between the City of Toronto, with its Mimico line, when acquired, and the municipalities of Oakville and Port Credit, and possibly the townships concerned. This is deemed by us to be purely a local matter and one in which the province should not be called upon to enter.

"As to the situation in the northern area of the city, which really does not enter into the plans of radial projects as presented to us, it is to be recognized that the T. & Y.R.R. Metropolitan Division, when acquired, must ultimately have provision for getting its interurban cars down to the lower part of the city, in some such manner as already described for the eastern and western entrances. It is suggested that a connecting line might turn off York Mills, and, running in the vicinity of the Don River, connect

at the upper end of the eastern suburban or Mr. Arnold's ('Rapid Transit') line previously described as the city part of the Toronto Eastern route. Such a plan, which we understand has already been under consideration by those concerned with city transportation matters, and which was referred to in evidence, appears to offer a solution for entrance of interurban cars from the north. This, too, is wholly a City of Toronto matter, in conjunction with the adjoining county and townships, and, being local, is also one in which we consider the province should not be called to enter.

"The portions of these three proposed new roads within the city, as described, would, according to Mr. Arnold's report, be by far the best paying portions of the hydro radial system, as they are all favorably situated for local and suburban business. These portions, including some extra lengths outside and adjoining the city, are together expected to earn a substantial passenger revenue of about \$74,500 (see Mr. Arnold's report), or about 21% of the entire passenger revenue expected for the hydro radial system in 1925. To this expected suburban revenue on new lines, there could be added additional passenger revenue and some light freight and express, for instance: on the Eastern Rapid Transit, the interurban passenger and freight business coming down the Metropolitan Division, and the revenue to be derived from any branches which may be built eastward, in conjunction with the city service; to the Toronto Suburban connection by Humber valley and Sunnyside; the similar interurban and freight business arising from the main line, and certain business from the local city lines in West Toronto, and possibly Weston, etc., to the Humber-Sunnyside line main line to Bay St., through the exhibition grounds and the Metropolitan Division, and the way for which is almost all already available to the city; the interurban business of passengers and freight coming in from Port Credit, Oakville, Burlington, and to some extent, from Hamilton. The aggregate revenue that might be thus derived from this combination appears somewhat attractive, especially when it might be operated under one management such as by the Toronto Transportation Commission. The fixed charges for these lines should be much lower in proportion than those rendered necessary by the hydro plans, mainly because of the low purchase price of the lower standard lines to be newly acquired, compared with the proposed cost of the very high standard new lines considered to be necessary by the hydro engineers. The operating costs, as put in by Mr. Arnold, taken in conjunction with those given in evidence for the Toronto & York Radials, would seem to offer a favorable opportunity for economic operation, but more likely if placed under the one unified management of the Toronto Transportation Commission, because revised plans and operative arrangements may be worked out by it whereby both construction and operation costs may be considerably reduced.

"The general question of the terminal station in Toronto is difficult to consider under any circumstances. It was early obvious that the proposal by the hydro engineers to discharge passengers at the waterfront was open to many objections, not the least of which was the lessened revenue to be derived by an inconvenient terminal. It was for this reason that Mr. Arnold proposed the subway termi-

nal, even at its great cost. Until the viaduct, and other large transportation questions, which are purely the affairs of the City of Toronto, are determined, the question of terminal will probably have to be left unsettled.

"In general, such a Toronto radial scheme as it might be worked out, appears to us to offer various advantages. It would supply an opportunity for a truly 'radial' system of railways, operating into the city from a suburban belt up to say 10 or 15 miles radius. This outer district might, as has been suggested, be formed into a greater Toronto district, so as to secure unified transportation control by the municipalities themselves, apart from and free from any outside influence or interference. This system would offer to suburban residents, workmen and others, who desire the advantages of cheaper homes and living expenses, a cheap and convenient transportation system, in the form of a system wholly co-ordinated with the civic system. In this we consider that such commuters would have a better service than if under two separate transportation bodies operating under public ownership principles. It may be pointed out in this connection that remedy may now be more readily found for the so-called deficiencies of the steam railways in suburban business, because under their public ownership and operation, requests and insistence for, say, an extra train morning and evening, where shown to be necessary in the interests of the public, will, doubtless, be given heed to more readily than by a private corporation. The remedy lies with the Board of Railway Commissioners to assist in case of difficulty or reluctance on the part of the railway. Such a unified transportation system would enable the Toronto Transportation Commission to work its own plans in conjunction with the problem of the street railway proper when taken over, and would not put it in the position of being a competitor with another transportation system operating within its area, such as the hydro radials might be. The civic system appears to have difficulties ahead in the ordinary course as to revenue, and Mr. Arnold, from an intimate knowledge of the street railway problems in Toronto, from previous study, gave it as his opinion in his evidence before us, that Toronto residents are probably going to be confronted with a 7c. street railway fare. It does not seem reasonable to set up, especially at this juncture, another transportation system, which would in reality be in competition to some extent at least. The necessary co-operation with the Toronto Harbor Commissioners would doubtless be more advantageously secured by another civic commission, than if a third were included."

The Minority Report of One.

As stated in the introduction, the foregoing reports were signed by all the royal commissioners except F. Bancroft, a member of the Pattern Maker's Union and a reporter on the Toronto Daily Star, who submitted a minority report in which he said: "It is a plain claim from the evidence that the bonds of money to build electric radial railways in Ontario must be guaranteed by the province, if the money is to be raised advantageously, or a radial scheme successfully launched. Radial railways in Ontario designed to engage in interurban, suburban and freight traffic, operating through various municipalities, as is proposed, cannot be successfully financed

without the Government pledging the credit of the people to back such a publicly owned enterprise. I cannot agree with any suggestions made during this investigation that municipalities should finance radials operating through various municipalities without a government guarantee. After listening to a long enquiry, to say the municipalities must finance their own radials without a government guarantee is equivalent to saying radials must not be built. I agree with Mr. Clarkson that the bonds to be issued in respect to any radial line cannot be sold to advantage without the guarantee of the province."

He then made the following recommendations:—"1. That the Government adopt the principle of publicly owned and operated electric radial railways for the province.

"2. That the Government instruct the Hydro Electric Power Commission to proceed at once with negotiations to complete contracts or agreements for the following: the purchase of certain electric railways now owned by the Dominion Government and the traffic arrangements which may enter into the agreements; the purchase of a section of the Grand Trunk Ry. owned by the Dominion Government; to acquire running rights over certain sections of the G.T.R.; entrance into and through Hamilton on the G.T.R. right of way, and other arrangements and agreements which I propose to outline in this report.

"3. Upon the completion of such agreements or contracts, or the choice of alternate plans where a satisfactory agreement or contract is not arrived at, the Hydro Electric Power Commission shall at once place before the Government the result as completed, showing clearly where their expectations were realized and where alternate plans had to be chosen.

"4. Following the action indicated above, the Government shall request the Hydro Electric Power Commission to recommend to the Government the most advantageous and economical time to commence construction of radial railways, and on which division or divisions construction shall begin first. The amount of money already expended on the Toronto & St. Catharines division, with the desire of the municipalities so clearly expressed, would suggest that this division ought to be commenced first and hurried to completion, so that the revenues may be earned as speedily as possible. This division is admittedly the best and most favorable in the whole province.

"5. I strongly recommend to the Government and the Hydro Electric Power Commission that when they are deciding the date for commencement of construction of radial railways very great weight should be given to the present state of unemployment. The Government could help a great deal by commencing work on such a public utility as radial railways, whereby many men could earn wages and the Government obtain return in labor for the money expended.

"6. The Hydro Electric Power Commission should have as a member one of the best and most experienced railway men in operating and traffic who can be found. Such a railway expert would be of great assistance to Chief Engineer Gaby, whose duties in connection with the power projects are onerous now, and upon whom much of the work connected with radials is likely to fall. Legislation may have to be passed to increase

the number of members on the commission, and such an experienced railway authority should be obtained without delay and placed in a position where he could be of greatest assistance to the Hydro Electric Power Commission. This is no reflection upon any of the engineers of the Hydro Commission, but a recommendation to assist the Government and the Commission in a great public project of magnitude.

"7. The utmost co-operation and frankness should govern the relations of the Hydro Electric Power Commission with the Government and the Government with the Hydro Electric Power Commission, in this great public enterprise of publicly owned and operated radial railways. There can be only one purpose, and that is the progress and welfare of this great province. The scheme of radial railways outlined before the royal commission by the Hydro Electric Power Commission was amplified and improved by experts in evidence before the royal commission, will be of immense benefit to the territory involved and the province as a whole, and there is every reason to believe confidently that the radials will be self supporting, providing service at cost to the citizens, and ensuring a healthy development and progress for Ontario, which lack of adequate transportation facilities will seriously obstruct."

Mr. Bancroft says that "one of the great difficulties during the investigation was in finding any radial railways on this continent with the same fundamental characteristics, such as the combination of services to be given with the physical advantages as proposed in the Hydro project." In his opinion, many of the experienced operating experts from the U.S. who gave evidence over the loaded or failed to appreciate thoroughly these very evident differences in the electric railways which they used for comparison.

The minority report also states that "there is no necessity for conflict between the Toronto St. Ry. system and the proposed radial railway"; also that the radial services should be regarded as supplementary to the steam railways, and that it is not likely the steam railways will be harmed by these additional facilities."

Regarding motor truck competition with the proposed radials, Mr. Bancroft says: "The electric interurban railways, thoroughly equipped, will not suffer very much from competition by motor traffic in passengers or freight. If the freight traffic on highways has to pay its fair share for the upkeep of the highways, the electric railway will not be affected by competition of motor trucking."

Mr. Bancroft does not think the financial standing of the province would be prejudiced by guaranteeing the bonds for the construction of the radials, because he considers they will be revenue producers which will carry themselves and in the long run pay for themselves in a period of years by a sinking fund process whereby they will be ultimately owned completely by the people.

He also says: "The enquiry has been an extended one. In one of the appendices attached to the majority report the procedure of the royal commission is outlined. In fairness to the hydro engineers, your commissioners ought to share to some extent the responsibility for the length of the enquiry."

He also states that "the costs of construction have not been questioned by any expert called to give evidence. It

is generally agreed that ample money has been provided to build the railways proposed by the Hydro Commission." Also, that "there cannot be any reasonable criticism of the hydro engineers for changing at various times their estimates of capital cost."

Mr. Bancroft accepts the evidence of Chief Engineer Gaby and other officials of the Hydro Electric Power Commission, supported by B. J. Arnold, consulting engineer. The Chief Engineer's system as a whole will be more than self supporting in the first year, earning a net surplus the first year of operation in 1925.

Premier Drury States the Ontario Government's Position on Hydro Electric Railways.

Mr. Drury, speaking at Glencoe, Ont., on Aug. 14, declared emphatically that the Ontario Government would not guarantee municipal bonds to carry out the Hydro Electric Power Commission of Ontario's projects for a system of hydro electric railways. He said, in part:—

"When we came into power, we found varied and extensive hydro electric enterprises under way. We found, too, a radial policy had been outlined, covering in its proposals a large part of the province, voted on in some instances by the people, and found in connection with this and other hydro electric enterprises a great degree of indefiniteness and misinformation. The Government was not in a position to know definitely what had been going on. The old Government, apparently afraid of the pro-hydro forces, and at the same time, reluctantly supporting the movement, had on the one hand endeavored to impede Sir Adam Beck, and in the other had yielded weakly to demands they should not have considered, and so the matter was more or less in a state of chaos. The enterprises had been entered upon; they were under way. It was necessary, if we were to carry them through to a successful conclusion, that we should know how much money we should raise and the state of affairs. Would a man hesitate to call in a physician to diagnose an illness?" he asked, in his justification of the appointment of the Sutherland Commission. "Frankly, the Government did not feel itself capable of a skilled investigation. We do not hold our abilities to be nothing, but in a matter of this sort, highly technical, we needed the advice of experts, and we appointed the commission."

"While the Sutherland Commission cost the province \$469,754, \$332,249 of that amount should be charged directly against the Hydro Electric Power Commission. When the scheme came before the Sutherland Commission for investigation new information was required to bolster it up. One would think that all this would have been gathered before the Commission's experts pronounced upon it. If we had stopped the presentation of evidence from expert after expert it would have been charged that full evidence had not been brought in.

"I see no objection whatever," he said, "if the municipalities involved want the railway and will vote on it again. I would insist upon that because I think there was a great lack of information, and a seriously small vote taken—if the municipalities want to vote on it again, and will vote on it and will go on with the project without asking the endorsement of the province, I see no reason why

they should not be allowed to go on with it. We are not here to interfere with municipalities, but we are here to guard the rights of the whole province. And so the Government, while deciding not to guarantee the bonds of these enterprises, will not hamper the municipalities if they choose to go on at their own risk, and put up the bonds. We will enact legislation to allow them to do so."

He said that on taking office his Government found itself committed to the Hydro Electric Railway, Essex Division, formerly the Sandwich, Windsor & Amherstburg Ry., and it would carry on the venture as it was in honor bound to do. He continued: "The Government stands committed in the case of the Toronto, Port Credit & St. Catharines line to the extent of \$1,250,000. With the one we cannot go back. With the other, the Toronto, Port Credit, St. Catharines line, there is a possibility that the Government, without dishonor, may be able to draw back. That is a matter that the Government decide. For the present I am not prepared to announce our policy."

Electric Railway Notes.

Guelph, Ont., Radial Ry. has started a Sunday car-service, which is being well patronized.

A section of the Winnipeg Electric Ry. employees are reported to have formed a new union to be known as the Canadian Independent Federation of Street Car Men.

Five Toronto Ry. motormen were arrested Aug. 6, three charged with conspiracy to rob the company's substation on Queen St. east, and the other two as material witnesses.

The Fort William, Ont., Utilities Commission is reported to have notified the Post Office Department that the charge for carrying postmen on the municipal railway will be increased from \$30 to \$60 a year.

An English motor bus of the type recommended for adoption by the Transportation Commission, is being shown at the Canadian National Exhibition at Toronto. It is a double decker, to seat 48 passengers.

Edmonton, Alta., City Council is reported to be about to make another attempt to stop the jitney opposition to the Edmonton Radial Ry. by prohibiting jitneys from operating except on certain specified routes.

The Hydro Electric Power Commission of Ontario is considering the ordering of 30 electric motor cars, 20 for the Hydro Electric Railways, Essex Division, and 10 for the Guelph Radial Ry., for which special designs have been prepared.

Port Arthur, Ont., Civic Ry. started a new car schedule on Aug. 15, which will, it is said, effect a saving of \$8,000 a year in wages, etc. This is being done by curtailing the service on certain lines, lengthening the runs on other lines and dropping four employees.

The London, Ont., Railway Commission's Vice Chairman, P. Pocock, is reported to have announced that the London & Port Stanley Ry. will buy a new electric locomotive in time for next spring's traffic and a steam shovel from the Hydro Electric Power Commission of Ontario, as soon as the Chippawa plant is completed.

Walter Inman, employed by the Winnipeg Electric Ry. Co. in connection

with the handling of fare boxes, was found guilty recently of being concerned in the theft of tickets therefrom, and was sentenced to 23 months imprisonment. Charles Outerson, charged in a similar connection, was arrested at Montreal, while on his way to Europe. The amount involved is stated to be from \$15,000 to \$20,000.

The question as to whether Halifax, N.S., City Council will build its own distributing plant for the power to be bought from the Nova Scotia Government's plant, or hand it over to the Nova Scotia Tramways & Power Co., came before the city's hydro electric committee on Aug. 18. A majority report favors selling the power direct to the company, and a minority report favors distribution by the city, the cost of the necessary plant being estimated at \$88,133.98.

Ernest and Alphonse Fournier created a disturbance on a Montreal Tramways Co. car and assaulted the conductor on Aug. 17. Ernest was charged in the Recorder's court with disturbing the peace, and with breaking two windows in the car, and was fined \$6 and costs for the damage and \$10 and costs for disturbing the peace. Alphonse was fined \$20 and costs for the assault, and \$10 and costs for disturbing the peace. Later in the day both were charged before Judge Casson with endangering the lives of the public, and the hearing was fixed for Aug. 25.

Mainly About Electric Railway People.

E. P. Coleman, General Manager, Dominion Power & Transmission Co., addressed the Hamilton, Ont., Trades and Labor Council on service at cost, on Aug. 5.

C. C. Curtiss, Manager, Cape Breton Electric Co., and W. L. Weston, Manager, Nova Scotia Tramways & Power Co., spoke at the Electrical Association's annual dinner in Halifax, N.S., Aug. 17.

W. J. Radford, Assistant Manager, Toronto Suburban Ry., spent a fortnight's holidays in August, going as far east as Halifax.

Among the Express Companies.

On the Dominion Department of Agriculture's complaint, the Board of Railway Commissioners passed order 31,400, Aug. 17, ordering the American Railway Express Co. to publish and file a tariff, showing a proportional rate of 24c. per 100 lb. on fruits and vegetables, from shipping points on the Toronto, Hamilton & Buffalo Ry., to Hamilton, Ont., applicable to shipments destined beyond Hamilton, to become effective Aug. 27.

William Campbell Muir, who has been appointed Vice-President and General Manager, Canadian National Express Co., was born at Clinton, Ont., Apr. 3, 1886, and entered express service in Nov. 1884, since when he has been, to 1886, clerk, American Ex. Co., Toronto; Apr. 1887 to Feb. 1897, clerk, Dominion Ex. Co., Winnipeg; Feb. 1891 to Oct. 1901, agent, same company, Winnipeg; Apr. 1902 to Jan. 1903, Superintendent, Canadian Northern Ex. Co., Winnipeg; Jan. 1903 to Aug. 1907, Auditor, same company, Winnipeg; Aug. 1907 to July 1910, Superintendent, same company, Winnipeg; July 1910 to Oct. 1919, General Superintendent, same company, Winnipeg; Oct. 1919 to Dec. 1, 1920, General Superin-

tendent, Canadian National Ex. Co., Winnipeg; Dec. 1, 1920 to Sept. 1, 1921, General Manager, Canadian National Ex. Co., Winnipeg.

John Pullen, who has been appointed President, Canadian National Express Co., at Montreal, was born at Shepton Mallet, Eng., Jan. 23, 1863, and entered G.T.R. service in 1877, since when he has been, to 1878, in various capacities in the Assistant General Freight Agent's office, Sherbrooke, Que.; 1878 to 1880, in General Freight Department, Montreal; 1880 to 1890, secretary to Traffic Manager, Chicago, Ill.; 1890 to 1896, Agent, West Shore Fast Freight Line and subsequently Agent, Reading Dispatch, Chicago, Ill.; 1896 to 1897, Division Freight Agent, Stratford, Ont.; 1897 to May 1, 1899, Division Freight Agent, Hamilton, Ont.; May 1, 1899 to May 1, 1900, General Freight Agent, Central Vermont Ry., St. Albans, Vt.; May 1, 1900 to Aug. 14, 1905, General Freight Agent, G.T.R., Montreal; Aug. 14, 1905 to Oct. 2, 1911, Assistant Freight Traffic Manager, G.T.R., Montreal; Oct. 2, 1911 to Sept. 1, 1921, President, Canadian Ex. Co., Montreal.

Street car fares in Vienna, Austria, are reported to have been advanced to 80 times over pre-war rates.

Trackless Trolley Cars, to be operated by one man, are, it is said, to be experimented with in the suburbs of Berlin, Germany, to try and find a solution of the railway problem there.

Chippawa Power Canal.—It is expected that water will be let into the Hydro Electric Power Commission of Ontario's Chippawa power canal early in December, when two of the nine generating units should be ready to be operated.

The British Trade Ship Ltd. has been registered in England, to acquire, or if necessary, build a steamship to be used as a floating exhibition of British products, to visit various ports throughout the world. Amongst those associated with the project are the Duke of Northumberland, Earl Grey, son of a former Governor General of Canada, and Sir George B. Hunter, of Swan, Hunter & Wigham Richardson Ltd., shipbuilders.

Fatality During a Rescue on Lake Ontario.—At the request of a resident of Toronto, Capt. L. A. Demers, Dominion Wreck Commissioner, held an enquiry, Aug. 23, into the death by drowning of a Miss Rita Glass, while attempting to be helped by the master of the Niagara, St. Catharines & Toronto Navigation Co.'s s.s. Dalhousie City, to rescue her and her companion from a canoe which had been carried into the open lake, in July. A complaint had been made that there was undue delay in launching a boat to effect the rescue, and negligence, which caused the overturning of the canoe. After hearing evidence, the Wreck Commissioner found that the ship was fully equipped and manned, the lifeboats were in a condition and position to be utilized promptly, there was no proof of incompetency of the master, Capt. G. W. Blanchard, but he erred unintentionally, and his judgment was faulty in not halting his lifeboat in the water before placing the canoe on his lee; and that the mate, G. Wilson, was dilatory in executing the master's order to prepare the lifeboats, which was swung and lowered in fairly good time. The direct cause of the fatality was the throwing of a rope by the wheelman, without orders, but with the best intentions.

Marine Department

General Shipbuilding Matters Throughout Canada.

Canadian Vickers Ltd., Montreal.—The steel cargo steamship *Topdalsfjord*, an illustration of which is given herewith and which was built and engined completely by this company, for the Norwegian-American Line, was delivered on July 22.

Collingwood Shipbuilding Co., Kings-ton, Ont.—This company, which recently reverted from an 8 hour to a 9 hour day, put into effect, Aug. 3, a working week of 55 hours, 10 hours a day for 5 days and 5 hours on Saturday, accompanied by a decrease in the hourly rate of wages.

Montreal Boatbuilders Ltd., Lachine, Que., has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, to build, deal in and

and 58 in. diar. by 40 in. stroke, 1460 i.h.p. at 85 r.p.m., and supplied with steam by 2 Scotch boilers each 13 ft. 2 in. diar. by 11½ ft. long, under induced draft at 175 lb.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—At a recent meeting of shareholders, the newly elected President outlined the company's position and prospects. The company was formed to build four auxiliary powered schooners, under special aid from the Dominion Government, and the Cholberg shipyard was engaged for the purpose. The yard was closed down in Dec. 1920, on account of the excessive cost of building the first of these ships, named *Simon F. Talmie*. Subsequent negotiations with the Dominion Government led to the tak-

A. Monteith. As mentioned in our last issue, the Dominion Government has decided to take over and complete the ships, and is reported to have given a contract to the Victoria Machinery Depot Co. for the completion and fitting of the *Simon F. Talmie*.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—We were officially advised recently that good progress was being made on the steamship under construction for the C.P.R. British Columbia Coast Service, ordered in Sept. 1920, and it was expected that she would be launched about the last week in August, the christening to be performed by Mrs. J. W. Troup, wife of the Manager, British Columbia Coast Service, C.P.R. The structural steel was about completed, the line shafting in place, the rudder hung, masts stepped, deck houses and wheel house erected, and a large force was completing the joiner work and finishing up the interior generally. The machinery was being manufactured in the builders' shops, and as the engine is over 4,000 h.p., with 4 cranks, it has been a somewhat difficult job, and might possibly delay the launching for a week or so, as it was the intention to have the machinery on board at launching. The four 16 ft. Scotch marine boilers were completed and ready for installation. The name selected for the ship is *Princess Louise*. Her dimensions are,—length b. p. 317 ft., beam 48 ft., depth of hold 18½ ft. She has a cellular double bottom, and the hull is divided by 8 transverse bulkheads. She has a single screw, driven by reciprocating engines, balanced on the Yarrow, Schlick & Tweedie system, for a speed of 16 knots. She is designed for all round service on the coast, and accommodation is arranged for about 200 first class passengers, with carrying capacity for about 600 tons of cargo. The furnaces are being equipped to burn oil fuel, and to be easily convertible for coal burning. She is being built under British Corporation classification, and fully equipped in accordance with Canadian inspection requirements, amply lighted and provided with hot and cold running water in every stateroom, with every modern convenience.

Yarrows Ltd., Victoria, B.C., did the following repair work during July:—British Columbia Cement Co.'s s.s. *Toby*, 194 tons, docked for cleaning, painting and repairs, and fitting new propeller; Canadian Government Merchant Marine s.s. *Canadian Exporter*, 5,498 tons, docked for cleaning, painting and repairs, and s.s. *Canadian Importer* docked for cleaning, painting and repairs; Consolidated Whaling Corporation's steamships *Black*, *Blue*, *Brown* and *Green*, 102 tons each, docked for cleaning, painting and repairs; H. Neave's yacht *Ivanhoe*, docked for cleaning and painting; *Victoria Tug Co.*'s steam tug *Swell*, docked for cleaning, painting, and repairs to propeller.

A London, Eng., press cablegram says: Labor troubles have led Yarrow & Co., Ltd. the Glasgow shipbuilders, to decide to close temporarily from the end of November their works on the Clyde. It is announced that repeated industrial disputes throughout the country have made the cost of shipbuilding excessive and

Steel Cargo Steamship *Topdalsfjord*, 6,400 d.w. tons, built by Canadian Vickers Ltd., for Norwegian interests.

operate ships of every description, wharves, piers, docks, warehouses, etc. The incorporators are W. S. Johnson, A. R. Hall, E. M. Pierce, J. Edwards and R. R. Larabee, Montreal.

Port Arthur Shipbuilding Co., Port Arthur, Ont., is reported to have a contract for overhauling and repairing the s.s. *Francis Widlar*, refloated recently by the Reid Wrecking Co., Sarnia, from the Pancake shoals, Lake Superior, where she stranded in the autumn of 1920. It is stated that the work will take about three months, and will be supervised by John Smith, marine architect, Cleveland, Ohio, on behalf of Mathews Steamship Co., Toronto. The *Francis Widlar* was built at Cleveland, Ohio, in 1904, with steel hull, on the channel system, steel tank top where no wooden ceilings are fitted, 3 watertight and 2 non watertight bulkheads, electric lighting, steam pump wells, and hatches spaced 24 ft. centers. Her dimensions are,—length b. p. 416 ft., breadth 50 ft., depth 28 ft.; tonnage, 4,682 gross, 3,368 net. The propelling machinery consists of triple expansion engines, with cylinders, 22, 35

ing over of the ships under a clause in the agreement, which gave it power to seize them, and to complete or sell as it thought fit. The company declined, on its solicitor's advice, to place the Government in the same position as the company, as regards the Cholberg Shipyard Co., until some policy as to dealing with the shareholders was enunciated. A resolution claiming that the shareholders are entitled to receive from the Government, equal treatment to that accorded to creditors of the Prince Rupert Drydock & Engineering Co., in bankruptcy, and requesting the Government to define its intentions, to "end the suspense and the unnecessary current expense involved in the continuance of our practically hopelessly bankrupt company, and ending at once any embarrassment the Government might be subject to by the continued existence of the company," was discussed, but not adopted. All matters were left in the directors' hands. The board consists of Capt. M. D. Harbord, President; Brig-Gen. R. P. Clark, A. G. Lidgerwood, D. Leeming, P. Borradaile, R. Angus, P. J. Riddell, L. A. Grogan and

impossible to promise dates of delivery. The works will be reopened when conditions enable business to be carried on with any chance of success.

The Dominion Steel Corporation's Shipping Matters

R. M. Wolvin, President, Dominion Steel Corporation, made the following references to shipping matters at the corporation's recent annual meeting:—"The company had various claims against the owners of ships which were under time charter. Several of these claims have been adjusted, and in arriving at these settlements your company has been able to acquire on very satisfactory terms the ownership of the British registered steamships Wabana and Kamouraska, each of 7,500 tons carrying capacity, and the Rose Castle, of 12,000 tons capacity, also under British register, together with a controlling interest in the Norwegian registered steamship Dagbild, of 12,000 tons capacity. These ships were all built especially for your company's ore and coal trade and we are now in possession of a very excellent fleet of ships peculiarly adapted for the carriage of our raw materials. The company now owns 1,000 d.w. tons of ships for its various trades and this adds to the company's profits the earnings that would otherwise go to owners from whom we charter ships, and in addition makes our position secure for ships suitable for our use.

"The claims against the owners of time chartered ships have all been settled, with the exception of a dispute with the owner of one large steamship which has changed hands, and this matter is now in court. Your company has a large claim against Germany for reparations, and should be reimbursed out of the proceeds from the German property held by the Custodian of Alien Property at Ottawa. This claim is mostly in respect of owned and time chartered ships sunk by submarines. In addition we have a large claim against the Imperial Government for losses suffered by your company, due to the requisitioning by the Imperial Government of steamships under time charter to us. It appears to be most difficult to obtain adjustment of these claims and they have not in any way been taken into the company's accounts."

The North Shipping Co. Ltd. and The South Shipping Co. Ltd. have been incorporated under the Dominion Companies Act, with \$500,000 authorized capital each, and offices at Quebec, Que., to transport passengers, mail and merchandise, and do towing and wrecking, etc., in any navigable waters in and bordering on the Dominion, and to and from any foreign port. The incorporators are A. C., and H. P., Hill, C. H. MacLaren, S. A. V. Martin and L. Mattman, Ottawa. It is stated that the companies are subsidiaries of the Clark Steamship Co., which operates steamships on the north and south shores of the St. Lawrence.

Kingston Harbor Works, Jamaica.—It was reported recently that the Jamaica Government planned the improvement of Kingston harbor, at a cost of about £1,000,000. Canadian Railway and Marine World communicated with the Government in connection with the matter, and was informed by the Colonial Secretary, recently, that no definite decision had been arrived at, as to the extent of the work to be undertaken.

Drydock Building at Esquimalt.

As stated in Canadian Railway and Marine World for August, Yarrows Ltd., Victoria, B.C., has a sub contract from the general contractor, the P. Lyall & Sons Construction Co., Montreal, for the cofferdams for the landing wharf and bulkhead at the outside of the entrance to the dock. The main contract calls for 4 timber work cribs, 30 ft. long, and one 100 ft. long, and all 40 ft. wide x 35 ft. high. These cribs are formed of 12 x 12 timbers, with 18 x 18 bottom logs, laid side by side, and all well fastened together with drift bolts, and braced internally with 3 longitudinal keelsons, and 11 cross keelsons, laid timber and spaced so as to cross one another without requiring to be checked. The cross keelsons only have the filling pieces fitted between the intersections to convert them into solid bulkheads. The whole interior of each crib is, in this way, subdivided into cellular spaces, each 8 ft. square. The cribs are all sheathed on the outside with reinforced concrete 24 in. thick on the front and end faces, and 12 in. thick on sides and back. The end timbers of all keelsons are laid to project through the

was able to enter into terms which were of mutual advantage to the general contractors and to itself. In preparing for this work, Yarrows Ltd. had to extend one of its launching ways for some distance, to give the required floating depth, and the top surface of this portion was sheathed with galvanized iron, to better retain the grease between the intervals of launching, and for the period they would be in service.

The building of these cribs was divided into two operations, and two dismountable cradles were built to the grade of the launching ways, and with the top deck set horizontally to receive the bottom platform of the cribs. These cradles were built in convenient sections, to be picked up by an overhead crane from the lower end, and re-assembled again at the upper end, ready to start with the next succeeding crib. The first operation consists of assembling and fastening all the timbers together, and caulking the bottom and lower five seams of the side timbers to ensure water tightness. In this position the crib is controlled over its entire surface by an extra large electric driven crane, with horizontal boom, having a working radius of 80 ft. and capable of lifting up to 6 tons. On the completion of this portion of the work, the cradle is lowered down to its second position, where all the reinforcing irons are set up and the form or shutter boards are fitted up to receive the concrete, which is supplied from a floating concrete mixer, used by the general contractor on other portions of the work. After being concreted, the crib is required, by the terms of the contract, to stand for seven days before being launched. During this interval the necessary ballast is loaded into place and the next crib is being got ready, in the first position, for taking its place as soon as launched.

In addition to the above work, it was arranged for Yarrows Ltd. to manufacture all the bolts and fastenings, and to notch and frame all the timbers required for completing the balance of the cribs, so that the general contractor has only to assemble and fasten them in place when afloat. The work has been mapped out on a regular schedule of 10 days to each operation, so that Yarrows Ltd. portion of the work would occupy 60 days from the start, and in the meanwhile, the general contractor carries on with its portion of the work as each crib is delivered to it. The amount of lumber involved in this contract will be a little over 2,000,000 ft.

A sub contract for the supply of approximately 2,000,000 ft. b.m. of lumber in connection with the construction of the drydock at Skinner Cove, Esquimalt, B.C., is reported to have been given to Canadian Puget Sound Lumber Co., Victoria, B.C.

St. Lawrence Radiotelegraph Stations. A recent notice to mariners issued by the Marine Department, advised the closing of radiotelegraph stations at Point Amour, Rich Point, Cape Ray, Heath Point, Pictou and Three Rivers. The matter was taken up by the Shipping Federation of Canada, which pointed out the value of these stations as aids to navigation, and the Department, after consideration, has given notice that the stations at Point Amour, Rich Point and Three Rivers will be continued in operation until further notice.

Dominion Marine Association.

President, A. A. Wright, President, Tide-water Shipbuilders Ltd., and Vice President and Managing Director, David Shipbuilding & Repairing Co., Montreal.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines Ltd., Montreal.

Second Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Executive Committee, W. E. Burke, H. W. Cowan and T. R. Enderby, Canada Steamship Lines Ltd., Montreal; Yves Dupre, Sincennes McNaughton Line, Ltd., Montreal; A. E. Mathews, Mathews Steamship Co., Toronto; W. L. MacLaren, Alcoma Central Steamship Co., Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; Col. G. F. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, S. Calbarines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transportation Co., Montreal; Hon. L. C. Webster, Webster Steamship Co., Montreal; A. A. Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

outer walls, part way into the concrete, and in this way help, with the iron bars, and anchor bolts, to secure the reinforced concrete to the crib. The specifications called for the lower section of these cribs to be built out of the water, to such a height that they will safely float by themselves, when sheathed with concrete and ballasted, so as to float on an even keel. The succeeding sections of timber, concrete, and ballast, up to the full height of 35 ft., are then added in successive stages while the cribs are afloat.

The building up ashore, and launching of the lower sections of these cribs, appealed to Yarrows Ltd. as being something within the range of its ordinary ship work, and with its yard and all its facilities in the way of plant and skilled labor, in such close proximity to the new drydock, and with water frontage and cranes alongside its building berths, it

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Launching of Steamship.—J. Coughlan & Sons Ltd., Vancouver, B.C., telegraphed Canadian Railway and Marine World Aug. 20 that one of the steel cargo steamships which it is building for Canadian Government Merchant Marine, viz., Canadian Transporter, Marine Department contract 62, builder's yard no. 20, approximately 8,390 d.w. tons, would be launched Aug. 31.

Delivery of Steamship.—We were advised Aug. 15 that the steel cargo steamship Canadian Engineer, Marine Department contract 49, builder's yard no. 11, approximately 3,500 d.w. tons, the contract for which was given the Dominion Shipbuilding & Repair Co., Toronto, and which, consequent on that company's bankruptcy, is being completed by the Collingwood Shipbuilding Co., at Toronto, would probably be delivered to the Marine Department on Aug. 29.

Officers of Steamships.—The following have been appointed, or transferred, in addition to those mentioned in previous issues:—Canadian Challenger, E. Sutherland, chief engineer; Canadian Fisher, R. McKenzie, chief engineer; Canadian Pathfinder, F. Stanley, chief engineer; Canadian Sapper, C. Robertson, chief engineer; Canadian Scottish, J. McIntosh, chief engineer; Canadian Warrior, Capt. F. A. Pines, vice Capt. W. McConechy.

Montreal Sailings.—The following dates have been announced:—

Liverpool Service.—Canadian Ranger, Sept. 10; Canadian Commander, Sept. 30.
London Service.—Canadian Rancher, Sept. 10; Canadian Aviator, Sept. 24.
Glasgow Service.—Canadian Navigator, Sept. 2; Canadian Runner, Sept. 16; Canadian Carrier, Sept. 30.
Cardiff and Swansea Service.—Canadian Squatter, Sept. 2.
Australia and New Zealand Service.—Canadian Planter, Sept. 23.
Rio, Santos, Montevideo and Buenos Aires Service.—Canadian Challenger, Sept. 20.
Barbados, Trinidad and Demerara Service.—Canadian Harvester, Sept. 7.
Nassau, Kingston and Belize Service.—Canadian Fisher, Sept. 6; Canadian Forester, Sept. 27.
St. John's, Nfld. via Charlottetown, P.E.I.—Canadian Sapper, Sept. 9 and 30.

Vancouver Sailings.—The following dates have been announced:—

Australia and New Zealand Service.—Canadian Scottish, Sept. 8, for Auckland, Sydney, Melbourne, Adelaide.
Canadian Traveller, Sept. 30, for Sydney, Melbourne, Auckland, Canadian Highlander, Oct. 25, for Auckland, Sydney, Melbourne.
Oriental Service.—Canadian Winner, Sept. 15, for Yokohama, Shanghai.
India Service.—Canadian Transporter, Oct. 15, for Calcutta.

S. s. Canadian Exporter Lost.—The s. s. Canadian Exporter, bound from Vancouver, B.C., to Portland, Oregon, to complete a cargo for the far east, ran aground on Willapa bar, about 30 miles north of Astoria, Ore., on July 29. The Pacific Salvage Co. dispatched its s.s. Algerine from Victoria, B.C., within an hour of being advised of the disaster, Capt. W. B. Finglass, Assistant Marine Superintendent, Canadian Government Merchant Marine, who went from Vancouver to Victoria, in one of the Canadian Air Board's seaplanes, and Capt. W. H. Logan, of the London Salvage Association, being aboard. The Algerine succeeded in getting the crew off through the heavy surf. The U.S. salvage tug Wallulu, from Astoria, also arrived on the scene of the disaster to co-operate. The grounding was stated to have been due to the ship getting off her course during a dense fog. She was at first reported to be fast aground, but with a

calm sea, it was not anticipated that there would be any difficulty in refloating her. A heavy sea rose later, and on Aug. 2, she broke her back and further salvage became impossible. She was built by J. Coughlan & Sons, Vancouver, B.C., under Marine Department contract 35, builder's yard no. 12, the contract being signed Nov. 22, 1918. The keel was laid Aug. 8, 1919, she was launched Dec. 27, 1919, and was delivered to C.G.M.M. for operation March 6, 1920, since when she has been engaged in general cargo trade between British Columbia, New Zealand and Australia. She cost \$1,659,240 and was of the 2-deck, poop, bridge and forecastle type, Lloyd's classification. Her dimensions were,—length overall 400.1 ft., breadth 52.4 ft.,

pending for six months, and that of the chief officer, N. Campbell, for four months. The court also found that no blame could be imputed to the owner, agent, or equipment of the ship; that she had three compasses, all of which were in good order, last being adjusted at Sydney, N.S., in 1920, and that she was fully supplied with charts and sailing directions.

S.s. Canadian Gunner Damaged.—During a trip to the West Indies towards the end of July, the s.s. Canadian Gunner experienced very heavy weather, and arrived at Barbados with her high pressure cylinder and piston, intermediate pressure cylinder and valve spindle saddle block damaged, also with hold damage consisting of 8' tween deck plates

Canadian Government Merchant Marine s.s. Canadian Exporter, wrecked near Astoria, Oregon, July 29.

depth 28.8 ft.; tonnage, 5,498 gross, 3,385 net, 8,380 d.w. She was screw driven, and equipped with triple expansion engines with cylinders 27, 44 and 73 in. dia. by 48 in. stroke, 266½ h.p., 3,000 i.h.p., for a speed of 11 knots under full load at sea, and was supplied with steam by 3 single ended boilers, each 15½ ft. dia. by 11½ ft. long, at 180 lb.

An investigation was held by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, but though the full report of the finding is not to hand at the time of writing, we are advised that the court found that the accident was caused by the ship not being properly navigated, that soundings had not been taken as they should have been, and that the master and mate were solely to blame for the stranding which led to the breaking up of the ship. The certificate of the master, Capt. W. Bradley, was sus-

buckled and about 150 ft. of ceiling burnt. The cargo from no. 2 hold was discharged, and after survey, was recommended to be sold. The damage sustained did not affect her seaworthiness.

The s.s. Canadian Importer, which left Vancouver, B.C., Aug. 13, for Adelaide, Australia, is reported to have become disabled about Aug. 19. The first word of this is stated to have been received by the s.s. Cordova, by wireless, on Aug. 24, when she immediately proceeded to the point indicated. The report stated that the ship had been abandoned, the crew having taken to the boats, with the engine room flooded, the radiotelegraph apparatus disabled and the ship drifting helplessly. The s.s. Cordova is reported to have taken the crew on board, with the exception of one boatload, two officers and nine men, who are stated to be missing. Another report states that Capt.

Westerlund of the s.s. Cordova wireless the radiotelegraph station at North Head, Wash., Aug. 25, to the effect that the ship was afloat, about 600 miles off San Francisco, with 17 ft. of water in no. 2 hold and engine room, and with a heavy list to starboard. The wireless apparatus is disabled. The message stated that Capt. C. R. Bisette of the s.s. Canadian Importer reported that the ship was in no danger of sinking, the water was not gaining, and he refused to take a tow, preferring to wait the arrival of a tug from Vancouver. A boat with two officers and nine of the crew, is reported to have left the ship, and to be missing, but otherwise, it would appear that the crew remained on board. The s.s. Canadian Importer was built by J. Coughlan & Sons, Vancouver, under Marine Department contract 34, signed Nov. 22, 1918, and cost \$3,659,438. The keel was laid July 25, 1919, the launching took place Dec. 6, 1919, and she was delivered to C.G.M.M. for operation Feb. 5, 1920, and she was immediately placed on the Australasian route, her first sailing taking place Feb. 23. She is a sister ship of the Canadian Exporter, the loss of which is dealt with on the previous page.

The s.s. Canadian Recruit was sunk in collision with the Dominion Coal Co.'s s.s. Maskinonge, Aug. 18, off Stone Pillars, near Quebec. The Canadian Recruit sailed from Levis at 5 p.m., and the Maskinonge left Quebec an hour later, both bound for Sydney, N.S., and the accident occurred about 45 miles below Quebec, during a dense fog. It is stated that an attempt to beach the Canadian Recruit, after the collision, was only partly successful, she having sunk, but is not entirely submerged. She is 3,964 d.w. tons capacity, and cost \$812,620. She was built by Collingwood Shipbuilding Co., Collingwood, Ont., under Marine Department contract 10, of July 5, 1918. The keel was laid Jan. 3, 1919, she was launched May 3, and was delivered June 7, 1919. She sailed for the Atlantic coast early in Dec. 1919, and had considerable trouble with ice, eventually going ashore on Dec. 20 on Vache Reef, near the mouth of the Saguenay River. She remained upright for some months, but on the break up of the ice, the next spring, she shifted, with a considerable list to port, making the salvaging of her somewhat intricate. She was refloated, July 17, 1920, by the Canadian Salvage Association, and towed to Tadoussac Bay, and thence to Lauzon, Que., and subsequently to Montreal, where she was overhauled and reconitioned by Fraser Brace Shipyards, at an approximate cost of \$300,000.

The s.s. Maskinonge was seized at Quebec Aug. 19 on a claim of \$660,000 on behalf of the Dominion Government and action has been entered in the local Admiralty court.

The s.s. Canadian Warrior grounded at the Traverse, near Quebec, Aug. 19, during low tide, and heavy fog. She floated off at high tide and proceeded to Quebec without any apparent damage.

Collingwood Shipbuilding Co., Collingwood, Ont.—See paragraph "Delivery of Steamship" above.

J. Coughlan & Sons Ltd., Vancouver, B.C., is building two steel cargo steamships, Canadian Transporter and Canadian Freighter, for Canadian Government Merchant Marine, Marine Department contracts 62 and 63, builder's yard nos. 20 and 21, each approximately 8,390 d.w. tons, the keels of which were laid

June 6. The company telegraphed Canadian Railway and Marine World Aug. 20 that the Canadian Transporter would be launched Aug. 31.

Davie Shipbuilding & Repairing Co., Lauzon, Que., is building a steel cargo steamship, Canadian Challenger, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, for Canadian Government Merchant Marine, which was launched July 7. The hull left Lauzon Aug. 7 for Three Rivers, Que., where the boilers and machinery are being installed by Tidewater Shipbuilders Ltd. It was expected that this would take about seven weeks, after which the ship will return to Lauzon, and should be completed there in about 10 days.

Halifax Shipyards Ltd., Halifax, N.S. The steel cargo steamship Canadian Cruiser, Marine Department contract 38, builder's yard no. 3, approximately 10,500 d.w. tons, for Canadian Government Merchant Marine, the keel of which was laid Oct. 2, 1919, and which was launched July 9, will probably be delivered by the

Canadian Government Merchant Marine s.s. Canadian Recruit, sunk by collision near Quebec, Aug. 18.

end of September, the completion having been delayed owing to the boilers and engines, which were built by Tidewater Shipbuilders Ltd., at Three Rivers, Que., not having reached Halifax until Aug. 4.

The steel cargo steamship Canadian Constructor, Marine Department contract 39, builder's yard no. 4, approximately 10,500 d.w. tons, which is also being built by this company for Canadian Government Merchant Marine, is expected to be ready for launching early in September, but the launching may be delayed till a few days before the Canadian Cruiser is delivered.

Midland Shipbuilding Co., Midland, Ont. advised us Aug. 11, that the steel cargo steamship Canadian Logger, Marine Department contract 54, builder's yard no. 10, approximately 3,890 d.w. tons, which it is building for Canadian Government Merchant Marine, the keel of which was laid June 9, 1920, and which was launched June 8, 1921, would probably be completed by the end of August, but that this was not at all certain, owing to delay in the delivery of the engines.

The French state-owned fleet of cargo steamships must be sold by Aug. 21, 1923, according to a Paris press dispatch, which says that a law to that effect has been passed.

New Channel Along Port Huron Water Front.

The United States Engineer Office, Detroit, Mich. has issued the following notice to ship masters:—A new channel along the Port Huron water front, St. Clair River, has been completed, thus providing two channels, from about 1,700 ft. above the mouth of Black River to a point just above the international tunnel. This new channel is 7,000 ft. long, 400 ft. wide and 21 ft. deep. Its east bank will be marked by two horizontally striped gas buoys, placed at the ends of the cut, with a red spar midway between; and the west bank will be marked by three black spar buoys directly opposite those marking the east bank.

Pending promulgation of regulations by the U.S. and Dominion Governments, the new, or west, channel, will be known as the American channel, and the old, or east, channel, the Canadian channel, and the following traffic rules will govern. All downbound ships will navigate the American channel. All up-

bound ships will navigate the Canadian channel. Ships under 100 gross tons, and ships making local stops along these routes, are exempt from this rule. The speed of ships navigating these channels shall not exceed 9 miles an hour. In the American channel will be found at times a current of 4 miles or more per hour. By reason of the proximity of this channel to Port Huron wharves and shipping, ship masters should check speed to the lowest safe limit, and be careful to avoid damage or hazard to such shipping.

Great Lakes Levels.—The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level for July as follows:—Superior, 602.59; Michigan and Huron 580.44; St. Clair, 575.62; Erie, 572.90; Ontario, 246.37. Compared with the average July stages for the last ten years Superior was 0.65 ft. above; Michigan and Huron, 0.53 ft. below; Erie, 1.05 ft. above; Ontario, 0.42 ft. below.

The National Sailors' and Firemen's Union of Great Britain has given notice of its intention to withdraw from the National Transport Workers Union, owing to the adoption by the latter of a resolution whereunder it has power to call out on strike any constituent union without a ballot.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out by the Dominion Marine Department. The figure shown in the column headed "Long ton d.w." and which are preceded by an asterisk (*) show the total deadweight capacities as determined after the ships have been completed. The other figures are completed, and the total price will vary accordingly. Where the total price does not agree with the finally ascertained deadweight tons multiplied by the price per ton, the extra amount is for charges from specifications, additional equipment, accommodation, etc.

Canada Steamship Lines' Finances.

A special general meeting of shareholders was called to be held at Montreal, Aug. 29, to consider, and, if found advisable, to repeal bylaw D adopted at a meeting of directors May 5, and ratified at a special general meeting of shareholders May 14, and adjourned to May 23, under which the terms of the directors were authorized to issue an aggregate amount not exceeding \$5,000,000 par value, or its equivalent in sterling at \$4.86 2/3 to the £ of 8% collateral trust debenture stock, and replacing same by bylaw E to authorize the directors to create at such time as they see fit 7% first mortgage collateral bonds or debenture stock or bonds or debenture stock of such other designation and description as they may consider advisable for an aggregate amount not exceeding \$6,000,000 par value, or its equivalent in sterling, and to secure same by mortgage, pledge, hypothecation or transfer of an amount not to exceed \$8,400,000 par value of first mortgage 5% debenture stock or bonds, and to sell same either in whole or in part at such times and upon such terms and conditions as they may consider proper, and to pledge or hypothecate same, or any part thereof, likewise at such times and upon such terms and conditions as they may consider proper, and upon the release of such bonds or debenture stock to replace same or dispose of same and otherwise deal with same as fully as if same had not been already issued, and in connection therewith to enter into a trust deed or deeds with such trustees as may be chosen for such purpose, said trust deed or deeds to contain such provisions with reference

to redemption and sinking fund and such other terms and conditions as the directors may likewise consider proper, as also to execute such pledges, hypothecations or transfers of such first mortgage 5% debenture stock or bonds, or any part thereof, and such other documents and instruments as may be considered proper in connection with the creation and issue of said first mortgage collateral bonds or debenture stock, and the securing of same in accordance with the terms of this bylaw and of the trust deed or deeds to be entered into.

Grounding of Ferry Boat St. Louis.

A fair sample of daily newspaper reporting appeared in the Montreal Star recently, in connection with the grounding of the Lachine Ferry Co.'s ferry St. Louis, near Caughnawaga, on July 27. The report read, in part, as follows:—"Confusion reigned on board, when the 150 passengers, among whom were a number of women and small children, realized that the boat was being rapidly swept down stream by the force of the 25 mile gale, and felt it ground on the rocks. Lifeboats were speedily lowered, when the captain saw it was impossible to back the ferry off, and the men on board rushed to fill them, leaving the women and children to fend for themselves as best they might. A number of the more chivalrous took the situation in hand, as the captain is alleged to have said that he was helpless, and when the lifeboats returned, the women and children were looked after before any more men were permitted to disembark."

Capt. L. A. Demers, Dominion Wreck Commissioner, having made a preliminary investigation into the casualty, de-

cided that it was not necessary to make a formal report, stating that the boat grounded within 75 ft. of the mainland, with the water so shallow that the passengers could wade ashore, and that there was no danger at any time, and no water taken by the boat.

Lumber Shipments by Water from Vancouver to Montreal.

A cargo of lumber reached Montreal from Vancouver recently and the dealer is getting a second cargo. The enterprise will be watched with much interest, because of the high freight rates on the transcontinental rail haul and the price slaughtering of the heavy stocks of lumber held in New Brunswick by foreign governments.

The Vancouver to Montreal shipments will be laid down several dollars a thousand cheaper than rail hauled lumber. That the disadvantage of water shipments is that they are necessary in large quantities and that may have to be carried for some time. There is also the disadvantage that lumber can be secured from the Pacific coast on shorter notice by rail. There seems little doubt, however, that, as the market becomes more stabilized and demand is steadier, a growing proportion of British Columbia lumber for consumption in Quebec and the Maritime Provinces will be carried by water, particularly if the initial shipments are attended by success on a rather dull market in the Montreal district.

The U.S. Shipping Board's Chairman has announced that all the Board's wooden steamships that are not sold before Oct. 1 will be destroyed.

Ships Registered in Canada During May, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Atlantic and Pacific Ocean.

The Dollar Steamship Lines Ltd. has transferred its steamships *Esther Dollar*, *Grace Dollar*, *M. S. Dollar*, and *Robert Dollar* from the British to the Canadian register.

The Canada Line opened its service from Montreal to Rotterdam, Hamburg, Danzig and Libau, Aug. 10, with the sailing of the s.s. *Poland*, formerly of the Red Star Line, from Montreal. Third class passengers only are being carried.

The Donaldson Line s.s. *Cordillera*, s.166 dw. tons, arrived at Montreal, Aug. 2, on her maiden trip. Her dimensions are,—length 419 ft., breadth 54.6 ft., depth 30.3 ft. She has 18 separate refrigeration compartments, in each of which different temperatures can be maintained for carrying meats, fruits, etc.

The mail contracts with the Union Steamship Co. of New Zealand, for the carriage of mails from Vancouver, B.C., San Francisco, Cal., to Auckland, New Zealand, have been renewed for another year. They provide for the dispatch of mails from Auckland every 14 days, except every fourth dispatch, which will be 21 days after the previous one.

The C.P.R. s.s. *Empress of Canada*, under construction by the Fairfield Shipbuilding & Engineering Co., Glasgow, Scotland, for the trans-Pacific service, and which underwent her trials in the Clyde recently, as mentioned in our last issue, will probably have the joinery work completed on the European continent, owing to the continuation of the ship joiners' strike. Similar work on two other steamships for other companies has been done in France.

The C.P.R. is reported to have bought the former German steamship *Tirpitz*, at one time owned by the Hamburg-American Line. It is stated that she is to be converted into an oil burner, reconditioned and brought up to C.P.R. standard, renamed *Empress of China* and placed on the trans-Pacific route. The *Tirpitz* has the following dimensions,—length 588 ft., breadth 75 ft., depth 41½ ft., tonnage 19,300 gross. As announced in a previous issue the name *Empress of China* had been selected for the German s.s. *Kronprinz Friedrich Wilhelm*, bought by the C.P.R. for its trans-Pacific service, but this ship is now reported to have been chartered to the Cunard Line to take the place of the s.s. *Mauretania*, damaged by fire at Southampton, Eng., recently, but it is not announced under what name she will run.

Maritime Provinces and Newfoundland.

The Imperial Oil s.s. *Mina Brea*, bound from Halifax, N.S., to Montreal, with gasoline, developed a leak en route and was beached near Sorel, Que., Aug. 1.

The international fishing schooner races have been fixed to take place off Halifax harbor, commencing Oct. 22. The Canadian elimination trials will commence Oct. 15.

The proposal to transfer the St. John, N.B., harbor properties to the Dominion Government, for management by a commission, was defeated, Aug. 1, by the ratemakers by 2,177 votes to 1,382, a very light vote being polled.

The s.s. *Bethlehem*, with 2,700 tons of coal, from North Sydney, for Montreal,

grounded in the Little Bras d'Or channel, Aug. 12, while being towed out to sea. Part of the cargo had to be lighterage before she could be refloated.

The Hudson's Bay Co. has bought the ship *B. Barry*, owned heretofore by Baxter Barry, Gloucester, Bonavista Bay, Nfld., and has changed her name to *Fort Chesterfield*, with port of registry at St. John's, Nfld. Her gross tonnage is 72.34, register tonnage 56.82.

The s.s. *Ruby L II* went into service on the Margaretsville Steamship Co.'s bay route at the end of July, replacing the s.s. *Ruby L*, which was chartered to the C.P.R. to replace the s.s. *Prince Albert* on the Kingsport-Parrobbro route, while she is under repair, having broken her crank shaft.

Imperial Oil Ltd. received tenders recently for the purchase of its wrecked steamship, *Impero*, as she lay at Imperial, N.S. Tenders were invited for the ship, without boilers, pumps and copper pipe, the removal of that portion of the machinery and storing on shore forming a basis of another tender.

Canada Steamship Lines will, it is reported, increase the first class passenger accommodation on its s.s. *Manoa*, before next season. The operation of this ship between Montreal and Newfoundland, in the combined tourist and freight trade, which was tried for the first time this year, is said to have met with great success.

Tenders were invited recently by Lloyd's agent at Yarmouth, N.S., for the purchase of the wrecked s.s. *City of Colombo*, 6,000 gross tons, with boiler and engine, in their damaged condition, lying ashore near Centerville. Dieby Neck, N.S. Separate tenders were also invited for the cargo presumed to be on board.

The U.S. s.s. *Binghamton* was wrecked towards the end of July on Gannet Rock near Yarmouth, N.S., and was abandoned later to the underwriters. Soon after the wreck the ship took fire and all the woodwork was destroyed. She was bound from Boston, Mass., for a Russian port, with general cargo for relief work.

The lights on Lurcher shoal, off Yarmouth, N.S., in the Bay of Fundy, will be removed from her station about Sept. 15, to undergo repairs. Pending her return, the station will be marked by a gas buoy, painted red, and showing an occulting white light. It is expected that she will be replaced on her station about the middle of October.

The s.s. *Frances Boutilier*, owned by

A. Boutilier, Centerville, N.S., was sold by the sheriff recently, on behalf of the Bank of Nova Scotia, to B. M. Melanson, Port Gilbert, N.S., for \$6,000. It is stated that she cost between \$30,000 and \$40,000, and that the bank had a mortgage on her for \$20,000. She was built at Centerville, N.S., in 1918, and is screw driven by engine of 17 h.p. Her dimensions are,—length 86.5 ft., breadth 15 ft., depth 8.3 ft.; tonnage, 99 gross, 41 net.

The Atlantic Salvage Co.'s steam tug *Musquash* sank off the Cape Breton coast, Aug. 4, while towing a derrick scow from Louisburg to Halifax. The crew were landed safely at St. Esprit. She was built at Garston, Eng., in 1910, and was screw driven, by engine of 89 h.p. Her dimensions were,—length 100.2 ft., breadth 23.1 ft., depth 12 ft.; tonnage, 198 gross, 4 net. She was equipped with wireless telegraph and was owned formerly by Quebec Wrecking & Salvage Co., Montreal.

The s.s. *Lady of Gaspe*, owned by Nova Scotia Steamships Ltd., Halifax, bound from Boston, Mass., for St. John's, Nfld., via Halifax, struck on Thrum Cap Rock, near Halifax harbor, Aug. 8, and became a total loss. She was built at Glasgow, Scotland, in 1877, and, at different times, was named *Restigouche* and *Rathlin*. She was screw driven, by engine of 180 h.p., and had the following dimensions,—length 229.7 ft., breadth 31 ft., depth 16.1 ft.; tonnage, 1,237 gross, 774 net.

The s.s. *Volundia*, with a cargo of coal, ran ashore at Neil's Harbor, N.S., July 29, and was abandoned to the underwriters, whom she was sold for \$300, as she lay, and the cargo of 2,500 tons of coal, for \$35. After she stranded, a diver was sent down, who reported that the bottom was seriously damaged, from the bow to about amidships, and that the position in which she lay made salvage practically impossible. She is a steel cargo steamship of 2,800 d.w. tons, built by Nova Scotia Steel & Coal Co. in 1920, and was owned by Wasieles Steamship Co., a subsidiary of the N.S.S. & C. Co. Her dimensions are,—length 270 ft., breadth 38.2 ft., depth 17.9 ft.; tonnage, 1,789 gross, 1,056 net. She was screw driven by engine of 166 h.p.

Province of Quebec.

It is reported that up to the end of June, approximately 31,000,000 bush of grain were received at Montreal from the head of the lakes for shipment, and

that in July the amount was approximately 10,000,000 bush.

The s.s. Nicaragua, owned formerly by Montreal Transportation Co., which was sunk in the La Salle Causeway, St. Lawrence River, some time ago, is being raised, after which she will be taken to Quebec for examination.

Capt. Luke Whalen of the s.s. Weldon, operating on the Ottawa River, between Aylmer and Chats Falls, was arrested at Kingston, Ont., Aug. 7, at the instance of the Mayor of Aylmer, on a charge of converting to his own use, money received for the operation of the steamboat in the excursion trade, the property of them both, jointly.

The Quebec Board of Trade has taken up the matter of improvement of ferry service between Quebec and Levis. It is stated that the boats used are too small for the amount of traffic that has developed, and it is asked that another boat be added, or the passenger and vehicular traffic divided.

A temporary lightship has been placed northeastward of Prince Shoal, off the mouth of the Saguenay River, replacing the lightship Prince Shoal No. 7, until she is again available for service. Another lightsip, Lower Traverse No. 20, has been placed on the south side of South Traverse, in the River St. Lawrence, below Quebec.

Canada Steamship Lines is reported to have bought the s.s. Narrangansett from the United States Shipping Board. She was operated between New York and Providence, R.I., prior to the war, and was subsequently bought by the U.S. Government for use during the war as a hospital ship. She is now lying at Quebec and it is said that she is to be overhauled and fitted for passenger service on the company's Saguenay Division.

Ontario and the Great Lakes.

Canada Steamship Lines' s.s. Beaver-ton grounded on the Sister Light shoal, near Brockville, Aug. 13.

The Dominion Public Works Department received tenders to Aug. 26, for the construction of a rubble mound extension to the Mission River breakwater at Fort William.

The contract for the construction of the Hamlet bridge, over the Trent Canal, has been given by the Railways and Canada Department, to Randolph MacDonald Co., Toronto.

Canada Steamship Lines' s.s. City of Hamilton, which went aground at Point Iroquois, in the St. Lawrence River, July 13, was refloated towards the end of the month, the company's steam tug Mary P. Hall being sunk in 13 ft. of water during the salvage operations.

The Knapp roller boat, a freak invention, built about 25 years ago by Polson Iron Works Ltd., and which has been lumbering the Toronto water front for many years, is to be scrapped. The machinery was removed some time ago. It is stated that her construction cost about \$30,000.

Canada Steamship Lines' s.s. Rapids King, which has replaced the s.s. Rapids King on the St. Lawrence rapids route, was overhauled and reconditioned at Sorel recently. The damage sustained by the Rapids King in grounding on Barnharts Island recently was comparatively trifling.

The Alfred C. Jackson Steamship Ser-

vise, which was planning to operate a steamship service between Detroit, Windsor and Montreal, is reported to be negotiating for the acquisition of a Canadian registered ship, to run between Windsor and Montreal, as, on account of the coasting regulations, the operation of a U.S. ship between Canadian ports is prohibited. It is intended to run U.S. ships direct from Detroit to Montreal.

The Fort Erie Ferry Co. applied to the Fort Erie council recently for increases in rates for ferry service varying from 100 to 300%, and was refused. A further application has been made for authority to increase fares and rates by about 10%, including automobile traffic, but it is reported that the council has decided not to permit any increase. The matter has been placed before the Public Works Department, and auditors have been sent from Ottawa to examine the company's books, to see whether an increase would be justified or not.

The steam tug Strathogie arrived at Montreal recently from Great Britain, for the Dominion Towing & Wrecking Co., Fort William. She was built in England about three years ago, for ice-breaking service in the Baltic Sea, and will, it is stated, be used on ice work in Thunder Bay during the forthcoming winter. Her dimensions are given as follows,—length over all 130 ft., beam 26 ft. She is equipped with compound engine, with cylinders 16 and 43 in. diam. by 30 in. stroke, 1,200 h.p. While en route from Montreal, she was utilized in releasing the Geo. Hall Coal Co.'s s.s. Lehigh, which grounded on Wolfe Island, Aug. 17.

The Queen Victoria Niagara Falls Park Commission was reported, in Canadian Railway and Marine World for August, to be considering the operation of passenger steamships between Toronto, Niagara-on-the-Lake, and Queenston, in the summer excursion trade. We are officially advised that the Commission is studying carefully every feature that will add to the people's enjoyment, and that will further develop the district under its charge, and that will facilitate the public taking advantage of the same at the lowest possible cost, but that whether it will enlarge its activities to the extent of establishing a steamship service remains to be determined in the future, no decision having been arrived at.

The s.s. H. N. Jex, owned by J. F. Sowards, Kingston, bound from Oswego, N.Y., to Kingston, with coal, sank near Long Point, Lake Ontario, Aug. 16, the crew being rescued by the Geo. Hall Coal Co.'s s.s. Lehigh, which subsequently ran ashore at Wolfe Island. The H. N. Jex, formerly Frontenac, was built at Cleveland, Ohio, in 1868, and rebuilt there in 1909. She was of the well deck type, with wooden hull with steel arches, windlass between decks, with no efficient bulkhead abaft same, bow sheathed for operation in ice, and equipped with electric light. Her dimensions were,—length b.p. 169.4 ft., breadth 26.6 ft., depth 17.5 ft., tonnage, 420 gross, 301 net. She was equipped with Steeple compound engine with cylinders 18 and 38 in. diam. by 36 in. stroke, 475 i.h.p., supplied with steam by a Scotch boiler 11 x 12 ft. at 150 lb.

The George Hall Coal Co. of Canada Ltd. has bought the s.s. Ignifer in England and has transferred her to the Canadian register. She was owned formerly by Gas Light & Coke Co., Westminster, London, Eng., and was built at Greenock, Scotland, in 1907, is screw driven by engine of 152 h.p. and has the following dimensions,—length 240 ft., breadth 41 ft., depth 14.2 ft., tonnage, 1,351 gross, 830 net. She was originally named Carleton. The company has also bought the s.s. Waccamaw in the U.S. and transferred her to the Canadian register under the name of Royan. She was built at Toledo, Ohio, in 1900, and has a steel hull, of the well deck type, with 3 water tight and 2 non-water-tight bulkheads, steel boiler house, electric light, and hatches spaced 24 ft. centers. Her dimensions are,—length b.p. 243 ft., breadth moulded 14½ ft., tonnage 1,359 gross, 920 net. She is equipped with triple expansion engine, with cylinders 22, 32½ and 55 in. diam. by 40 in. stroke, 900 i.h.p., at 85 r.p.m., and supplied with steam by two Scotch boilers, each 12½ ft. diam. by 11½ ft. long, at 170 lbs.

Manitoba Saskatchewan, Alberta and Northwest Territories.

The s.s. Mont Cachel was offered for sale by auction at Winnipeg at the end of July, but no bid was received. She was built at Winnipeg in 1912 for excursion traffic on the Assiniboine and Red

Sault Ste. Marie Canals Traffic.

Rivers, and was operated by E. D. Moore, Winnipeg. She was considerably damaged by fire in 1914 and has since been laid up. Her dimensions are,—length 148 ft., breadth 28.5 ft., depth 11 ft., tonnage 508 gross, 346 net. She is screw driven by engine of 60 h.p.

Douglas S. Robertson, of the Toronto Evening Telegram, writing from Port Smith, N.W.T., says: "Port Smith, which is in latitude 60, is 400 miles north of Edmonton, and about 1,000 miles north of Toronto, and is the farthest inland seaport in Canada. Not a single rapid intervenes between it and the Arctic Ocean. Down at the landing the other day I went aboard the little screw steamship Northland Trader, which, pushing snowloads of canoes, toboggans and supplies, was headed for the northern posts. She sails, on occasion, to Herschel Island and out into the Arctic Ocean 200 miles. From Smith to Norman is 900 miles, and to the Arctic 1,500. Three separate lines of steamboats ply north from Smith, the Alberta & Arctic Transport Co., the Hudson's Bay Co., and the Northern Trading Co. All handle freight and passengers, and run on a schedule liable to severe interruption, as might be supposed, seeing that a storm on Great Slave Lake just held the H.B.C. steamboat Mackenzie River up six days. The later two lines are in the transport business only as a sideline, their main business being to carry their own goods and employes to and from the various trading posts and to bring in the furs."

British Columbia and Pacific Coast.

The C.P.R. s.s. *Princess Ena* ran ashore on Goddyn Head, Aug. 14, and was refloated at the following high tide.

The Dominion Public Works Department received tenders to Aug. 17, for the construction of a wooden hull for a ferry boat for service on the Fraser River at Agassiz.

The s.s. B.C. *Maid*, formerly named *Rustler*, built in Seattle, Wash., and owned by F. M. Clark and G. P. Cathrea, Vancouver, has had her name changed to *Kitsilano*.

G. S. Hopkins, of Hopkins Landing, in the Howe Sound district, a retired master mariner, is reported to have bought a steamship in Great Britain for operation on Howe Sound next year.

The Marine Department invited tenders recently for the construction of a fog alarm building at Entrance Island, Quatsino Sound, the building to be of frame construction, on a concrete foundation.

Furness Withy & Co. are reported as likely to inaugurate a steamship service to the British Columbia coast, in the near future. Enquiries are stated to have been made by the company, as to the facilities at Vancouver and other ports along the Pacific coast.

The Royal Mail Steam Packet Co.'s motor ship *Somersetshire*, which sailed from Vancouver, B.C., recently, had, as part of her cargo, 65,000 cases of salmon, approximating 3,000 tons, stated to be one of the largest single cargoes of salmon ever sent from that port.

The C.P.R. s.s. *Princess Louise*, under construction by Wallace Shipbuilding & Drydock Co., North Vancouver, was expected to be ready for launching about the end of August. Details of her are given under General Shipbuilding Matters Throughout Canada, on another page of this issue.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

38. July 4.—100. New Brunswick, north coast, Cocagne harbor, Cote d'Or wharf, lightship. 101. Quebec, Gulf of St. Lawrence, St. Mary Island, fog alarm to be established. 102. Newfoundland, east coast, Conception Bay, Western Bay Point, fog signal temporarily discontinued.

39. July 14.—103. British Columbia, entrance to North Arm of Fraser River, outer beacon light, structure to be rebuilt. 104. British Columbia, Queen Charlotte Sound, Tribune channel, Humphrey rock, depth. 105. British Columbia, Seaforth channel, Gunboat passage, uncharted rock.

41. July 16.—108. United States, Lake St. Clair, St. Clair flats canal, east pier headlight to be established, gas buoy to be discontinued. 109. United States, Lake St. Clair, St. Clair Flats canal, depths. 110. United States, St. Clair River, new south bound channel at mouth of Black River, abreast of Port Huron, regulations, buoys to be established. 111. United States, Lake Huron, south end, light vessel replaced, characteristics of lights and fog signals to be changed.

42. July 18.—112. Nova Scotia, south coast, La Have River, intended change in character of buoy.

43. July 19.—113. Newfoundland and Quebec, radiotelegraph coast stations to be continued. 114. Quebec, River St. Lawrence, off mouth of Saguenay River, Prince Shoal, temporary lightship placed in position.

44. July 22.—115. Ontario, Lake Erie, Port Dover, color of front range light to be changed. 116. United States, Detroit River, above Fighting Island, changes in buoyage.

45. July 23.—117. New Brunswick, Bay of Fundy, Passamaquoddy Bay, Chamcook Harbor, change in characteristics of light. 118. Quebec, Gulf of St. Lawrence, Magdalen Island, House Harbor, buoy established. 119. New Brunswick, Northumberland Strait, off Shediac Harbor, Zephyr rock, gas buoy to be discontinued, spar buoy to be placed. 120. New Brunswick—Prince Edward Island, Northumberland Strait, Cape Tormentine to Port Borden chart issued.

46. July 25.—121. Nova Scotia, south coast, entrance to Jeddore harbor, Thorn Shoal, change in position of bell buoy. 122. Nova Scotia, south coast, Sheet Harbor passage, change in position of bell buoy. 123. Nova Scotia, Cape Breton Island, Sydney Harbor, South Sea Bar, change in characteristic and color of light, fog bell to be re-established. 124. Quebec, River St. Lawrence, Montreal to Longue Pointe, new addition to chart.

47. July 25.—125. British Columbia, Vancouver Island, Quatsino Sound, Kopri Harbor, uncharted rock. 126. British Columbia, Vancouver Island, Nanaimo Harbor entrance, Entrance Island, characteristic of light to be changed. 127. British Columbia, Strait of Georgia, Fraser River, buoy placed temporarily.

48. July 25.—128. Quebec, River St. Lawrence below Quebec, Lower Traverse new lightship to be placed. 129. Newfoundland, east coast, Bonavista Bay, Cabot Island, fog alarm established.

49. July 27.—130. Quebec, River St. Lawrence, Lake St. Louis, west entrance to Lachine Canal, shoal removed. 131. Ontario, Lake Ontario, Oakville, light to be discontinued. 132. Ontario, Lake Hur-

on, Georgian Bay to Clapperton Island, new edition of chart.

50. Aug. 5.—133. Ontario, Lake Ontario, Port Weller, light and fog bell to be established. 134. Ontario, Georgian Bay, Nottawasaga River mouth, change in position of range lights, buoys established. 135. Ontario, Lake Huron, north channel, Eddy wharf, change in character of lights.

Mainly About Marine People.

Capt. Alex. Cameron, who died at Charlottetown, July 29, aged 73, after being on sailing ships for several years, entered the Charlottetown Steam Navigation Co.'s service, and remained in it for over 30 years, being master successively of the steamships *Summerside*, *St. Lawrence*, *Northumberland*, and *Empress*. After the company went out of business, selling the *Northumberland* to the Canadian Government Rys., and the *Empress* to the C.P.R., Capt. Cameron commanded the *Northumberland* for some two years, retiring after bringing her to Toronto to be placed in service between Toronto and Port Dalhousie in connection with the Niagara, St. Catharines & Toronto Ry.

John Ennis, who died at Ballymitty, County Wexford, Ireland, early in July, was for 40 years, prior to his retirement in 1907, manager of the Allan Line passenger service, at Liverpool, Eng. On his retirement he was presented with his portrait by a number of friends, with a silver salver by the Liverpool Board of Trade's Emigration Department, and an address and cheque by friends on both sides of the Atlantic.

P. W. Fox has been appointed harbor master, Chemsinus, B.C., vice F. V. Miller.

C. T. Knowlton, Superintendent of Car Ferries, Canadian Government Rys., Moncton, N.B., is on indefinite leave of absence.

Scott Moffatt has been appointed an officer to superintend the survey and measurement of ships, and a surveyor of accommodation for seamen, for the port of Campbellton, N.B.

Capt. John Park, who has recently become a British Columbia pilot, was, for many years, associated with the coastwise trade. He went to the Pacific coast about 14 years ago on the Blue Funnel Line's s.s. *Titan*, and entered the Union Steamship Co. of British Columbia's service. After serving some time as master of that company's various steamships, he was appointed master of the s.s. *Turret Crown*, owned in Seattle, Wash., and sailed her on the Atlantic during the war. He subsequently took the Imperial Junctions Board's s.s. *War Cavalry* to Europe, and on his return was appointed master of Canadian Western Steamships' s.s. *City of Victoria*.

Major-General Sir David Watson, President, Quebec Harbor Commissioners, has received the decoration of Commander of the Order of Danilo I, from the Queen Regent of Montenegro, in recognition of services rendered to that country during the war and since the signing of the armistice.

The B.C. Electric Ry. head office employees held their annual picnic to Seaside Park, Aug. 6, some 500 persons taking part, including Geo. Kidd, General Manager, and W. G. Murfin, Assistant General Manager. Prizes were donated by the company's officials to winners of the sporting events.

Wreck Commissioners' Enquiries and Judgments.

Appeal re Prince Rupert Stranding.

Mr. Justice Morrison of the British Columbia Supreme Court has quashed the judgment of the Wreck Commissioner of British Columbia, Capt. J. D. Macpherson, so far as it affected the mate, Roderick Mackenzie, of the Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince Rupert, in connection with the stranding of the ship, near Swanson Bay, B.C., Sept. 29, 1920. The Wreck Commissioner's judgment read in part as follows:—"The court therefore finds both the master, and the mate, in default. Neither of them appeared to take the slightest intelligent interest to satisfy himself that the ship was accurately steered on the various courses steered, when alerted, nor did they realize that the ship had been swinging under port helm for some time, until they suddenly saw the land, close to the right, ahead, at which moment, the ship, going at a speed which, in the conditions of the thick weather then prevailing, rendered it impossible to stop within the limits of observation, with the result that she struck and was extensively damaged. The court therefore suspends certificates no. 9667 of the master, Capt. Duncan MacKenzie, for four months from Sept. 29, 1920, and certificate no. 7,055 of the mate, Roderick MacKenzie, for two months from the date of this investigation, such suspensions to expire on Jan. 29 and Jan. 18, 1921, respectively."

On the appeal, it was claimed that the mate was asked to appear before the Commissioner and testify against the master; he did so and then went to sea on another ship. On his return he found that he had been blamed for the casualty, as well as the master, and his certificate suspended for two months, in face of the fact that the master was on the bridge with him when the ship struck. It was also claimed that he made two attempts to appeal the case to the Minister of Marine, but had been refused. He then laid the case before the Canadian Navigators' Federation, and subsequently applied for a writ of certiorari. In quashing judgment against the mate, the judge said that he was satisfied that the man did not have a chance to defend himself, and he ordered his certificate to be restored.

Rygia-Mapledawn Collision.

Held at Quebec, Que., July 20, before Capt. L. A. Demers, Dominion Wreck Commissioner, Assisted by Capt. C. Lapierre and A. Lefebvre, as nautical assessors, in the collision between the Norwegian s.s. Rygia and Canada Steamship Lines' s.s. Mapledawn, while the latter was at anchor in the River St. Lawrence, near Jacques Cartier River July 13. The Mapledawn had anchored in a proper place, no objection or criticism on this point having been made by the Rygia. The anchoring of a ship at any time is a privilege of the master and pilot, providing that it is in such a place as to leave sufficient passage for ships in movement. The light which was exhibited was 12 ft. dia., and made according to the requirements of the Canadian Shipping Act and Rules of the Road. That it was burning brightly was admitted by the Rygia witnesses, and there was a sea watch kept, as it was the intention to raise anchor about two hours later. There was nothing on which the court could look with suspicion. In such

juncture, when collision was imminent, it may be asked if it would not have been proper to slacken some chain. This was thought of by the master and pilot, but no instructions were given, owing to fear of jeopardizing the life of one of the crew. On the other hand, the first officer, realizing that such action may have been helpful, went forward with the intention of opening the brake to allow the chain to run out, but the ships collided before he could carry out his well meant intention. There was nothing in the conduct of those in charge of the Mapledawn on which the court could comment.

With respect to the Rygia, assuming that the weather was such as to obscure visibility of all objects, did the pilot, master and mate meet the requirements of the Rules of the Road, art. 29? There was a reduction of speed, brought about by the fact that the intention was to anchor, but if the weather was so thick as to prevent the pilot seeing the light of the Mapledawn until only seconds before the collision, why was there not a lookout at his post, and why was not a whistle sounded as required by art. 15? There was failure to keep a proper lookout on the part of the master, mate and pilot. The use of the glass was neglected, and the pilot's excuse that he could see as well with the naked eye, could not be accepted. There was a doubt in the master's and pilot's minds as to whether the ship showing a light was under weigh or at anchor, and the action of crossing the bow when so near was indefensible, whether the ship was anchored or under weigh, especially with a four mile current running with the Rygia, combined with a strong wind. Art. 22 says "Every vessel which was directed by these rules to keep out of the way of another vessel, shall, if the circumstances of the case admit, avoid crossing ahead of the other." The Rygia had considerable speed on at the time of the collision, accelerated by a full speed ahead order, and before either the master or pilot could recover from the excitement of the moment and adopt such measures as would keep the ship in deep water, she grounded, suffering further damage. The pilot avers that he gave an order full speed ahead after the collision, and steadied the helm, but the time of that order does not appear in the log. By this it is apparent that the engineer was remiss in his duty by imperfectly noting occurrences. The pilot's statement in regard to the weather and the range of visibility, was, in the court's opinion, greatly exaggerated, the fact that the Mapledawn's witnesses were not questioned with regard to the non-ringing of the ship's bell, though the court raised the point, indicated in a forcible manner, that objects could be seen at a greater distance than admitted by the pilot. He admitted that he was thinking of anchoring only, and the court concluded that all else was forgotten, no thought being given to keeping a sharp lookout, all the more necessary as the weather was boisterous and the engines rendered more or less indistinct by rain, though by other evidence lights were visible at a distance which permitted timely action to be taken. The Rygia's master stated that he would not carry out the same evolutions again, which implied default.

The court therefore could not arrive at any other conclusion than that the

master, first mate and engineer were remiss in their duties; that the pilot, whose statements varied somewhat, did not keep a proper lookout, and did not exercise that judgment required from him, and violated articles 15, 22 and 29 of the Rules of the Road. It therefore found that the master, Johannes Haugen, holding a Norwegian certificate, not produced in court, was in default, for not assuming the responsibility which rested on him, and acquiescing with the pilot in performing such evolutions as he did, in violation of articles 15, 22 and 29 of the Rules of the Road. The court also found the first mate, Lara Skeashuin, in default, for not seeing that a lookout was stationed; and the chief engineer, Bernard Mehie, for failure to register in his log, the time of orders received by the telegraph. As the master, first officer and engineer hold Norwegian certificates, the court has no jurisdiction over them, and submitted the evidence and finding to the Norwegian Consul, to deal with as he may deem fit. The pilot, Armand Marchand, was also found in default, and directly responsible for the two mishaps, the collision, and the eventual stranding of the Rygia, and his license was suspended for three months from July 22. The Mapledawn's officers and pilot were exonerated from all blame.

Grounding of s.s. Rapids King.

Held at Montreal, Sept. 29, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and A. Lefebvre, into the grounding of Canada Steamship Lines' s.s. Rapids King in Long Sault Rapids, River St. Lawrence, July 16. The evidence was of a straightforward character, and resolved itself into the fact that the steering gear had been overhauled and examined by both the deck officers, and the engine room staff, prior to the ship's departure. This is done on every trip, and is rendered necessary owing to the intricate navigation performed. The master and officers were at their posts. At a certain juncture it became necessary to port the helm, in order to prepare to turn a bend in the river, but something failed to operate in the steering machinery. The ship was running with the current, the velocity of which was estimated at about 16 or 17 m.p.h. and was in a narrow and intricate channel, with the engines on slow speed, when she swerved and grounded at the point of Barnhart's Island, about 70 ft. from the land. After taking soundings, the master made arrangements to communicate with the owners, and went personally in a boat, but not before he had given instructions to his officer and purser, and allayed the passengers' apprehension. There was no panic or confusion. The examination of the steering gear did not reveal the cause of the temporary non-effectiveness. It was one of those occurrences which happen rarely, and for which no reason can be given beyond a surmise, and the court's opinion was that the strength of the current at that particular spot was such that it offered, for a short period, a resistance against the rudder, the attachment of which, for the time being, failed to respond. The fact that when the helm was immediately starboarded, the rudder responded, will prove the court's conjectures as being logical. That there was sufficient pressure of steam is indicated by this fact. The disembarka-

tion of passengers was necessarily slow, owing to the peculiarities and nature of the landing place. Nothing transpired to show that at the time of the grounding, and during the disembarkation of the passengers, there was any feeling of panic, or lack of discipline, control, or management on the part of the officers and crew, but, on the contrary, sang froid was displayed, which enabled the transfer of the passengers to a safe landing. In view of the intricate channel, and barren, rocky surroundings, it speaks well for the judgment, seamanship and discipline shown by the master, officers and crew. The court therefore found that the master and officers acted with the usual prudence in navigating the ship, that the temporary non-effectiveness of the steering gear was unforeseen and unavoidable, that proper judgment and discipline were exercised in the landing of the passengers, without confusion or panic, and it exonerated the master, Capt. George Baden, and the mate, Wm. Black, from all blame and liability. The judgment concluded with the statement that "While the court's function is frequently to criticize adversely the conduct of shipmasters and officers, it is also its duty to eulogize, when special acts, which are out of the ordinary, are performed. It recognizes in this instance the opportunity to felicitate the master, officer and crew on their successful achievement."

Loss of s.s. Volunda.

Held at Halifax, N.S., Aug. 9, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. Neil Hall and C. O. Allen, as nautical assessors, into the loss of the Wasie Steamship Co.'s s.s. Volunda, off Neils Harbor, July 29. The evidence showed that a satisfactory course was steered, that the ship was supplied with all the necessary instruments, and up to date charts. The compass had been steady on the deviation obtained by adjustment obtained last October, and verified subsequently. There was clear weather, no sea and a very light breeze from the northwest. The master, Capt. J. Meikle, assumed the responsibility of the watch, and, after passing Ingonish, went to his room adjacent to the wheel house, within easy access to the bridge, leaving the so-called second mate in charge, with instructions to call him when lights were seen. He had been writing his official log, and the wheelman stated that he had been lying down dressed. The lookout man stated that smoke obscured the range of visibility for some time prior to the stranding, until he could not see farther than 100 yards, the ship being kept at full speed and no whistle sounded. No lights could be shown as to why the ship was off her course, and the compass had not shown any erratic tendency, the ship grounding before those on watch were aware of it. The engines were stopped, and a hard aport helm order was given, with inappreciable effect. The court was unable to obtain the heading of the ship when she struck, no one apparently having thought of it. While on the course, a 4 point bearing was taken at Ingonish, placing the ship some 5 miles off the light, but the fact that it was taken by an inexperienced and irresponsible led the court to think that it could not have been done accurately. The court commented on the omission of the master to save the log books, which are so essential to corroborate the points brought out in the investigation. There was ample time to do so, and no reason

was given for the omission, which is somewhat mitigated by the fact that the master lost all his effects. Bearing in mind that the law does not require ships engaged in the coasting trade to carry certificates of second officers, and that fact being known to the master, he assumed responsibility of keeping watch jointly with the first officer, the so-called second officer being irresponsible and inexperienced. The master therefore was remiss in not being on the bridge personally, a duty which imposed itself on him under the circumstances, and more so when the range of visibility was obscured by smoke.

The court had not the least doubt that had the master been on the bridge, the casualty would not have occurred. The court condemned the action of the second officer, Wm. Cross, for not calling the master when the smoke got so dense, and for not diminishing the speed until the master came on deck. The court found the master, Capt. Jas. Meikle, certificate 169, in default for being absent from his post, but owing to his long and successful career, dealt leniently with him, and suspended his certificate for six months from Aug. 9, 1921, to Feb. 8, 1922.

Loss of s.s. Lady of Gaspe.

Held at Halifax, N.S., Aug. 18, into the stranding and subsequent loss of the s.s. Lady of Gaspe on Thrup Cap shoal, near the entrance to Halifax harbor, Aug. 3, before Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. Neil Hall and C. O. Wilson, as nautical assessors. The court's report stated that Capt. N. Nicolson, of the Lady of Gaspe, assumed full responsibility for the navigation and loss of the steamship, which was sufficient in itself to permit the court to arrive at a logical conclusion. The evidence showed that from Boston, Mass., to Cape Sable, N. S., the ship had been navigated with the usual prudence, and everything seemed to be all right on board. However, carelessness, the reason for which did not develop, was shown from the time the Sambro buoy was ahead, when a mere cast of the lead was made, and apparently deemed unimportant, since neither the master nor mate thought fit to investigate the chart, and, without such necessary examination, the master casually and approximately established his position from the buoy to be $\frac{3}{4}$ mile. Immediately after striking, water entered the engine room, and apparently nothing could be done to extricate the ship from her position. The mate did not appear to be interested in the navigation of the ship and was no help to the master. The court therefore found that the master, Capt. Neil Nicolson, certificate 009,181, was in default, and suspended his certificate for 12 months from Aug. 11, and D. W. Munro, chief officer, was severely reprimanded, cautioned to be more careful and interested in future in the navigation of the ship in which he is called upon to take an active part.

Mission River Breakwater, Fort William.—The Dominion Public Works Department received tenders to Aug. 17, for the construction of a rubble mound extension to the Mission River breakwater, Fort William, Ont. The extension is to commence 375 ft. southerly from the existing concrete breakwater at the mouth of the river, and to be 1,000 ft. long on the water line, and 26 ft. wide, with a top width of 10 ft. and a height of 8 ft. above the datum line.

Canal Statistics for June, 1921.

The Dominion Bureau of Statistics' Transportation Branch reports as follows:—The traffic on the Welland and St. Lawrence Canals increased 37 and 35% respectively in June, but the traffic on the other canals showed considerable decreases compared with June 1920. Traffic on the Chambly decreased 58%, on the Trent 54%, on the Murray 43%, on the Rideau 31%, on the Sault Ste. Marie 30%, on the Ottawa 37%, and on the St. Peters 15%. The cumulative figures since the opening of navigation show much the same conditions, the traffic on the Welland and St. Lawrence show increases of about 50%, while the other canals show decreases from 5 to 45%.

The falling off in the iron ore shipments accounted for practically all the decrease in traffic through the Sault Ste. Marie Canals. The increases in traffic through the Welland and St. Lawrence Canals were due to iron ore and anthracite coal, and grains. There were several factors contributing to the increases in the grain shipments; the large crop last year left a quantity of grain in elevators with the close of navigation, considerable United States corn was moved through to Montreal during June, and the Canadian grain that was being exported to the U.S. via Buffalo and other Lake Erie ports was more or less diverted by the duty of 35c. a bush, imposed by the U.S. Emergency Tariff effective the latter part of May. Canadian grain to Buffalo and other Lake Erie ports during April amounted to 3,701,350 bush, during May to 3,055,934 bush, and during June to only 1,007,218 bush.

The width of the West Neeshib channel in St. Mary River, provided by the original improvement (300 ft.), has been diminished at some points. On course 5, about opposite the mouth of the Charlotte River, some filling has occurred at the sides of the channel, mainly along the west side, for about a mile, and for a maximum width of about 30 ft., leaving a channel of full 21 ft. depth for a minimum width of 270 ft. Through Rock cut, a section of the dry masonry wall on the east side, for about 40 ft., has fallen into the channel, just in front of the break in the wall, restricting the width to about 270 ft. On course 8, in Mud Lake, between Moon Island and crib lights 3 and 4, the center has been deepened and the sides have been raised, so that the width having full project depth of 21 ft. is reduced to 150 ft., but the minimum width, having low water depth of 20 ft., is about 165 ft. At present water levels, that width of the channel having 20 ft. draft is about 200 ft. The bottom is very soft. It is expected that full channel width and depth will be restored by dredging during the summer of 1922. In the meantime, deep draft ships should keep in the center of the channel on this course.

The American Steamship Agency Ltd. has been incorporated under the Quebec Companies Act, with \$49,000 authorized capital and office at Montreal, to build, deal in and operate ships of all kinds, warehouses, wharves, docks, etc., and to conduct a general navigation business and to act as agent and purchaser of steamship tickets for the transportation of passengers. The incorporators are E. Klein, S. Syakos, L. Diner, J. Davidson and S. Eliasoph, Montreal.

Welland Ship Canal Contracts.

The contract for the completion of the work on the combined sections 1 and 2, has been awarded by the Railways and Canals Department, to J. P. Porter, Halifax, N.S.

Sec. 1, the contract for which was originally let Aug. 1, 1913, to the Dominion Dredging Co., consists principally of the construction of the new harbor at Port Weller, at the Lake Ontario end of the canal, covering about 1½ miles of dredging in the lake, and considerable pier work, 1½ miles of canal excavation, the construction of lock 1 with its weirs and entrance walls, between Lake Ontario and bridge 2.

Sec. 2, the contract for which was originally let, Dec. 3, 1913, to Baldry, Yerburgh & Hutchinson, Ltd., includes, in addition to the excavation of the canal prism, the construction of locks 2 and 3, with their regulating and waste weirs, the substructure of four bridges in addition to one at the head of lock 2, and a large amount of watertight embankments.

Work on these, as well as also other, contracts was suspended in Jan. 1917, on account of war conditions, but was resumed early in 1919, on a cost plus 8% basis, and considerable work has been done at intervals since. It is estimated that on the two sections combined, there remains about 40% of the work to be completed.

A press report from St. Catharines, Ont., states that the work which has been proceeding on a cost plus 8% basis, on contract 3, is to be closed down Sept. 1, and tenders called for its completion. Sec. 3, which was let originally, Dec. 31, 1913, to Doherty, Quinlan & Robertson Ltd., covers excavation of 2,700,000 cu. yds. of rock, 3,400,000 cu. yds. of earth, the diversion of the G.T.R., rendered necessary to obtain a satisfactory location for the canal, the building of a large earth dam with concrete core walls, the building of twin locks 4, 5 and 6, in flight, and single lock 7, which, together with their entrance walls, etc., will contain about 1,200,000 cu. yds. of concrete. The contract also includes the furnishing and crushing of 1,250,000 tons of stone for concrete, for secs. 1 and 2.

Sec. 4a is covered by a small contract for certain portions of work which were to have been included in sec. 4, which could not be deferred when it was decided to postpone the letting of the larger contract, and consisted of the construction of a new supply lock, opposite lock 25 of the present canal, and the construction of some concrete culverts. This contract was completed prior to the war by Maguire & Cameron.

Sec. 5 is under contract to the Canadian Dredging Co., and it now includes some dredging work, originally intended to be incorporated with the contract for sec. 4, when placed.

The International Mercantile Marine Co.'s report for the calendar year 1920, shows gross income, including dividends from subsidiary companies, of \$11,307,441, against \$15,193,831 for 1919. P. A. S. Franklin, President, is reported to have stated that the reduction is due to the smaller movement of freight, the reduction of freight rates, and labor troubles in various directions, which seriously interfered with the movement of steamships, and materially increased operating expenses.

The Russian Port of Novorossisk.

As mentioned in Canadian Railway and Marine World for July, the 590 tank cars, which are being built by Canadian Car & Foundry Co., for the Russian Soviet Government, are to be shipped by Canadian Government Merchant Marine, to Novorossisk, for use in the oil carrying trade from the Caucasus. Novorossisk is on the Black Sea, in lat. 60 deg. 47 min. n., long. 21 deg. 24 min. e. It has a population of about 40,000, and its shipping consists chiefly of imports of machinery and general merchandise, and exports of grain, seed, oil cake, kerosene, oak staves, etc. The port is connected with the general network of Russian railways by a branch line to Tichoretskai, on the Wladikavkaz, and the railway to Petrovsk and Batu, on the Caspian Sea, brings the two seas into direct connection. The harbor accommodation consists of 7 loading piers, of which 5, including 2 elevator piers, belong to the railway company, one is owned by the French Standard Oil Co., and one by the Russian Steamship Co. There is berthing for 22 steamships by two breakwaters, and a depth of water at the ends of the piers, averaging 24 to 26 ft. The facilities include cranes of 5, 10 and 30 tons capacity, and a floating crane of 40 tons capacity, an elevator of 3,000,000 poods (approximately 1,350 tons) capacity, and there are two large piers, one for Government use, and one exclusively for steamships discharging, now under construction.

The harbor dues, customs charges, loading and discharging expenses, are approximately as follows:—The railway company charges 10 kopeks (6c. normal value) a registered ton for use of its piers; and to merchants, ¾ to 1½ kopeks (0.45 to 0.90c.) a pood (35 lb.) of cargo loaded or discharged, for the use of wagons, laborers, etc.; customs dues, 20 kopeks (12c.) a net registered ton on ships, and discharging, general, 50 kopeks (30c.) a ton. There are no pilots.

The s.s. *Cap Nord*, which was advertised to be offered for sale by public auction in London, Eng., Aug. 16, is one of 6 auxiliary, twin screw, 5-masted schooners, built by Wm. Lyall Shipbuilding Co., Vancouver, B.C., in 1918, for French interests. They were classed 12 A1 at Lloyd's, and have 1,800 tons d.w. capacity on about 20 ft. draft. They are of the single deck type, with 2 tiers of beams, and are fitted with two 200 h.p. oil engines placed aft, with 8 cylinders 11½ in. dia. by 15 in. stroke, and equipped with electric light. Their dimensions are length 242½ ft., breadth 44.4 ft., depth 18.7 ft. It is reported that the 6 ships were sold to the French Government for \$3,000,000, and on completion were handed over to Trenholme and Thorndyke Inc., Seattle, Wash., then operating agents for that Government.

Transmission of Shipping Documents. In response to a complaint from the Montreal Board of Trade that in certain cases merchandise was reaching the other side of the Atlantic before the documents necessary for clearing purposes, and that the delay was detrimental to the cargoes and therefore to the interests of the shippers, the Postmaster General has pointed out that there must be some misunderstanding, as, under the Post Office Act, letters of merchants, owners of vessels, or of cargo therein

sent by such vessel or by any person of such letters, according to their respective addresses, and delivered to the persons to whom they are respectively addressed, without any pay, hire or reward for so doing, are exempt from mail regulations, and therefore such documents can be handed to the purser of the merchant ship for transmission direct. By such means the documents would arrive on the other side at the same time as the cargoes.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will only be placed on condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Independent Pneumatic Tool Co., Chicago.—J. D. Hurley, President, is making an extended combined business and pleasure trip through continental Europe, accompanied by his wife.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

- P. Fennell, Jr., 57 Common St., Montreal.
- Belleville, Ont. Railway Men's Educational Club. Meets each Tuesday, 7:30 p.m. F. A. Pinkston, Belleville, Ont.
- Canadian Car Demurrage Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.
- Canadian Electric Railway Association—L. E. Moreland, Hull Electric Co., Hull, Que.
- Canadian Freight Association (Eastern lines)—G. C. Ransom, 909 Shaftness Bldg., Montreal.
- Canadian Freight Association (Western lines)—W. E. Campbell, 907 Boyd Block, Winnipeg.
- Canadian Navigators Federation, Great Lakes Division.—Capt. R. D. Simpson, Owen Sound, Ont.
- Canadian Navigators Federation, Pacific Division.—Andrew Goodlad, 1101 Rogers Building, Vancouver, B.C.
- Canadian Railway Board of Adjustment No. 1.—R. Chapelle, 263 St. James Street, Montreal.
- Canadian Railway Club.—W. A. Booth, 131 Charron St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8:30 p.m. except June, July and August.
- Canadian Trade League, A. H. Thorpe, 25 Balmora Ave., Toronto.
- Dominion Marine Association—F. King, Counsel, Kingston, Ont.
- Canadian Ticket Agents' Association—E. de la Houcke, 1000 Ave. Toronto.
- Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.
- Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.
- Engineers' Club of Toronto—R. B. Webster, 84 King Street West, Toronto.
- Engineers' Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.
- Express Traffic Association of Canada—C. N. Ham, Montreal.
- Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.
- Hydro-Electric Railway Association of Ontario—T. J. Hannagan, Guelph, Ont.
- International Water Lines Passenger Association—M. R. Nelson, 89 Chatham Ave., Buffalo, N.Y.
- Niagara Frontier Summer Rate Committee—James Morrison, Buffalo, N.Y.
- Quebec Transportation Club—A. F. Dion, Harbor Commissioner's Office, Quebec, Que.
- Railway Association of Canada—C. P. Riddell, Montreal.
- Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.
- Transportation Club of Toronto—W. A. Gray, 257 Roston Road, Toronto.
- Transportation Club of Vancouver—C. E. Blaney, Harbor Commissioner, Pacific Ocean Services Ltd., Vancouver, B.C.

Transportation Conventions in 1921.

The names of persons given below are those of the secretaries, unless otherwise mentioned:—
Sept. 12-14.—American Railroad Master Timbers, Coppermiths and Pipefitters Association, Chicago, Ill. C. Berhardt, 202 North Hamlin

Ave., Chicago, Ill.

Sept. 12-15.—International Railway General Foreman's Association, Chicago, Ill.: W. Hall, 1061 West Wabasha Ave., Winona, Minn.

Sept. 20-22.—Roadmasters' and Maintenance of Way Association, Chicago, Ill.: P. J. McAndrew, Chicago & North Western Ry., Sterling, Ill.

Oct. 3-6.—American Electric Railway Association,

Atlantic City, N.J. E. B. Burritt, New York, N.Y.

Oct. 4.—Maintenance of Way Master Painters' Association, Buffalo N.Y.: E. E. Martin, Union Pacific R.R., Kansas City, Mo.
Oct. 18-20.—American Railway Bridge and Building Association, New York, N.Y.: C. A. Lichty, Chicago & North Western Ry., Austin Station, Chicago, Ill.

CANADIAN NATIONAL RAILWAYS

Canadian Government Railways,
Eastern Lines.

TENDERS

SEALED TENDERS, addressed to A. F. Stewart, Chief Engineer, Moncton, N.B., and marked on the outside "Tenders for Dwellings," will be received up to 12 o'clock noon **THURSDAY, SEPTEMBER 8th, 1921**, for the construction of ten double dwelling houses at Parent, P.Q.

Plans, Specifications and blank form of contract may be seen at the following offices:

Chief Engineer—Moncton, N.B.

District Engineer—Quebec, P.Q.

Division Engineer—Tunnel Station, Montreal, P.Q.

All the conditions of the specification and contract must be complied with. Tenders must be put in on the blank form of tender, which may be obtained from any of the offices at which the plans are on exhibition.

Each tender must be accompanied by an accepted bank check payable to the Canadian National Railways for an amount equal to ten per cent. of the tender.

Lowest or any tender not necessarily accepted.

W. A. KINGSLAND,
General Manager,
Eastern Lines.

Dated at Moncton, N.B., August 22, 1921.

CANADIAN PACIFIC RAILWAY COMPANY Dividend Notice

At a meeting of the Board of Directors held today the following dividends were declared:
On the Preference Stock, two per cent. for the half-year ended 30th June last.
On the Common Stock, two and one-half per cent. for the quarter ended 30th June last, being at the rate of seven per cent. per annum from revenue and three per cent. per annum from Special Income Account.

Both dividends are payable 1st October next to Shareholders of record at 3 p.m. on 1st September next.

By order of the Board,
Ernest Alexander, Secretary.

COFFEE RIVER BRIDGE SUBSTRUCTURE.

SEALED TENDERS, addressed to A. F. Stewart, Chief Engineer, Canadian National Railways, Moncton, N.B., and marked on the outside "Tenders for Coffee River Bridge," will be received up to 12 o'clock noon on Wednesday, Sept. 17th, 1921, for the construction and completion of the substructure for a single track Railway Bridge over the Coffee River, 41.1 miles from Duquet on the St. Maurice Division, Quebec District.

Plans, Specifications and Blank form of Contract may be seen and tender forms obtained from the following offices:

The Chief Engineer, Canadian National Railways, Moncton, N.B.

The Chief Engineer, Canadian National Railways, Toronto, Ont.

The District Engineer, Canadian National Railways, Quebec, P.Q.

The Division Engineer, Canadian National Railways, Quebec, P.Q.

The Division Engineer, Canadian National Railways, Tunnel Terminals, Montreal, P.Q.

Tenders must be submitted in duplicate on the tender forms supplied for that purpose.

Each contractor tendering must submit with his tender, a security deposit in the form of an Accepted Check on any chartered bank in Canada and made payable to the "Canadian National Railways" for an amount of Four Thousand Dollars (\$4,000.00). This security deposit will be returned to all unsuccessful tenderers. Security deposit of successful tenderer will be forfeited to the railway if the contractor refuses to enter into a contract based on his tender when called upon to do so. Contractor's security deposit will be returned on the satisfactory completion of the work.

Plans and Specifications will be loaned to bona-fide contractors on the deposit of security amounting to Twenty-Five (\$25.00) Dollars. This security deposit to be in the form of an accepted cheque on any chartered bank in Canada, made payable to the "Canadian National Railways." Security deposit will be refunded on the return of the plans and specifications.

No revision of any tender will be considered if received by the Chief Engineer at Moncton, N.B., at a date later than 12 o'clock noon, Wednesday, September 15th, 1921.

All conditions of the Specifications must be complied with.

The lowest or any tender will not necessarily be accepted.

W. A. KINGSLAND,
General Manager,
Eastern Lines.

Montreal, P.Q., August 8th, 1921.

(Central Lines)

Tenders for Ties

Sealed tenders addressed to the undersigned and endorsed "Tender for Ties" will be received at this office until 12 o'clock noon, Saturday, 17th day of September, 1921, for 1,000,000 railway ties to be manufactured between October, 1921, and May, 1922, and delivered between December 1st, 1921, and September 30th, 1922, on Canadian National Lines between Port Arthur and Quebec, and between Armstrong and Quebec, in accordance with the Specification No. 8566, dated March 18th, 1919.

Tender forms and specifications can be obtained at the office of the General Tie Agent, Room 231, New Union Station, Toronto.

Tenders will not be considered unless made on forms supplied by the railway.

No tender for quantities less than 10,000 ties will be considered.

The lowest or any tender not necessarily accepted.

Special arrangements will be made to purchase ties fully up to specification, manufactured and delivered by actual settlers from their own lands.

W. H. GRANT, General Tie Agent, Canadian National Railways, Toronto, Ont.

Toronto, July 29th, 1921.

CANADIAN GOVERNMENT RAILWAYS, Eastern Lines.

Tenders.

SEALED TENDERS, addressed to A. F. Stewart, Chief Engineer, Moncton, N.B., and marked on the outside, "Tender for Station," will be received up to 12 o'clock noon, Tuesday, September 6th, 1921, for the construction of a station building with dwelling accommodation at Luceville, P.Q.

Plans, Specifications and blank form of contract may be seen at the following offices:
Chief Engineer—Moncton, N.B.
District Engineer—Quebec, P.Q.
Division Engineer—Tunnel Station, Montreal, P.Q.

All the conditions of the specification and contract must be complied with. Tenders must be put in on the blank form of tender, which may be obtained from any of the offices at which the plans are on exhibition.

Each tender must be accompanied by an accepted bank check payable to the Canadian National Railways for an amount equal to ten per cent. of the tender.

Lowest or any tender not necessarily accepted.

W. A. KINGSLAND,
General Manager,
Eastern Lines.

Dated at Moncton, N.B., August 5th, 1921.

Canadian Railway and Marine World

October, 1921

Sir Joseph Flavelle's Review of the Railway Situation, for the Prime Minister.

The following letter, to Prime Minister Meighen, from Sir Joseph Flavelle, who was selected a short time ago by the Dominion Government as one of the directors of the Grand Trunk Ry., and who was subsequently elected Chairman of the Board, was given out just as Canadian Railway and Marine World's last issue was being closed for the press, and when it was too late to use it. In view of its importance it is given in full in this issue, as follows:—

You may not consider it inappropriate if I report, in writing, upon the railway situation. There would be no acute railway problem in Canada today if, in 1903, Parliament had refused the proposal to build the National Transcontinental line from Winnipeg to Moncton; if it had refused to grant a charter to the Grand Trunk Pacific to construct a railway from Winnipeg to the Pacific Coast; and had refused the builders of the Canadian Northern further financial assistance, except as the Western division of the Grand Trunk System, carried through to the Pacific Coast. If the Grand Trunk and Canadian Northern companies had been told they must come together and constitute a second transcontinental line, the country would not have been called upon to face the present gravely serious situation, while a powerful corporation, with a serviceable railway from ocean to ocean, owned and operated by private capital, would, with the Intercolonial and Canadian Pacific Railways, have given the needed transportation facilities for the present and reasonable future requirements of Canada.

Parliament decided otherwise. It directed the construction, with public funds, of the National Transcontinental line from Winnipeg to Moncton. Concurrently, it granted the Grand Trunk Pacific a charter, with financial guarantees for both the prairie and mountain sections, to build a line from Winnipeg to the Pacific Coast, as well as a charter for Grand Trunk Pacific branch lines, and the Superior Division, from Superior Jct. to Fort William. It further lent financial assistance for the completion of the Canadian Northern to the Pacific Ocean, and facilitated the extension of the Canadian Northern east from Port Arthur through Ontario and Quebec and the Maritime Provinces. Thus, three transcontinental lines have been constructed, when two were all that the business of Canada required, or could support. Added to the three transcontinental lines, is the National Transcontinental from Winnipeg to Moncton, and the Hudson Bay Railway, projected from Winnipeg to Port Nelson.

Crippling losses through operation and fixed charges followed in these over railroad territories. The Canadian Northern, the Grand Trunk Pacific, and the Grand Trunk Ry. Co., as the guarantor of the Grand Trunk Pacific enterprises, sought and received repeated advances from Parliament to meet the serious deficits with which they were confronted. Ultimately, Parliament refused to make further advances to these private cor-

porations, and determined to take over, by purchase or the guarantee of securities, the several properties above indicated, including the Grand Trunk System. The effect has been to make the country responsible for the operation of 22,000 miles of railway, and for the interest upon the securities issued by these railways and now held by the public. These interest charges, with taxes and rental of leased roads, as of the year ended Dec. 31, 1920, amounted to \$36,998,981 a year, exclusive of the interest upon the loans of \$353,000,000 made by Parliament to these corporations, and exclusive of interest upon \$367,000,000 invested in the National Transcontinental and Intercolonial Railways. The loans of \$353,000,000 referred to include \$33,000,000 Grand Trunk Pacific bonds held by the Treasury.

Moreover, as, broadly speaking, the 1,800 miles of National Transcontinental road, and 1,800 miles of Grand Trunk Pacific, and probably about 1,000 miles of the Canadian Northern road east of Port Arthur, are not actually needed for the business of the country, they will fall for years to earn operating charges, will require the country to pay their fixed charges, and will perform service of little material value for an extended period. Hence, the necessary portions of the National System (the Grand Trunk in the east and the Canadian Northern lines through the west) will, until there is a material increase in population, and corresponding increase in tonnage, have associated with them a great mileage of immediately unnecessary lines which will involve operating losses for many years. In addition, the Intercolonial System, including branch lines and the Prince Edward Island Ry., aggregating 2,258 miles of road, has not generally earned its operating charges, and, under the conditions prevailing in the Maritime Provinces, may similarly fail to earn operating charges for an indefinite period of years.

Further, to enable the National System to command its share of the country's business on even terms with the C.P.R., some time during succeeding years, large capital sums will be expended for general betterment of tracks, for the consolidation of the separate lines constituting the National System, as well as expenditures for terminals in Montreal, and for the completion of terminals in Toronto. These capital expenditures will aggregate \$125,000,000 to \$175,000,000, and when they are completed will constitute a new fixed charge of \$10,000,000 a year in excess of the present fixed charges, and equivalent to two-thirds of the entire fixed charges upon the C.P.R., which stand at \$15,510,516 a year, including rental for leased roads and taxes.

The railways' reports to the Railway Department indicate that exclusive of outside operations (such as street railway, lands, coal mines, etc.), the operating deficit for the year 1920 of lines in the National System was \$25,565,105 (including the Grand Trunk System, which

had a surplus of \$4,507,116), contrasted with net operating revenue for the C.P.R. of \$35,352,506. Adding to the operating deficit of the National System lines, the fixed charges of \$36,998,981 (but excluding interest upon Government loans of \$353,000,000) the deficit is increased to \$69,564,176. The estimated operating losses for 1921, recently submitted to Parliament, for the National System, including the Grand Trunk, were placed at \$8,377,000, which, plus fixed charges of \$36,998,981, make an aggregate loss to be met by the country of \$45,375,981, exclusive of the interest due the Government for advances upon loan of \$353,000,000, and exclusive of interest upon the investment upon the National Transcontinental and Intercolonial Railways. The loss in operation for the first six months of 1921, which has now been established, indicates the operating loss for the year will exceed the estimate.

It should be remembered that ownership by the public establishes no exemption from conditions inseparable from successful business administration. No great business can survive if it is the constant target of unfavorable comment, and if the management is subject to sustained critical and unfriendly examination. Will Parliament, the press and the public generally, afford to the administration of the National Railways support which will permit administrative capacity of high order, or will the inevitable heavy losses for years cause unrest and distrust, or will the errors of judgment associated with all human action be magnified to the humiliation of the management, and will the political disappointment of members of the House of Commons, who cannot have their way in the administration of the property in their respective constituencies or districts, create such bitterness in Parliament and the press that men of sound capacity and fine spirit will refuse to serve? Parliament will not contract itself out of responsibility to examine critically the estimates for railway administration submitted annually to the House. It has yet to be demonstrated, however, that it will bring to the consideration of the estimates and review of the work of the management, a temper and sense of fairness which is associated with the successful administration of private enterprises. If these are denied, the administration of this publicly sound property will break down.

The C.P.R. Co. deserves well of the country. Under the guidance of two great men, now succeeded by a third, it brought faith, courage and invincible energy, with trained capacity, to the great task of building their line through the untravelled west, and subsequently completing and operating a transcontinental railway in Canada, with steamship services on the Great Lakes and on the Atlantic and Pacific Oceans. Its achievement commands the admiration of both railway experts and the public, and has been a material factor in causing Canada to be favorably known upon three continents. The company has brought pro-

fit to its shareholders, yet has become a national asset of great value and importance. This asset should be preserved. Its preservation will primarily rest upon just treatment of the private corporation by successive Governments. It will be furthered by the low fixed charges upon the property, and by the company's highly efficient operating organization.

As matters now stand, practically all the steam railways in Canada, other than the Canadian Pacific, are in the Canadian National System. Hence, there is the anomaly of 40% of the railways being owned and operated by private capital and 60% directly owned and operated on behalf of the Canadian people. This distinction in ownership was not planned. It was occasioned through the breakdown of a scheme of railway construction and operation authorized by Parliament, and carried out under private ownership. Troubles developed beyond the control of the private corporations, and Parliament, confronted with the necessity of choosing between undesirable alternatives, considered it advisable that the Government should take over the properties which were in default. Hence the C.P.R. Co. and the country are confronted with the fact, not the theory, of public ownership of railways upon a great scale, and the publicly owned properties must be operated on behalf of the Canadian people. If good sense prevails, the executive officers of the two systems will plan together to meet the transportation requirements of the country. If good sense does not prevail, both the private corporation and the public (as owner) will suffer loss through unnecessary multiplication of services, and through the absence of sanity in mutual relations, which already contain sufficient of the unnatural to create trouble.

It is to assume that operations of the Government requiring railway transport, such as mails and the movement of troops, will be equitably divided between the two systems, but plainly the privately controlled business will be subjected to competitive conditions. It is but a mere platitude to state that the gross earnings of both properties are dependent upon the support given by those who require a railway to transport their commodities, or those who require a railway for personal travel. Obviously, there can be no relief from losses in operation of the National Railway, and consequent increased demand upon the Dominion treasury, except by earnings secured by the movement of freight and passengers, and revenues from express and other services. Therefore, an organized traffic department will make claims upon the Canadian people to use their own railways. A man owning a motor car, driven by his chauffeur to the place he himself desires to go, will not lightly hire someone else's car to take him to that place while his own car is only partially occupied. A man owning a motor truck, in charge of his driver for the transmission of commodities to the place which he desires to send his goods, will not lightly hire someone else's motor truck to take his goods to that place while his own motor truck is without sufficient load. There will be much advantage to all concerned if these inherent conditions are accepted as inevitable. The wisdom for which acceptance rests less with the administrators of the great private corporation than with the administrators of the publicly owned properties, and with Parliament, to whom they are responsible.

The railways in Canada have been developed in advance of the requirements of the country. The remedy cannot be found in now materially reducing the miles of railway operated, although economies in this respect will be made if sound practice prevails. Apart from better operating conditions incident to consolidation of the National lines in one system, the chief remedy will be found only in increased population, and consequent increased tonnage of commodities for movement by the railways, and increased passenger, express and other revenues. Canada must secure this increase through settlers who will occupy the unoccupied land in the west. The carrying out of this work should be entrusted to the best available talent for the purpose, and should command the Government's foremost consideration. There should be no stint in the resources placed at the command of those in charge of the work. Colonel Dennis, Chief Commissioner of Colonization and Development, of the C.P.R., in giving his testimony at the Grand Trunk arbitration, said: "Some years ago J. J. Hill made the statement that a farmer adjacent to the Great Northern was worth \$1,000 a year to it. That figure was used for a long time, and it would look as if Mr. Hill was a fairly good guesser, because, when we get down to the actual facts, we get the figure of \$743."

In addition to the efforts of the Government's Immigration and Colonization Department, the Canadian National Rys. and the C.P.R. should enlarge their departments for the colonization of the lands contiguous to their systems. The officers of these departments, and the officers of the Government, should co-operate in well-considered plans which would combine the two.

The method of accounting in the various railway companies entering into the National System records in each separate unit the tonnage which passes from one unit in the system to another, with the result that it is difficult, without labor involving much expense, to secure a statement as to the net number of tons hauled by the united railway system. For purposes of comparison, however, the Grand Trunk System affords an opportunity to estimate the effect of short haul traffic, which is noticeable in that system, as compared to long haul traffic characteristic of the C.P.R. The G.T.R. System operating 4,775 miles of road, during 1920 moved 33,026,658 actual net tons, and was paid for the service \$80,686,623. The C.P.R., operating 13,402 miles, moved 29,919,645 tons, for which it was paid \$143,878,185. It will observe that the G.T.R., moving 3,100,000 tons more freight than the C.P.R., received in payment \$63,191,562 less for its services than that company. The greatest single factor in this remarkable difference is that, while the C.P.R. carried each ton an average of 463 miles, the G.T.R. carried each ton an average of 212 miles. Or, stated in another way, the C.P.R. received \$4.81 for each ton, while the G.T.R. received \$2.44 for each ton. The costs at terminals, to collect and distribute, including switching, are as much per ton whether the freight is short hauled or long hauled. Consequently, there is an added burden affecting net returns by reason of the heavier terminal charge relatively in the short haul business.

In a less pronounced manner the exhibits of the other divisions of the Canadian National System make the same showing in contrast with the C.P.R. The

Canadian Northern Division, operating 9,868 miles of road, moved 14,504,411 tons, for which it received \$48,074,193. Its unfavorable showing in relation to the C.P.R., as far as miles per ton carried is concerned, is that its average in miles for each ton was 326, for which it received \$3.31 a ton.

An analysis of the passenger service for the Canadian National System and Grand Trunk, in contrast with the C.P.R., reveals the same conditions. The miles the C.P.R. moved each passenger greatly exceeds the miles which the G.T.R. moved each passenger, and, though relatively less, the miles each passenger was moved by the Canadian National System.

On the side of gross earnings, these figures plainly indicate that the National System should diligently cultivate the long haul business, both in passengers and freight. It also crosses the continent, and should attract the long haul continental tonnage and passengers. If any mileage of the tracks is not equal in standard to the C.P.R., the necessary expenditures should be made to correct the deficiencies. If the information were available, it would probably be found that the C.P.R. has most valuable earnings from its long haul in transcontinental tonnage, originating in the Orient and European ports. The ocean movement of this tonnage is controlled by the company's ocean steamships, and the land transportation across the continent is controlled by the company's railroad. It is apparent that the management of the National System should secure a large share of this business.

There has been an important increase in gross earnings in the various railways during the recent years. An examination of the G.T.R. records will be useful in determining how much of the increase is due to increased traffic, and how much to higher rates. For this purpose, I compare 1911 to 1920. The G.T.R. gross earnings for the year 1911 were \$46,465,636, and for the year 1920 \$110,796,595, an increase of 138.45%. In each year the same mileage was operated. The freight revenue portion of this increase was \$51,227,994, or 74.83%. The increase in freight revenue due to increased freight traffic was \$18,912,915, or 64.42%, and the increase due to increased rates was \$32,415,079, or 110.41%. Comparing passenger revenue for 1920 with that of 1911, there was an increase of \$8,251,684, being 63.17%, all of which was due to increased rates. There was an actual reduction in traffic of \$38,077. Mail revenue increased \$342,000, or 54.76%, of which 3.8% was from increased traffic and 50.95% from increased rates. Express revenue increased \$1,765,342, or 117%, of which 72.88% was due to traffic, and 44.50% to increased rates.

The operating charges of the C.P.R., the Canadian National as at present administered, and the Grand Trunk System, are unfavorable to the National and Grand Trunk lines. In 1918, 1919 and 1920 the operating ratio (i.e., the gross expenditure for operating compared with gross revenue) of the various units was:

	1918	1919	1920
Canadian Northern.....	97.42%	112.94%	125.25%
Intercolonial.....	111.25%	111.15%	112.82%
Nat. Transcontinental.....	124.60%	122.95%	125.95%
Grand Trunk Pacific.....	109.80%	155.65%	170.38%
Grand Trunk.....	109.80%	155.65%	170.38%
Canadian Pacific.....	74.24%	81.71%	89.87%

*Year ended June 30.
†National and National Transcontinental combined in 1920.

Apart from any other causes, the extensive mileage of the National and

Grand Trunk Systems combined, with shorter haul and consequent lower earnings per ton, constitutes a greater overhead and less favorable net return. A consolidation of the Grand Trunk System and the Canadian National as now administered, into the Canadian National Ry. Co., with one organization, will introduce economies which will be reflected in reduced operating charges. It will be wise, however, to guard against optimistic belief that such economies will be reflected immediately following the reorganization. It will take time to establish smooth working conditions in the re-adjusted body, and not much, if any, relief will be secured until the new organization is shaken down and establishes well balanced facilities.

I attach a memo giving summary of mileage, investment, capitalization, gross and net earnings, fixed charges, operating ratios and revenue statistics of the railways entering into the National System, as well as the C.P.R. From this statement you will observe the total investment in the railways in the National System, including the Grand Trunk, is \$1,652,107,965 for 19,433 miles of road owned, being an average cost of \$85,000 a mile, in contrast to a cost of \$83,117 a mile for the C.P.R. Both systems have considerable double track mileage.

When the railways in the United States passed through their successive periods of depression which discovered the errors of their promoters, relief from interest charges upon outstanding securities was secured through the roads passing under the control of receivers. In the reorganization following the receivership, the outstanding securities were cancelled in whole or in part, or the old mortgage securities were exchanged for income bonds, or for a reduced amount of other mortgage securities, or for issues bearing a lower rate of interest than applied to the defaulted issue. Thus, the fixed charges upon capitalization of over-railroaded communities were kept within compass. In the development of the Canadian railway systems, in which the Government was practically a partner, through guarantees, or through heavy advances to the several corporations, relief through receivership was not considered advisable, or possible. In consequence:

1. The securities issued for the construction of these railways, unreduced by reorganization, are held by the public, and the National Railway System must respect the interest as it matures. The interest amounts to \$82,539,471 a year.

2. There will be an increase in interest bearing securities through an issue to provide money to meet the railway appropriations authorized by Parliament at its last session. Interest upon these securities will approximate \$7,000,000 a year.

3. Inasmuch as it will be necessary to make improvements chargeable to capital, involving an expenditure of \$125,000,000 to \$175,000,000 upon the National System during the next five to seven years, there will develop an interest charge upon the securities issued to meet these expenditures, when completed, of \$10,000,000 a year.

4. The Dominion Treasury has loans outstanding against the railways in the National and Grand Trunk Systems, aggregating \$353,000,000. Interest upon these loans is now being debited by the Treasury to the National and Grand Trunk Systems, and constitutes part of their annual deficits. If this interest

charge is continued at 5%, a sum exceeding \$16,000,000 a year will be required to meet it.

Summing up these four items of charges, and adding taxes upon railway properties, and rental upon leased lines, which in railway accounting are considered as fixed charges, you have the following:

Annual interest charges upon securities in the hands of the public.....	\$32,539,471
Annual interest upon issue to meet railway appropriations authorized by Parliament at its last session.....	7,000,000
Interest upon capital improvements to be made during the next five to seven years.....	10,000,000
Interest upon Government loans of \$353,000,000.....	16,000,000
Taxes and rental for leased lines.....	4,459,510
Total.....	\$69,998,981

To this total must be added the interest upon the award, if any, of the arbitration upon Grand Trunk common and preferred stock, as covered by the agreement with the Grand Trunk shareholders.

As an offset to these charges, there are annual earnings aggregating about \$4,000,000 from investments in securities of other companies and for use of system equipment by other companies, also rentals, etc. This indicates that the National Railways System would be asked to operate ultimately with net fixed charges aggregating \$66,000,000 a year, in contrast with \$15,910,516 a year for the C.P.R.

As, however, the C.P.R. pays preferred and common stock dividends of \$21,427,276 from its railway earnings, and as the National Railways System will not pay dividends upon its share capital, it is true, in comparison of the payments to be made out of railway earnings of the two systems if the \$15,910,516 of fixed charges of the C.P.R. plus the \$21,427,276 paid in dividends, or \$37,337,792, are compared with the fixed charges of \$66,000,000 to be paid by the National System. Dividends upon share capital are not, however, obligatory obligations, and can be discontinued by the C.P.R. without penalty to the control of its property by the corporation, but failure by the National System to pay fixed charges, and refusal of the Treasury to meet them, would mean the appointment of a receiver and the consequent passing of the control of the property. (The C.P.R. pays additional dividends of \$7,800,000 derived from earnings received from activities other than the railway in Canada.) Manifestly, the Canadian National System, with its sound transcontinental line, does not immediately require, plus the burden of the National Transcontinental and Hudson Bay Railways, cannot possibly bear fixed charges of such magnitude.

Remedy Suggested.—Something like the following way of dealing with the situation would relieve the National Railways. The Dominion Treasury cannot be relieved except through increased earnings. That the new National Railway Co. be formed shall have a nominal capital of say, 5,000,000 common shares, and 2,500,000 6% preference shares—each share par value \$100. The total authorized capital would thus be \$750,000,000. That the Government take common shares at par, in payment of its existing advances to the various systems. These, as of Dec. 31, 1920, were \$320,000,000 of loans and \$33,000,000 of Grand Trunk Pacific debentures. The figure would no doubt be increased under 30 new, or whatever, increased charges for taking over. The Government would

turn over to the company the equity in the system, subject only to the bonds and debentures and guaranteed stock issued to the public, and to the fixed charges which may result from the Grand Trunk arbitration. Thus, the existing Government advances, excluding the capital cost of the Intercolonial and Transcontinental, would be represented by common stock ownership only, and no part of the increase in it would be a fixed charge or would be cumulative.

As regards the future: When the issues of National Railway securities incident to the immediate plans of the Finance Minister are completed, I would suggest that any expenditure which can or should properly be charged to capital shall be provided by the Government from year to year, and be capitalized by the issue to the Government of a preference stock at par in respect of its capital advances. Any annual deficit, on the other hand, which has to be met by the Government through the failure of operating revenue to cover operating expenses, plus fixed charges due to the public, should be met by an issue to the Government of common stock at par. Thus the company at the commencement would have the whole of its preference stock unissued, i.e., \$250,000,000, and also \$172,000,000 of common stock unissued. The preference stock would be issued only against capital expenditure advanced by the Government. The balance of common stock would be issued to capitalize the operating deficits and fixed charges over the next few years. The result of this would be as follows:—

1. The cost of constructing the Intercolonial and Transcontinental Railways would be written off at once.
2. The further actual cost up to date to the Government of acquiring the various systems (except for the fixed charge incurred in respect of the Grand Trunk acquisition) would be converted into the form of common stock.
3. Future capital provided by the Government for betterment, etc., would take the form of preference stock.
4. Future deficits would, for the time being, be converted into common stock until it appeared that there was a prospect of the company being able to pay them off out of the excess earnings within a reasonable number of years.

On some plan like this, the accounts of the company would show clearly from the arrangement of the capital itself:

- (a) What the cost to the Government had been of acquiring the system (after writing off the Transcontinental and Intercolonial), since this would be represented by the common stock.
- (b) What losses were sustained in operation and in payment of fixed charges, since these would be represented by the increase in common stock over the original issue to cover advances when the new company was formed.
- (c) What additional capital expenditure the Government had made to the railway system after its unification, since this would be represented by the preference stock.
- (d) What obligations were due to the outside public, since these would remain in the form of bonds, debentures or guaranteed stock on the existing systems.

Plainly, we should face the fact that the \$353,000,000 of loans have no immediate interest bearing value; that until the National System upon a paying basis, the annual deficits in operation and fixed charges are an actual and irro-

coverable loss, and should not be carried as an active debt against the railway.

There are two great departments in a railway organization—the one, traffic, which directs its energies to secure freight and passenger business; the other, operation. The duty of operation is to take care of the business thus obtained. The department charged with operation has to do with all matters affecting transportation, including engineering problems, motive power, equipment, maintenance of way, and general co-ordination and direction of the immense body of men and activities involved in the operation of the railway. The chief traffic officer constantly presses his associate in operation for better service to assist him in securing business. The chief operating officer constantly presses upon his associate in traffic for greater comfort and convenience for passengers to give adequate return for the service supplied. The united effort of these two departments will, in the course of years, reflect the vision, capacity and vigor of the chief officers and their associates, and will establish their sense of responsibility for service to the public. Hence, one system of railways earns a wide reputation for excellent service, and another system is said to fail in essential qualities.

The immediate and sustained duty which will confront the chief executive head of the National Railway Co., when the selection is made, will be to develop an organization which will secure a full share of the country's business, and will establish operating costs within reasonable limits, while giving to the public a service as excellent as circumstances may warrant. It will call to the lot of but few men to undertake a task of such

moment and magnitude. Whether the senior executive officer be a man of affairs, or a man conspicuous in railway traffic, or railway operation, he must be given freedom in determining the character of organization which he will establish, and the men he will bring to his help in the conduct of the enterprise.

You will remember that there are three organizations which are to be merged into one when the National Railway Co. is established—the Grand Trunk, the Canadian Northern and the Intercolonial. These contain, in all, some 800,000 employees, staff and officers. Much patience and good sense will be required to establish an esprit de corps in this great body of men in the new organization. Their goodwill and loyalty are vital in the long struggle which must precede the ultimate successful operation of the property. It is very desirable, if it is possible, to secure leaders for the departments from the personnel of the present organizations. Such a selection will secure the support of the officers and men, and will be of substantial assistance in developing the qualities needed for an uphill fight. The determination whether this is possible or not, however, must rest with the senior executive of the company.

In the interval between the present alarming losses in operation and fixed charges, and the ultimate successful operation of the properties, the patience of all concerned will be severely taxed. It should be accepted that the conditions responsible for the present and anticipated unfavorable results cannot be remedied in short order through the administrative genius of a superman. They are inherent, and will, for years, register disappointment and loss. They will yield only to the patient and capable adminis-

tration that develops power and efficiency, supported by increased tonnage made available through increased population.

There is no burden which the Canadian people are called upon to bear that should occasion fear. The abundant resources of the country and the character of the people will enable the country to meet every obligation. There will be periods of readjustment, when anxiety and concern will be present, but these will always pass. When the construction of the C.P.R. was proposed there were leaders in Parliament who sincerely thought the enterprise was doomed to failure. Within 30 years, men whose opinion upon financial matters was considered authoritative predicted the C.P.R. would pay no more dividends. We will have an uncomfortable time for years with this publicly owned railway property, but we need not give way to fear if we retain patience and balance, and afford a publicly owned property, developed before its time, but with unlimited credit, an administration operating under conditions reasonably corresponding to those present in successfully operated private properties.

If politics will permit, and Parliament and the press will allow the necessary freedom and give the necessary support, the gravity of the issues should go to demand resourceful leadership. Given such leadership, with sufficient time to work out the problem, a National System which will pay its way will in due course emerge. I do not venture an opinion as to what will happen to these great properties if politics will not permit and Parliament and the press will not allow the necessary freedom and will not give the necessary support to the administration of publicly owned railways.

Traffic Orders by Board of Railway Commissioners.

Grain Rates, Georgian Bay to Quebec.

31,313. July 26.—This order was published in Canadian Railway and Marine World for September, pg. 467. Following is Chief Commissioner Carvell's judgment, on which the order was based:

The application, as I construe it, was based upon two grounds, first, that Quebec was being discriminated against in the export trade, because the rate to Quebec was $\frac{1}{2}$ c. per 100 lb. higher than to Montreal, whereas the all rail rate from Port William and Port Arthur to Quebec was the same as to Montreal; and, second, that Quebec was being discriminated against because it was given the same rate as St. John, N.B., Portland, Me., and Boston, Mass., which are all a greater distance from Georgian Bay ports than is Quebec.

W. B. Lanigan, for the C.P.R., and D. O. Wood for the G.T.R., explained the ground for both of the apparent discriminations. It was explained that prior to the construction of the National Transcontinental Ry., the all rail rate from the head of the lakes to Quebec was greater than to Montreal, because of the greater mileage, excepting for a few years from 1900 to 1903, when the old Great Northern Ry., then acting in conjunction with the Canada Atlantic, granted the same rates to both ports, but after the construction of the National Transcontinental, the distance from Armstrong, which would be practically opposite Port Arthur and Port William on both the C.P.R. and C.N.R., to Quebec, was 945 miles, whereas the distance from

Port William to Montreal is 998 miles. The rate of the shorter distance prevailed, and, from that time to the present, the all rail rates to both ports have been the same.

As to the second point, Mr. Lanigan entered into a lengthy explanation of the conditions governing export rates on grain. The grain is assembled, either at Port Arthur or Port William, and West Port, on the Canadian side of the line, or at Duluth on the U.S. side. It is then, as far as possible, carried by water from the head of the lakes to Port McNicoll, Tiffin, and Goderich (called the Bay ports), and Port Colborne, in Canada, and to Buffalo, in the U.S. It seems that, for many years, Philadelphia has enjoyed a 1c. lower rail rate from the Great Lakes than has been granted to New York. The reason was not explained, but I have always understood it was because of the natural advantages possessed by New York over other ports, in the tremendous amount of shipping, cheap insurance, and other things, by which that port can command a large amount of traffic, even with a handicap of 1c. per 100 lb. For many years past, Montreal has enjoyed the Philadelphia rate, I understand because of its natural disadvantages as compared with New York, and the advantage of a great amount of shipping as compared with the latter port, and the higher insurance rate owing to the alleged dangers of the St. Lawrence route. Once the grain is landed in the elevators at the Bay ports or Buffalo, a new contract of carriage then

arises, either by water in the St. Lawrence and Erie Canal movement or by rail, and all the ports on the seaboard practically must be given the same rate, otherwise the business would all go to the ports enjoying the more favorable rate, excepting, as heretofore mentioned, that Philadelphia and Montreal take a rate of 1c. below the New York, Boston, Portland, St. John, and Quebec rate. Even with this handicap, millions of bushels of Canadian wheat are annually diverted from Montreal to New York purely for economic and business reasons.

It is not my intention to enter into a discussion as to the advantages of Quebec as compared with other ports. Without a doubt, it possesses a splendid harbor, ample dockage, and reasonable elevator space, and could the grain be landed there as a business proposition, every facility exists for speedy and economical transshipment. On the other hand, however, the distance from the Bay ports to Montreal is 371 miles, and to Quebec 532 miles, or 161 miles greater to Quebec than to Montreal. It was argued that the Board would have the power to direct the railway companies to grant the same rate to both Montreal and Quebec. That, I believe, is correct, but, on the other hand, this Board is directed by the Railway Act to grant to the railway companies just and reasonable rates, and I am at a loss to see how we can contend that we are carrying out the law in granting a rate to Quebec the same as to Montreal under the mileage

conditions just above described. I know in answer to this it will be argued that Canadian railways are carrying grain to St. John, N.B., a distance of 50 miles beyond Montreal, for 1c. per 100 lb. over the Montreal rate; and to Portland, which is 297 miles beyond Montreal, at the same rate as to St. John; but, as explained by Mr. Lanigan, they are compelled to grant these rates in order to get the business by Canadian channels. If the same rates, especially during the winter, were not given to St. John, and Halifax with 1c. over St. John, as are granted to Portland, Boston and New York, not a bushel of grain would move through the Canadian ports, and hence, as stated by Mr. Lanigan, it is purely a question of compulsion in order to get the business. These conditions, however, do not exist as between the ports of Montreal and Quebec, and I fail to see how this Board would be justified in forcing the railway companies to carry this grain 161 miles beyond Montreal absolutely free. I think the application should be dismissed.

This judgment was concurred in by Deputy Chief Commissioner Nantel, and Commissioner Rutherford.

Stop off Arrangements for Agricultural Products.

31,329. July 28.—Re application of C.P.R. Co. for an order authorizing it to cancel the stop off arrangements at Montreal, Outremont, Toronto and West Toronto, on shipments of grain products, hay, and potatoes for inspection and forwarding orders. Upon hearing the application at Ottawa, Dec. 21, 1920, the C.P.R., the Toronto and Montreal Boards of Trade, and the Montreal Corn Exchange Association being represented, and upon reading the written submissions filed, the Board orders that the company be granted leave to cancel the stop off arrangements at Place Viger, in Montreal, and at Simcoe St. and the Esplanade, in Toronto. Inspection to be retained in all cases as it now exists, and stop off for inspection, change of destination, or for orders, to be retained at Outremont and West Toronto, or Lambton, as at present.

Grain Rate from Head of Lakes to Lewis.

31,342. July 25.—Re application of Chamber of Commerce, Lewis, Que., for a reduction in the rate on grain and grain products; carloads, from Western Canada to Lewis to the same basis as in effect to Quebec City. Upon hearing the application at Quebec, Feb. 3, 1921, in the presence of counsel for the Canadian National Railways, the applicant and the Quebec Board of Trade being represented at the hearing, and what was alleged in support thereof; and upon reading the further submission filed, the Board orders that the Canadian National Rys. be authorized to file a rate on grain and grain products, in carloads, from the head of the lakes to Lewis, Que., of 40¢ c., the same as that which is now in effect to Quebec City.

Nipissing Central Railway Passenger Fares.

31,361. Aug. 12.—Re application of Nipissing Central Ry. Co. for approval of its Standard Passenger Tariff of Maximum Tolls. C.R.C. 23. The said tariff having been filed on the basis prescribed in order 31,317 of July 27, the Board orders that it be approved.

Charges for Weighing Carload Freight.

31,379. Aug. 13.—Re application of Thos. Myles' Sons, Hamilton, Ont., for an order suspending operation of items in Canadian Freight Association's Tariff

C.R.C. 45, providing increased charges for weighing carload freight. Upon hearing the application in the presence of counsel and representatives for the applicants, the Canadian Lumbermen's Association, the Montreal and Toronto Boards of Trade, the Canadian Freight Association, the Canadian Manufacturers' Association, the Union Lumber Co., the Laidlaw Lumber Co., and the Canadian Pacific, Grand Trunk and Toronto, Hamilton & Buffalo Railway Companies, the evidence offered and what was alleged; and reading the written submissions filed, and the reports of the Board's Traffic Officers, the Board orders that the application be dismissed.

The Assistant Chief Commissioner, S. J. McLean, prepared the following memorandum on the case for the Chief Commissioner:—It appears that on the average the movement on the T.H. & B.R. from the Thomas Myles' Sons' plant is 1.62 miles, while from the Grand Trunk scales it is 1½ miles. The service involved, as pointed out by Mr. Myles' report, made up of two factors, 50c. a car for weighing, and a switching charge as follows: 1c. per 100 lb., minimum \$5 a car, if weighed before placement, and 2c. per 100 lb., minimum \$10 a car, if weighed after placement. The reason for the 2c. per 100 lb., minimum \$10 a car, in the latter case, is that two switching movements are required. It seems to me that the matter must be looked at from the standpoint of the switching service. I do not think the charge of 50c. for weighing is out of line; and, further, as to this charge, the complainant is safeguarded by sec. 18, in conjunction with sec. E of Rule 7, Tariff 14, C.R.C. 45, effective May 25, 1920. This is a Canadian Freight Association tariff, dealing with special and joint freight tariff rules and regulations governing weighing of freight traffic. It provides for a tolerance "on all other freight (including coal and coke) the weight of which is not subject to change from its inherent nature, 1% of the weight of the lading, but not less than 500 lb. a car." This provision is in accordance with what is set out as to "tolerance" in sec. 4 (c) of General Order 283, in the matter of track scale allowances, also of tolerance. Under this provision, a 50 ton car would have a tolerance of 1,000 lb. In the sections, if the scale is found to be short less than the tolerance, the shipper stands the cost of weighing; if the shortage is in excess of the tolerance, the railway stands the weighing.

The 1c. local switching charge is, in general, the minimum applicable. The switching tariff for Hamilton, for example, shows switching rates of from 2 to 3½c. per 100 lb., rates of 2 and 2½c. being very common. It might be argued that in the case of the local switching service, a special service was being done for the individual concerned and that, therefore, the analogy would be imperfect between this and what is involved in Myles' case, for it might be urged in Myles' case that the hauling of the car to the weighing scales was due to the railway being short in its weights; and it might then be urged that it was unfair to charge a man for a railway service which is a say, local switching, in conjunction with checking up on railway shortage. Myles, I understand, in every case desires the car to be weighed, assuming it to be short, but, leaving this aside, I think he is adequately safeguarded, because under sec. 18 of the tariff already cited, and referring to secs. 14 to

17, inclusive, provision is made that neither the weighing charge nor the switching charge shall apply on weighing the shortage of the load is found to be more than the tolerance as provided in rule 7, sec. E of the tariff. The situation then is that if the car has a shortage of less than the tolerance Myles has to stand the weighing charge and also the switching charge; if it has a shortage in excess of the tolerance, the railway has to stand both the weighing and switching charge. I see no reason why the car should be hauled free of local switching charge, on mere suspicion. If the applicant has good evidence which stands the test of weighing, he is amply safeguarded.

This was concurred in by the Chief Commissioner, the Deputy Chief Commissioner and Commissioner Boyce.

Express Rates on Fruits and Vegetables from T.H. & B. Ry. Points.

31,400. Aug. 17.—Re complaint of Dominion Agriculture Department against the Toronto, Hamilton & Buffalo Ry. to Hamilton for shipment beyond, charged by American Railway Express Co. Upon reading what is filed in support of the complaint and on behalf of the American Railway Express Co., the Board orders that the American Railway Express Co. be required to publish and file a tariff showing a proportional rate of 24c. per 100 lb. on fruits and vegetables from shipping points on the T.H. & B.R. to Hamilton, applicable to shipments destined beyond Hamilton; the same to become effective Aug. 27.

Scrap Iron Rate from Canada to United States.

31,405. Aug. 6.—Re complaint of Consumers Metal Co., Montreal, against rates charged on scrap iron from Canada to the United States. Upon hearing the complaint at Montreal, March 23, the applicant and the C.P.B. being represented at the hearing, and what was alleged; and upon reading the written submissions filed, the Board orders that the complaint be dismissed.

Revised Ratings on Rubber and Rubber Articles.

31,406. Aug. 6.—Re application of the Rubber Association of Canada, Toronto, for revised ratings on rubber and rubber articles as they appear in supplement 15 to the Canadian Freight Classification 16. Upon hearing the application at Ottawa, March 15, the applicants, the Canadian Freight Association, the Toronto Board of Trade, and the Grand Trunk, Canadian Pacific and Canadian National Railways being represented; and upon reading the written submissions filed, the Board orders that item 12, page 48, of Supplement 15 to Canadian Freight Classification 16, be corrected to read as follows:—

Tires, rubber, pneumatic (See note 1)	
In wrapped bundles or wrapped bundles	
(see note 2)	1½
In metal strapped and sealed bundles (see note 3)	1
In boxes or crates	1
Loose or in packages, c1 minimum weight 20,000 lb. (see note 4)	3

That item 16, page 45, of Supplement 15 to Canadian Freight Classification 16, be corrected to read as follows:—

Tire Tubs	
In boxes or crates	1
In packages named, c1 minimum weight 20,000 lb.	3
Note 1. Ratings apply also on tires containing inner tubes.	
Note 2. Wrapping must be burlap, or of paper and burlap, or of waterproof paper reinforced with a cotton cloth of not less than 40 x 40	

threads to the inside, the combined wrapping material having a resistance of not less than 60 lb. to the square inch, Mullen test; or of two thicknesses of waterproof paper, fastened together with a waterproof composition and containing parallel strands of yarn not more than $\frac{3}{8}$ in. apart, the combined wrapping material having a resistance of not less than 60 lb. to the square inch, Mullen test; or of a waterproof material, straps being fastened by uniting with a waterproof composition two thicknesses of paper, each weighing not less than 60 lb. to a ream (100 sheets 24 x 36 in.), the combined wrapping material having a resistance of not less than 100 lb. to the square inch, Mullen test.

Note 3.—Wrapped to comply with note 2 and stowed with not less than $\frac{1}{2}$ in. of air, and not less than $\frac{3}{8}$ of an inch in width, and not less than 0.015 of an inch in thickness, and having a tensile strength of not less than 600 lb. and sealed with metal seals.

Note 4.—Tires when shipped loose must be loaded and unloaded by owners.

And it is further ordered that the changes herein mentioned be made effective forthwith in Supplement 17 to Canadian Freight Classification 16.

Rates on Sugar from St. John, N.B., to Levis, Quebec and Montreal.

31,407. Aug. 22.—Re complaint of Atlantic Sugar Refineries, Ltd., of Montreal, against cancellation by C.P.R. of rates on sugar from St. John, N.B., to Levis, Montreal, and Quebec. The matter having been considered at a meeting of the Board in the Chief Commissioner's office on Aug. 19, the Board orders that item 863B, as published in Supplement 10 to C.P.R. Tariff C.R.C. no. E-3808, effective Sept. 6, be suspended until a further order is made after hearing the com-

plaint at the first September traffic sittings in Ottawa.

Commodity Rates on Coal Briquettes from Toronto.

31,439. Aug. 23.—Re complaint of Nukol Fuel Co., Toronto, against cancellation of commodity rates on coal briquettes from Toronto. Upon hearing the complaint at Toronto, May 27, the complainant, the Grand Trunk, Canadian Pacific and Canadian National Railways being represented; and upon the report and recommendation of the Board's Traffic Officer, the Board orders that the complaint be dismissed.

Additional Traffic Orders appear on another page farther on in this issue.

President Beatty, of the C. P. R., on Canadian Railways Position.

During his recent inspection trip of C.P.R. Western Lines, E. W. Beatty, K. C., President, and the official party accompanying him, were entertained at dinner at Moose Jaw, Sask., by the Board of Trade and the Kiwanis and Rotary Clubs, combined. In responding he said in part:—I know there is abundant ground for difference in opinion about many subjects pertaining to railways, and it is not my purpose to deal with questions of past policies. We, you are not right, however, in assuming, that we have reached a finality in the railway situation and the end of the problems it represents. I doubt whether, for many years, any of us will be able to say that the railway problem is behind us, and, therefore, that we need not give serious or particular attention to it. The size of the country, and the magnitude of the system, render it quite unlikely that a permanent solution has yet been reached, and if it has not, then the subject will for some time be one in respect of which all Canada should be profoundly concerned. The railways are our greatest national necessity and at the moment they are a great national burden, but, whatever we may think of the different policies of administration which are advocated in different quarters, there at no time existed, as exists today, the necessity for keener appreciation of the problems of the companies or of sympathetic assistance towards their ultimate solution.

Never in the history of this country were greater efforts made by the railways to capitalize public opinion in their favor and gain strength from public support than in the case today. It would be a pity if these efforts were neutralized, by misunderstanding or failure on the companies part, to not only do their full duty, but also to take the public into their confidence in respect of the difficulties which they have to meet. I would regard it the part of, not only wisdom, but ordinary common sense, that the utterances of the companies, in order that the officers of the companies, in order that they need support and sympathy which they need should be obtained in full measure. We are not only to discuss before courts and commissions the questions of the differences between the public and ourselves. That, to my mind, is a mistaken policy. The questions are so important, and the necessity of information in respect of them so great, that they should be publicly and frankly discussed, so that all misapprehensions may be removed, or, if not, minimized to the greatest possible extent.

The question of rates will always be a subject in respect of which there will be a difference of opinion, due to the difference in interest, and also the difference in the point of view. The recent increases granted in Canada and the United States were accepted as necessary in the latter country, but were somewhat misapprehended in certain parts of Canada, notwithstanding the fact that Canadian rates are lower than those on U.S. railways, and the necessities of Canadian railways are equally great. A good deal of this misapprehension would be removed if the people knew or cared to know (and in some cases they do not care to know) more of the conditions under which the operations of the companies are carried on, and showed to them a more generous attitude, an attitude which, I may add, in my opinion, would prevent more awkward complications in the future.

One of the small beginnings which has added to the difficulty of the railway situation in the U.S. was this very lack of appreciation of the railway companies' needs by public tribunals, up to 1917. The railways were not altogether free from blame in bringing this about, because initially their attitude of inelasticity in dealing with the public developed a sentiment which found reflection in a series of Congresses relating to transportation and to the administration under which they were passed. The Interstate Commerce Commission seemed, in former years, to regard it as its paramount duty to permit the railways to suffer, if by so doing the public interest was temporarily advantaged. Obviously this was a wrong view, and has since been corrected by statute. The duty of any commission so established is to protect the interest both of the companies, and the proprietors of their influence should be directed in favor of them, and the public, rather than that of either one or the other of the parties in any controversy affecting the railways and the public.

Now whatever may be said of our railway mistakes of the past, it cannot be said that during the last few years Canadian railways have exacted more in tolls for their service than they required. The companies have not been in the slightest degree profiteers, and their earnings, where there were earnings, have been moderate to a degree. In spite of these factors, and the strain upon them by war activities, they were able, during the last five years, to perform a transportation service which, for efficiency and effectiveness, was unequalled in any country

in the world. It is significant, too, that while the so-called increased cost of living has been met, in whole or in part, by wage increases, and while the increase in the price of commodities has enabled the traders in them to have secured in many instances the same or higher relative profits than before the war, in no case in Canada has the holder of a railway security obtained more than he did formerly, and what he received, by way of interest or dividend, was, up to last year, due to the diminishing purchasing power of the dollar, worth half what it was even as recently as 1916.

The increases which were granted were claimed, in some quarters, to be excessive, and the only ground upon which this claim was urged was that because of them the C.P.R. earnings would be unduly swelled. The results of the operations for 1920 entirely disprove this theory, because the earnings increased and a quick and large fall movement of grain, only the very moderate surplus of \$450,000 was earned, after paying fixed charges and usual dividends. What has happened since? Towards the end of 1920, a pronounced depression in business took place throughout the whole of the country; people were apprehensive, and corporations tightened their belts; all unnecessary expenditures were reduced and those not immediately essential were postponed. It was the only way open to any company, to meet the high cost and decreasing traffic, and doubtful future conditions. The C.P.R. gross earnings to the end of August were \$16,500,000 less than during the same period last year. In spite of this decrease, by the exercise of the greatest possible economy, we were able to show a slightly better position at the end of the first six months than for the first six months of 1920. A small margin between revenues and expenditures is not a healthy condition for any corporation, particularly so in the case of a large corporation, whose ability and willingness to spend is of the greatest possible advantage to the country. The company which I represent is one of the largest individual producers of goods in Canada, and you do not need any assurance from me to indicate the disadvantage of the company being compelled to defer purchases, or buy in very small quantities from day to day, rather than freely and courageously, against its future necessities. No one is more anxious than I am that rates should come down as soon as they can come down in this country. There is not a railway executive in America who would not prefer to

make money by the free movement at moderate rates than by a slight movement at high rates. One is a healthy condition and the other one of abnormality.

The problems which have to be met are, first of all, the protection of the property, viz., that it should not be allowed to run down so that the character of the service may be depreciated; secondly, the maintenance of the kind of service an exacting public demands; and thirdly, but equally important, the continuance, through a satisfactory earning power, of a high credit, in order that money may be forthcoming to enable the companies to meet Canada's future transportation necessities. If we fail in any of these three essentials we cannot claim success, and, without them, we cannot do our plain transportation duty to the people of this country. I do not propose to weary you with a statement of our individual needs, because that would involve a statement of C.P.R. plans and aspirations which could not, with accuracy or appropriateness, be made at this time. I am as anxious as you are to see a much lower scale of expenses, and, therefore, a lower scale of rates, but I am not one of those who believe that lower rates is a panacea for

our commercial depression, which is universal and exists by reason of conditions not connected with the transport of goods. I would, however, ask that Canadian railways be permitted, and particularly the C.P.R., to work themselves into a position where they can face problems of expansion and improvements in railway service, and extension of railway activities, with some certainty. I know you are not going to be unmindful of what has taken place in the past, or of the progress we have been able to make, and I feel, too, that you will agree with me that those past achievements should be duplicated in the future, if this country has in it, as we think it has, latent resources of infinite variety and value.

The companies themselves have realized that they have a common purpose in their existence, and to that end have associated themselves together in what is known as the Railway Association of Canada. Of this the presidents of the five larger systems are the executive, and through the medium of this executive the activities of all the systems should be carried on in a spirit of fair competition, which will, I think, inure to the benefit of the country, and the companies themselves. Both the larger

systems are, in every sense of the word, national; one conceived and undertaken as a part of Confederation, and the other appropriated by reason of what was considered to be at that time a national necessity. Both systems will further their individual interests by every legitimate means, and contribute their share to the general development of the country. While we are doing this, and it is a proper ambition, the C.P.R. should be permitted to make profits on rates which are determined by an independent tribunal to be fair and reasonable. If we are able to accomplish this no one of business experience will, I think, object, and if in this development we can perform still better public service, and extend our outside activities in development, colonization, hotels, and steamships, I can assure you that the satisfaction of having done so successfully will equal, if not exceed the satisfaction of fair financial returns. It can be said, I think, of all the larger companies, that they are in every sense citizens of Canada, and as such we desire to see its problems determined in such a way as to restore and increase that confidence in Canada and its enterprise upon which the prosperity of the country is so largely dependent.

Birthdays of Transportation Men in October.

Many happy returns of the day to:
A. Aitken, Assistant Superintendent, Toronto Terminals, C.P.R., Toronto, born at Decewsville, Ont., Oct. 12, 1872.

E. W. Beatty, K.C., President, C.P.R., Montreal, born at Thorold, Ont., Oct. 16, 1877.

L. S. Brown, Assistant General Manager, Eastern Lines, Canadian National Rys., Moncton, N.B., born at Nelson, N. B., Oct. 19, 1864.

F. F. Busted, Assistant Engineer, C.P.R., Vancouver, B.C., born at Battery Point, Que., Oct. 10, 1858.

J. M. S. Carroll, Sales Manager, Canadian Consolidated Rubber Co., Montreal, born at Ballarat, Australia, Oct. 22, 1875.

J. W. Corbett, Purchasing Agent, Canadian Government Merchant Marine Ltd., Montreal, born there, Oct. 4, 1887.

H. H. Couzens, A.M.I.E.E., General Manager, Toronto Transportation Commission, born at Totnes, Devonshire, Eng., Oct. 16, 1877.

H. A. Dixon, Chief Engineer, Western Harbor Commission, Quebec, born at L'Acet, Que., Oct. 1, 1871.

H. A. Dion, Chief Engineer, Western Lines, Canadian National Rys.-Grand Trunk Pacific Ry., Winnipeg, born at Sand Hill, Ont., Oct. 7, 1878.

L. V. Druce, Travelling Traffic Representative, Canadian National-Grand Trunk Pacific Rys., born at London, Eng., Oct. 20, 1873.

J. H. Edwards, Freight Claims Agent, Canadian Steamship Lines, Montreal, born at Birmingham, Eng., Oct. 4, 1880.

R. G. Edwards, Assistant Superintendent, Windsor Division, Ontario District, C.P.R., London, Ont., born at Maitland, Ont., Oct. 10, 1883.

A. C. Egan, General Auditor, Canadian Northern Ry. System and Grand Trunk Pacific Ry., Toronto, born at Winnipeg, Oct. 6, 1883.

E. Friend, Comptroller, Canadian National Rys., Toronto, born at Brighton, Eng., Oct. 12, 1871.

W. P. Fitzsimmons, Commissioner of Industries, G.T.R., Montreal, born at De-

troit, Mich., Oct. 27, 1868.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., Hull, Que., and President, Canadian Electric Railway Association, born at Quebec, Que., Oct. 9, 1882.

N. Ham, Secretary, Express Traffic Association of Canada, Montreal, born at Winnipeg, Oct. 21, 1884.

G. Hodge, Assistant to Vice President, Eastern Lines, C.P.R., Montreal, born there, Oct. 2, 1874.

J. H. Hughes, Assistant Superintendent, Ottawa Division, Quebec District, C.P.R., Ottawa, Ont., born at Charlottetown, P.E.I., Oct. 7, 1865.

H. Irwin, Consulting Right of Way and Lease Agent, C.P.R., Montreal, born at Newgrove, County Down, Ireland, Oct. 27, 1847.

W. B. Johnson, Master Mechanic, Halifax Division, Maritime District, Canadian National Rys., Truro, N.S., born there, Oct. 8, 1872.

W. B. Lanigan, Freight Traffic Manager, C.P.R., Montreal, born at Three Rivers, C.P.R., Oct. 12, 1861.

O. M. Lavioie, Superintendent, Laurentian Division, Quebec District, C.P.R., Montreal, born at St. Cyril de Wendover, Que., Oct. 16, 1884.

A. E. McMaster, Treasurer, Whalen Pulp & Paper Mills Ltd., Vancouver, B.C., born at Perth, Ont., Oct. 22, 1885.

C. Malcolm, chief clerk, Auditor of Stores and Mechanical Accounts, Alberta District, C.P.R., Calgary, Alta., born at Tatamagouche, N.S., Oct. 18, 1881.

W. T. Marlow, General Freight Agent, Ocean Traffic, C.P.R., Montreal, born at Limerick, Ireland, Oct. 25, 1872.

Fred. R. Miller, member, Toronto Transportation Commission, and Hydro Electric Power Commission of Ontario, born at St. Catharines, Ont., Oct. 31, 1878.

C. R. Moore, General Superintendent of C.R. Service, G.T.R., Montreal, born at Hamilton, Ont., Oct. 12, 1867.

Hugh Paton, President, Shedden Forwarding Co., Montreal, born at John-

stone, Renfrew, Scotland, Oct. 5, 1852.

J. W. Porter, Special Engineer, Western Lines, Canadian National Rys., Winnipeg, Man., born at Aberdeen, Scotland, Oct. 15, 1877.

H. G. Reid, General Master Mechanic, Western Lines, Canadian National Rys., Winnipeg, born at Pembroke, Ont., Oct. 27, 1863.

O. J. Rowe, Local Freight Agent, Grand Trunk Pacific Ry., Edmonton, Alta., born at Binghamton, N.Y., Oct. 11, 1879.

J. K. Savage, General Superintendent, Quebec District, C.P.R., Montreal, born at Forreston, Ill., Oct. 5, 1876.

The Lord Shaughnessy, K.C.V.O., Chairman, C.P.R., Montreal, born at Milwaukee, Wis., Oct. 6, 1853.

T. Duff Smith, Lake Forwarding Agent, Canadian National Rys., Cleveland, Ohio, born at Barking, Essex, Eng., Oct. 2, 1868.

Lieut.-Col. C. C. Stibbard, D.S.O., Trainmaster, C.P.R., Lethbridge, Alta., born in Sussex, Eng., Oct. 19, 1855.

C. E. Stoddard, Assistant to Vice President, Western Lines, C.P.R., Winnipeg, born at London, Ont., Oct. 25, 1881.

D. A. Storey, ex-Freight Traffic Manager, Canadian Government Railways, Moncton, N.B., now of Kingston, Ont., born at Halifax, N.S., Oct. 26, 1855.

E. N. Todd, General Foreign Freight Agent, C.P.R., Montreal, born at Huntingdon, Que., Oct. 17, 1879.

J. H. Valleeau, Secretary-Treasurer, Thousand Islands Ry. and Chawara Ry., Gananoque, Ont., born at Selby, Ont., Oct. 14, 1889.

J. A. Vallender, Superintendent and General Freight and Passenger Agent, Roberval-Saguenay Ry., Chicoutimi, Que., born at Quebec, Que., Oct. 21, 1878.

R. Walton, Master Mechanic, Montreal Division, Quebec District, C.P.R., Montreal, born at Peterborough, Ont., Oct. 16, 1880.

A combined coal and oil locomotive is being tried in England, using both coal and oil as fuel, or either.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1901, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

31,341. July 25.—Ordering Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to move material from bottom of outlet of Thynne Lake, B.C., deposit it away from high water channel from stations 1602 and 1612; and dredge bottom of lake to an elevation not greater than 2616; work to be done by Oct. 31.

31,342. July 25.—Authorizing Canadian National Ry. to file rate on grain and grain products, in railroads, from head of lakes to Lewis, Que., of 10½¢, same as in effect to Quebec City.

31,343. July 25.—Authorizing C.P.R. to remove station agent at St. Lazare, Que., caretaker to be appointed.

31,344. July 30.—Authorizing Canadian Northern Ry. to build spur for W. Errington, Dalehurst, Alta.

31,345. Aug. 2.—Approving Canadian Northern Quebec Ry. bridge renewal over St. Hubert River, St. Lawrence Subdivision, mile 128.51 from Quebec.

31,346. Aug. 3.—Authorizing City of Hamilton, Ont., to build bridge over G.T.R. and C.P.R. at Burlington Heights.

31,347. Aug. 3.—Rescinding order 30,445, Jan. 29, ordering Canadian National Ry. to build farm crossing for John Kearney, Sleemans, Ont., at his expense, by May 1.

31,348. Aug. 3.—Authorizing C.P.R. to build spur for Mason & Hickey, Fort William, Ont.

31,349. 31,350. July 29, 28.—Approving Canadian National Ry. plan showing changes to be made in spurs over Newcastle, Junior Mining Co. and Manitoba Coal & Development Co., Drum-beller, Alta.

31,351. Aug. 2.—Approving G.T.R. plan of location and details of structure and yard tracks of station 1 oke built at Howland, formerly Kinmen, Jct., Ont.

31,352. Aug. 3.—Approving Canadian National Ry. plan of changes in interlocking plant at crossing of G.T.R. and James Bay Ry. on Lot 2, C. 10, East Gower, Regina, Sask.

31,353. July 29.—Extending for two months time within which C.P.R. may install protection at crossing near Moffatt, Ont., as required by order 31,107, June 6.

31,354. July 29.—Ordering Canadian National Ry. to erect trestle bridge over the main line, and to install gantry and chute for loading live stock at Brancepeth, Sask.

31,355. July 29.—Authorizing Canadian National Ry. to rebuild bridge over Belle River, in Signal Tp., Que., at mile 191.0 Quebec Subdivision.

31,356. July 29.—Extending for 90 days from date time within which Montreal & Southern Counties Ry. may build spur for Slate Milling Corporation, Canada, Grand Forks, Que., as authorized by order 30,363, Nov. 21, 1920.

31,357. Aug. 5.—Ordering Canadian National Ry. forthwith to keep their cars 100 ft. from crossing at 7th Ave., Regina, Sask., and to install electric bell with wigwag signal there within two months.

31,358. July 25.—Ordering Edmonton, Dunvegan British Columbia Ry. to build by Oct. 15 standard portable shelter station, with platform not less than 200 ft. long, and standard 2-car combination loading platform and stock yard at Girouxville, Alta.

31,359. July 25.—Ordering Canadian National Ry. to move material from St. Lawrence, Ont., more than 700 ft. west of its present location; work to be done to satisfaction of Board's Engineer on condition that St. Lawrence municipality applies for authority to make highway crossing where station is to be located.

31,360. Aug. 4.—Ordering Grand Trunk Pacific Ry. to install standard portable stock chute at Endako, B.C., by Sept. 1.

31,361. July 31.—Dismissing application of Eugene Phillips, Industrial Engineering Works, for order requiring C.P.R. to lease its siding on Marston St., Montreal.

31,362. Aug. 1.—Approving G.T.R. plan of changes in flagging plan at St. John's, Ont.

31,363. Aug. 4.—Dismissing application of City of Ottawa, Ont., for order directing C.P.R. to remove material from the maintenance of crossing at Second St., East.

31,364. Aug. 9.—Authorizing Canadian Northern Ry. to build spur for Douglas Fuel Co., St. Boniface, Man.

31,365. Aug. 10.—Recommending to Governor in Council for sanction, agreement between the Canadian Railway Commission and Michigan Central Ry.

31,366. Aug. 8.—Declaring that for the pres-

ent, C.P.R. crossing at Francis, Sask., is protected to Board's satisfaction.

31,367. Aug. 9.—Ordering that crossing of G.T.R. and C.P.R. at George St., Toronto, be protected by watchman.

31,368. Aug. 10.—Declaring that for the present the third public crossing of highway by G.T.R. east of Campbellford, Ont., is protected to Board's satisfaction.

31,369. Aug. 9.—Ordering Canadian National Ry. to furnish improved station facilities at Lashburn, Sask., by Aug. 1, 1922.

31,370. Aug. 3.—Extending for two months time within which C.P.R. may build spur for Knechtel & Sons and Pepler Bros. Co., Hanover, Ont., as required by order 31,027, May 1, 1921.

31,371. Aug. 9.—Dismissing Canadian National Ry. application to close station at Elgin, Ont., and authorizing them to remove station agent and appoint a caretaker agent there instead; also C.N.R. to stop trains 5 and 6 there, on flag, to take up passengers, and to stop there whenever necessary to set down passengers.

31,372. Aug. 5.—Extending to Sept. 1, time within which C.P.R. may install gates to protect crossing at Waterloo and Paul Sts., London, Ont., under order 30,132, Sept. 25.

31,373. Aug. 11.—Amending order 31,086 approving location of Canadian National Ry. Acadia branch, and authorizing the crossing of highways.

31,374. Aug. 9.—Authorizing Grantham Tp., Que., to make highway across C.P.R. tracks.

31,375. Aug. 10.—Authorizing C.P.R. to remove station agent at Plaisance, Que., caretaker agent to be appointed.

31,376. Aug. 12.—Authorizing C.P.R. to build spur for Skingle Coal Co., Moose Jaw, Sask.

31,377. Aug. 11.—Declaring that for the present C.P.R. crossing of highway west of Ingersoll station (Carman Road), Ont., is protected to Board's satisfaction.

31,378. Aug. 17.—Approving location of C.P.R. Station at Station to be built at Dufrost, Man.

31,379. Aug. 13.—Dismissing application of Thos. Myles Sons, Ltd., Hamilton, Ont., for order directing Canadian National Ry. to change Freight Classification C.R.C. 45, providing increased charges for weighing of carload traffic.

31,380. Aug. 12.—Relieving Canadian National Ry. of its obligation from maintaining a Sunday at crossing at Delta Jct. (Transpect), Man., so long as present character of movements there exists.

31,381. Aug. 12.—Approving Nipissing Central Ry. Standard Passenger Tariff of maximum tolls, C.R.C. 23.

31,382. Aug. 13.—Authorizing C.P.R. to build spur across Water St., Toronto, for Thomas Davidson Mfr. Co.

31,383. Aug. 18.—Authorizing G.T.R. to build spur for U. Richardson, Ferris, Ont.

31,384. Aug. 17.—Authorizing Canadian Northern Ry. to divert highway in n.w. ¼ Sec. 5, T. 37, Range 7, west 5th meridian, Alta.

31,385. Aug. 18.—Declaring that for the present G.T.R. crossing near River Beaudette, Que., is protected to Board's satisfaction.

31,386. Aug. 17.—Declaring that for the present Grand Trunk Pacific Ry. crossing 450 west of Homewood station, Man., is protected to Board's satisfaction.

31,387. Aug. 17.—Authorizing C.P.R. to build extension spur for D. H. Bain Co., Calgary, Alta.

31,388. 31,389. Aug. 17.—Authorizing Canadian Northern Ry. to rebuild bridge at River York, Ont., at miles 13.0 and 15 from Toronto.

31,390. Aug. 17.—Requiring C.P.R. to fence each side of right of way from mile 1.2 to Cooper Creek, mile 4, on its Lardo Subdivision, B.C., by Oct. 1.

31,391. Aug. 18.—Authorizing Toronto, Hamilton & Buffalo Ry. to rebuild bridge over Grand River, Bradford, Ont.

31,392. Aug. 17.—Authorizing C.P.R. to build spur for Lake of the Woods Milling Co., Calgary, Alta.

31,393. Aug. 17.—Approving revision of Canadian Northern Ry. spur for Elgin Coal Co., Drum-beller, Alta., and authorizing C.P.R. to build spur from same for Gibson Syndicate Coal Co.

31,394. Aug. 19.—Approving British Columbia Transportation Co. C.R.C. 12, providing for rentals and charges, and Supplement 1 to Tariff title Sept. 1.

31,395. Approving location of Canadian Northern Ry. crossing toll charges, to become effective 3rd class station at Lucky Lake, Sask.

31,396. Aug. 18.—Authorizing International Trunk Ry. Co. to close its crossing at St. Catharines, at Cathcart St., Sault Ste. Marie, Ont., without first stopping them, speed not to exceed 10 miles an hour.

31,397. Aug. 18.—Declaring that for the present C.P.R. crossing at Lorette, Three Rivers Subdivision, Que., is protected to Board's satisfaction.

31,398. Aug. 18.—Extending to July 19, 1922, time within which Lake Erie & Northern Ry. may build spur from St. Catharines, Que., to Hamilton, Ont., authorized by order 30,573, Jan. 19.

31,399. Aug. 18.—Authorizing Michigan Central Ry. to build spur for Bridgeport Coal Co., Bridgeport, Ont.

31,400. Aug. 17.—Ordering American Railway Ex. Co. to file tariff showing proportional rates of 24c. per 100 lb. on fruit and vegetables from shipping points on Toronto, Hamilton & Buffalo Ry., applicable to shipments destined beyond Hamilton, effective Aug. 15.

31,401. Aug. 17.—Declaring that for the present C.P.R. crossing east of Cooksville station, mile 117.7 London Subdivision, is protected to Board's satisfaction.

31,402. Aug. 18.—Declaring that for the present G.T.R. crossing west of Alvinston, Ont., is protected to Board's satisfaction, and ordering that nothing be placed on the land which may obstruct the view.

31,403. Aug. 17.—Ordering Canadian National Ry. to stop trains 9 and 10 on flag at diamond crossing, mile 450, Battleford Subdivision, Sask., to pick up and let off passengers from or to points onto Cudworth Subdivision.

31,404. Aug. 18.—Declaring that for the present Canadian National Ry. crossing 335 ft. north of Cambridge station, Ont., is protected to Board's satisfaction.

31,405. Aug. 6.—Dismissing complaint of Consumers Metal Co., Montreal, against rates on scrap iron from Canada to S.S.

31,406. Aug. 6.—Ordering that items 12 and 16, page 45, Supplement 15, of Canadian Freight Classification 16, be corrected to provide new rates for tires, tire tubes, etc., effective forthwith, in Supplement 17.

31,407. Aug. 22.—Suspending until further order after Sept. 1, 1922, in Supplement 19 to C.P.R. tariff C.R.C. no. E-3808, effective Sept. 6, re rates on sugar from St. John, N.B., to Quebec, Lewis and Montreal.

31,408. Aug. 2.—Authorizing release from liability in respect of persons travelling on the French exhibition train through Canada.

31,409. Aug. 2.—Authorizing City of Port Arthur, Ont., to build temporary roadway over C.P.R. to serve grain elevators at northerly end of city.

31,410. Extending to Sept. 1, 1922, time within which C.P.R. may build spur for Gray-Dot Motors, Ltd., Chatham, Ont., authorized by order 30,567, March 24.

31,411. Aug. 23.—Authorizing C.P.R. to build spur for Milton Pressed Brick Co. at mile 34 Galt Subdivision, Equeuxing, Twp.

31,412. Aug. 24.—Authorizing Saskatchewan Highways Department to make highway crossing over Canadian National Ry. on surveyed road in s.e. ¼ Sec. 36, T. 44, Range 7, west 3rd meridian.

31,413. Aug. 24.—Extending to Aug. 29, 1922, time within which C.P.R. may build spur for Ruggie Truck Co., London, Ont., authorized by order 30,407, Nov. 29, 1920.

31,414. Aug. 23.—Authorizing G.T.R. to build spur connecting its tracks with Canadian National Ry. at Bridgeport, Ont.

31,415. Aug. 28.—Ordering C.P.R. to make temporary farm crossing for McKee & Ferguson, Alberta, B.C.

31,416. Aug. 19.—Authorizing C.P.R. to build its Moose Jaw Southwesterly Branch (Assiniboia to Consul revised location) over road allowance on south side of road, mile 15.2, Range 22, west 3rd meridian, Sask., mile 39.97 (new mile 228.52).

31,417. Aug. 20.—Authorizing Canadian Northern Ontario Ry. to rebuild bridge over Kiokee Kooi Lake, Pentland Tp., Ont., mile 20.4 North Bay Subdivision.

31,418. Aug. 20.—Authorizing C.P.R. to build its Moose Jaw Southwesterly Branch across road allowance on west boundary of s.w. ¼ Sec. 18, T. 3, Range 21, west 3rd meridian, Sask., at mile 10.76.

31,419. Aug. 20.—Authorizing Canadian National Ry. to extend Railway Ave., Galesburg, Ont., to Brookville, Ont.

31,420. Aug. 23.—Authorizing Hydro Electric Power Commission of Ontario to build two tracks across road allowance, at McEwen Subdivision, single track at intersection of Aylmer Ave. and Wyandotte St., Windsor, Ont.

31,421. Aug. 19.—Approving agreement between City of Brookville and Brookville Tp., Ont.

31,422. Aug. 19.—Relieving C.P.R. from maintaining signalman on Sundays at crossing of G.T.R. at St. Catharines, Ont., mile 1.2, Range 7, west 3rd meridian, Ont., so long as present character of movements there exists.

31,423. Aug. 19.—Amending order 30,573, Apr. 8, authorizing International Trunk Ry. Co. to make highway crossing over C.P.R. in s.e. ¼ Sec. 10, T. 8, Range 5, west 5th meridian, Alta.

The Award in the Grand Trunk Railway Stock Arbitration.

Under the agreement between the Dominion Government and the G.T.R. Co., ratified by the Dominion Parliament at its 1920 session, the Government undertook to guarantee the payment half yearly of dividends at 4% a year on the company's guaranteed stock, and the interest on the debenture stocks as and when payable. It also undertook to acquire the following stocks from the shareholders, the amounts mentioned being their par values:

First preference stock 5½%	\$3,420,000
Second preference stock 5%	2,530,000
Third preference stock, 4½%	7,168,666
Ordinary or common stock	23,955,487

\$37,073,492

The agreement provided that the value, if any, to the holders of the preference and common stocks should be determined by three arbitrators, the value, so determined, to be not greater than that on which the annual dividend at 4% on the aggregate face value of the then present guaranteed stock, and the new guaranteed stock taken together, would be \$5,000,000, i.e., the value must not exceed \$64,166,666.66. The fixing of this limit was not to be taken by the arbitrators as any admission, or indication, that the value to be determined was the amount so fixed, or any other amount.

This meant that the arbitrators could not award a larger sum than is represented by \$5,000,000 capitalized at 4%, and as out of this amount \$2,432,500 would have to be taken to fulfil the Government guarantee of \$60,812,500 of present guaranteed stock, there would remain \$2,567,500, or \$64,166,666 capitalized at 4% that might be awarded the holders of the preference and common stocks. As these amount to \$180,362,000, at par value, the securities could obtain would have been a little more than one third their face value. The arbitrators were also directed to determine in what proportion the amount of their award, if any, should be distributed among the holders of the first, second and third preference, and the common stock.

The Arbitration and the Award.

The arbitrators were Sir Walter Cassels, President of the Exchequer Court, chairman, appointed by statute; Sir Thos. White, ex Finance Minister, representing the Dominion Government, and W. H. Taft, ex President, United States, representing the G.T.R. Co. The arbitration proceedings opened in Montreal, Feb. 1, but were suspended in April, the arbitrators' powers having lapsed by the effluxion of time, and the Government having refused an extension until the G.T.R. Co. met the conditions imposed. These conditions having been agreed to, the Dominion Parliament passed an act at its last session, authorizing the arbitration to proceed, and the hearing of evidence was resumed on June 1 and concluded on June 24, counsel's arguments commencing June 30, and ending July 8.

The arbitrators' award was given on Sept. 7. Two of them, Sir Walter Cassels and Sir Thos. White, worded their decisions as follows:—"We the undersigned arbitrators, a majority of the board, after mature deliberation, and after careful consideration of the evidence adduced, do order, award, adjudge and determine, that there is no value, to the holders thereof, in the first, second or

third preference stock, or in the ordinary or common stock of the Grand Trunk." Mr. Taft added under the above:—"For reasons stated in a memorandum filed this day I dissent." Sir Walter Cassels' reasons for the award occupy 41 pages of typewritten matter, foilsap size; Sir Thos. White's reasons occupy 28 pages, and Mr. Taft's dissenting reasons occupy 59 pages.

Sir Walter Cassels' Reasons.

In commencing his reasons for the award, Sir Walter Cassels, chairman of the arbitration board, said: "There are two questions raised by counsel for the Crown which I had hoped might not be necessary to be dealt with, but which I feel must be carefully considered. The first point raised is that the G.T.R. system accounts have been so manipulated—I use a milder term than that used by Mr. Tilley, K.C.—as to render the accounts as presented by the books, unreliable and unsatisfactory. The second point is that, for reasons of his own—I will quote later his own reasons as stated by himself—dividends were paid when, to the Chairman's knowledge, there were no earnings applicable to the payment of such dividends, and those monies so paid were diverted from paying claims due to the Government, which should have been paid, leaving the Government claim unpaid to the present time." He then points out that while G.T.R. counsel argued that stock market quotations were of value in arriving at the exchange value of the stocks, the dealings referred to would effectually destroy any value to be derived from such quotations. He refers to one incident in the arbitration hearing as an example of the juggling of the company's accounts as follows:—"McLaren is Chief Auditor of the Grand Trunk Ry. In 1919, according to his sworn statement, there was a deficit of \$6,483,000. Instead of showing this deficit he shows a surplus of \$5,556. I asked him this question, 'And that being a deficit, instead of showing a deficit of \$6,483,000, you showed a surplus of \$5,556, and that is the same all the way through?' His answer was 'Exactly.'"

He then quotes verbatim a series of cablegrams which passed between Sir Alfred Smithers and E. J. Chamberlin, then Chairman and President respectively of the G.T.R., in order to demonstrate the methods employed by Smithers and his associates in conducting the company's affairs. A portion of a cablegram from Chamberlin to Smithers, Jan. 28, 1917, reads:—"Mr. Bigger" (Vice President and General Counsel) "thinks that unless Government waives its rights or gives consent, it would be improper, if not illegal, to pay dividends on the guaranteed stock, or any preference stock, without first making provision for payment of overdue interest on Government loans of 1909 and 1913 to the Grand Trunk Pacific, and also the guaranteed interest on Grand Trunk Pacific securities which rank ahead of the preferred stock." We were criticized by the Government for having paid last year on first preference, and if we were now to pay on first, second and third it would be impossible for us to get consent of Parliament for the increase we are asking." It is evident that the question involved is the payment of dividends to holders of the preferred stocks. The G.T.R. had not the right, until it had

met its liabilities to the Government, to pay a dividend out of net earnings. As Sir Walter Cassels states, "There could not be, in the mind of any reasonable man, a belief that net earnings means anything but earnings after payment of interest on liabilities due."

In this connection, Chamberlin again cabled Smithers on Feb. 2, 1917, in part as follows: "With regard to legal obligations to preferred stockholders, would call your attention to definition of net earnings set out in paragraph 18 of agreement of Feb. 9, 1914." Further cablegrams quoted by Sir Walter demonstrate how, despite the warnings conveyed by Chamberlin, Smithers and other directors manipulated the accounts so as to avoid trouble with the shareholders and make the company's affairs present a satisfactory appearance. The last cablegram quoted, dated March 10, 1917, from Smithers to Chamberlin, reads as follows: "Board have decided to pay Grand Trunk second preference stock dividend in full, reduce general interest by \$100,000 and include amount in preferred credit items, as suggested in your cable message of Feb. 27, also debit net income account with \$400,000, as a reserve to avoid meeting contingencies and possible liabilities, showing amount specially in the general balances. Announcement published today." Respecting this Sir Walter says: "Dividends paid; unpleasantness to directors avoided. Neither Sir Alfred Smithers nor Mr. Chamberlin were produced as witnesses on the part of the G.T.R. Co. of Canada. Further comment is unnecessary."

A letter from Sir Alfred Smithers to Sir Robert Borden, dated Dec. 10, 1915, in which is contained the request that the Government relieve the G.T.R. of its G.T.P. liability, is quoted. It made plain the G.T.R.'s inability to carry the G.T. P.R.

The question of maintenance of the G.T.R. property is then taken up, and it is emphasized that the company was seriously at fault in not establishing a depreciation reserve, to which a sum should have been contributed annually, to take care of replacement requirements. The case of the City of Knoxville vs. the Knoxville Water Co., decided in the U. S. Supreme Court, is reviewed, and the conclusions drawn in another and similar case are also quoted. Both showed that so called net earnings were decreased to an extent commensurate with the amount which should have been set aside to meet depreciation, but that, and it is pointed out, that the G.T.R. was in the position of having set aside nothing.

Mr. Chamberlin's testimony before the commission of investigation into the railway situation, resulting in the presentation of what is familiarly termed the Drayton-Acworth report, is next referred to and passages are quoted which have to do with the reasons Mr. Chamberlin advanced as to why the Government should take over the G.T.P.R., viz., because on account of its location and on account of the agreement which the G.T.R. entered into concerning the carriage of export traffic through Canadian ports. Sir Henry Drayton is quoted as saying: "Your point, Mr. Chamberlin, is that the G.T.P.R., as contracted for and laid out is something which takes traffic away from the parent G.T.R. system in-

stead of giving traffic to it. . . . The representatives of the G.T.R. must have known all that when this contract was entered into." Mr. Chamberlin answered: "I don't know; they must have. Of course, I do not want to criticize my predecessors." Further, Sir Henry Drayton said: "Suppose you are left to yourself, the thing crashes, no one confiscates it. Isn't that right?" Mr. Chamberlin admitted this, but further specifically stated that the G.T.P.R. would have to go into insolvency if the G.T.R. attempted to carry out its contract.

In a continuation of these quotations, it is shown that Mr. Chamberlin admitted paying \$2,500,000 in dividends in 1916, and further admitted that if the company had paid out all it should have paid out for improvements, nothing would have been paid in dividends. He expressed the opinion that a reserve should have been established and contributed to to the extent of 5% annually, to meet rolling stock depreciation, and admitted that no reserve had been so constituted.

The next thing dealt with is the report of H. G. Kelley, then Chief Engineer, now President, as to the physical condition of the property in 1917, and it is pointed out that putting together revenue and capital expenditures required, it would have taken \$51,000,000 to put the railway in first class condition, according to the estimates of its own responsible officers at the time. Sir Walter then calls attention to the G.T.R.'s estimated cash requirements from Jan. 1, 1921, to March 31, 1922, totaling \$89,687,633.39, and withholds comment as being entirely unnecessary.

In regard to the constitution of the agreement, Sir Walter states that he cannot regard the proceedings as a forcible expropriation of the three preference and common stocks, as argued by E. Laflour, K.C., because there was no compulsion or forcing of the G.T.R. shareholders; they were free agents and as such voted in favor of the agreement. He points out that under the agreement the Government assumed large liabilities of the G.T.R. from the date of the appointment of the committee of management in May, 1920. A case, Peake vs. Derry, is quoted to show that value must necessarily depend on earning power, while another case, Watcham vs. Attorney General, E. A., is quoted to show that stock market quotations would be no indication of value in the case. It is pointed out that Mr. Taft agreed with this view.

In connection with the attempt to introduce evidence as to physical values, Sir Walter points out that if the value is to be determined on the basis of earning power, reproduction costs cut no figure. Further cases are quoted, from which Sir Walter draws the inference that it is the value of these stocks as of May, 1920, which is to be determined, the present value alone. So far as potential future value is concerned, this is reflected in the present value. Further concerning potential value, if this must be made an issue, it must be ascertained as if the Government had not come to the aid of the railway. In the concluding portion of his statement Sir Walter says: "If, therefore, the value of these four classes of stock, including their potential value, is to be ascertained on the basis of the G.T.R. system continuing to operate as heretofore, could any sane business man, with a knowledge of the facts, come to any conclusion different from that come to by Mr. Chamberlin, that a crash was inevitable, and insolvency and

receivership the sequel, and would there be any reasonable chance of these four classes of stockholders ever receiving a cent on their investments? I think not." He further says: "I . . . am of opinion that our award should be that there is no value in any of the four classes of stocks. If equitable or moral considerations are to be considered, those who control the public funds must deal with the question, not this board."

Sir Thomas White's Reasons.

After briefly reviewing the terms of the agreement providing for the arbitration, Sir Thos. White first makes the point that the date as of which the value of the preference and common stock was to be determined was the date of the appointment of the committee of management, i.e., as of May, 1920. He makes it clear that with regard to the G.T.P.R., counsel for the G.T.R. took the position that, as the G.T.P.R. stock was fully paid, the G.T.R. was liable in respect of the G.T.P.R. only to the extent of its guarantees on G.T.P.R. bonds and debentures, and he states that as this seems to be the strictly legal view of the situation, he has adopted it as correct for the purposes of the arbitration.

Concerning the attempt to introduce by G.T.R. counsel of evidence having to do with physical values, Sir Thomas reviews the reasons for rejecting evidence of this nature, and cites several cases in support of the majority view in this connection. He argues, in a convincing manner, that from whatever angle the question is viewed, net earnings, actual and potential, are the true indicators of value in the case, and therefore the essential factors to be determined. He quotes Sir Walter Cassels and Mr. Taft, places no faith in stock market quotations for G.T.R. shares as an indication of the value of the complete issues of those shares.

He says that in seeking to ascertain the earning capacity of the capital represented by the preference and common shares, all evidence relating to G.T.R. earnings as of May 1920, as well as the earnings prior to that time, as of that time, must be considered. He continues: "All evidence as to physical condition of the system and its proper maintenance, the advantages or disadvantages of the location of its lines, volume of business, traffic rates, operating costs and fixed charges must be given its due weight in its bearing upon the question of earning capacity, and there must also be taken into account the contingent annual liability upon G.T.R. guarantees in respect of securities of other companies."

Concerning the disclosures made in connection with the juggling of G.T.R. accounts, he says: "It was clearly proven in the course of the enquiry that the reports of earnings shown in the annual statements to the shareholders, and to the Railways Department, for many years past were inaccurate and misleading. For 1913 the published earnings were considerably larger than those shown by the books themselves. Later, during 1915, 1916 and 1917, a substantial portion of the earnings was concealed by the creation of an 'inside reserve' account. Subsequently this account was availed of to show in subsequent years larger earnings than were actually made. It is not necessary to deal here with the motives which actuated this policy on the part of the directors. It will be sufficient to say that these motives were fully revealed in the evidence and that they were not directly connected with the purpose of

creating adequate reserves against deferred maintenance or depreciation."

Turning next to a perusal of G.T.R. earnings in past years, as disclosed by the accounts, after correction and change to accord with the facts, he shows that after the payment of operating expenses and fixed charges, for the G.T.R. alone, and not including the Central Vermont and G.T.P. Sys., in 1918 there was a deficit of \$672,344; in 1919 of \$66,488,918, and in 1920 of over \$6,500,000.

Speaking next of maintenance, he lays particular emphasis on the point that the G.T.R. did not lay aside a sum each year to meet depreciation in the property. With regard to annual maintenance he holds that the evidence firmly established that the G.T.R. had allowed its property to run down badly within the last 10 years; figures he quotes show that for 1911 to 1917 inclusive, about \$6,000,000 a year was expended for maintenance of way and structures, but that for 1918 the expenditure under this head was \$11,600,000; for 1919 it was \$17,000,000, and for 1920 it was \$18,100,000. He also mentions the report as to physical condition made by Mr. Kelley in 1917 as showing conclusively the run down condition of the property. Even after the heavy maintenance expenditure of 1918, 1919 and 1920, continues Sir Thomas, it is estimated by the Government that over \$69,000,000 will have to be spent on maintenance between 1920 and 1925.

Another point stressed is that the G.T.R. revenues were made misleading, not only by the juggling of accounts, but also by crediting the company with interest on loans and advances made to subsidiaries, which had not actually been paid. He points out that some of these charges, aggregating very large amounts, do not represent collectible indebtedness.

Taking into consideration all of the facts developed, he continues, it is perfectly clear that without taking into consideration the G.T.P.R., the G.T.R.'s financial position was most precarious at the time of the appointment of the committee of management in May 1920. In his opinion, its financial position, even excluding its G.T.P.R. obligations, was such that a receivership was inevitable, and if the liability in respect of the G.T.P.R. be added, its position was hopeless. He says that a more misconceived project than the G.T.P.R. would be hard to imagine, and presents a statement showing that its deficit was \$1,358,453 in 1916; \$5,500,512 in 1917; \$6,318,594 in 1918; \$11,450,000 in 1919, and \$6,414,016 in 1920. These figures take into consideration operating losses and fixed charges. To this, he states, must be added about \$20,000,000 now required to meet deferred and extraordinary maintenance. He makes it plain that the serious nature of the G.T.P.R. problem cannot be overestimated, and quotes the letter of Sir Alfred Smithers to Sir Robert Borden in 1915, and also Mr. Chamberlin's statement to the committee of investigation in support of his statement.

He also deals with complaints to the effect that the G.T.R., desiring only a western connection for its existing line, was coerced into entering into the Grand Trunk Pacific-National Transcontinental project, and to the effect that the Government permitted railway lines to be built into that territory exclusively by the G.T.P.R. He takes the stand that neither of these complaints is justified, and presents arguments in support of his position. He says that he deals with these

features because it appears to him that the complaints were put forward as raising some equitable claim in favor of the G.T.R., but as no legal claim is involved, complaints of such a character could not be considered in the arbitration proceedings. Speaking of a sale of the G.T.P.R. assets, which had been suggested as a possibility by G.T.R. counsel at the hearing, he is confident that such a sale of all its assets would not yield sufficient to satisfy all claims against the property which have priority over the securities guaranteed by the G.T.R. Speaking of guarantees to subsidiaries, he points out that the G.T.R. has guaranteed interest upon Central Vermont Ry. bonds for \$13,359,000; and considering the C.V.R.'s unsatisfactory earnings, it would be impossible to say that no loss will be incurred by the G.T.R. in respect of this guarantee, but he does not, for the purpose of his finding, treat this obligation as one upon which loss will be incurred.

In the concluding portion of his reasons, he says: "Reviewing all the evidence in the case, I have reached the following conclusions: 1. The actual earning power of the G.T.R. of Canada, before, during and since the war, and, so far as can be estimated, for the future, does not justify the assumption that any profits would, from the date of the acquisition by the Government of the preference and common shares, in May, 1920, ever have been available for distribution to the holders thereof, after providing for the contingent liability of the company in respect of G.T.P.R. securities guaranteed by the company, and dividends upon guaranteed stock. 2. Having regard to its own continuing heavy deficits, the necessity for making provision for deferred and extraordinary maintenance and capital construction, and its heavy liabilities in respect of securities of the G.T.P.R. Co. bearing its guarantee, the G.T.R. Co. of Canada, but for the Government's financial support since May, 1920, would have been forced into a receivership. Upon these conclusions I find that the preference and common stocks of the G.T.R. Co. of Canada have no value. Any question as to compassionate consideration of the shareholders must be for the Government and Parliament of Canada to deal with and not for this board."

Mr. Taft's Dissenting Reasons.

In giving his reasons for dissenting from the other arbitrators, Mr. Taft briefly reviews the circumstances leading up to the arbitration proceedings and summarizes the agreement on which the arbitration was based. He then describes the system, emphasizing the favorable location and traffic connections of the lines. He points out the great advantage the G.T.R. enjoys in the number of its outlets to the Atlantic seaboard, the number of branch lines in Ontario and Michigan, the connection with the lake system of transportation at many points, and in the partial complete ownership of steamship lines, elevator companies, electric lines, subordinate railway lines, bridge companies, terminal companies and other corporations owning hotel properties used in connection with the railway system. He goes on to review some of the history of the property, emphasizing the influence brought to bear by the late C. M. Hays, who imposed it greatly, and in large part by charging the expenditures for such improvement to operating expenses rather

than to capital, to the end that the value of the property was vastly increased without new capital expenditure, while been declared. He then passes on to dividends were withheld that should have viewed the company's organization, praising the loyalty and efficiency of its employees, and makes the significant statement that had the policy of the company as dictated from London, been as prudent, wise, and effective as the local management, the fate of the property would have been different. He mentions the value of the U.S. connections, pointing out that the main line through business from points in the U.S. through Canada to destinations in the U.S. has been built up to large proportions. He points out the advantage enjoyed by the G.T.R. in connection with land acquired by the company in Montreal, Toronto, Detroit and Chicago, for terminal purposes. In connection with grade separation work in different cities, a subject stressed by Government witnesses at the hearings, he seriously questions the accuracy of the statement that the G.T.R. will be called upon to spend \$46,000,000 on grade separation work in the near future. In his opinion, half the sum mentioned, spread over 20 years, more nearly represents the obligation the G.T.R. will have to incur in this connection.

The G.T.P.R. venture is next reviewed. It is emphasized that the G.T.R.'s desire was but to secure a western connection for the railway, to the Pacific coast, but that the then Government, not content with this, was responsible for initiating the G.T.P.-National Transcontinental Ry. arrangement. He points out that the Government, by the terms of the contract, required the high standards of construction embodied in the G.T.P.R., and that this reason the line was not built as economically as the limited traffic available would require to make it financially successful in a reasonable time. He states that the Government guaranteed interest due on G.T.P.R. debentures to the extent of \$68,000,000, while the G.T.R. guarantees the G.T.P. debentures absolutely to the extent of \$2,594,080, and to the extent of \$1,395,175 conditional on the G.T.R. being able to pay first interest on its guaranteed stock.

After reviewing fully the circumstances attending the G.T.P.R. receivership, he frankly states that no value at all can be attributed to the G.T.P.R. shares which the G.T.R. holds. Although, he states, Mr. Atwater, K.C., argued strongly that something might be realized out of a sale of the G.T.P. to reduce the G.T.R. liability on its guarantee, he expresses the opinion that a sale of the G.T.P.R. property would not realize a sum greater than would satisfy the first lien of the receiver's debts, now over \$9,000,000 and the prior debentures guaranteed by the Government, \$68,000,000. He characterizes the association of the G.T.R. with the G.T.P.R. and the National Transcontinental Ry. as "the tragic part of the story of the G.T.R. of Canada."

Speaking next of Government aid, he points out that while both the C.P.R. and the Canadian Northern Ry. were generously aided by the Government, the G.T.R., which was much earlier in the field, and offered the opportunity to Ontario and the western part of Quebec to develop pulp industries, had comparatively little assistance.

In connection with his argument concerning the introduction of evidence concern-

cerning physical values at the hearing, he states that he did not desire to introduce this evidence as a means of compelling the Government to pay the reproduction value of the property, but merely to enable the arbitrators to use the value as a circumstance in judging its potential net earning capacity. In his opinion, because the U.S. Valuation Act and the U.S. Transportation Act use the actual physical value of a railway as a basis on which its earnings must be figured for the determination of rate levels, and because 70% of the G.T.R. earnings are affected by rate levels in the U.S., the G.T.R.'s physical value should have been introduced as one of the factors to be used in determining the earning power value of the property and of the exchange value of the common and preference shares. He points out that a budget of expenditures on behalf of the G.T.R. under Government operation was made out by G.T.R. officials to a total of \$44,000,000, but that this was increased to \$89,000,000 on direction from the Railways Department, and he argues that a major part of the expenditure which the Government claims as necessary in the near future is not necessary, and not advisable, and that if such large and unnecessary expenditures were figured on the value of the stocks would shrink to nothing, under the great annual fixed charges which such expenditures would bring to bear. In reply to the argument advanced by Government counsel to the effect that the G.T.R. did not set aside each year a sum to meet depreciation, he says that although failure to comply with a prescribed system of accounting in that respect may have a tendency to induce the belief that the road could not be in good condition, yet the actual physical condition, demonstrated to his satisfaction as being first class, must take precedence over such theoretical considerations. The proof of the good condition of the road, he maintains, is found in the fact that the company is doing, and has done, its work of transportation efficiently and without accident of consequence.

He speaks freely of the juggling of G.T.R. accounts. In reference to the great stress laid by Government counsel on the report furnished by H. G. Kelley when he was Chief Engineer in 1917, a time when the London directors were trying to make a showing of great poverty, he indicates that they were endeavoring to induce the Government to relieve them of the G.T.P.R. liability, he says that while this report made the company seem to require a great deal to be spent on maintenance and improvement, Mr. Kelley, in making his report, used discretionary judgment, and apparently had in mind a state of physical perfection approaching that in the minds of Lt. Col. Monsarrat and other Government witnesses when they were criticizing the G.T.R.'s physical condition at the arbitration hearings.

Coming to the main question of the case, viz., a reasonable anticipation of the future net earnings of the three preferred and the common stocks, he reviews the "frozen assets" of the G.T.R., mentioning (1) the Southern New England Rd., on which \$7,000,000 had been spent, and which should be a money maker on completion; (2) the Jacques Cartier Ry., around the Montreal mountain, costing \$1,600,000; (3) the G.T.P. Development Co., which owes the G.T.R. \$11,000,000, and which has been conservatively valued at \$12,160,834; (4)

the G.T.R. fire insurance fund and the compensation fund; (5) the Montreal & Southern Counties Ry.; (6) the surplus lands of the Rail & River Coal Co. He expresses the opinion that \$20,000,000 can be realized from these assets in the next 10 years.

He places no faith in the contention of G.T.R. counsel that prices prevailing on the London Stock Exchange in the years ending with 1913 could be made a basis of proof of the preferred and common stocks being worth the maximum amount mentioned in the agreement. Neither does he lean for support on the argument involving the applicability of the terms of the U.S. Transportation Act. He states emphatically that past earnings, and probable future net earnings, are the only evidence of value of the stock. Before proceeding with an examination of these, he points out, in reply to the argument that the stocks at the date of transfer were valueless, because the company was bankrupt, that their value as of that date is not limited by their earning capacity as of that date, but within a few years their earning capacity will be very increased. Also, before proceeding with the examination of past and probable future earnings, he tells of the London management "exercising a discretion" to overstate the G.T.R. revenues in 1913, to declare a full dividend on the first and second preference stocks, and a half dividend on the third preference stock; of similarly "exercising a discretion" in 1915, 1916 and 1917, to understate the revenues by \$8,000,000, so as to create a showing of poverty and induce the Government to take over the G.T.P.R., and in 1919 and 1920 to overstate the revenue, when the sale of the road was being faced, as the best course. "Although," he says, "this dealing with the accounts by the London management admits of no defence, it cannot be permitted to prejudice the interests of the stockholders in this case." The fund created by the understatement of revenues in 1915, 1916 and 1917 was used as a reserve account for renewals and repairs in 1919.

After showing how the accounts would look when straightened out and corrected, he shows that for seven years before 1917, the G.T.R. had 25.97% of its earnings left after paying all operating expenses; while in 1919 the percentage was 3.16% and in 1920 it was 3.9%. He points out that operating costs are reasonable, to normal, and by a chain of reasoning comes to the conclusion that the G.T.R. would have 25% of its earnings left in 1926 after paying operating expenses, or \$22,500,000 applicable to the payment of fixed charges and dividends.

Dealing with the fixed charges, he sets down the present annual obligations of the G.T.R. as \$17,421,455.88, which excludes the G.T.P.R. obligations, but includes the fixed charges on a \$25,000,000 issue in 1920, and the 4% dividend on the guaranteed stock. Adding the G.T.P.R. guarantees of \$2,291,600 and \$1,395,000; adding the cost of refunding 4, 5 and 6% bonds falling due in 1922, amounting to \$297,200; adding \$1,112,153 for interest for an \$18,000,000 working fund for the company and its subsidiary lines; subtracting the non operating or outside income, which was for 1920, a poor year, \$1,942,648; and subtracting further the surplus income for subsidiary companies, which for 1920 was \$448,532, he figures the total fixed charge

for 1926 as \$20,075,252, which, deducted from the net estimated operating income in 1926, amounting to \$23,400,000, leaves \$3,324,748 applicable to the payment of returns on the preferred and common stock. He further states that, while the fixed charges of the Central Vermont and other lines are included in the statement of fixed charges in the above calculations, he expects the time will come in the near future when these properties will meet their owned fixed charges, relieving the G.T.R. of an annual liability of \$1,312,649.

He realizes that he is liable to be met by the equity "Assuming your estimates for 1926 to be correct, how about deficits in the meantime?" He answers that the \$2,433,333.33 annual payment on the guaranteed stock, and the conditional payment annually of \$1,395,000 on account of the G.T.P.R., both of which were figured in the above calculation, if not paid would not constitute an increase in funded or unfunded debt. Deducting this from the total fixed charge of \$20,075,252, leaves \$16,246,918.67 to be met annually. "I predict that this could be met easily in two or three years; if deficits continued for two or three years from the present, to an extent sufficient to demand the addition of as much as \$10,000,000 to permanent liability, this would add but \$700,000 to the annual fixed charges, which would be adequately taken care of as the above calculation discloses.

In conclusion he states that while the stock may yield by 1926 a return to make it worth the maximum sum named in the agreement, he realizes it is not available at present as it would be if it were capable of yielding that return now. He expresses the opinion that this feature should not make the present value more than 25% less than the maximum value prescribed, and for these reasons he considers that the G.T.R. Co. of Canada's preferred and common stocks are worth not less than \$48,000,000.

The Question of Appeal.

The agreement, made March 8, 1920, between the Dominion Government and the G.T.R. Co., contained the following provision: "The unanimous award of the arbitrators shall be final, but should the award not be unanimous, and should notice of appeal be given by either party to the other, within 30 days after the making of the award, an appeal therefrom, upon any question of law, shall lie to the Supreme Court of Canada, and/or to the Judicial Committee of the Privy Council, if leave be granted by the said Committee."

A London, Eng., cablegram of Sept. 20 said that the holders of G.T.R. preferred and common shares would probably apply for leave to appeal direct to the British Privy Council's Judicial Committee, against the award, which declared their holdings to be of great value. The main grounds for an appeal will probably be the decision of a majority of the arbitrators to exclude evidence as to the properties' physical value.

Simplon Tunnel.—The second Simplon tunnel under the Alps, connecting the Swiss and Italian railway lines, which is under construction parallel to the original tunnel, is nearing completion. The opening of the passage through was completed Sept. 13; the masonry work is now advanced, and it is expected to have the tunnel completed by Dec. 31.

Voluntary Freight Rate Reductions.

The Railway Association of Canada has compiled a statement showing that from Jan. 1 to the middle of September 1,450 freight rates have been voluntarily revised and reduced by Canadian carriers to meet varying traffic and commercial conditions since the blanket reduction of 5% ordered by the Board of Railway Commissioners, effective Jan. 1, 1921, as against rates in effect prior to that date. These reductions cover about 400 commodities.

Outstanding reductions are those on lumber from British Columbia to eastern Canadian destinations to enable the producer to meet the competition. (See Canadian Railway and Marine World, June, pp. 315.) Besides other commodity rates on canned salmon and rice from coast points have also been substantially reduced. On live stock between all Canadian points a reduction of about 25% has been made. (See Canadian Railway and Marine World, August, pp. 464 and September, pp. 466.) On grain and grain products for export from Georgian Bay ports and Port William via Montreal and other Atlantic ports reductions of from 9 to 26% have been made. Transcontinental rates on 48 different staple commodities show reductions of from 6 to 32%. Seventy-eight commodities to U. S. consuming points show reductions varying from 4 to 64%. Rate revisions on 10 export commodities via Atlantic and Pacific ports received attention by reductions varying from 4 to 39%. 151 commodities have received reductions varying from 5 to 47% on domestic traffic between points in Canada. These commodities represent a substantial proportion of the entire traffic.

In connection with the rate reductions on grain we are advised that, effective Sept. 23, reduction of 7% per 100 lb. in the all rail rate on grain and grain products was made from Fort William and Port Arthur to St. John, Halifax, Portland, New York and Boston, and that a reduction of 4c. per 100 lb. was made from Fort William and Port Arthur to Montreal and Quebec, leaving the rate to the latter less than to the above mentioned Atlantic ports. These reductions are in addition to a reduction of 3c. per 100 lb. made in Canada. A reduction of 5c. from Georgian Bay ports has also been put into effect. Consideration is being given to a reduction of 4½c. per 100 lb. on grain from Fort William and Port Arthur for domestic consumption and of 2½ c. per 100 lb. between station in eastern Canada.

Railway Lands Patented.—Letters patent were issued during August for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres.
Canadian Northern Ry.	480.12
Canadian Northern Pacific Ry.	36.46
Canadian Northern Western Ry.	1.06
Grand Trunk Pacific Branch Lines Co.85
Manitoba Southwestern Colonization Ry.	51.20
Total.....	569.49

Duty on Transportation Men's Uniforms.—The Canadian Manufacturers' Association, Montreal, Branch, has been advised by the Commissioner of Excise and Customs, that a sales tax of 3% is payable by manufacturers of clothing or customs tailors on uniforms sold by tender to transportation companies.

Steam Railway Operating Revenues, Expenses and Other Statistics for June.

The following comparative table, for June, 1921 and 1920, has been compiled in Canadian Railway and Marine World's office, from information supplied by the Dominion Bureau of Statistics. Transportation Branch.

The figures in the column headed "All railways," include all operating revenues, with an annual operating revenue of \$500,000 and over, except the St. Lawrence and Adirondack Ry., which is not able to give the 1920 figures, and is therefore being omitted from 1921 reports, as its inclusion would not show a true comparison. The 1921 figures, however, will be available for comparative purposes for 1922.

The column headed "Canadian Government," includes the Intercolonial, Prince Edward Island, National Trans-

Operating revenues	1921	1920	1921	1920	1921	1920	1921	1920	1921	1920
Freight	\$21,472,835	\$24,139,544	\$1,830,220	\$2,076,820	\$2,429,139	\$3,214,864	\$8,483,710	\$10,385,536	\$4,293,654	\$4,676,336
Passenger	8,148,065	9,252,275	673,504	866,465	886,367	1,068,824	2,663,741	3,157,777	3,586,886	3,981,153

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern," includes the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government.

The column headed "Canadian Pacific," includes also the Montreal and Atlantic, and Esquimalt & Nanaimo Rys. The column headed "Grand Trunk" includes its Canadian lines only.

The Railways' Operating Results for June.

The gross operating revenues of Canadian railways as given on the preceding page show a good increase in June, as compared with May and April, although they are smaller than those of June 1920 by over \$3,000,000. While the improvement shown by the comparison with preceding months this year is gratifying, the fact remains that traffic is not moving in nearly the volume that it was in the corresponding months of 1920. Even if freight rates were at the same level as they were in the same months of 1920, the decrease in revenue would indicate a falling off of large importance. When the increased rates are taken into consideration, the figures showing the great decrease in revenue passenger mileage and ton mileage are read without surprise.

The Canadian Government, the Canadian Northern and the Canadian Pacific Railways experienced such large reductions in operating revenue as to offset by the amount noted the increases shown by the Grand Trunk and the G.T. Pacific. While the Grand Trunk shows a falling off in freight revenue, and in revenue from miscellaneous sources, it shows an increase in passenger revenue, and very large increases in revenue from mail and express, so that its total gross revenue for the month exceeded that of June last year by \$49,885.45. The G.T. Pacific, due chiefly to its large increase in freight revenue, shows a total operating revenue of \$93,639 greater than for June 1920. The Canadian Government Rys. show a decrease from June 1920 of 9% in freight revenue and 22% in passenger revenue, although freight and passenger earnings were 40 and 25% higher per mile, respectively.

The Canadian Northern shows about 8% decrease in freight revenues, and over 40% decrease in passenger revenues from June 1920. June passenger receipts were 13% greater than May, but the June 1920 passenger traffic was very heavy being 87% greater than May 1920, which helps to account for the 40% decrease in June this year, compared with June 1920. The C.P.R. operating revenue decreased \$2,149,877.68, or over 12%, compared with June 1920. This was chiefly in freight revenue, passenger revenues, due to increased fares, about holding their own, despite the 20% decrease in revenue passenger mileage.

A notable feature in connection with the revenues, of the railways as a whole, is the large increase in passenger revenues compared with May and April. For all the roads, the passenger revenue for June was 16% greater than for May; but a comparison with June 1920 shows the same facts obtaining as in the case of total revenue, viz., that the returns for June of this year were much smaller than for June 1920, the decrease in passenger revenue for all roads being \$1,104,810. Although the rates in June of this year were 10% greater, the figures for revenue passenger miles account for the result.

The operating expenses increased, for all roads, by \$1,145,972.34 over those of May, but they were \$4,622,221.05 less than in June 1920. Taking the roads as

a whole, the accounts for maintenance of way and structures, and maintenance of equipment, show decreases as compared with June of \$2,069,220 and \$1,772,691 respectively. This cutting of maintenance expenditure has been characteristic of Canadian railway operation during the year to date. Although the savings effected have been large, it is a reasonable supposition that such large curtailments of expenditure cannot continue. Although maintenance can be cut to a certain extent and for a certain period of time, in keeping with reduced traffic and consequent reduced revenue, without affecting the wide margin of safety that the roads maintain, it is a fact that maintenance expenditures cannot be curtailed in this way indefinitely. No doubt the improved showing made by the roads as a whole is due in large degree to these maintenance economies, and it would be well for those who so confidently point to increased net earnings as a reason for lowered rates to take this into consideration.

Transportation expenses do not show as much reduction as would be expected on examining the traffic figures, but this is a natural and unavoidable effect of conditions. Train mileage, particularly passenger train mileage, cannot be reduced in proportion to a falling off in traffic, while freight car loading and freight train loading tend to decrease, the while all the various items of transportation expense, which are not affected by a change in traffic conditions, continue to exist.

Although revenue decreased by \$3,341,187, compared with June 1920, the large decrease in operating expenses above noted resulted in the reduction of the operating ratio for all roads from 98.44 to 94.53. This is the lowest operating ratio for any month so far this year, and if it were not for the fact that so large a part of the reduction in operating expenses resulted from the reduction in maintenance expenditures, it could be maintained that the railways were beginning to get on their feet financially. As a matter of fact, however, improvement has been evident, it being probable that the savings in maintenance made to date were justified, and that the properties have not suffered; but these expenditures cannot be withheld indefinitely, so that the future trend of operating results is by no means faithfully indicated by the showing made this year to date.

The effect of a traffic slump, and unfavorable conditions generally, on roads of low traffic density, is seen in the operating ratios of the Canadian Government Rys. and the Canadian Northern, which increased from 118.61 to 133.26 and from 121.19 to 128.88 respectively in June 1921, compared with June 1920. The C. P.R. shows an operating ratio of 78.61, compared with 84.60 in June 1920. If as much had been spent on maintenance of way and maintenance of equipment in June this year as in June 1920, the net would have been reduced to \$955,109, and the operating ratio would have been over 93. The G.T.R. shows a great improvement in operating ratio, the figure of

88.70 being the lowest it has obtained this year. While its revenue freight ton-mileage decreased 30% and its revenue passenger mileage decreased 3%, the higher rates gave it more revenue, as noted previously, which, in combination with a 4% decrease in expenses, gave it the operating ratio it obtained. The G. T. Pacific, which is surely, even if slowly, emerging from the colonization stage, despite all the pessimistic utterances made concerning it, shows a remarkable improvement in bringing its operating ratio down to 134.20, compared with 205.02 in June of 1920. Although its passenger traffic decreased 14%, freight traffic increased 50%, resulting in an increase in revenue of 21%, which combined with a 38% reduction in expenses to make the improvement noted.

The traffic figures show that the revenue freight ton mileage for all railways decreased 32% compared with June 1920. Revenue passenger mileage decreased 24%. The only exception to the decrease in freight traffic is found on the G.T. Pacific, its increase being noted above. The average haul on the G.T.P. decreased slightly; the average haul on the roads as a whole decreased 7%, while the average passenger journey decreased from 80.3 to 68.7 miles, or 14.5%. Compared with May, the revenue ton mileage for June was about 3% smaller.

The number of freight train miles for all railways decreased 27% in June 1921, compared with June 1920. With a 32% decrease in revenue freight tonnage, as above noted, the fact of freight train mileage being decreased by 27% would indicate that operating efficiency has been maintained, and that no more trains were run light than absolutely necessary. While train loading decreased from 44.14 to 39.75 revenue tons, and from 49.75 to 47.24 tons for all freight, this is but an outcome of the prevailing traffic and economic conditions, and unavoidable. Prevailing conditions are also reflected by the figures dealing with empty and loaded cars in freight trains, the ratio of loaded to total freight car miles decreasing from 76.2 to 67.6% in June 1921. While, as above noted, revenue passenger mileage for the roads as a whole decreased 24% between June 1920 and June of this year, passenger train miles decreased but 3.4% and passenger car miles decreased by but 0.3%. This shows the difficult proposition with which the railways are faced when the large fallings off in travel are accompanied by large reductions in large amount, the expense of providing the service is continued with but small decrease. Freight car loading shows a decrease of 0.8 ton a car, but, like train loading, this is a logical consequence of conditions.

The pay roll shows a large reduction from that of June 1920, due principally to the smaller number of employees in service in June of this year. The ratio of pay roll to operating expense is smaller in June of this year than last, as is also the ratio of pay roll to revenue.

The average freight earning for the month was 1.409c. a revenue ton mile,

which is undoubtedly the highest average amount Canadian railways have received for transporting freight. The average receipts in January were 1.204c. a revenue ton mile. Since no rate increases of importance took effect in the first six months of the year, a conclusion which may be drawn is that a larger percentage of the freight handled consisted of high grade and high rate commodities. The average passenger rate, 3.217c. a mile, represents a large increase over the average rate of June 1920, but as June was the last month in which the 10% advance remained in effect, the average rate may be expected to be decreased considerably.

Taken on the whole, the performance of the railways for June marks another step in the gradual improvement in railway conditions. But it must not be lost sight of that the C.P.R. is the greatest factor in this improvement in the operating ratio, and that a large improvement remains to be effected before the railway industry of Canada as a whole is on a sound basis. The position of the Canadian National Rys. could not be made more unfavorable than it has been by the prevailing light traffic movement of past months. There was not nearly enough traffic to make them able to pay their way in 1920, and the falling off in 1921 has made their position much more

difficult. In view of these conditions, the fact of their operating ratio having been kept down to what it has, constitutes a remarkable performance. The great need of the National Railways is more traffic, and the length of time it will take for these lines to become financially self-supporting will necessarily depend largely on the rapidity with which population, and consequent commerce and industry, increase. The lines have a capacity greatly in excess of the present traffic demands, and for that reason it may be reasonably anticipated that each succeeding increase in the volume of traffic offering will be handled at a continually decreasing unit cost.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Alberta & Great Waterways Ry. — **JOHN CALLAGHAN**, heretofore in C.P.R. service at Calgary, who has been appointed acting Deputy Minister of Railways and Telephones for Alberta, and Manager of Railways, is now Manager of the A. & G.W. Ry., vice H. A. Warner, resigned. Office, Edmonton.

Alberta Railways and Telephones Department — **JOHN CALLAGHAN**, heretofore in C.P.R. service at Calgary, has been appointed acting Deputy Minister of Railways and Telephones, and also Manager of Railways. Office, Edmonton.

Algoma Eastern Ry. — **F. M. DONEGAN**, heretofore Superintendent, has been appointed Chief Dispatcher at Sudbury, Ont.

Board of Railway Commissioners. — **G. A. BROWN**, Chief Clerk, Traffic Department, is acting as Traffic Officer, in consequence of James Hardwell's death.

Canadian National Rys. — **J. DEED**, heretofore District Freight Agent, Canadian National Rys., London, Eng., has been appointed City Agent, Freight and Passenger Departments, Canadian National-Grand Trunk Rys., and not City Freight and Passenger Agent, as mentioned in our last issue. Office, 44 Leadenhall St., London, Eng.

P. K. HUNT, heretofore Manager, Prince Arthur Hotel, Port Arthur, Ont., has been appointed Manager, Macdonald Hotel, Edmonton, Alta., vice J. B. Windrom, resigned. Other duties.

D. O. LEWIS, Assistant Engineer, Maintenance of Way, Toronto, has resigned, and has associated himself with the Engineering Corporation Ltd., Vancouver, B.C.

G. II. LINNEY has been appointed acting Assistant Superintendent, Battleford, Carlton and St. Brieux Subdivisions, Saskatoon Division, and Humboldt Subdivision, Dauphin Division, Prairie District, vice E. W. Cameron, transferred. Office, Humboldt, Sask.

J. P. McCLELLAND, not J. D. McClelland, as mentioned in our last issue, heretofore Assistant General Passenger Agent, Canadian National Rys., London, Eng., has been appointed District Passenger Agent, Canadian National-Grand Trunk Rys. Office, 44 Leadenhall St., London, Eng.

J. H. MORGAN has been appointed Assistant Superintendent, Fort William Division, vice D. W. Steeper, transferred to Edson, Sask. Office, Sioux Lookout, Ont.

Canadian National Express Co. — **F. C. SALTER**, heretofore European Traffic Manager, G.T.R., and Canadian Express Co., London, Eng., has been appointed Manager, Foreign Department, Canadian National Express Co. Office, Montreal.

Other Canadian National Express Co. appointments are given on pg. 541.

F. J. G. SMITH, heretofore Publicity

Eng., has been appointed Publicity Agent,

Canadian National-Grand Trunk Rys. Office,

17 Cockspur St., London, Eng.

D. W. STEEPER, heretofore Assistant Superintendent, Fort William Division, Central District, C.N.R., Sioux Lookout, Ont., has been appointed acting Superintendent, Edson Division, Grand Trunk Pacific Ry., vice A. D. Carey. Office, Edson, Alta.

J. VANWYCK, heretofore Manager, Minaki Inn, Minaki, Ont., has been appointed Manager, Prince Arthur Hotel, Port Arthur, Ont., vice P. K. Hunt, transferred.

Canadian Pacific Ry. — **J. GIBSON**, heretofore Master Mechanic, Moose Jaw Division, Saskatchewan District, Moose Jaw, has been appointed General Foreman, Revelstoke, B.C.

W. G. McPHERSON, heretofore Master Mechanic, Regina Division, Saskatchewan District, Regina, has been appointed Master Mechanic, Moose Jaw Division, Saskatchewan District, vice J. Gibson, transferred to Revelstoke, B.C. Office, Moose Jaw.

Canadian Pacific Steamships Ltd. — The name of The Canadian Pacific Ocean Services Ltd. was changed, on Sept. 8, to Canadian Pacific Steamships Ltd. G. M. BOSWORTH continues as Chairman, and the organization and personnel remain as hitherto.

Canadian Pacific Steamships Ltd. has appointed the Canadian Pacific Ry. Agency (Belgium) Societe Anonyme to act as its agent in Belgium. In future, therefore, the Canadian Pacific Ocean Services' office at Antwerp will be operated by the C.P.R. Agency. Sir George McLaren Brown, Sir Thomas Fisher, W. D. Grosset, Administrateur Delege of the Canadian Pacific Ocean Services Agency (Belgium), Societe Anonyme at Antwerp, and C. De Mey, Agent, Canadian Pacific Ry. at Brussels, have been elected directors. W. D. Grosset being appointed Managing Director and C. De Mey being appointed Director of the agency at Brussels.

Erie Rd. — **E. M. SNELL**, heretofore Export and Import Agent, New York, has been appointed General Agent and will devote all his time to freight matters. Office, 59 Yonge St., Toronto.

Esquimalt & Nanaimo Ry. — **J. D. FRASER** has been appointed acting Superintendent, vice John Goodfellow, deceased. Office, Victoria, B.C.

Grand Trunk Ry. — **G. A. GODFREY**, Assistant to Auditor of Revenues, Montreal, has been appointed acting Auditor of Revenues, Western Lines, Detroit, Mich.

D. A. INNES has been appointed Locomotive Foreman, Stratford, Ont., vice H. Battley, resigned.

See also Canadian National Rys.

Reid Newfoundland Co. — It was stated in Canadian Railway and Marine World for September that R. C. Morgan, Superintendent, Winnipeg Terminal Division, C.P.R., had been offered the General Managership of the Reid Newfoundland Co.'s Ry. and having been granted a month's leave of absence had left Winnipeg Aug. 21 for Newfoundland, to decide whether to accept or not. He was installed in the position, made a few changes in the organization, but resigned on Sept. 12, stating his reasons in a letter to H. D. Reid, President, as follows: "When we first discussed the question of my accepting an engagement as General Manager of the railway for five years, I was unwilling to bind myself for a definite term until I had given the position a trial and become acquainted with its requirements. The time I have spent here since then has afforded me an opportunity to size up the present situation and the future prospects of the road. The conditions attending railway operation here are very different from those in Canada and the United States, and while I might be able to effect some economies in operation, large capital expenditures on the railway are necessary in order to put the freight traffic on a sound basis, and effect other savings of great importance. After careful consideration I do not feel justified in giving up my prospects with the C.P.R. to accept the managership of the Newfoundland Ry. I therefore beg to tender my resignation, and should wish, if convenient to you, to be able to return to Winnipeg at once, before my leave expires. I wish to express to you and to the staff my appreciation of the courtesy shown me and the assistance afforded me in getting acquainted with the details of operation."

Mr. Morgan left St. John's Sept. 13, for Winnipeg.

The position was offered previously to other Canadian railways officials. The salary offered is \$15,000 a year for five years.

Mainly About Railway People Throughout Canada.

E. W. Beatty, K.C., President, C.P.R., and Chancellor of Queen's University, Kingston, Ont., is one of those who will deliver lectures in connection with the special commercial course for engineer students at the university.

Sir George McLaren Brown, European General Manager, C.P.R., and William Phillips, European Manager, Canadian National-Grand Trunk Rys., London, Eng., have been elected honorary vice presidents of the recently organized Canadian Club of Great Britain.

Miss B. M. S. Cantlie, eldest daughter of Lt. Col. G. S. Cantlie, D.S.O., formerly General Superintendent, Car Service, C.P.R., was married at Montreal, Sept. 5, to Robt. Hampson, Jr.

Percy Acton Clews, whose appointment as General Freight Agent, Canadian National-Grand Trunk Rys., London, Eng., was announced in our last issue, was born at Rock Ferry, Cheshire, Eng., Jan. 19, 1882, and entered transportation service in March, 1898, since when he has been, to Jan., 1907, with G. H. Fletcher Co., ship owners and forwarding agents, Liverpool, Eng.; Jan. 1907 to Jan. 1909, freight clerk, G.T.R., Liverpool, Eng.; Jan. to July, 1909, freight clerk, G.T.R., London, Eng.; July, 1909 to Apr. 1910, City Agent, G.T.R., London, Eng.; Apr. 1910 to Aug. 1914, acting Agent, G.T.R., Antwerp, Belgium; Aug., 1914 to Dec. 1918, City Agent, G.T.R., London, Eng.; Dec. 1918 to Sept. 1, 1921, General Agent and Assistant to European Traffic Manager, G.T.R., and Canadian Express Co., London, Eng.

F. Gerald, C.P.R. station agent, Tweed, Ont., died there suddenly, Sept. 7, while on duty.

G. A. Godfrey, Assistant to Auditor of Revenues, G.T.R., Montreal, was presented with a smoking set and umbrella, by the local staff, Aug. 30, on leaving Montreal, for Detroit, Mich., where he has been appointed acting Auditor of Revenues, G.T.R. Western Lines.

John Goodfellow, Superintendent, Esquimalt & Nanaimo Ry., died at Victoria, B.C., Aug. 29. He entered railway service in Oct. 1882, since when he was, to Dec. 1884, dispatcher, C.P.R., Winnipeg; Dec. 1884 to June 1886, chief dispatcher on construction, C.P.R., Yale, B.C.; June 1886 to Apr. 20, 1902, chief dispatcher, C.P.R., Vancouver, B.C.; Apr. 20, 1902 to July 1, 1905, Trainmaster, C.P.R., Vancouver, B.C.; July 1, 1905 to Apr. 1, 1912, Assistant Superintendent, Esquimalt & Nanaimo Ry., Victoria, B.C., and from Apr. 1, 1912, Superintendent, same road.

Grant Hall, Vice President, C.P.R., was one of the guests at the Sherbrooke, Que., annual exhibition, Sept. 1, and, at the directors' luncheon, spoke of the relation of the C.P.R. to the Dominion and the railway situation in general.

Geo. H. Ham, of the C.P.R., executive staff, was a guest at directors' luncheon at the Sherbrooke, Que., annual exhibition, Sept. 2.

B. E. Holloway, General Manager, Mexican Ry., Mexico, with his wife and daughter, visited Montreal recently.

Miss Jessie B. H. Hutchison, daughter of Col. J. Alex. Hutchison, C.B.E., M.D., Chief Medical Officer, G.T.R., was married in Montreal, Sept. 9, to E. F. New-

combe, of Ottawa, son of the Deputy Minister of Justice.

A. H. Johnston, agent, G.T.R., Glasgow, Ont., has declined nomination as a candidate in the forthcoming Dominion elections, on the ground that the G.T.R., being now a Government road, employees are prohibited from being candidates for parliamentary honors, while holding their positions.

William Kennedy, Winnipeg, who recently attained his 97th birthday, came to Canada in 1853, and entered G.T.R. service as a locomotive man, running out of Belleville, Ont. He moved to Winnipeg in 1872, travelling by way of Chicago and Emerson, and was for a time engaged on construction work on the C. P.R., and followed the construction from Rat Portage (Kenora) to the Rockies. After completion of the line he was locomotive man on the paymaster's train, before divisional points were established, and continued as locomotive man for several years. About 25 years ago he was given a position in the C.P.R. Winnipeg shops, and was superannuated shortly after. He has been a member of his brotherhood for 50 years, and arrangements are being made to present him with a long service medal.

Sir Hormisdas Laporte, one of the directors, Canadian National Rys., who was mentioned recently as a possible member of the Dominion Government, is reported to have stated that he has no intention of re-entering politics.

John Leslie, Comptroller, C.P.R., accompanied by Mrs. Leslie and their son and daughter, toured the C.P.R. system and several of its subsidiary lines in the west, during September.

J. McGowan, who died in the Old People's Home, Vancouver, B.C., Aug. 31, aged 93, was employed on the first C.P.R. train which ran through to the Pacific coast, and continued in that service for some years. He was a Crimean veteran.

Sir Wm. Mackenzie left Toronto, Sept. 17, for England, expecting to return in November.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., was one of the guests at the directors' luncheon at the Sherbrooke, Que., annual exhibition, Sept. 1.

Sir Donald Mann has returned to Toronto from England.

Walter Maughan, Assistant General Passenger Agent, C.P.R., Montreal, spoke for the railways, at the Canadian National Exhibition directors' luncheon, in Toronto, Sept. 8.

F. H. Moore, Assistant Master Mechanic, Canadian National Rys., Montreal, N.B., acted as Assistant Master Mechanic, Island Division, at Charlottetown, P.E.I., during the absence in September, of P. McQuaid, on holidays.

T. W. Paterson, Lieutenant-Governor of British Columbia from 1909 to 1914, died Aug. 29 at St. Joseph's Hospital, Victoria, where he was being treated for gastro-enteritis, stated to be due to drinking chlorinated water, the immediate cause of death being a clot of blood on the brain. He was born at Darvel, Ayrshire, Scotland, Dec. 6, 1852, and was brought to Canada as a child, his family settling in Ontario. He was educated in Oxford County, Ont., and entered service with Larkin, Carroll & Co., contrac-

tors, St. Catharines, Ont., who had a contract for building a section of the C. P.R. along the north shore of Lake Superior. He was also associated with a contract on the Welland Canal, and later became a partner in the firm of Larkin, Connolly & Paterson, and took a C.P.R. contract in British Columbia. He built a portion of the Esquimalt & Nanaimo Ry. and also the Shuswap & Okanagan Ry. The Victoria & Sidney Ry. was also built under his direction, and was opened for traffic under his superintendence.

F. R. Perry, General Agent, Passenger Department (Rail), C.P.R., was elected President, American Association of Travelling Passenger Agents, at its convention, at Salt Lake City, Utah, Sept. 15. The 1922 convention will be held at a point to be chosen in the Canadian Rocky Mountains district.

Hon. J. D. Reid, M.P. or Grenville, who had been Minister of Railways and Canals since Oct. 12, 1917, was not included in the reorganized Dominion cabinet announced by Premier Meighen on Sept. 21 and has been appointed a senator.

Joseph A. Richardson, formerly District Passenger Agent, Wabash Rd., Toronto, died there Sept. 19, after a long illness. He was born near Millbrook, Ont., in 1844, and entered railway service with the G.T.R., afterwards transferring to the Union Pacific Rd., and later to the Wabash Rd. He was District Passenger Agent at Toronto for over 30 years, and retired during the war, when the Canadian offices of U.S. railways were closed on the taking over of the railways by the U.S. Railroad Administration. The funeral took place at Millbrook, Ont., Sept. 21.

W. D. Robb, Vice President, Transportation, Construction and Maintenance, G.T.R., spent a portion of his recent holidays, touring the G.T.R. and Grand Trunk Pacific Ry. systems, and during a portion of the trip was accompanied by Jas. McNaughton, Vice President, Baldwin Locomotive Works, Philadelphia, Pa.

D. W. Steeper, who has been appointed acting Superintendent, Edson Division, Grand Trunk Pacific Ry. (Canadian National Rys.), Edson, Alta., was, from Aug. 1908 to Nov. 1910, Trainmaster, G.T.P.R., Westport, Ont.; Nov. 1910 to Sept. 1915, Trainmaster, G.T.P.R., Graham, Ont.; Sept. 1915 to Apr. 1917, conductor, National Transcontinental Ry., Graham, Ont.; Apr. to July 1917, acting Assistant Superintendent, District 8, Transcontinental Division, Canadian Government Rys., Fort William, Ont.; July 1917 to Dec. 1919, Assistant Superintendent, District 3, Transcontinental Division, Canadian Government Rys., Graham, Ont.; Jan. to Feb. 1920, Assistant Superintendent, District 2, Central District, Canadian National Rys., Sioux Lookout, Ont.; Feb. to Apr. 1920, acting Superintendent, Division 4, Central District, C.N.R., Winnipeg; Apr. 1920 to Sept. 15, 1921, Assistant Superintendent, Division 2, Central District, C.N.R., Sioux Lookout, Ont.

John Alex. Stewart, LL.B., of Perth, Ont., M.P. for Lanark, Ont., who has been appointed Minister of Railways and Canals to succeed Dr. J. D. Reid, was born at Renfrew, Ont., and is a barrister and solicitor. For some 15 years he was High Chief Ranger, Canadian Order of Foresters, was Mayor of Perth from

1900 to 1904, and was first elected to the House of Commons at a bye election May 3, 1918. During the Dominion Parliament's last session he took a prominent part in the examination of witnesses before the special committee on Canadian National Ry. and Canadian

Government Merchant Marine.

Mrs. R. B. Van Horne, wife of the late Sir Wm. Van Horne's only son, has been left an annuity of \$5,000 a year, and a life interest in \$20,000, which at her death is to be divided among her children, under the will of her late father, Dr.

W. A. Molson, of Montreal, whose estate totaled \$644,981.

Mrs. A. E. Warren, wife of the General Manager, Western Lines, Canadian National Ry., is convalescing from a serious illness, during a portion of which she was in Winnipeg General Hospital.

The Railway Wages Question in Canada and the United States.

The relationship between the Pennsylvania Rd. and its employees was fully discussed in Canadian Railway and Marine World for September on pg. 473. It will be remembered that the Pennsylvania had entered into agreements with its employees, through representatives elected by the employees at meetings called by the company, and that the U.S. Railroad Labor Board declared these elections null and void, and ordered new elections held, the labor organizations concerned to be recognized by the company. The Pennsylvania immediately challenged the Labor Board's authority in this respect. It states that the Board had no authority, or power, in law, to ever extend the national agreements, and especially, after terminating them, to decide on a further extension. So far as the Pennsylvania is concerned, it states that the national agreements are completely terminated and of no force and effect. It points out in addition that the Board was authority for the statement: "There is no question of the closed or open shop involved in this dispute, and no other real matter of principle." If this is right, says the Pennsylvania management, and it does not admit that it is, then the question is merely one of procedure, then if the Board has no right or power to set up its judgment against that of the carrier. Dissatisfaction by certain employees, with matters of mere procedure, should not be tortured into a "dispute" within the purview of secs. 301 and 307 of the Transportation Act. The Pennsylvania also denies the power of the Board to prescribe an election, or any other method, by which the carrier may ascertain who are the authorized representatives of its employees, and states that it has been its policy, since the termination of federal control, to establish with its own employees a harmonious and contented relationship, ever bearing in mind that honest, efficient and economical operation of its lines can be secured only by close and unrestricted co-operation by the management and the employees. Out of 176,000 employees, contracts have been entered into between the company and the elected representatives of 149,918 employees, and the railway claims that if it complied with the Labor Board's decision these contracts would be rendered null and void, to the great and irreparable injury of the railway and its employees. Formal application has been made to the Labor Board for a withdrawal of its orders and the road offers to have counsel present at any time the Board desires to hold a hearing on the case.

Elis L. Lee, Vice President of the Pennsylvania, is reported to have said in speaking of this matter: "The Labor Board's order, in all likelihood, would compel us to conduct our conferences with strangers, with labor union general officers who were not our employees and who might not even be railroad men. It would defeat the very fundamental purpose of employee representation, which

is based upon the principle of face-to-face discussion between management and men. Our differences with the Labor Board arise out of the fact that while Congress plainly created it as a board of mediation, to act in disputes which railroad managers and railroad employees were unable to settle between themselves, the Board has gone far beyond that scope and assumed very largely the role of an administrative or managerial body with respect to the labor affairs of the railroads. This, we contend, under the Transportation Act, it has no right to do, and that is the gist of our differences with the Board."

Some progress has been made by the Labor Board in deciding the controversy between the U.S. railways and their shop employees, in connection with the making of rules to supplant the national agreements. In a majority decision, the Board decided upon new rules to replace rules 7, 9, 10, 12, 14 and 15 of the shop crafts national agreement. The new rule provides that time and one-half shall be paid for Sunday, and overtime work except that which is absolutely essential, but that straight time shall be paid to men who are regularly assigned to work on Sundays and holidays. Rule 7 has been changed so that instead of receiving a guaranty of one hour's pay for 40 minutes, or less, continuous overtime service, with the right to go to meals within one hour's work, the shop employee will be paid straight time and one-half on an actual minute basis, with a minimum of one hour, and he can be held for two hours before going to meals. The time then taken for meals will not terminate the employee's continuous service and must be paid for up to 30 mins. Instead of receiving five hours pay for 3 hours and 20 mins. service, or less, when called to return to work the employee is to be paid a minimum of 4 hours for 2 hours and 40 mins. or less work. This four hours pay must also be paid to employees called but not used. Rule 9 gave the employee who worked through his lunch period, one hour's pay, and the chance to get his lunch later without loss of time. The new ruling gives him straight time, and the opportunity of getting his lunch later without loss of time up to 30 mins. Rule 10 has been changed so that when an employee is sent out on the road to a job, he gets straight time for all time waiting or travelling, his station. If away several days, he is now guaranteed 8 hours pay for each calendar day. Among the other changes may be noted that in rule 15, relative to the determination of a monthly rate for employees on road work and paid on a monthly basis, which is to the effect that, instead of arriving at the monthly rate by dividing 3156 hours (which includes 59 Sundays and holidays at time and one-half) by 12, their monthly rate is to be determined by dividing 2920 hours, or 365 eight hour days, by 12. This was a majority decision. A dissent-

ing opinion was given by A. O. Wharton, a labor representative on the Board, this being the first time that the Board has had a dissenting opinion presented. He claimed that the practice of paying extra compensation for overtime work had been established in American industry for 40 years, and he submitted a statement showing the practice of 2544 industrial firms in this connection, and claiming that 869 of these firms pay double time for overtime, 2270 pay time and one-half, and only 49 pay straight time.

In connection with the ballots sent out to the members of the five large brotherhoods, it is of interest to note that the ballot prepared by the Brotherhood of Locomotive Firemen, Brotherhood of Locomotive Engineers, Brotherhood of Switchmen's Union was prepared jointly, and stated that "It is to be understood the men will be permitted to withdraw from the service of their respective companies unless satisfactory settlement can be reached under the laws of the organization." The Brotherhood of Railroad Trainmen apparently did not like the wording of the ballot decided upon by the other organizations, and a statement accompanied their individual ballot said in part: "All members and others are hereby notified that the membership vote is in lawful necessary majority to leave the service, rather than continue service under the reduced wages now in effect, they will on any or all lines, with the sanction of the general grievance committee, be given necessary authority by the president of the grand lodge. The president of the grand lodge will not undertake to prevent the wishes of the men as expressed in their ballot from being adhered to." A press report stated that the brotherhood chiefs were to convene in Chicago on Sept. 22 to consider the situation, and presumably to determine what action will be taken upon the ballots being returned and the vote recorded. No information as to the result of the balloting is to hand at the time of writing (Sept. 24). The shop crafts are highly dissatisfied with the Labor Board's decision in the national agreements case, referred to above, and officers of the federated shop crafts, after a three day conference at Chicago, issued a letter to the membership, in which the men are warned not to become involved in any unauthorized strikes, but to conserve their resources, and be ready to follow any lead which may be given by the responsible officers of the crafts.

Another interesting case before the Labor Board is in connection with the action of the New York Central in transferring employees engaged in the construction and maintenance of telegraph lines along its right of way to the Western Union Telegraph Co.'s pay roll. The labor representatives claim this is merely a means used by the railway to avoid paying the rates of wages laid down as just by the Labor Board. The railway claims this action was taken because its

contract with the telegraph company enabled the latter to refuse to honor the bills presented to it by the carrier, on the ground that the wages paid by the carrier were unreasonable, so a new arrangement was entered into. The case was heard before the Board on Sept. 13, but no decision has as yet been announced.

In Canada, wage matters are still the topic of much discussion and negotiation. In connection with the board of arbitration demanded by the Canadian Brotherhood of Railway Employees, the developments in date are that two boards have been constituted to deal with the organization's complaints, one to deal with the dispute as between it and the Grand Trunk Ry., and the other to deal with the dispute as between it and the Canadian National Ry. The board to hear the dispute between the Grand Trunk and the organization was granted under the Industrial Disputes Investigation Act, and is composed of J. M. Godfrey, K.C., of Toronto, chairman; H. H. Vaughan, Montreal, for the Grand Trunk, and Peter Marcovitch, K.C., Montreal, for the employees. The first session of the Board was to have been held in Montreal on Sept. 8, but it was postponed, and no information is available as to when the board will get down to work. In the dispute between the C.B.R.E. and the Canadian National Ry., a board was granted the employees under the terms of the Act Respecting Conciliation and Labor, composed of H. P. Hill, M.L.A., for Ottawa West, chairman; Geo. D. Kelley, of Ottawa, representing the company,

and ex mayor Harold Fisher of Ottawa, representing the C.B.R.E. This body held a meeting at which representatives of the company and of the men were present, when the situation was thoroughly discussed. Any views that the members of the board may have had to the effect that the Canadian National management was unwilling to discuss the matter were dispelled by the management stating that it was willing to discuss wage schedules and working rules, and conditions fully. In view of this, it was felt that some progress might be made as between the company and the organization without the board's intervention, so conferences between representatives of the C.B.R.E. and the company began on September 20, with a view to seeing if a settlement of all points in dispute could be arrived at, but such had not been accomplished up to Sept. 23. Under the Act Respecting Conciliation and Labor, the board of conciliation appointed is apparently supposed, in the first place, to attempt to bring the two parties to the dispute together, and pave the way for an amicable settlement, but in the event of not being able to accomplish this, the board of conciliation assumes the duties of a board of arbitration, provided the membership is agreeable to all concerned. If, therefore, the negotiations in progress do not result in a settlement being arrived at, it is altogether likely that the dispute will be referred to arbitration with the same arbitrators.

In connection with the joint applica-

tion of the Brotherhood of Locomotive Engineers, Brotherhood of Locomotive Firemen and Enginemen, Order of Railway Conductors, Brotherhood of Railroad Trainmen and Order of Railroad Telegraphers for a board of arbitration, it will be remembered that the Railway Association of Canada stated that it was not empowered to select a member for such a board, on behalf of the Canadian railways. After considerable correspondence between the Labor Department and the Railway Association, it has been exchanged in this connection, the Department conceded the point to the Railway Association, and on Sept. 12 appointed Isaac Pitblado, K.C., of Winnipeg, to act for the railway companies. This appointment was made only after further conference between the managements of the railway companies and the general chairmen and other representatives of the organizations concerned had failed to bring about an agreement. While the companies expressed a willingness to discuss wages and working conditions, they would not consider the withdrawal of the wage reduction which became effective July 16. The organizations considered this refusal as a barrier to the carrying on of further negotiations, as between themselves and the railways, before submission of the matter to a board of arbitration, with the result that the board was constituted with Mr. Pitblado representing the employees, and Mr. Justice Macleannan of Montreal as chairman. The first sitting of the board was scheduled for Sept. 28.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—J. Callahan, Deputy Minister of Railways for Alberta, returned to Edmonton, Alta., Sept. 3, from a trip of inspection over the line. It is reported that large quantities of ballast are being put on from Carbondale Jct., to the present end of track, near the Clearwater River. The route from this point into McMurray, has been relocated, and grading has been in progress for some time. It is expected that track laying will be started Oct. 1, and that the line will be completed by Oct. 31. (Aug., pg. 419.)

Burrard Inlet Tunnel & Bridge Co.—The annual meeting of the shareholders, who are representatives of the cities of Vancouver and North Vancouver and adjoining municipalities, was held in North Vancouver, Sept. 14, when directors were elected as follows:—E. H. Bridgeman, President; G. W. Vance, Vice President; E. E. Woodhouse, J. G. MacNought, B. E. Townsley, P. Ward, and J. Leitch. A finance committee and a construction committee were appointed. The directors' report stated that while no construction had been done, consideration had been given to what might be done, and the British Columbia Government had been interviewed. It was suggested that the company take immediate steps to obtain estimates for a low level steel bridge with pile approaches, immediately north of the C.P.R. right of way, with as narrow an opening for ships as the Dominion Government would approve of. A committee was appointed to interview the Vancouver Harbor Board on the matter. (April, pg. 198.)

Central Canada Ry.—J. A. McGregor, General Manager, Edmonton, Dunvegan

& British Columbia Ry., who also has charge of the C.C.R., returned to Edmonton, Alta., recently, after an inspection trip over the lines. He is reported to have stated that excellent progress was being made with the extension of the line northwesterly from the Peace River crossing, although some two weeks had been lost owing to unfavorable conditions. W. A. Dutton, Winnipeg, Man., has the grading contract. (Aug., pg. 419.)

Eastern Maine Ry.—An unconfirmed Fredericton, N.B., press dispatch says that this projected line is to be built in 1922 and that it will give the Canadian National Ry. connection with the Maine coast. The scheme is for Canadian interests to build from the St. John and Quebec Ry. at Pokok, N.B., to the New Brunswick-Maine boundary and for United States interests to build thence to connect up with the Maine Central Ry. at Danforth.

Edmonton, Dunvegan & British Columbia Ry.—W. R. MacInnes, Vice President of Traffic, C.P.R., and other officials, made an inspection trip recently over the line, which is under C.P.R. management, and had a 125 mile motor trip through the Grand Prairie district, beyond the railway terminus. The question of the extension of the line from Grande Prairie, Alta., was discussed and it is said that the C.P.R. Co. is ready to build an extension provided the Alberta Government provides the money, as it is doing for the Central Canada Ry. extension.

The agreement for running rights over a portion of the Canadian National Ry. lines in Edmonton has been arranged,

and it is reported that the E.D. & B.C. Ry. trains will be running into the C.P.R. station Oct. 1. Work was reported to have been started on Sept. 7 on a short piece of line to connect the C.N.R. with the C.P.R., and arrangements were said to have been made for laying the connecting switches. (Aug., pg. 419.)

Esquimalt & Nanaimo Ry.—An additional gang is reported to have been put on the piling for the substructure of the Johnston St. bridge, Victoria, B.C., and the last caisson has been sunk in place. The putting in of the concrete has been started, and it is expected to have it completed early in November. The substructure work is being done under the City Engineer, F. M. Preston. The Strauss bascule span superstructure is being manufactured by the Canadian Bridge Co., Walkerville, Ont., and will be erected as soon as the substructure is completed. (Aug., pg. 419.)

Grand Trunk Ry.—The G.T.R. Victoria Bridge, Montreal, was closed to vehicular traffic between 11 p.m. and 6 a.m., from Aug. 22 to Sept. 10, to allow a sheet of asphalt to be laid on the highway portion for protection against fire. The company is reported to be replacing all wooden bridges in Hamilton, Ont., east of James St., with permanent structures of concrete and steel. One of them is under construction at the Macnab St. cutting on Stuart St., and preparations are going on for putting in a steel superstructure at the crossing of Hughson St.

A press report states that the company is spending about \$40,000 in replacing old wooden culverts in the London, Huron & Bruce Ry., with cement tile cul-

verts. (Aug., pg. 419.)

Kettle Valley Ry.—A recent press report stated that tenders were being invited for grading on the line from the southern end of Dog Lake, as far south as the experimental station on the soldier settlement area in the vicinity of Okanagan Falls. Another report stated that engineers had located a route for the continuation of the line to the International Boundary, a little north of Orville, Wash., a station on the Great Northern Ry.'s Spokane-Marcus-Penticton-Vancouver line, to which reference is made on another page of this issue.

The track has not yet been laid on the approximately two miles of line from Penticton to the north end of Dog Lake. The wharves at the north and south ends of the lake are reported to have been completed and the steamboat York is ready on the lake to run between the two sections of the line as soon as the northern section is completed. (Aug., pg. 419.)

Luscar Collieries Ry.—A recent press report stated that it was expected to have the five mile railway from Luscar siding on the Grand Trunk Pacific Ry. Mountain Park Branch, to the Luscar collieries, completed by Oct. 15. Development work at the mines is being pushed and it is expected to have 10,000 tons of coal ready for shipment when the railway is completed. (Aug., pg. 419.)

Reld Newfoundland Ry.—The Newfoundland Legislature has passed an act respecting the construction of the branch line from near Dunville on the St. John's-Placentia line, to Argentina. The act declares that the construction of the line and the payment for it out of the public funds, and everything done in connection with the taking of the right of way and payment for the same are ratified and confirmed. This piece of line, which is not yet completed, is intended to provide a more convenient winter port for trade with Canada, than Port aux Basques, to which port traffic is shut up nearly every winter by snow blockades in the Topsails district.

Minto to Chipman.—The New Brunswick Government is reported to have decided to engage an independent engineer to locate a line, about six miles long, from Minto, in the Grand Lake coal mining district, to Chipman on the National Transcontinental Ry. The N.B. Government owns the New Brunswick Coal & Ry. line extending from Minto to the intercolonial Ry. to Chipman, 58 miles, which is operated by the C.P.R. in conjunction with the Fredericton & Grand Lake Coal & Ry. Co.'s line from Fredericton via Minto to Chipman.

Northern Light Railways Co.—A press report states that the company has sold bonds sufficient to build 15 miles of narrow gauge railway in northern Ontario mining districts. It is stated that construction will be started at Swastika, on the Timiskaming & Northern Ontario Ry. and will be pushed eastward to Larder Lake, and westerly to Fort Batchewan. This mileage would cover the Kirkland Lake mining district. We have reason to believe that the bonds have not been sold. (June, pg. 305.)

Pacific Great Eastern Ry.—As stated briefly in Canadian Railway and Marine World for August, track was laid into Quesnel, B.C., July 22. It was expected that track laying would have reached there July 1, but the completion of the bridge across the Quesnel River was delayed. This extension gives the line a

total length of about 375 miles from Squamish. Track was laid on 36 miles, from Deep Creek to Australian Creek, in 1920, and on 9 miles from Australian Creek to Quesnel this year. Track laying from Quesnel was pushed on immediately and it was reported that rails had been laid to the Cottonwood River, 16 miles from Quesnel, on Aug. 23, about a week earlier than was anticipated. At this point a large steel bridge is under construction, the contract for the superstructure having been given the Dominion Bridge Co. The remaining mileage between the Cottonwood River and Prince George is reported to be ready for track laying, and it is expected to start work at an early date, working from Prince George.

A party of members of the Legislative Assembly, led by the Premier, who is also Minister of Railways, left Vancouver, Aug. 25, by steamboat, for Squamish, the railway's coast terminus, and made a four day inspection of the line to the end of track, 365 miles. Referring to the trip on returning to Victoria, the Premier said it had been shown that the Government was justified in changing the route of the line from that originally laid down, as a more secure roadbed had been provided at several points, and the line taken into Quesnel, instead of passing it at a distance of two or three miles. Track laying from Prince George to the Cottonwood River, 63 miles, would be gone on with as soon as possible. It is hoped to lay 20 miles this year, and to complete the line next spring. Funds have been provided by the issue of \$1,000,000 of 20-year 6% bonds which were sold through Toronto bond houses at 93.59 in August.

D. Whiteside, M.L.A. for New Westminster, who was one of the party on the trip, is reported to have engaged G. Kent, an engineer, to advise him as to the possibilities of a plan which he proposes to present to the Legislative Assembly next year. He suggests that the line from Squamish to Clinton, 167.7 miles, be abandoned, and that the rails be taken up and used for a line from Clinton to connect with the Canadian National Rys., and the C.P.R. at Ashcroft, the route of which was described in Canadian Railway and Marine World for May, 1920, pg. 243. The abandoned right of way from Squamish to Clinton could be utilized as a motor road, and this would be the most magnificent tourist road in the country. (Aug., pg. 420.)

Quebec Central Ry.—A press report states that the branch line of 19.5 miles from Scotts Jct., to a junction with the Canadian National Rys., a short distance east of the Quebec Bridge, has been completed, and will be opened for traffic Oct. 2. Arrangements are reported to have been made for the operation of trains from the junction, over the C.N.R. and the Quebec bridge into Quebec. The contractors for the extension were J. T. and J. F. Davis, of Quebec. A description of it was given in Canadian Railway and Marine World for May, pg. 242. (Aug., pg. 420.)

St. John & Quebec Ry.—The directors who have charge of this line for the New Brunswick Government, are reported to have been asked by the Canadian National Rys., which operate the line to provide about \$80,000 to build section houses and sidings, and to make improvements on the road bed. About half of this proposed expenditure is stated to

be to raise the roadbed at McGauley's crossing, near Fredericton. The C.N. Rys. management claims that the St. J. & Q. Ry. should bear this cost, and the latter contends that it is a maintenance work, which is to be paid for by the lessee. The matter is reported to have been discussed at a conference of C.N.R. officials with the directors on Sept. 8. In the event of an agreement not being reached the matter will, according to the terms of the lease, be submitted to the Board of Railway Commissioners for settlement. (June, pg. 306.)

Timiskaming & Northern Ontario Ry. It is reported that the clearing of a right of way for an extension of the railway north from Cochrane is under consideration.

The Toronto, Hamilton & Buffalo Ry. is carried across the Grand River at Brantford by a bridge, built in 1893, and partially rebuilt in 1902. The substructure consists of stone abutment at the east end, and two cylindrical piers built in 1893, and one concrete abutment and one concrete pier at the west end built in 1902. All the foundations are carried down to solid rock. The superstructure consists of three truss spans belonging to the 1893 bridge, and one plate girder span at the west end, erected in 1902. The three truss spans are to be replaced by three through plate girders of the same length. The length of all the spans is 102 ft. The contract for removing the present truss spans and erecting the new spans has been let to the Hamilton Bridge Works Co. It is expected that the work will be completed by Oct. 15.

Western Dominion Ry.—The Dominion Parliament has extended for one year the time within which the company may commence its projected railway from the International Boundary in Range 23, west 4th meridian, via Cardston and Pincher Creek to Lundbreck, on the C.P.R. The present line, thence to Calgary and Edmonton, Alta., Fort St. John, B.C., with branch lines into the southern Alberta coal fields. Twenty-five miles of line are to be completed within a year, and a further 25 miles each year thereafter, until the whole of the railway is built. (Mar., pg. 143.)

Pouring Hub Liners.—In the article describing the pouring of hub liners on driving wheel hubs, in Canadian Railway and Marine World for August, it was stated that "the 'habbit' is melted in Rockwell tilting furnace," thus indicating that the hub liners are of habbit metal. The material used for them is brass.

C.P.R. Rail Order.—We are officially advised that the C.P.R. has ordered 250,000 gross tons, 100 lb., C.P.R. section, open heavy steel rails, from Algoma Steel Corporation, for shipment during September and October, and that the bulk of this tonnage will be shipped east from Sault Ste. Marie, Ont.

Live Stock Transportation Officers.—The Dominion Agriculture Department's Live Stock Branch has appointed two special transportation officers, to assist shippers of live stock in obtaining the best and quickest service possible, viz., L. L. Cook, Agriculture Department, Ottawa, for eastern Canada; and S. H. Gandler, Union Stock Yards, St. Boniface, Man., for western Canada.

The Canadian Electric Railway Association's next annual meeting will be held in Quebec, Que., June 1 and 2, 1922.

Farewells in England to F. C. Salter.

F. C. Salter, formerly European Traffic Manager, G.T.R. and Canadian Express Co., whose positions have been abolished, consequent on the appointment of Wm. Phillips, heretofore European Manager, Canadian National Rys., and Canadian National-Grand Trunk Rys. and Canadian National Express Co., was entertained at luncheon at the Great Eastern Hotel, London, at the end of August by members of the staffs of the G.T.R., Canadian Express Co. and Canadian National Rys.

Sir Alfred Smithers, ex Chairman of the Board, G.T.R., who presided, said that it gave him very great pleasure to be there for the special purpose of welcoming Mr. Salter and wishing him all the good luck that he deserved in his new occupation on the other side, and also because, as he understood, a great many Canadian National men were there and a great many Grand Trunk representatives. He was not going to say anything or indulge in any speculation about the railway position in Canada. He had every hope that all the railways under Government control would be able to show successful results in the face of the very keen competition they would undoubtedly meet with. His only hope was that their efforts would be successful, and that Canada would enjoy the benefit of a first class railway system. The G.T.R. had had great difficulties to contend with in Canada. He would not go into any details, but would say that those difficulties would have immensely increased had it not been for the marvelous loyalty of their staffs in the United States and England. The G.T.R. was first commenced in 1851, and the British spirit which went into the line on that occasion had been with it ever since, and although the officers to-day of the Grand Trunk Railway were largely Canadian or American, he believed there still remained that British spirit which carried them through very great difficulties. He must mention one name which ought not to be forgotten, that of Wm. Wainwright. He missed his old friend Mr. Wainwright more than he could say. Mr. Wainwright won the respect of all with whom he came in contact. Amongst others he would like to mention was W. D. Robb, whose friendship he had enjoyed since 1895, when he first went to Canada, a man of whom it was said that he told on the G.T.R. R. Their Treasurer, Frank Scott, also deserved the highest praise for loyalty. In England they had H. H. Norman (Secretary), who died recently after completing 50 years service. H. Deer, the present Secretary, who he was sorry to say, was not there that day, had put in over 45 years continued service. Amid all the misfortunes and all the trials which the G.T.R. had had, one saving factor had been the loyalty of its staff. There had been no better example of that loyalty than that shown by Mr. Salter. He had been there ever since 1904, and they had been through periods of unexamined tension together. It was a source of great pleasure to him to make the presentation, and he was sure that he was only voicing their wishes when he said that they wished Mr. Salter health, long life, and that he would succeed in the duties he was going to undertake. He then presented Mr. Salter a handsome cabinet of silver cutlery, bearing

the inscription: "Presented as a mark of esteem and appreciation to Fred. C. Salter, Esq., by Sir Alfred Smithers, on behalf of all the employees of the traffic organizations of the G.T.R. system and associated members of the Canadian National Rys."

Mr. Salter, in reply, said that he had been through some very pleasant moments and some very sad moments. The severing of this connection after 17 years was one of the saddest. He wished to thank Sir Alfred for his generous words, and also those present for the generous way in which he had received that expression. Sir Alfred had put him rather in the position of Dr. Johnson, who was called before His Majesty after writing his famous dictionary. As he was leaving the palace, his face wreathed in smiles, he met Boswell, who asked him, "What did you say to His Majesty?" Johnson replied, "Who am I to bandy words with my monarch?" The spirit of affection was the greatest gift that one man could give to another. He was leaving these shores and they might never hear his voice again. All he asked of them was that they should remember Fred Salter. He knew he was leaving to his successor, Mr. Phillips, a loyal, intelligent and conscientious staff who would render to him that support and loyalty characteristic of the G.T.R.

Mr. Phillips also spoke briefly.

Mr. Salter was entertained at another luncheon, at the Elysée Restaurant, Coventry St. London, on Sept. 12, by officers of various transportation companies doing business with Canada, including the C.P.R., Canadian National Rys., Cunard and White Star Lines, American Express Co., and Thos. Cook & Son. Sir George MacLaren Brown, European General Manager, C.P.R., who presided, spoke of the harmonious relations which had existed between Mr. Salter and himself. Sir Alfred Smithers was unable to attend, owing to an emergency meeting of G.T.R. shareholders.

A London cablegram of Sept. 12 stated that Mr. Salter would sail for Canada on Sept. 27, on the s.s. Megantic.

Freight and Passenger Traffic Notes.

The Canadian National Rys. and Canadian Pacific Rys. autumn and winter time tables go into effect on Oct. 2.

The Canadian National, Canadian Pacific and Grand Trunk Railways put into effect Sept. 15 a reduced price list for meals on trains.

The Pacific Great Eastern Rys. has cut off four trains daily between North Vancouver to Altamont, B.C., two each way, owing to lack of passengers.

Over 4,000 head of live cattle were shipped through Montreal for the British markets during August, making a total of over 15,000 shipped during the season.

The C.P.R. ceased running the Great Lakes Special between Winnipeg, Man., and Fort William, Ont., Sept. 13, when the last train for the season left Winnipeg.

The British Columbia Government is reported to have passed orders in council Sept. 15, reducing by 15% the freight rates on potatoes in carload lots, and on saw logs on the Pacific Great Eastern Rys.

The Canadian National Rys. have an-

nounced a number of changes in the times of operation of a number of trains, together with some cancellations of a more or less local character, commencing Oct. 2.

Owing to a stenographic error it was stated in Canadian Railway and Marine World for August that British Columbia expects to ship 500,000 car loads of apples this year. Obviously the figures should have been 5,000.

The C.P.R. on Sept. 15 started running three trains a week in each direction on Mondays, Wednesdays and Fridays, between Estevan and Neptune, Sask., instead of the twice a week service operated previously.

The C.P.R. Trans-Canada Limited trains left Montreal and Vancouver, Sept. 10, on the last trip for the season. The transcontinental service is now supplied 10.15 p.m. for Vancouver and intermediate points; a Toronto section connecting at Sudbury, Ont.

The G.T.R. has been authorized by the Board of Railway Commissioners to close its station at Hawkesbury, Ont., and to use the Canadian National Rys. station there from Oct. 2. G.T.R. trains will operate into and from the Canadian National Rys. station at Rockland, Ont., and on the same date the connecting link between the C.N.R. and the G.T.R. at Brighton, Ont., will be completed and trains will be operated into and out of the G.T.R. station.

For handling the Okanagan Valley, B. C., fruit trade, the C.P.R. has added three new barges on Okanagan Lake, and is employing two tugs on the Penticton-Okanagan Landing run, and one on the Kelowna-Okanagan Landing run. The icing capacity at Okanagan Landing has been double. The loaded cars are shipped from Penticton to Calgary and other points. Up to the end of August 32 full cars had been shipped out this season, and in the early parts of September four cars a day were sent east.

The Alberta & Great Waterways Ry. put a new timetable in force recently. The important change is that sleeping and dining car service is operated from Edmonton, Alta., to the end of track, on the train leaving Edmonton 9.30 a.m. on Fridays, and reaching the end of track at 12.35 p.m. on Saturdays; returning at 8 a.m. on Sundays, and reaching Edmonton at 7.30 a.m. on Tuesdays. There are also trains leaving Edmonton for Lac la Biche on Mondays and Wednesdays, at 7.50 a.m. and 10 a.m. Lac la Biche at 7.30 a.m. on Tuesdays and Thursdays.

The C.P.R. has put on two extra Saturday night trains between Montreal and Toronto, and Toronto and Montreal, respectively. The westbound train leaves Montreal at 11.45 p.m. Saturday, arriving at Toronto, Yonge St. station, 9.15 a.m. Sunday. The eastbound train leaves Toronto union station at 11.59 p.m. Saturday, reaching Montreal 9.10 a.m. Sunday. The only traffic stops for either train are at Peterborough, but diagonal stops are made at Smiths Falls and Hawkeville. This change gives two daily night trains between Montreal and Toronto both ways, the other westbound trains being no. 23 leaving Montreal 9.15 p.m. daily except Saturday, via Peterborough, and no. 21 leaving Montreal at 10 p.m. daily via Belleville. The eastbound trains are no. 24, leaving Toronto, Yonge Street, 9.45 p.m. daily except Saturday, and no. 22, leaving Toronto union station daily 10.50 p.m.

The Board of Railway Commissioners' Decision on Freight Rates.

The Board of Railway Commissioners' decision to leave railway rates as they are for the time being cannot fail to give satisfaction to those who are acquainted with conditions in the railway industry, and more particularly to those who appreciate the relation of railway transportation to the whole industrial structure of the country. Viewing the subject from any angle, it may be readily demonstrated, by a process of simple reasoning, that a general percentage rate reduction on Canadian railways is not desirable at this time. While improvement in the financial status of the railways is gradually taking place, that improvement has not yet progressed to an extent sufficient to allow a lower scale of rates to be introduced without results disastrous to the railway industry, and, incidentally, to the country.

In any consideration of railway rates in Canada, the Canadian Pacific operating results are commonly made the basis of the justness and reasonableness of freight and passenger rates. This is as it should be. It is apparently recognized that the C.P.R., outstandingly representative of the privately owned public utility, is entitled to such rates that it may have, after efficient and economical operation of its property, sufficient net earnings to provide for the payment of a just and reasonable return to the investors in the enterprise. This, also, is as it should be. We go further, and say that the public interest would be better served if, in addition to paying the dividend on a capitalization so greatly below the value of the facilities employed in the public service, some annual surplus remained. Canada is a country in which the look for future growth and development; this inevitably requires continual addition to transportation facilities, and these continual additions are secured more economically if obtained by the expenditure of surplus earnings, than by the expenditure of money calling for increased capitalization. If new facilities calling for the expenditure of comparatively large sums are to be obtained, the cost of new capital, ultimately paid by the people, will be influenced in consequence by the earnings and consequent standing of the securities of the railway.

Regarding the C.P.R. performance to date this year, it is evident that, while conditions have shown a slight degree of improvement over last year, in so far as net earnings are concerned, this improvement has been secured largely at the expense of deferring work, particularly maintenance, which must be done ultimately. In the recent proceedings before the Board of Railway Commissioners, the company estimated that, from present indications, the year's operation would result in a deficit, with rates as they are, while the Chief Commissioner adopted a more optimistic view and made an analysis to show that the company would have, at present rates, a surplus of sufficient size to permit of a 10% reduction of freight rates now. Our contention is, that where maintenance and all other expenditures have been cut to a minimum for months past, and where present rates are such that one estimate of future earnings results in a predicted surplus, and the other in a predicted deficit, any reduction in rates would violate the principle of allowing the company sufficient earnings to maintain its property

in good physical condition, and in a position of undoubted financial strength, and, in the final analysis, the public welfare would suffer.

The majority judgment, against a decrease in rates, was based on a possible decision against the railways in the matter of wages. It is easily understood that a reduction of rates would be out of the question if the former wage scales were put back into effect; but, as above noted, the C.P.R. looked for a deficit even on the reduced scale of wages. Irrespective of reduced wages, therefore, the above argument holds. A 10% reduction in passenger rates, coupled with numerous rate reductions already made by the railways themselves, have amply compensated for the wage decrease, and an attempt to base a general reduction of rates, on top of the individual reductions already made, on the wage decrease, would be an entirely unwarranted action. It must be realized that during the whole of 1920 the railways occupied a most unfavorable financial position; the 12% wage reduction is but a step toward removing them from that position, and toward restoring them to a normal basis, and an attempt to counteract that step, by a reduction in unit revenues would, successful, merely have the effect of retarding the restoration.

Although traffic conditions require that rate scales in Canada and the United States be on substantially the same basis, both domestic and export rates in Canada, on a ton for ton, and mile for mile, comparison, are lower than they are in the U.S. Canadian railways pay the same wages, and as much, if not more, for their materials, as the U.S. wage reduction was not seized upon in the U.S. as an excuse for a general rate reduction; the benefits were allowed to go to the railways, to assist them in improving their financial position. In Canada, we have had a 5% general reduction in freight rates and a 20% reduction in passenger rates since Sept. 1920; in the U.S. there has been no general reduction. Does it seem reasonable to suppose that Canadian railways are able to stand a further reduction, while the U.S. railways, operating under substantially similar conditions, have suffered no reduction?

We have spoken of numerous individual rate reductions already made by the railways. These are referred to more particularly on another page of this issue. It is our firm belief that such reductions, made after study and conference, by traffic experts who are thoroughly acquainted with the situation, will do more to promote trade and industry than a straight percentage reduction, applied indiscriminately to all commodities. But a demand for a general percentage reduction in addition to these individual reductions, seems, and is, entirely unreasonable.

Canadian Railway and Marine World is thoroughly cognizant of the fact that it is in the best interests of all concerned that Canadian railways derive their revenues from the greatest possible volume of traffic, carried at the lowest possible rates consistent with first class maintenance, fair wages and a fair return to capital. While it does appear to us that the present sleeping car and parlor car charges might be reduced, with just as good results to the railways as they are now obtaining, we cannot agree

with the idea that present freight rates are acting as a discouragement to business revival. When the rates were increased, the cost of living, despite the assertions of many, decreased, showing just what effect on commodity costs the charge for transportation has. We are assured by responsible traffic men that in many cases during past months traffic would not have moved if it had been carried for nothing. Many instances come to our attention where rates have been decreased, in order to secure greater traffic, but the expected increase in traffic has not materialized. While recognizing fully the desirability of transportation charges which are as low as possible, we cannot stand idly by and see the financial standing of the transportation industry imperilled because of the general existence of a most fallacious theory.

After all, a general reduction of rail rates at this time would only be another case of robbing Peter to pay Paul, only Peter would stand a chance of being robbed of more than Paul would get. The people of this country must pay a certain sum for the transportation of themselves and their goods, and the only thing that could decrease the sum would be an increase in the efficiency with

which transportation is conducted, if that were possible. If railway maintenance is allowed to run down, because of an improper relationship as between rates and expenses, the efficiency of conducting transportation is necessarily decreased, and in the end the people will pay more to make up that maintenance. If they pay less directly in rates at present, they will in future pay higher rates than they would otherwise be called on to pay, to enable the railways to get new capital for extensions and improvements. If they do not pay enough to yield a fair return to capital now, they will pay a great deal more in the future, to attract new capital. Further, the less direct revenue the National roads earn, while in their present position, the more will the people have to pay in taxes to make up for their losses, and the more unjust the situation will become, in that the people who get the transportation will not pay for all of it; and among the other people of the country will be called upon to pay for some of it. Conditions in the transportation industry are such that a general percentage rate reduction would be of no benefit to the Canadian people at this time. On the contrary, and in the final analysis, it would be disadvantageous to the people as a whole.

Henry Ford's Railway.

The Detroit, Toledo & Ironton Rd., which with branches has a little over 400 miles of line and runs from Detroit, Mich., and Toledo, Ohio, in a general southerly direction to Ironton, in the extreme south of Ohio, has been brought from obscurity to a position of prominence by its acquisition by Henry Ford, the automobile manufacturer, who became President of the road on March 4. Before he obtained control, the property had never justified its existence economically, and its history had been marked principally by continuous operating deficits. In February the operating deficit was slightly over \$100,000. In April, the net operating revenue was in excess of \$300,000, and in May and June the returns were even more favorable. The daily press has been full of sensational accounts of the manner in which the new management has removed inefficiencies, which, it is alleged, are common to all railways on the North American continent, and the net result of these stories is that the public has been led to believe that railway executives are not enforcing economies that should be enforced, that as a class they do not know their business, and that it has remained for an outsider to show them how to conduct the industry. It is a fact that humanity is easily influenced by the sensational, and it is most unfortunate that public suspicion should be aroused against the railway industry at this time, when the railways are beginning to obtain some relief from the almost impossible conditions with which they have been faced for the last few years.

As a matter of fact, the new wage scales based on a minimum of \$6 a day did not become effective on the D. T. & I. till July 1, and the rate reductions were not put into effect on the road till some time later, so that the vastly improved showing made by the property up to the end of June, the last month for which figures are available at the time of writing, could not have been caused in any degree by these changes,

as is alleged. The reason for the remarkable improvement in the D.T. & I. results is found in the fact that the new management represents one of the largest manufacturers in the U.S., and that the position of the new owner, as a manufacturer and shipper, has enabled it to do things with the D.T. & I. that could not be done under other circumstances.

The average monthly ton mileage of the D.T. & I. for the last four months of 1920 was 49,000,000. The average monthly freight earnings were \$490,000, or 1c. a ton mile. In January and February of this year its traffic fell off badly. In April, however, the revenue ton mileage had increased again to 31,600,000, yielding a revenue of \$674,692, or at the rate of 2.13c. a ton mile. In May, 41,090,000 tons were handled, yielding a revenue of \$721,562, or 1.76c. per ton mile; in June, 38,589,000 ton miles were handled, the revenue being \$686,355, or 1.78c. a ton mile.

In the latter part of 1920, the D.T. & I. handled a lot of low class freight, taking a low rate, and on joint business it took just about such divisions of the through rate as its strong traffic connections saw fit to allow it. Its traffic in January and February decreased by a large percentage, in common with that of all other railways; but while the traffic of other railways remained small, that of the D. T. & I. in April, May, and June, rose up again. The point worthy of note is that the new traffic was not the usual low grade, low rate traffic, which has not picked up again, but that the new traffic is high grade, high rate traffic, as the above figures show, consisting largely of trucks and automobiles from the Ford factories at Detroit, and manufactured parts and materials to the factories at Detroit. It is also worthy of note that the new management is in a position to demand and get better divisions of the through rates, for the simple reason that the bulk of the traffic being moved over the D.T. & I. belongs to the owner of

the railway. The rate per ton mile of revenue freight moved being about double that received by the road before its acquisition by Mr. Ford, it is no wonder that its operating results should improve. If all other railways had been in a position to furnish a large new high rate traffic for themselves, when their ordinary traffic fell off, the chances are they would be in a position to raise wages and lower rates also, but things are made still more unfavorable for the other railways concerned, in that they have lost the traffic which they previously handled, and which is now handled by the shipper himself.

The Ford Company's freight bills come to about \$20,000,000 a year. The D.T. & I. will earn about \$7,000,000 of this, while the remainder will go to other railways. Is it not worth while for the Ford interests to insist on a movement for a 20% rate reduction on all railways, and give the movement encouragement by placing the reduction in effect on the D. T. & I.? It is certainly worth while for a man to sacrifice a dollar, as a railway man, if it will bring him back five dollars as a shipper.

After all, it is contrary to good plain common sense to believe that anyone can step into the railway industry and show the ablest men in that industry, and who have spent their lives in building up efficiency in it, how to do their work. That the wages paid by a railway can be raised, and the rates lowered, without some other great cause operating, is impossible. The cause, in this case, is that the D.T. & I. is being operated as an adjunct to the Ford factories, with their 70,000 cars of freight annually, rather than as a common carrier. The success of the new owner of the D.T. & I. in increasing the quantity production of automobiles has been remarkable, but the fact remains that the D.T. & I. performance has advanced no argument against the way the transportation industry is being conducted. While no one will dispute the fact that the Ford factories are operated with efficiency, as all factories should be operated, the fact also remains that neither the employees of the D.T. & I. nor of the Ford factories could be made a preferred class as to wages, if the public were not charged a price involving large profits for the product of those factories, any more than could the employees of that other great new industry, motion pictures, be paid salaries altogether out of proportion to their ability, unless the public were taxed sufficient to so pay them. If the Canadian and the U.S. people paid no more for the other necessities and luxuries of life in proportion to service rendered, than they do for railway transportation, they would be a much wealthier people than they are today.

Railway Employees Wages Situation.—Owing to a printer's error, and an oversight in proofreading, a sentence in the article on this subject in Canadian Railway and Marine World for September, on pg. 477, read as follows:—"In the latter part of 1920, practically all of the United States roads operated at a loss; so far in 1921 they have earned only about 20% on their capitalization." It should have read 2% instead of 20%. It may be added that the Transportation Act was designed to allow U.S. railways to earn 5½%, or, at the Interstate Commerce Commission's discretion, 6%, on their investment, but 2% is the average return earned by them so far this year.

Canadian Pacific Railway Earnings and Expenses for July.

The C.P.R. gross earnings for July, \$15,772,929, were the largest for any month this year. The working expenses were \$13,718,613, and operating ratio was 86.97%. The net earnings were \$2,054,316. Compared with July 1920, the gross was \$1,602,831 less, but the expenses were \$2,037,661 less, while the net for July this year was \$434,830 greater, showing a large improvement in the July results this year, compared with those for July 1920.

The fact of the July gross showing an increase over any other month so far this year is an encouraging sign. The best month previous to July was March, when the gross was \$14,705,726, or \$1,067,203 less than in July. A good increase in traffic handled is thus evident. Consideration of the fact that passenger fares were reduced on July 1 to the level at which they were prior to the rate judgment of Sept. 1920, further indicates that traffic was moving in greater volume than for some months past. However, when it is noted that the gross in July 1920 was \$17,375,760, and that this was earned on rates which, on the whole, were much lower than those now prevailing, the extent to which traffic has fallen off is at once evident.

The recent wage decreases are reflected only in part by the July figures, as they did not take effect until the beginning of the second wage period of the month, i.e., July 16. The reduction has been generally spoken of as averaging 12%, but it is doubtful whether it was as large as that. At all events, the fact of the wage reduction applying during the latter part of the month did not serve to decrease the operating ratio for July, as compared with that of June, which was but 78.53. While passenger earnings are only about one fourth of the total earnings, the fact remains that the 10% reduction in fares represents a large decrease in revenue, with no corresponding decrease in expenses, and it is probable that the wage reduction has been more nearly counterbalanced by this cut in rates than is commonly supposed. Although the passenger rate decreases applied during all of July, and the wage decrease only during the latter part of the month, the results would indicate that no sweeping freight rate reductions are possible at this time. The improvement over the situation of 1920 is not yet sufficiently pronounced to warrant anyone looking for substantial decreases in the cost of transportation service, if the railways are to be maintained on a proper financial basis.

The gross earnings for the first seven months of this year were \$99,828,600, and the net earnings \$15,004,487. The gross for the first seven months of 1920 was \$109,433,347, but the net was only \$13,047,672. These figures indicate that a good deal of improvement had been effected to the end of July this year, as compared with the corresponding period last year. The net for the first seven months of this year, however, is smaller than for the corresponding months of any year, with the exception of 1920, back to 1910. The fact of the C.P.R. 1921 earnings to the end of July being \$10,000,000 smaller than those for the first seven months of 1920, despite the increased rates, indicates accurately the extent to which the world-wide business

depression has affected Canada. On the other hand, however, the fact of the July gross earnings being much greater than those of June, and any preceding month in 1921, despite a reduction in passenger fares, may be taken as indicating that traffic conditions, and consequently economic conditions generally, are tending toward improvement.

The High Cost of Publishing.

In an effort to reduce production costs by bringing lower prices on paper supplies, publishers who are members of the Canadian National Newspapers and Periodicals Association asked recently for a conference with paper manufacturers, which was held in Toronto on Sept. 8, when the situation was fully discussed. It was shown that some publishers are actually paying more for paper than in 1920, that the ruling price on book paper is 100% higher than in 1914, and that in some cases even more than 100% increase is being paid. Unfortunately, no reduction was promised by the paper manufacturers. This does not, of course, refer to the grade of paper used by daily and weekly newspapers, which is materially lower in price now than in 1920.

Publishers of agricultural, business, educational, religious and technical newspapers and magazines in the United States, all of them in direct competition with Canadian publishers, are today buying their paper at from 25 to 50% more than the prices paid for paper used in Canadian Railway and Marine World. These U.S. publications are all admitted to Canada free of customs duty, a fact which was impressed on the Dominion Prime Minister at the Canadian National Exhibition directors' luncheon in Toronto on Sept. 2, by Acton Burrows, President, Canadian National Newspaper and Periodicals Association, and Proprietor, Canadian Railway and Marine World, who, in responding to the toast of the press, said in part:—"The Association which I have the honor to imperfectly represent, the Canadian National Newspapers and Periodicals Association, embraces the agricultural, the business, the educational, the religious, and the technical newspapers, and the magazines. These are actually national publications, their circulations in the great majority of cases extending from the Atlantic to the Pacific. I can confidently state that they are performing a great national work, and that they will compare favorably with those of any other country, even with those of the great country to the south of us, with its far larger and more intensive population. In this connection I should like to impress on the Prime Minister the fact that United States publishers are allowed to send their publications— their finished products—into Canada, absolutely free of duty while we have to pay a heavy duty on anything we require to import, and which we require to use in the production of our papers."

In addition to the high cost of paper, there has been no reduction in wages of printers, pressmen, binders, etc. On the other hand, the Typographical Union, which is controlled from Indianapolis, demanded as from June 1 a decrease from 48 working hours a week to 44, and an increase in pay from \$35.20 a week to \$44. The principal national newspaper and periodical publishers, and job printers, throughout Canada, refused these extortionate demands and their men went on strike and a large number of

them are still out. But the publications are being brought out, though in most cases at considerably increased cost. Even with a victory for the employers, which is undoubtedly assured, there will be no reduction of wages until well on into next year at the earliest and the old rates will continue to be paid.

A Ministerial Blunder.—The Mayor of St. Catharines telegraphed the Minister of Railways recently that the Niagara, St. Catharines & Toronto Ry. employees were threatening a strike, owing to the management not having acted on a board of conciliation award, and asked that the Minister take steps to prevent a strike occurring. The Minister replied that the telegram was the first he had heard of the question, and that he was taking the question up with the management at Toronto. This is but another instance of how Dr. Reid fails to carry out the Government's repeated declaration that the Canadian National Ry. management is free from political interference. His reply should have been that the matter referred to was one to be dealt with by the C.N.R. management and that St. Catharines' mayor should communicate with the management. Such a telegram as Dr. Reid sent in this case is simply an encouragement to the public to keep on attempting to secure political interference and so long as Ministers of Railways continue to pursue such a course so long will the management's difficulties be increased.

A Liberal Leader's Railway Policy.—Hon. R. Lemieux, M.P. for Gaspe and Malbecque, Que., Minister of Postmaster General in the Laurier Government, in speaking at a meeting held in Montreal, Sept. 22, in connection with the 25th anniversary of his membership in the House of Commons, said: "I have on many occasions expressed my personal opinion on the railway problem. It was a fatal error for Canada, after the experience of Great Britain and the United States, to have taken over the Canadian Northern and the Grand Trunk. The proposition of Lord Shaftesbury appears to me to be the one solution possible, subject to revision in terms. Some one will cry of monopoly, but between two evils we must choose the lesser. I prefer monopoly to bankruptcy. The Board of Railway Commissioners has powers which are absolute in the matter of tariffs and was created to protect the public." It is significant that the leader of the Dominion Opposition, Hon. W. L. Mackenzie King, and many other prominent Liberal politicians were present.

Another Unloading Scheme.—A financial paper urges that the Dominion Government take over from the New Brunswick Government the St. John & Quebec Ry., which was promoted to provide direct connection between St. John and the National Transcontinental Ry., and has been completed from Westfield, on the C.P.R., near St. John, through Fredericton to Centerville, N.B., and is being operated by the Canadian National Ry. for 60% of the revenue. The 40% going to the N.B. Government is not sufficient to pay interest on the total expenditure of over \$8,000,000 on the line, hence the desire to get rid of it. Is it not time that the unloading of non-paying railways on the Dominion should cease? Every one that is taken over adds to the Canadian National Ry. management's difficulties.

The United States Railways' Financial Position.

Canadian Railway and Marine World for September, on pg. 468 reviewed the progress made in the effort to restore the credit of U.S. railways, up to the point where bills providing for the funding of the debts of the railways to the Government were introduced in the House of representatives and the Senate. On Aug. 22 the bill was passed in the House, by 214 to 120. A recess in the Senate, commencing in the latter part of August, has been continued until the recess is over, so that the railways will be compelled to wait still longer for the financial assistance to be provided. During the discussion in the Senate, a letter from W. G. McAdoo, formerly Director General of Railroads, was read, in which he pointed out that out of a total indebtedness of the railways to the Government of \$1,144,000,000, the sum of \$381,000,000, which the Government had spent in furnishing the railways with additional equipment, had already been funded, leaving \$763,000,000 still owed by the railways. His contention is that the U.S. Government is not bound, as stated by President Harding in his message to Congress, to fund these debts owed by the railways; all it is legally and morally bound to do is to fund "the remaining indebtedness of the carriers to the Government after the accounts have been balanced," i.e., after there has been set off, against the amount which the railways owe the Government, the amount which the Government owes the railways. While, apparently, Mr. McAdoo does not directly attack the proposed legislation, he nevertheless points out that it is not based on a question of "legal and moral obligation," as the Government would have it appear, but that it is purely a matter of policy, for which the Government is responsible, and should be recognized as a sound ground of opposition has developed in the Senate toward the proposed legislation, but indications are that it will pass there as in the House, and that the War Finance Corporation will be authorized to accept the securities of the railways for the amounts owed the Government, while the Railroad Administration will pay the roads the sums owed them by the Government, from moneys on hand, and from sums derived from the sale of the railways' securities.

In connection with the funding of \$381,000,000, which the Government spent for locomotives and cars for the railways, during the period of federal control, as above noted, is may be pointed out that the securities, or equipment certificates, issued by the various railways bear interest at 6%, mature serially from 1928 to 1935, and are held by the Railroad Administration. These securities to the extent of \$7,500,000 have been sold recently to investors through Kuhn, Loeb & Co., and it is expected that the remainder of them will be disposed of gradually in market conditions improve.

In July, the 202 class 1 U.S. railways earned a net operating income of \$69,485,000, an increase of over \$17,000,000 over June. To get 6% on their valuations, as determined by the Interstate Commerce Commission, they should have earned a net operating income of \$92,267,000. The income earned represents an annual return of 4½%. As compared with July 1920, operating revenues decreased 12.5%, but as operating expenses

decreased 29.4%, a deficit of \$11,878,000 for July 1920 was replaced in July 1921 by the net operating income noted above. A large part of this good showing is owing to the decrease in wages which took effect July 1, but a large part is also due to economies in maintenance of way and of equipment. For the 11 months since Sept. 1, 1920, when the guarantee period ended, U.S. railways have earned a net operating income of \$485,000,000, representing an annual return of 2.6% on the investment. To earn the 6%, decided upon as just by the Government in framing the Transportation Act, they should have earned \$570,000,000 more than they did in the 11 months period.

A determination as to when the hearings concerning the general railway situation, before the Senate Committee of enquiry, will not be arrived at till after the close of the Congressional recess. The testimony of the railway executives before this committee was reviewed fully in previous issues of Canadian Railway and Marine World. Shippers and the representatives of labor organizations have yet to present their testimony.

It is interesting to note that the gradual improvement which has been taking place in the financial position of U.S. railways has served to prevent railway securities from participating fully in the general downward tendency in the stock market which has prevailed since the autumn of 1919. During the past few weeks, while industrial shares have been experiencing a continuation of their declines, railway shares on the whole have advanced a few points. The progress made in the funding legislation undoubtedly has also had something to do with this.

Health Train in Quebec.—The C.P.R. equipped a "health train" recently, which made a tour of the Province of Quebec. The movement was started by the Child Welfare Association, and the Red Cross Society of Montreal, and has for its object the instruction of parents in the right way of bringing up children. A. D. MacTier, Vice President, Eastern Lines, C.P.R., represented the company at the starting out of the train, which was run over the C.P.R., the Canadian National Rys. and the G.T.R.

L. E. Ayer, General Agent, Traffic Department, Canadian National-Grand Trunk Rys., Kansas City, Mo., has written Canadian Railway and Marine World as follows:—"I am enclosing cheque for renewal subscription to your valued paper, which I could hardly afford to be without. I look forward to its receipt with pleasure, as the articles and personalities are of great interest to a representative of Canadian lines."

Canadian National Railways Divisions in New Brunswick.—A Fredericton paper stated recently that a new division was about to be created in New Brunswick, and that its headquarters would be at Fredericton. We are advised that there is no foundation for the report, and that the matter has not been considered in any way.

C.P.R. Hotel Rates.—A Vancouver press dispatch credits C. E. E. Ussher, Passenger Traffic Manager, C.P.R., with stating there recently that food prices in all C.P.R. hotel dining rooms will be reduced 16% on October 1.

Railway Rolling Stock Orders and Deliveries.

The C.P.R., between Aug. 14 and Sept. 20, received 4 vans from its Angus shops, Montreal, and 275 steel frame box cars from National Steel Car Corporation.

It is expected that the first shipment of the order for 500 oil tank cars, building for the Russian Soviet Government, by Canadian Car & Foundry Co., will be made during October. It is stated that complete shipment will be made at intervals, in four Canadian Government Merchant Marine ships, from Montreal, to Novorossisk, a Russian Black Sea port, and that this will be the first shipment of Canadian goods to Russia, since the conclusion of the war.

A Fort William, Ont., press dispatch of Sept. 14 stated that the city clerk had received a telegram from Dr. R. J. Manion, M.P. for Fort William and Rainy River, who was then in Ottawa, stating that "The Fort William Car Foundry Co." was to receive an order for repairing 1,500 Government cars there. There is no "Fort William Car & Foundry Co.," but Canadian Car & Foundry Co. has a plant there. We were officially advised Sept. 22 that no order has been placed for repairing cars. As far as we can ascertain it is possible that orders may be given for repairing, in fact largely rebuilding, a considerable number of not only Grand Trunk Pacific Ry. cars, but also Canadian National Rys. ones, and should this be done it is possible that plants in eastern Canada as well as the one at Fort William, will receive orders.

The G.T.R. has, we are officially advised, ordered 600 flat cars, 100,000 lb. capacity, from the National Steel Car Corporation. We understand that these are a part of an order for 1,000 given last year, and of which, 400 have been delivered as mentioned in previous issues. They are to be built with side and center sills of the fish belly type, the former ½ in. plate, and the latter of 5/16 in. plate, 28 in. deep, with cast steel striking plate, drop forged body center plate, and cast steel truck bolsters of U.S. Railroad Administration design; end sills of 15.3 channels, 10 in. The truck bolsters are arranged for the Barber lateral motion device. Following are the chief details:—

Length over floor	40 ft. 5 in.
Length over floor	39 ft.
Height from rail to top of floor.....	4 ft. 2½ in.
Draft gear	Miner friction A-25
Complers	U.S.R.A. class D
Air brakes	Westinghouse KC-812
Trucks, type	Arch bar
Journal ends	5½ x 10 in.
Side bearings	Miner roller

News privileges on Timiskaming & Northern Ontario Ry.—Tenders will be received, to Oct. 3, for the privilege of selling, on T. & N.O.R. trains, newspapers, books, periodicals, publications, nuts, fruits, confections, cigars, stationery, fancy goods, and other articles usually sold on trains.

Brockville Stations.—The Canadian National Rys. station at Brockville, Ont., has been closed and C.N.R. trains are operating to and from the G.T.R. station.

The Moncton Tramways, Electricity & Gas Co. has made an agreement with the Moncton, N.B., City Council for the sale to the city of the lighting plant, originally bought from the city. The ratepayers were to vote on the bylaw on Sept. 29.

The Board of Railway Commissioners Decides not to Reduce Freight Rates and Sleeping and Parlor Car Fares.

Following several conferences at Ottawa, between the Board of Railway Commissioners and railway officials, the Board, early in September, considered the question of reductions in freight rates, and sleeping and parlor car fares, the result being a division of opinion. Chief Commissioner Carvell and Deputy Chief Commissioner Nantel favoring reductions, while Assistant Chief Commissioner McLean and Commissioners Boyce and Rutherford held that reduction should not be made until the employees' wages question has been settled. The Chief Commissioner prepared a judgment dated Sept. 13, which Mr. Nantel concurred in, and the Assistant Commissioner prepared another judgment bearing the same date, which Messrs. Boyce and Rutherford concurred in. On Sept. 14 a statement was issued from the Board's offices which said:—"As a result of the divided opinion of the Board of Railway Commissioners there will be no reduction in freight and sleeping car rates, etc., at least for the present." The summary of the Chief Commissioner's proposed reductions was then given, and the statement concluded as follows:—"Assistant Chief Commissioner McLean and Commissioners Boyce and Rutherford have filed a judgment refusing the rate reduction, on the ground that the wages of railway employees are now the subject of investigation."

The two judgments are given in full as follows:—

Chief Commissioner Carvell's Judgment.

Under sec. 325 of the Railway Act, 1919, subsec (1).—"The Board may disallow any tariff or any portion thereof which it considers to be unjust or unreasonable, or contrary to any of the provisions of this act, and may require the company, within a prescribed time, to substitute a tariff, satisfactory to the Board, in lieu thereof, or may prescribe other tolls in lieu of the tolls so disallowed."

About a month ago, the Board of its own motion, instituted an investigation to decide whether or not a change should be made in the freight, Pullman and sleeping car rates as now existing in Canada, and requested the railway companies of Canada under its jurisdiction to meet the Board at Ottawa on Aug. 30, for the purpose of discussing the whole situation. The proceedings were informal, in the nature of a conference, because we felt that, if a reduction in rates was justified, then no greater delay should be allowed than was absolutely necessary and also that we would probably have a better opportunity of discussing the whole situation than we would at a public hearing. At the conference, the Canadian Pacific, Grand Trunk, Canadian National, New York Central, Michigan Central, and Temiscouata Railways were specially represented by their officials, and, in most cases, solicitors, and all other railways under our jurisdiction were represented by the Railway Association of Canada. Continuous conferences have taken place almost daily down to the present time. Statements were furnished by some of the railways, principally by the C.P.R. I think I am safe in saying that they all deprecated any serious reduction in rates, but contended that, if a reduction were

to be made, it should be on special commodities which, in their judgment, would be of particular benefit in expediting commercial transactions in Canada, rather than percentage decrease covering traffic of all kinds. They all agreed, however, that there should be a reduction in sleeping, Pullman, and parlor car rates, practically admitting that the present rates were so high as to prevent a certain amount of traffic. There were some suggestions that the reduction in the rates governing this particular class of traffic should be graduated according to distance, giving a greater percentage reduction on long distance traffic than on the shorter, and with this view, on general principles, I am inclined to be in accord, but no details have been furnished us up the present time.

By the Rate Judgment of Aug. 1920, a flat increase of 40% in Eastern Canada and 35% in Western Canada was given on all freight traffic, with a few exceptions more particularly referred to hereafter, up to the end of Dec. 1920, and thereafter of 35% in Eastern Canada and 30% in the West and a 50% increase in sleeping car, Pullman, and parlor car fares. It was strongly contended by the representatives of the Grand Trunk and Canadian National roads that their finances were such that a rate reduction of any kind excepting that in sleeping car rates, etc., would be a gross injustice to them because, with the Canadian National in particular, their operating expenses far exceed their revenues, and a reduction in rates would only aggravate the difficulties under which they were laboring.

The C.P.R. contended that any reduction in rates would probably endanger their chances of earning dividends for this year. The decision of this Board in the Aug. 1920 case was referred to, in which it was contended that on account of the strong financial position which the C.P.R. has occupied in the business life of Canada for many years past, any rate arrangement should be such as to leave them in a position to earn its dividend of 7%. I agreed with that proposition then, and reiterate it here, and, therefore, in arriving at a conclusion at the present time, I am doing so entirely on an examination of the C.P.R. traffic and financial requirements. The company filed with us a very comprehensive analysis of all kinds of traffic for the first seven months of this year, January to July inclusive, and an estimate of receipts and expenditures for the remaining five months. During the discussions they were able to produce the gross receipts for August, but the amounts credited to each particular kind of traffic had not been segregated, and therefore we have not the benefit of this information so far as that month is concerned, neither have we any statement of their expenditures. In the statement filed, they estimated a small deficit. In doing so, they pointed out many important reductions which have been made during the past eight months, and particularly within the last two or three months, which are very considerable, and will, to that extent, affect their net at the end of the financial year. Perhaps the two most important reductions are grain from Fort William and lake ports, both to the sea-

board and for domestic consumption in Eastern Canada, and live stock. In the case of grain for export, the reduction amounts to 3c. per 100 lb. from Fort William, and 5c. per 100 lb. from Bay ports. They propose to increase the 3c. reduction from Fort William by 7½c., or a total of 10½c. per 100 lb., and to reduce the rate on grain for domestic consumption from Fort William by 4½c. per 100 lb. and the rate on grain between stations in Eastern Canada by 2½c. per 100 lb. This, they estimate, will amount to a reduction in revenue of \$1,169,000. In the case of live stock, the reduction amounts to about 25% of the existing rates. This last reduction was made with the entire concurrence of the Board, in July last, owing to the serious condition in which that important industry found itself by reason of existing economic conditions, and will, according to the company's estimate, amount to \$220,000 from the date of reduction. They propose a reduction in the rate on hay of 25%, which will amount to \$143,000, this due to the shortage in the hay crop in Ontario and Quebec and, to some extent, in the Maritime Provinces. They have made reductions in the rate on lumber from the Pacific coast to eastern points amounting to \$95,982. They have made reductions in the rates on smelter products to United States points, effective Sept. 22, and to Canadian points, effective Aug. 18 last, which they estimate will produce a reduction in revenue of \$46,985. They propose a reduction in the rate on dressed meats and packing house products from western packing house plants to eastern destinations, but do not state either the percentage of reduction or the estimated loss of revenue therefrom. They have made reductions in wool and hides from western to eastern points which they estimate will amount to about \$9,000. In addition to these specific cases, a number of substantial reductions have been made between various points and on various commodities, but, as we have not been furnished with details of quantities, I am unable to give any estimate of what the result will be in their revenues. By another computation, they estimate that, with the reductions already in effect and those contemplated, the total reduction in freight rates for the remainder of the year will be \$2,500,000. These are all very important, and are all taken into consideration in arriving at their estimate of their net for the whole year, which, as I said before, they estimate will produce a slight deficit after providing for fixed charges, pensions, income tax, and dividends.

The rates granted the railway companies of Canada a year ago were very severe, and I am not at all surprised that they were a great shock to the people generally, who were compelled to patronize the railways and who, of course, would have to pay the extra rates, and yet, after a year's experience, and a very close study of the traffic returns from month to month, I am satisfied they were entirely justified, and nothing less would have complied with the requirements of the law, which says that we should give to the transportation companies "just and reasonable rates." In fact, the final results to the

C.P.R. for the last year, even under these very high rates, only gave them a surplus of \$450,000, after paying their dividends. At that time, the Chicago wage award had gone into effect in the U.S., and the executives of the different railways in Canada felt that they were compelled to give the same increases here as had been granted in that country, which, in the case of the C.P.R., were estimated at an increase of about \$21,000,000 annually, something over \$7,000,000 being required to meet these wages back to May 1, 1920, because the increased wages went into effect on that date in the U.S.

As I felt that in order to avert a catastrophe to the railway companies of Canada a year ago we were compelled to give the increase above referred to, while the same board in the U.S. some months ago ordered a reduction in the wages of the employees of the U.S. railways which amounted to about 12½%. I naturally felt that the Canadian railways should at least make a like reduction, and we are informed they have already put these reductions into effect, dating, in the case of the C.P.R., from July last, and all the roads are now paying their men on this reduced basis. Also, as it is admitted by the railways that their materials are costing them at least 25% less than a year ago, I had a very strong impression that the public was entitled to a substantial reduction in freight rates. It could not be exactly the same amount, because our passenger rates, which were increased 20% up to Dec. 31, 1920, then 10% until July 1, are now back to where they were prior to the Rate Judgment, and there were increases on a number of commodities hereinafter referred to. My object, therefore, in inviting the railway companies to a conference was to ascertain what would be a reasonable reduction in freight, sleeping, and parlor car rates, in order to correspond with the reduction in operating expenses.

I was also very strongly in this opinion by an examination of the C.P.R.'s traffic returns for the first seven months of this year, in which they show net earnings, practically \$2,000,000 greater than for the corresponding months of 1920. An examination also shows that, during January and February only a very slight improvement took place in their operations, but beginning with March, the C.P.R. have applied their well known efficient business methods to the operation of their road. Their net, month by month, has shown a satisfactory increase. In March, it amounted to \$2,450,000, in April to \$2,646,000, in May to \$3,293,000; in June to \$3,104,000, and in July to \$2,054,000, the reduction during July being accounted for by a large increase in maintenance and equipment charges in getting ready for the fall business. The August net is not available, but we know that the gross is \$16,647,000 or an increase over the July gross of about \$900,000, and I think it fair to assume that their net will show a very satisfactory increase. The result of these economies as above stated being to show a net of nearly \$2,000,000 over the same period for 1920. I am satisfied, not only from the statements of the company's officials, but also from a careful analysis of their monthly statements, that this great saving has been accomplished without in any way reducing the high standard of their right of way, equipment, and system in general. It is certainly, considering the great decrease in general

business, a wonderful tribute to the business sagacity and ability of this organization.

The problem before us is what will be the results of the last four months of the company's fiscal year. Of course, it can only be an estimate, but the company should be in a position to estimate results more accurately than I could do, and I, naturally, in arriving at a conclusion, felt that I must scrutinize very closely these estimates and see whether or not in my opinion they are justifiable. On the whole, I think they are fairly accurate, but I am compelled to disagree with them on a few very important items. In the first place, they state that during the last four months of 1920, their revenue from the transportation of grain and grain products from the point of origin to the head of the lakes was \$20,762,000, and they estimate that, during the like period of this year, it will fall to \$13,387,000, a drop of \$7,374,000, or a decrease of 34%. They point out, in justification of this estimate, that, on account of crop conditions in the U.S. and Canada, the northern portions of the country, which are served more largely by the C.N.R. lines than by the C.P.R., will produce the greater portion of the grain, and naturally the C.N.R. will transport a greater proportion than last year. They also contend that the average haul will be about 20% less than last year in mileage, and, of course, the rate will be 5% less than in 1920, with the C.P.R.'s well-known business ability with their efficient operating staffs, excellent roadbeds, and adequate equipment, I cannot agree that there will be a reduction of anything like 34% in their revenue, especially when they admit that the grain crop will be 4% greater than it was last year. How much less is their estimate than the actual result will be, of course, I am unable to estimate, but I will be very much surprised if their revenue from this commodity is not \$2,000,000 greater than their estimate.

Taking the system as a whole, they arrive at their estimate of gross expenses for the last five months of 1921, by applying the percentage of total expenses to total revenue as found in 1920 to a like period in 1921, and in the statement which they furnish us, they took the total receipts for the last five months of 1920, and the total expenses for the same period, and found that the expenditures amounted to 84% of the receipts, and, after estimating the total receipts for the last five months of 1921, they estimated their total expenses on the same basis to be \$70,830,000. From this they deducted certain amounts for the decrease in the cost of labor and materials, amounting to \$7,002,000, and added \$2,800,000, provision for rails and fastenings, and the necessary labor in laying same, making the net estimated expenses for that period \$66,328,000, and, by adding this to the actual expenditures for the first seven months of 1921, arrived at their estimated expenditures for the full year, which, when placed against the estimated revenue, showed, as before stated, a small deficit. Their attention was called to the fact that, in Oct., Nov. and Dec. 1920, they had included about \$3,400,000 for the retroactive wages of May and June, the result being that a new computation was made based upon an operating ratio of 81.99, or practically 82%, which reduced their estimated deficit by about \$1,500,-

000, thus leaving their deficit around \$1,100,000. If they arrived at the estimated expenditures for the last five months of 1921 upon the same operating ratio as that for 1920, it is perfectly clear that they included in that estimate the same percentage of requirements for rails, fastenings, and the laying of the same as was provided for 1920, and I find from an examination of their traffic returns, that, during these five months, they actually expended for these items \$5,945,000. I naturally enquired why it was necessary to include an estimated expenditure for these same items during the last five months of this year, in addition to what they had already provided for by \$2,800,000. This was called to their attention, and the answer was that it was required to bring up the expenditure for this year to what would be required to keep their track in proper condition, as these items had been very seriously reduced in the first seven months of this year. I find, however, from an examination of their statements, that, during the first seven months of 1920, they expended for these items \$5,435,000, and for the same period of 1921, \$4,984,000, or a reduction of less than \$450,000. Considering the general reduction in business, in my opinion, the amount expended during the first seven months of this year is quite equal to, if not in excess of, the amount expended for like purposes in the first seven months of 1920, and, therefore, I conclude that they are not justified in adding \$2,800,000 to their estimated expenditures for the last five months of this year. Applying this item alone to their estimated deficit of \$1,100,000, I find they would have a surplus of \$1,673,000.

Then again, I find they estimated for the present year that they will require \$2,381,498 for income tax, but \$2,300,000 was included in their expenditures for Nov. and Dec. 1920, for income tax, and, as they have estimated for 1921 the same ratio of expenditures to revenue as actually obtained in 1920, they have already included in their estimated expenses for this year 82% of \$2,300,000, or \$1,886,000, and I am unable to see that they are justified in doing this a second time as they have done. Therefore, instead of adding \$2,381,498, they would have been entitled to add only \$495,498, which would bring their surplus to over \$3,500,000. I cannot, however, agree that the expenditures for the last five months of this year will be in the same ratio to earnings as they were in 1920. I find from their returns that, during Jan. and Feb. 1921, their operating ratio was just about the same as it was in 1920, but, from that time down to the end of July last, being the last month for which we have accurate returns, a very substantial improvement has taken place in their operating ratios, as will be seen by the following table:—

	1920	1921	Decrease
Jan.	94.63	94.13	0.50%
Feb.	93.56	93.56	1.55%
March	86.52	81.95	4.57%
April	84.29	79.18	5.11%
May	79.35	74.18	5.17%
June	84.37	77.90	4.47%
July	91.43	87.12	4.31%

This shows an average reduction for the five months, March to July inclusive, of over 5%, due entirely to more economical management, for which the company is entitled to the very greatest credit imaginable. I cannot bring myself to believe that, for the remainder of the year, they will discontinue this

excellent business management, and bring their operating ratio back on a parity with what it was for the last five months of 1920. In other words, there must be a continuation of this reduction in their operating ratio, which, at the end of the year, should show an improvement at least as great as that for the first seven months, which amounted to \$2,000,000, because, while the period is shorter, the traffic is very much greater. If this estimate is anywhere nearly correct, it would give the company a surplus of well over \$4,000,000. I am not satisfied with their estimate of the reduction in revenue under the item of all other kinds of traffic, which includes everything excepting grain and grain products, hay, lumber, anthracite coal, bituminous coal, ores, live stock, and dressed meats. They estimate a reduction of about 21%, because that was the average reduction on this traffic for the first seven months of this year, but I find that for July this reduction only amounted to 13%, and, therefore, while I cannot say to what extent this estimated revenue is smaller than it should be, yet I see no reason why the full 21% should be deducted, and think these items will yield more revenue than they anticipate, but, as the question is largely problematical, I make no venture as to the actual amount. There is one other small item in which their estimates are clearly wrong, although I am quite understand how it happened, that is, the rates for the carrying of mail. A new agreement was made with the Government, effective March 1, 1921, by which their receipts from this source are practically doubled, and, in arriving at the estimate for the last five months, they took the average for the first seven and applied it to the last five. I find, however, that, if we take the average, from March to July inclusive, and apply it to the last five months of this year, their revenues will be \$200,000 more than their estimate.

I, therefore, think that, instead of showing a deficit of \$1,100,000, they will have a substantial surplus, after meeting all dividend requirements, and, of course, fixed charges, pensions, and income tax. If I am correct in this estimate, then there should be a reduction in rates, because the public is entitled to every cent of reduction in rates which is possible under existing circumstances. A year ago, the Board gave the railway companies a percentage increase in rates on all traffic excepting a few items hereinafter referred to, such as sand, gravel, crushed stone, etc., and, as they were given, at least by me, under the firm conviction of absolute necessity, with the hope that sometime in the near future rates might be brought back to the same basis as existed in Aug. 1920, I can never be privy to allowing these rates to remain on their present basis, subject to a few special reductions which the railway companies would like to make for any reason which to them may seem proper. It is not my comprehension of the duties of the Board of Railway Commissioners under the Railway Act. As they have already made very considerable reductions, which I have particularly referred to, I think they could stand a 10% reduction on the remainder of their freight traffic and still pay their dividends.

I, therefore, think an order should issue instructing all steam railway companies in Canada under this Board's jurisdiction to file tariffs, effective Sept.

21, reducing the fares on their sleeping, Pullman, and parlor cars by 25%, not 25% from existing rates, but, going back to 1920, when they were given an increase of 50%, it should now be figured upon an increase as of that date of 25%. This, I am sure, will produce more money at the end of the year to the railway companies than they could possibly earn under present rates, because, as before stated, I am satisfied these rates are so high that they are preventing much traffic which otherwise they would obtain. That all freight rates other than those upon which decreases have already been made, and also those hereinafter especially provided for, should be decreased by 10% from the increases given in 1920, which would leave the increase in Western Canada at 20% and in Eastern Canada at 25%. In cases where the reductions already granted would amount to less than 10%, they should be reduced to that point, and, of course, where they exceed 10%, they will remain as at present. There will be no reductions on crushed stone, sand, and gravel, cordwood, slabs, edgings, and saw mill refuse when used exclusively for fuel, and on milk, as no increases were given on these commodities by the 1920 order. There should be no reduction on coal, because the increases on this commodity in no case exceeded 20c a ton, and were graduated down to 15 and 10c a ton according to distance. There should be no decrease in the minimum class rate scale as established by order in council 1863 and now in force by an order of this Board, or in the minimum charge per shipment, as these were not increased a year ago. There will be no decrease in commutation or passenger fares, because passenger fares are now back to where they were in 1920, and the commutation fares have been dealt with by a special order of this Board. The decrease hereby ordered shall only be for line hauls, and shall not affect local switching rates, tolls for interswitching, or such incidental services as milling-in-transit, diversions, reconsignments, stop overs, demurrage, weighing, and the like, as they were not dealt with by the 1920 order. In arriving at these decreases, existing spreads between the rates from the various mills in British Columbia shall be maintained, the same as provided for in the order of 1920, and, of course, the export rates will not be affected by this order, as they were the subject of a special order of the Board. In working out the rates under this judgment, fractions will be disposed of as set out in order in council 1863.

Assistant Chief Commissioner McLean's Judgment.

In the present case, as in the Board's judgment in the Rate Application of 1920, the C.P.R.'s position is taken as the test. The Chief Commissioner, in his decision in the 1920 application, expressed the opinion that the rates the judgment sanctioned would "very nearly give the C.P.R. an even balance sheet at the end of the present year (1920), and for the year 1921, according to my estimate, should give them a reasonable surplus. . . ." The Chief Commissioner's position in the present case is expressly the same. Under the reduction in wages which the C.P.R. provided for, effective July 16, 1921, it is estimated this represents from July 16 to December 31, a reduction of \$4,787,000, while for the period August to December it is \$4,300,000. The amount so involved is in either

case in excess of the surplus estimated in the Chief Commissioner's judgment in the present matter. While provision was made by the C.P.R. for a reduction in wages, with a corresponding reduction in the pay cheques, this has not up to date so gone into the company's funds as to be available for reduction of operating costs. Whether it will remain with the company, or whether it will finally be paid to the employees will be involved in proceedings before a special tribunal.

Parliament has provided, by legislation, for rate regulative powers to be exercised by a regulative tribunal operating under The Railway Act. It has also provided by distinct and separate legislation for investigatory powers in respect of labor disputes, and for the appointment of special tribunals in connection therewith. On Aug. 4, the engineers, firemen, conductors, trainmen and telegraphers made application to the Labor Department for the appointment, under the Industrial Disputes Investigation Act of 1907, of a board of conciliation and investigation. The Minister of Labor acceded to this application. The board of conciliation and investigation is now in process of constitution. The question of wage reduction is the pivotal one in the present consideration of reduction in operating costs, with its consequent bearing on rates. What is here involved is a rate reduction based essentially on a wage reduction. Pending the decision of the special tribunal, appointed to investigate as to the wage question involved, I do not feel that I am justified in expressing an opinion on the propriety of a rate reduction based essentially on a wage reduction whose justifiability is at present under investigation.

Canadian Railway and Marine World's Proprietor in Prince Edward Island. The Charlottetown, P.E.I., Guardian, said in a recent issue: "Acton Brooks, Proprietor of the Canadian Railway and Marine World, Toronto, and President of the Canadian National Newspapers and Periodicals Association, who first visited the Island with his family in 1898, and came frequently afterwards until 1914, when he was at Brackley Beach when the war broke out, and had to leave suddenly, is on the Island again. He was met at Tormentine by Superintendent Grady, of the Canadian National Railways, looked over the terminal and the wharf, and then the car ferry steamship, 'Prince Edward Island,' from the bridge to the boiler room, with Mr. Grady, Captain Reid and Chief Engineer Sutherland. Coming on to Charlottetown, he spent most of the next day in the railway offices, and looking over the yards and shops, driving out in the afternoon to Seaman's Farm, Brackley Beach, where he is staying and where he gave an afternoon tea, in the garden, one day, to a number of his friends among the summer colony at the adjacent resorts, Mr. George A. Gane presiding at the tea table."

G-T-R. First Aid Work.—The competition for the trophy presented by E. J. Chamberlin, formerly President, G.T.R. and G.T. Pacific Ry., was won recently by the Point St. Charles Montreal shops team, the Stratford, Ont., team being second. Thirteen teams competed from Montreal, London, Stratford, Guelph and Lindsay, and were judged by Dr. C. A. Hodges, Director General of St. John's Ambulance Association, Canadian branch.

Canadian National Railways Construction, Betterments Etc.

Tie Tenders.—Tenders were received to Sept. 17, for 1,000,000 ties to be manufactured between Oct., 1921, and May, 1922, and delivered between Dec. 1, 1921, and Sept. 30, 1922, on the C.N.R. between Sydney, N.S., and Quebec, Que., including the Halifax & Southwestern Ry. The ties are to be manufactured in accordance with the specification 3856, Mar. 18, 1919.

Tenders were asked for quantities of 10,000 and over. Special arrangements, however, will be made to buy ties fully up to specifications manufactured and delivered by actual settlers from their own lands. Tenders were also received, to Sept. 17, under similar terms and conditions for the supply of 1,000,000 ties to be delivered on the C.N.R. between Quebec, Que., and Port Arthur, Ont., and for 2,500,000 ties to be delivered on the C.N.R. between Port Arthur, Ont., and Vancouver, B.C., and between Armstrong, Ont., and Prince Rupert, B.C.

Halifax Ocean Terminals.—It is reported that as a result of a conference between S. J. Hungerford, Vice President, and other C.N.R. officials, recently, with Halifax Board of Trade Committee, some paving will be done around the station buildings front of South St., extending over South Hollis St., and the whole of the passenger yard extending up to Barrington St. A contract for this work is reported to have been let to Pickrem & Gorman, who are also said to have a contract for work at the freight shed on Upper Water St. Matters connected with the location of a new car delivery yard, and construction of a roadway and a crossing at Bedford, were also discussed.

Automatic Signalling.—The absolute permissible block signalling with polarized line circuits, heretofore in operation on the Maritime District, from Moncton to Painssee Jct., N.B., 7.23 miles, double track, is being extended this year from Painssee Jct. to Sackville, N.B., 30.85 miles, single track. A similar system is also being installed between Levis and Chaudiere, Que., on the Quebec District, 9.28 miles, part of which is single track and part double. The signalling material, which is being supplied by the General Railway Signal Co. of Canada, Lachine, Que., and is being installed by the railways' forces, is as follows: From Painssee Jct. to Sackville, 55 top of mast, low voltage model 2-A signals, 233 model 10-A wall type relays, 44 model 5-switch circuit controllers, relay housings, cable posts, terminal boxes, etc. From Levis to Chaudiere, 12 top of mast, low voltage model 2-A signals, 30 model 10-A relays, 8 model 5-switch circuit controllers, terminal boxes, etc.

Petitcodiac River Bridge.—The superstructure for the new bridge across the Petitcodiac River near Salisbury, N.B., was reported to have been completed on Sept. 13 by the contractors, Gorman & Peckham, Halifax, N.S. The erection of the steel superstructure by the Dominion Bridge Co. is expected to be started very soon. This structure was described in Canadian Railway and Marine World, August, pp. 421.

Luceville Station.—Tenders were received for building a station with dwelling accommodation at Luceville, on the Intercolonial Ry., 8.1 miles west of Mont Joli, Que. The building will be of frame construction, 25 x 114 ft.

Belle River and Metabetchouan River Bridges.—We are officially advised that a contract has been given the Canadian Bridge Co., Walkerville, Ont., for the superstructure for bridges over the Belle and Metabetchouan Rivers, on the Jonquiere Subdivision, Quebec District.

The present bridge across the Metabetchouan River, mile 181 Jonquiere Subdivision, Que., consists of two 207 ft. through truss spans on one masonry pier and two abutments. These spans are being replaced by two 205 ft. center to center, through Pratt truss spans, designed for Coopers E-55 loading, with an impact percentage of live load equal to

30,000 — all in accordance with the 30,000+L2

general specifications for steel railway bridges issued by C.E.S.A., 1920. The present pier and abutments are to be used, the stringer seats are to be removed and the end floor beams to be used on the new abutments. The total weight of the new steel is 1,200,000 lb. The new bridge is to be ready for traffic Nov. 30.

The present bridge across the Belle River, mile 191, Jonquiere Subdivision, consists of two 55 ft. approach girders, and one 153 ft. through truss span. The approach spans are being left in the new bridge, and the center span is being replaced with a 156 ft. center to center through Pratt truss span, designed for the same loading as the Metabetchouan River bridge. There will be no alterations to the present substructure, except the removal of the stringer seats to permit of the use of end floor beams. The substructure consists of 2 masonry piers and 2 masonry V abutments. The weight of the new span is 425,000 lb.

Chaudiere Ice. Ice House.—Tenders will be received up to Oct. 6 by the Chief Engineer at Moncton, N.B., for building an extension to the ice house at Chaudiere Jct., Que.

Coffee River Bridge.—We are officially advised that the work to be done at the Coffee River bridge, mile 41.1, Donnet Subdivision, St. Maurice Division, National Transcontinental Ry., consists of the replacement of a 500 ft. frame trestle, by a bridge of three spans having a total length of 220 ft., with approach fills. This will necessitate the construction of two piers and two buried T abutments carried on pile foundations. The river has but a slight current, and at the present season is approximately 5 ft. deep, but in the spring freshets it is about 15 ft. deep. The bottom is easy clay for 40 ft., at which depth it stiffens to hard clay at a depth of 70 ft. Tenders are only being invited for the substructure at present. The superstructure will consist of one 150 deck plate girder span, and two 60 ft. spans.

Longue Pointe Terminal.—We are officially advised that a contract has been given the Canadian Bridge Co., Walkerville, Ont., for the steel work for a turntable at the new terminal, Longue Pointe, Montreal.

Shawinigan and St. Norbert River Bridges.—We are officially advised that contracts have been given the Dominion Bridge Co. for the superstructures of bridges over the Shawinigan River, mile 86.7, and over the St. Norbert River, mile 128.8, St. Lawrence Subdivision, Quebec District.

Hervey Jct. Station.—We are officially advised that the station to be built at Hervey Jct., Que., will be of frame construction, on concrete foundation, two stories high, covered with shingles and drop siding. It will be 23 ft. wide by 58½ ft. long. The ground floor will be used for station purposes, and the upper floor as the station agent's dwelling.

Muskoka Subdivision Bridges.—We are officially advised that a contract has been let to the Hamilton Bridge Works Co., Hamilton, Ont., for the superstructure of the bridges to be erected over the Don River at mile 15, and over the Black River at mile 55.9, Muskoka Subdivision.

Orient Bay Stream Diversion.—We are officially advised that a contract has been given the Dominion Construction Co. for the stream diversion work at Orient Bay, Ont., on the Canadian Northern Ry., 106.6 miles east of Port Arthur, Ont. This work was described in Canadian Railway and Marine World for August.

Houses at Parent.—Tenders were received recently for the erection of 10 double dwelling houses at Parent, Que., on the National Transcontinental Ry., 251.6 miles west of Quebec, Que.

Barrute Station.—We are officially advised that the station to be built at Barrute, Que., 408.2 miles west of Quebec, Que., on the National Transcontinental Ry., will be 21 ft. by 65½ ft. on the ground level, with a second story 26 x 26 ft. On the ground level provision is made for a machinery platform 16 x 29 ft. when required. The building will be of frame construction covered with shingles and drop siding, on a concrete foundation. The ground floor will contain a general waiting room, 12 ft. 2 in. x 20 ft. 2 in.; agent's office, baggage room, and freight room, 29 ft. 2 in. x 20 ft. 2 in., all fronting on the platform, with the agent's living room and kitchen in the rear. On the second floor there will be four bedrooms and store room. There will be a cellar under the main part of the building.

Longlac-Nakina cut off. H.T. Morrison, Locating Engineer, is making a preliminary survey for a cut off of about 30 miles, between Longlac, Ont., and the Canadian Northern transcontinental line, and Nakina, Ont., on the National Transcontinental main line, the building of which is under consideration by the management. Longlac is 822.6 miles west of Montreal, 100 miles west of Hornepayne, 50.5 miles east of Jellicoe, and 198.4 miles east of Port Arthur. Nakina is 865.8 miles west of Montreal, and 15.9 miles west of Grant. The building of the cut off would materially shorten the Canadian National Ry. through routes between Montreal and Winnipeg, and Toronto and Winnipeg.

Port Arthur, Duluth & Western Ry.—The Palatine Iron & Steel Co., Port Arthur, Ont., has, we are officially advised, completed the regrading of the old Port Arthur, Duluth & Western Ry., from North Lake, the point to which it is being operated to the Canadian National Ry., for 14 miles, practically to the International Boundary at Gunflint Narrows. When track laying will be completed is uncertain, as there are several bridges to be built. H. Hancock, Fort William, Ont., is the contractor.

Onoway to Whytecourt Branch.—The extension to Whytecourt of the branch

from Onoway, Alta., which has been in operation for some time to Robinson's Crossing, is reported to have been completed, and is expected to be handed over to the operating department at an early date. This branch is projected towards the Grande Prairie district.

Grand Trunk Pacific Ry. Betterments. Etc. The C.N.R., Western Lines, received tenders recently for the following works on the Grand Trunk Pacific Ry.: Excavation of reservoir and construction of dam at Ethelbert, Man., and at Paswegin, Sask.; building subway for pedestrians under tracks at Dauphin, Man.; constructing sewers at Melville and Watrous, Sask.; building 58 miles of fencing on Amarant extension, 48 miles on Melfort Northeast Branch, 32 miles on Luck Lake Branch, 44 miles on Jackfish Branch, all in Saskatchewan, and 3 miles on rail 333 on a revision of the Drumheller Subdivision, Alta.; and for construction of a water and sprinkler system in the salmon warehouse at Prince Rupert, B.C.

Western Lines Contracts.—We are officially advised that the following contracts have been given for works on the C.R.N. Western Lines, and on the Grand Trunk Pacific Ry.:—Excavation of reservoir, and construction of dam at Paswegin, Sask., Claydon Co., Winnipeg. Excavation of reservoir, and construction of dam at Ethelbert, Man., Northern Construction Co., Winnipeg. Fencing, Melfort Northeast Branch, 48 fence miles, Kelley & Johnson, Winnipeg. Fencing Luck Lake Branch, 32 fence miles, T. D. Rourke, Regina, Sask. Fencing Jackfish Branch, 44 fence miles, A. J. Gibson, Winnipeg. Construction of sewer, Melville, Sask., Jamieson Construction Co., Edmonton, Alta. Construction of sewer, Watrous, Sask., J. Brodt, Regina, Sask.

Prince George Station.—We are officially advised that the station building, on the Grand Trunk Pacific Ry. at Prince George, B.C., for which tenders were invited recently, will be 30 x 102 ft. on concrete foundation, with brick walls and stone dressing, and will have the following accommodation on the ground floor: Baggage and express rooms, general waiting room, women's waiting room, ticket and land office, conductors' room, restaurant, kitchen and lavatories. The offices on the first floor will be reached by an entrance on the approach side of the building, and will be subdivided to suit requirements. Quarters for the restaurant staff will be on the first floor, will consist of three bedrooms, store room and lavatories, and will be approached by a staircase from the kitchen. The basement is being only partially excavated, one portion will be reached by a private stairway at the office entrance, and the other from the kitchen. The building is to be steam heated, steam to be supplied from the locomotive house.

Prince Rupert, B.C., Building.—The Grand Trunk Pacific Ry. station at Prince Rupert, B.C., for which tenders were invited recently, will be 100 x 40 ft., of brick with stone dressings, on concrete foundation. It will be two stories high, and will be flanked on each side by platform accommodation partly covered by a canopy, giving ample space to take care of business under all conditions. The ground floor will contain a passageway, 16 ft. 11 in. wide along the end of the building, with a stairway to the first floor, and giving access to the overhead bridge across the tracks to the town;

baggage room with parcels office, express room, and office and boiler room; the ticket office in the passageway, general waiting room, and ladies' waiting room with lavatories. The building will be between the tracks and the dock side, entrances to the ground floor being provided both from the tracks and the dock. It will be steam heated.

We are officially advised that the warehouse to be built at Prince Rupert will be on the new dock on the water front. It will be 150 x 800 ft., of frame construction, with trussed roof, covered with built up rubberoid. (Aug., pg. 419.)

The Retirement of the Interstate Commerce Commission's Chairman.

Chairman E. E. Clark has retired from the U.S. Interstate Commerce Commission, after 15 years service. Before his appointment to the Commission, he was the leader of a railway labor organization, and it is said that his appointment was not approved at the time by either U.S. railway officers or the important shippers and representatives of the leading industrial interests. However, that may be, it is certain that no member of the Commission ever held the respect of all connected with the transportation industry to a greater degree than he did in the years preceding his retirement. His sense of justice and fairness won for him a high place among the railway regulative authorities of the day, and his policy of having representatives of the railways and of the shippers get together without the necessity of expensive and protracted hearings before the Commission, has been proven wise, by long experience. He showed, in thought and action, that he was fully aware of the potential evils of too rigid and excessive regulation of railways, which inevitably results in the destruction of efficiency and initiative, and he was regarded as one of the leaders in that school of thought which recognizes the importance of maintaining transportation agencies in an atmosphere of clean finance and efficient operation, free from that brand of regulation which was so common in the past, and which may be characterized as being thoroughly destructive. His retirement from the Commission means a loss to the entire transportation industry.

Railway Accidents Throughout Canada. The total number of accidents reported to the Board of Railway Commissioners in July and August was 349, resulting in 75 persons being killed and 323 being injured. Of the killed, 1 was a passenger, 22 were employees, and 52 were others. Of the injured, 39 were passengers, 216 were employees, and 68 were others. Under others are included 42 highway crossing accidents, in which 23 were killed, and 43 injured. In 33 of these accidents there was no protection; in 4, there were bells; in 1, a wigwag signal, and 1, a flagman; in 1, gates; and in 2 there was speed restriction. In 23 cases automobiles were concerned; in 6, trucks; in 6, horse vehicles; in 3, bicycles, and in 4, pedestrians.

Combined Coal and Oil Locomotive.—An English railway is reported to be experimenting with a locomotive, in which coal and oil can be used as fuel, at the same time, or either without the other.

French Exhibits Train.

By arrangement between the French Government and the Trade and Commerce Department, a special train of eight cars is touring Canada to promote trade between France and Canada. The campaign opened at Montreal Aug. 29, when the Dominion Premier, and Hon. Mackenzie King were the principal speakers. On the third or the four days the train was in Montreal, the railway and transportation interests were entertained. The train consists of eight exhibition cars, as follows:—1. "La Pensee Francaise" (The French Thought), which includes some of the finest treasures of French art and literature as well as relics of the wars of France. 2 and 3. Industrial exhibits, including travel, photography, civil engineering, mines and mineral products, mechanics, etc. 4. La Mode," including dresses, silks, laces, etc. 5. Leather industries, chemical products, drugs, perfumes, electrical appliances, brushes, toys. 6. Agricultural, horticultural and alimentary products. 7. Decorative art, bronzes, etc. 8. Office car.

The train after leaving Montreal, visited Three Rivers and Quebec and then went on to Toronto for the Canadian National Exhibition and thence to the west. It is expected back in Montreal, Nov. 4. The train is being run over the Canadian National, Canadian Pacific and Grand Trunk Railways.

A suggestion has been made for a train to exhibit Canadian productions in France in 1922.

Hand-holds over Doorways, inside of Baggage, Mail and Express Cars.—The Board of Railway Commissioners has issued the following circular:—A recent investigation held by the Board's Operating Department into a serious accident discloses the fact that hand-holds over the doorways, inside of baggage, mail and express cars, etc., are not at all times secured to the frame of the cars as they should be; nor do they comply with the safety regulations prescribed in general order 102. The attention of railway companies is called to this condition, and they are requested to have their equipment looked over as quickly as possible, and strengthen the means of fastening these hand-holds, where necessary, so that a repetition of the accident referred to above will be guarded against.

Canadian Tank Line Ltd. has been incorporated under the Dominion Companies Act, with authorized capital of \$275,000, and office in Toronto, to deal in various merchandise and particularly petroleum and its products. It is authorized to manufacture, lease, buy or deal in tank cars and all kinds of rolling stock, storage tanks, switching tracks and sidings; to act as freighter common carrier and transporter, and other things. The provisional directors are: A. Fasken, J. Acheson, V. O. Matchett, D. A. McCrimmon, Toronto.

The Commercial Export & Import Co. has been incorporated under the Dominion Companies Act, with authorized capital of \$100,000 and office at Montreal, to carry on business as importer, exporter, warehouseman, storeman, and common carrier of goods of all kinds. The incorporators named are stenographers or bookkeepers in the office of the Toronto solicitor acting for the real interests which asked for incorporation.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John River Bridge.—We are advised that the Dominion Bridge Co. is making progress with the placing in position of the superstructure of the new bridge across the St. John, N.B. C. E. Fitzsimmons is in charge of the work. This bridge is to replace the existing structure, and in connection with its erection there has been considerable controversy, marine men using the river being desirous of having the level of the bridge raised.

Quebec-Montreal Line.—A considerable portion of the line between Quebec and Montreal has been rebalasted with broken stone this year.

Considerable improvements are reported to have been made at 12 highway crossings west of Three Rivers during this year by the construction of a tarmac top to conform with the highway construction. Between St. Martin and Mile End, in the immediate vicinity of Montreal, four highway crossings have been built up with stone block paving.

Sherbrooke St. Bridge, Montreal.—Work is reported to have been started by the City of Montreal on Sept. 15 on a bridge across the C.P.R. tracks at Hochelaga, which will provide for an extension of Sherbrooke St. through to the end of the Island. The bridge is estimated to cost about \$250,000.

Kipawa-Ville Marie-Des Quinze Line.—A contract is reported to have been let to Angus & Taylor, Ltd., North Bay, Ont., for building an extension from near Kipawa, Que., to the Des Quinze River falls, about 80 miles, with a branch of about 8 miles to Ville Marie. This line is being built under the Interprovincial & James Bay Ry. charter in accordance with a special subsidy contract between the Quebec Government and the C.P.R., approved in 1920. The line will be an extension of the C.P.R. branch from Mattawa to Lake Timiskaming, and its extension to Kipawa, to which a 10 mile extension was added some years ago.

Ontario District Improvements.—A press report states that plans for the betterment of lines in the Ontario District for 1922 are already under discussion, and that they include the laying for a further mileage of the main line with 100 lb. rails, beyond the 50 miles that is being put at the eastern end of the district this year.

Lanigan Northerly Branch.—The Board of Railway Commissioners has authorized the opening for traffic of the Lanigan Northerly Branch, mile 0 to 49.34. This line starts at Lanigan, mile 548 from Portage la Prairie, Man., on the line to Wetaskiwin, Alta., and proceeds northerly, crossing the Canadian National Rys. between Watson and Humboldt, and is intended ultimately to reach Melfort and the Saskatchewan River.

Western Line Work.—A press report of Sept. 17 stated that the C.P.R. required about 1,000 additional men to complete the track and other work in hand and contemplated for this year.

The extension of the line to the Drumheller coal fields in Alberta is about completed.

Track laying is reported to have been completed on the 6.5 mile extension of the Russell line, to Cracknell, Sask.

Track laying is reported to have been

started westerly of Altavan, on the Saskatchewan-Alberta boundary on the last mile of the Weyburn-Sterling line. (Aug., pg. 426.)

Railway Earnings.

Canadian National Railways.

Following are approximate monthly gross earnings for the Canadian Northern Ry. System and Canadian Government Rys., the latter including the Intercolonial Ry., Prince Edward Island Ry., National Transcontinental Ry., and various local lines which have been acquired by the Dominion Govt. in the Maritime Provinces and in Quebec, enment.

	1921	1920
January	\$8,781,839	\$7,267,662
February	\$1,500,341	\$5,615,695
March	9,497,740	7,161,826
April	8,164,955	7,997,478
May	7,784,147	8,385,505
June	7,855,548	7,776,639
July	8,837,354	9,063,674
August	8,881,530	9,582,693
	\$68,063,274	\$64,211,487

Approximate gross earnings for three weeks ended Sept. 21, \$7,085,209, against \$6,603,924 for same period 1920.

Canadian Government Railways.

Following are total operating revenues, total operating expenses, and net operating deficits, for the Intercolonial, Prince Edward Island, National Transcontinental, and local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government and added to the Canadian Government Rys., as far as they are available to date.

	Revenue	Expenses	Net deficits
	1921	1921	1921
Jan.	\$5,327,304	\$4,347,728	\$820,425
Feb.	5,256,658	4,367,431	820,933
Mar.	5,595,144	4,688,904	947,761
Apr.	3,363,072	3,016,095	562,923
May	2,914,973	3,728,849	813,767
June	2,853,386	3,811,295	951,309
	\$19,787,047	\$24,710,272	\$4,923,225
Incr.	915,923	1,482,726	567,701

Canadian Northern Railway System.

Following are approximate monthly gross earnings for the Canadian Northern Railway System:

	1921	1920
January	\$5,094,100	\$4,200,700
February	4,930,000	3,892,300
March	6,112,700	4,587,700
April	4,972,500	4,732,623
May	4,742,200	4,863,500
June	4,606,000	4,427,600
July	6,006,900	5,168,500
August	5,708,500	5,899,700
	\$41,597,200	\$37,673,623

Approximate gross earnings for three weeks ended Sept. 21, \$4,743,200, against \$4,156,300 for same period 1920.

Following are total operating revenues, total operating expenses, and net operating deficits, for 1921 and 1920, as far as they are available, to date:

	Revenue	Expenses	Net deficits
	1921	1921	1921
Jan.	\$8,561,220	\$7,538,786	\$1,087,566
Feb.	6,675,783	6,061,337	1,285,556
Mar.	5,812,730	5,746,918	34,122
Apr.	4,994,027	6,327,739	1,333,712
May	4,427,994	5,742,052	1,314,058
June	4,295,811	5,536,771	1,240,960
	\$39,957,694	\$38,753,597	\$7,759,903
Incr.	3,522,120	3,487,688	34,432

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1921, compared with 1920:

	Gross	Expenses	Net
	1921	1921	1921
Jan.	\$14,465,430	\$13,824,005	\$641,425
Feb.	12,763,987	11,905,595	858,392
Mar.	14,708,727	12,254,518	2,456,909
Apr.	13,761,440	11,116,709	2,646,131
May	13,892,845	10,698,493	3,293,552
June	14,681,642	11,256,836	3,194,758
July	15,772,292	12,718,613	2,654,812
	\$99,828,641	\$84,124,410	\$15,004,816
Incr.	1,956,810		
Deer.	\$6,694,746	\$11,561,556	

Approximate gross earnings for August, \$16,400,000, of which \$12,500,000 was net profit, against \$13,265,000, against \$17,575,000 and \$12,854,000 respectively, for same periods 1920.

Grand Trunk Railway.

Following are total operating revenue and total operating expenses for lines in Canada for 1921, also total net operating revenue or deficit for 1921 and 1920, with increases or decreases in totals, as compared with those for 1920, as far as they are available to date:

	Gross	Expenses	Net revenue or deficit
	1921	1921	1921
Jan.	\$6,187,539	\$6,486,300	\$698,951*
Feb.	5,468,732	5,439,839	29,693
Mar.	6,271,921	5,684,721	687,200

Railway Finance, Meetings, Etc.

Canadian National Rys.-G.T.R. Co.—Dillon, Read & Co., and other New York bankers, offered, on Sept. 16, an issue of \$25,000,000 of 15-year non-callable sinking fund gold debenture bonds of the Grand Trunk Ry. Co. of Canada, at 95% and interest from Sept. 1, to yield 6 1/2%. The issue is reported to have been oversubscribed. This issue is a direct obligation of the G.T.R. Co. of Canada, and both principal and interest are guaranteed by the Dominion of Canada. The bonds are dated Sept. 1, and are due Sept. 1, 1935, with principal interest being payable in gold at the Bank of Montreal, New York. A sinking fund of \$500,000 a year, accruing from Sept. 1, 1921, will be available in equal half yearly amounts for the redemption of the bonds in the market at not exceeding par and interest.

Central Vermont Ry.—The Interstate Commerce Commission is reported to have approved the granting of a loan to the C.V.R. of \$65,000 for three years to retire certain equipment notes. The company has applied to the Interstate Commerce Commission for authority to issue \$147,000 of refunding 5% gold mortgage bonds dated May 1, 1920, to reimburse its treasury for expenditures from income in payment of a similar amount of certain equipment gold notes.

Cumberland Ry. & Coal Co.—The National Trust Co. received to Sept. 20 proposals for the sale of this company's first mortgage bonds, maturing Oct. 1, 1940, to be paid out of \$22,197,72 standing to the company's credit in the sinking fund, under the terms of the trust deed of Oct. 1, 1910.

Moncton & Buctouche Ry. Co.—A meeting of shareholders was held at Buctouche, N.B., recently to ratify a resolution passed by the directors to convey and transfer to the Minister of Railways for Canada, representing the King, all the company's property and assets, and for other purposes.

H. C. Creighton, Claim Agent, Eastern District, Canadian National Express Co., St. John, N.B., writes: "I have been a constant reader of Canadian Railway and Marine World for many years, and look for it regularly."

Among the Express Companies.

The Interstate Commerce Commission has decided, in the case of the Glacifer Co. vs. American Railway Express Co., that defendant's practice of assessing charges on 5 gall. shipments of ice cream, in tubes packed with ice, on an estimated, or billing, weight of 115 lb., while contemporaneously assessing the charges on the same quantity of ice cream, in a dry refrigerating container, on actual weight, was unduly prejudicial to the complainant, and that the undue prejudice must be removed.

Canadian National Express Co.
The Canadian National Ex. Co. has closed the summer office at Alberta Beach, Alta.

W. G. Burrell, heretofore Supply Agent, Canadian Express Co., has been appointed Supply Agent, Canadian National Express Co. Office, Montreal.

Wm. Phillips, European Manager, Canadian National-Grand Trunk Rys., and Canadian Government Merchant Marine Ltd., has, as forshadowed in Canadian Railway & Marine World for September, also been appointed European Manager, Canadian National Express Co. Office, 17 Cockspur St., London, S.W. Eng.

E. J. Wearing, heretofore General Agent, G.T.R., and Canadian Ex. Co., Liverpool, Eng., has as foreshadowed in Canadian Railway and Marine World for September, been appointed European Express Agent, Canadian National Express Co. Office, 20 Water Street, Liverpool, Eng.

R. J. McEwan, heretofore District Agent, Freight and Passenger Departments, Canadian National Rys., Glasgow, Scotland, who, as stated in Canadian Railway and Marine World for September, has been appointed District Agent, Canadian National-Grand Trunk Rys. at Manchester, Eng., has also been appointed District Agent, Canadian National Express Co. there.

J. M. Walker, formerly General Agent, Grand Trunk Ry., and Canadian Express Co., Glasgow, Scotland, who, as stated in Canadian Railway and Marine World for September, has been appointed District Agent, Canadian National-Grand Trunk Rys. has also been appointed District Agent, Canadian National Express Co. Office, 75 Union St., Glasgow, Scotland.

Walter Edwin Norman, whose appointment as General Superintendent, Central District, Canadian National Ex. Co., Toronto, was announced in our last issue, was born at Pieton, Ont., May 26, 1871, and entered Canadian Ex. Co.'s service in May 1888, since when he has been, to June 1899, train messenger, Montreal, Toronto and other points; June 1899 to May 1908, agent, Brockville, Ont.; May 1908 to Dec. 1, 1912, route agent, Toronto; Dec. 2, 1912 to Dec. 31, 1917, Assistant to Superintendent, Toronto; Jan. 1 to Oct. 31, 1918, Assistant Superintendent, Toronto; Nov. 1, 1918 to Aug. 31, 1921, Superintendent, Toronto.

E. J. Wearing, who has been appointed European Express Agent, Canadian National Ex. Co., Liverpool, Eng., was born at Birkenhead, Eng., Nov. 12, 1872, and entered G.T.R. service, Jan. 1, 1888, serving in all departments of the company's office at Liverpool, and visited Canada in the latter part of 1911, covering the chief points from Montreal to Prince Rupert, Vancouver and Victoria, to be-

come personally acquainted with the handling of freight, passenger and express traffic. Early in 1916, he was appointed General Agent, G.T.R., Central Vermont Ry. and Canadian Ex. Co., at Liverpool, which position he held at the date of his present appointment.

Herbert Cogswell Creighton, whose appointment as Claim Agent, Eastern District, Canadian National Ex. Co., St. John, N.B., was announced in our last issue, was born at Halifax, N.S., Aug. 27, 1858, and entered express service Dec. 27, 1876, since when he has been, to Apr. 30, 1878, clerk, Intercolonial Ex. Co., Halifax, N.S.; May 1, 1878 to March 31, 1879, acting agent, same company, Halifax, N.S.; Apr. 1, 1879 to May 31, 1889, agent, same company, Halifax, N.S.; June 1 to Dec. 31, 1889, agent, Canadian Ex. Co., Halifax, N.S.; Jan. 1, 1890 to Apr. 30, 1898, Assistant Superintendent, same company, St. John, N.B.; May 1, 1898 to Aug. 31, 1921, Superintendent, same company, St. John, N.B.

Robert Henry Jones, whose appointment as Superintendent, Toronto Division, Central District, Canadian National Ex. Co., Toronto, was announced in our last issue, was born at St. Thomas, Ont., and entered transportation service in May, 1900, since when he has been, to May 9, 1906, telegraph operator and relieving agent, G.T.R., at various points on the Southern and Northern Divisions; May 10, 1906 to Feb. 14, 1909, agent, Canadian Ex. Co., Bracebridge, Ont.; Feb. 15, 1909 to March 20, 1910, agent, same company, Guelph, Ont.; March 21, 1910 to Dec. 15, 1918, route agent, same company, Toronto; Dec. 16, 1918 to Dec. 31, 1919, Assistant to Superintendent, same company, Toronto; Jan. 1, 1920, to Aug. 31, 1921, Assistant Superintendent, same company, Toronto.

Forest Norman Wiggins, whose appointment as General Superintendent, Eastern District, Canadian National Ex. Co., Moncton, N.B., was announced in our last issue, was born at Oxford Mills, Ont., Oct. 9, 1886, and entered express service June 15, 1901, since when he has been, to May 15, 1904, clerk, Canadian Ex. Co., Parry Sound, Ont.; May 16, 1904, to June 20, 1906, relieving messenger and relieving agent, same company, at various points in northern and western Ontario; June 20, 1906 to May 15, 1907, chief clerk, same company, North Bay, Ont.; May 16 to Aug. 24, 1907, chief clerk, same company, Parry Sound, Ont.; Sept. 1, 1907 to Aug. 31, 1911, correspondent, Canadian Northern Ex. Co., Winnipeg; Sept. 1, 1911 to Aug. 31, 1920, Superintendent, same company, Toronto; Sept. 1, 1920 to Aug. 31, 1921, Superintendent, Canadian National Ex. Co., Toronto.

Zarah Mortimer Middleton, whose appointment as Superintendent, Edmonton Division, Western District, Canadian National Ex. Co., Edmonton, Alta., was announced in our last issue, was born at Sweets Corners, Leeds County, Ont., June 16, 1876, and entered express service Oct. 8, 1894, since when he has been, to 1897, clerk, American Ex. Co., DeKalb, Ill.; 1897 to 1899, on hand clerk, same company, Omaha, Neb.; 1899 to 1901, night agent and money clerk, same company, Milwaukee, Wis.; 1901, one month, agent, same company, Potosky, Mich.; 1901 to 1902, agent, same company,

Joliet, Ill.; 1902 to 1905, claim agent, Superintendent's office, same company, Detroit, Mich.; 1905 to 1907, route agent, same company, Bay City, Mich.; 1907 to 1909, assistant agent, same company, Dallas, Tex.; 1909 to 1911, chief clerk, Claims Department, same company, Chicago, Ill.; Aug. 1911 to Nov. 1915, chief clerk to Superintendent, Canadian Northern Ex. Co., Winnipeg, Man.; 1915 to Sept. 1921, General Agent, Canadian Northern Ex. Co., latterly Canadian National Ex. Co., Vancouver, B.C.

Dominion Express Company

The Dominion Ex. Co.'s employees at St. John, N.B. held their annual field day at Lorneville, Aug. 20 in conjunction with some C.P.R. employees. A baseball game between the C.P.R. and the Dominion Ex. Co. was won by the latter team by 6 to 2, the C.P.R. team winning the tug-of-war.

George W. Liddle, agent, Dominion Ex. Co., Parkdale, Toronto, died there, Sept. 22, after a long illness, aged 64. He was born at Brooklands, near Whitby, Ont., and had been in the company's service for about 37 years, for several years at North Bay, Ont., and for the past 15 years, at Toronto. The funeral, which was conducted under Masonic rites, took place at Toronto, Sept. 24.

Railways, etc. Operated Over by Express Companies.

The Canadian National Ex. Co. operates exclusively over the following railway and steamship lines comprised in the Canadian National Rys., viz. Canadian Northern Ry. System, Cape Breton Ry., Grand Trunk Pacific Ry., Grand Trunk Pacific Coast Steamships, Halifax and Southwestern Ry., National Transcontinental Ry., St. John and Quebec Ry., St. Martins Ry. It also operates exclusively over the following steam railways, Central Vermont Ry. (in Canada), Grand Trunk Ry. (in Canada), Inverness Ry. and Collieries Ltd., Quebec, Montreal & Southern Ry., Sydney and Louisburg Ry., and exclusively over the following electric railways, Chatham, Wallaceburg & Lake Erie Ry., Montreal and Southern Counties Ry., Windsor, Essex and Lake Shore Rapid Ry., Winnipeg, Selkirk and Lake Winnipeg Ry. The Canadian National Ex. Co. also operates, but not exclusively on the following lines comprised in the Canadian National Rys., viz. Intercolonial Ry., Prince Edward Island Ry. and Salisbury and Albert Ry., also over the following railways, but not exclusively, Atlantic, Quebec & Western Ry., Cumberland Railway & Coal Co., Maritime Coal Ry. & Power Co., Quebec Oriental Ry., and Timiskaming and Northern Ontario Ry.

The Dominion Ex. Co. operates exclusively over the following steam railways—Canadian Pacific, Dominion Atlantic, Esquimaux & Nanaimo, Fredericton and Grand Lake Coal & Ry. Co., Kettle Valley, New Brunswick Coal & Ry. Pere Marquette (in Canada), Quebec Central, Temiscouata, Wellington Colliery, and also exclusively over the following electric railways, British Columbia (through traffic only), Grand River, Hamilton & Dundas, Lake Erie and Northern. The Dominion Ex. Co. also operates, but not exclusively, on the following steam railways: Atlantic, Quebec & Western (through traffic only), Cana-

dian National east of Montreal and south of St. Lawrence River; Caraqueet & Gulf Shore, Cumberland Ry. & Coal Co., Maritime Coal, Ry. & Power Co., N.S., Maritime (through traffic only), Timiskaming & Northern Ontario and also on the London & Port Stanley electric, (through traffic only).

The arrangements under which the Dominion Ex. Co. operates over Canadian National Ry. lines east of Montreal and south of the St. Lawrence River, is said to be terminable at short notice, and it is reported that such notice may be given in the near future.

Telegraph, Telephone and Cable Matters.

The Naval Service Department, which has charge of the Dominion Radiotelegraph Service, has announced that of 25 candidates examined during August, 14 were awarded certificates of proficiency in radiotelegraphy.

The Marconi Wireless Telegraph Co. is reported to have issued a circular to its employees at Glace Bay, N.S., and other points, announcing a reduction in wages, of approximately 20%. It is stated that the employees are asking for the appointment of a board of conciliation.

J. D. Gaines, Superintendent, Commercial Cable Co.'s station at Shanghai, China, who died at Tsatamagouche, N.S., recently, when he was spending a holiday, was, from 1884 to 1902, in the company's service at Canso, N.S. In 1902 he was transferred to Honolulu, and in 1909 to Shanghai.

Canadian National Telegraphs have opened offices at Loggieville, N.B., St. Adelaide de Pabos, Que., Muir and Mulvihill, Man., and Kamloops, B.C., and have closed offices at Britannia Mills and Lac a Beauce, Que., Elgin, Kabina, Minnaki Inn, Pass Lake and Shenna, Ont., and Narcisse and Poplar Field, Man.

A Vancouver, B.C., report states that a telegraphic achievement was performed there recently, when Lord Northcliffe's speech before the Canadian Club was cabled to London, Eng., in the remarkably short time of 45 minutes. It is quite possible that a record was achieved, but the report does not state what the length of the speech was.

Regarding the proposed erection of a radiotelegraph station at Port Norman, Northwest Territories, A. H. Morse, Managing Director, Marconi Wireless Telegraph Co., is reported to have stated that everything being ready, the company applied to the Government for licenses to proceed with the installations, but that they had not yet been granted, and if granted now, it would be too late to go on with the work this year.

The Naval Service Department is reported to have announced recently that radiotelegraph messages had been exchanged between the Government station at Barrington, N.S., and the new radiotelegraph station at Leafield, Eng., approximately 3,000 miles apart. The Leafield station, the first of a series being built throughout the British Empire, communicates on Poulsen arcs of 250 kw. capacity.

The Swedish State Railways are reported to be experimenting with a locomotive in which reciprocating engines are replaced by a steam turbine, and a special arrangement for saving fuel.

Marconi Wireless Telegraph Co. of Canada.

Following are extracts from the report for the calendar year 1920, issued over the signature of Hon. Frederic Nicholls, President:—Pursuant to an agreement dated Oct. 1, 1920, 800,000 of the new shares have been issued to the Canadian General Electric Co., in consideration of its having assigned to your company the exclusive rights to all Canadian and Newfoundland patents owned or controlled by it. As a consequence of this transaction your company has secured the C.G.E. Co.'s co-operation, which has already been beneficial. The C.G.E. Co. also undertakes to subscribe for a further 200,000 shares at par, as additional working capital is required.

A very considerable proportion of your company's activities consists of the operation and maintenance of some 30 coast wireless stations, under contracts made in 1911 and 1912 with the Dominion Government. As was pointed out in our last annual report, your company had to respond to the general demand for higher wages. The effect was an increased cost of nearly \$80,000 in respect of the operation and maintenance of the coast stations in 1920, the wages being in accordance with a schedule recommended by a board of conciliation appointed by the Minister of Labor in the fall of 1919.

A. E. Dymont, President, Canadian General Electric Co., and Vice President of your company, accompanied by A. H. Morse, Managing Director, made a trip to England this summer to make an adjustment and settlement with the British Marconi Co. of some matters which were in dispute, and also to advise with them with regard to the future development of this company. I am glad to say that satisfactory arrangements were concluded, and your officials are in accord with the views of the British company's officials regarding the development in Canada of wireless telegraphic communication. Mr. Dymont reports the greatest enthusiasm on the part of the British company's leading officials with regard to the development of wireless telegraphy.

Your company's trans-Atlantic telegraphic service continues to give satisfaction and your directors are pleased to report that, as a result of improvements which are now being effected, the efficiency of the service will shortly be materially increased. The business in amateur wireless apparatus, which is carried on by your subsidiary, Scientific Experimenter, Ltd., continues to grow.

Towards the end of the period under review your company placed in operation in Nova Scotia, a transmitting station of the latest type, for the purpose of radiating Canadian news to subscribing ships in the North Atlantic. This station is giving entire satisfaction and its operation is profitable. Your company gave a demonstration of wireless telephony at St. John's, Nfld., in 1920, on the visit of the Imperial Press delegates to Canada. The demonstration, which involved considerable expense, was an unqualified success, and your directors feel sure have been worth while, having regard to the effect which it must have upon your company's prestige and future prosperity.

Your attention is directed to the fact that your board is now under full Canadian control and your directors, relying on the continued zealous support and ef-

ficient co-operation of their officers and staff, look forward to a radical improvement in the company's affairs in the near future.

The statements show that the profits from operation for the year, after deducting all expenses of operations and management, but before providing for depreciation and government taxes, were \$69,906.38. From this was deducted \$55,449.41 reserve for depreciation of buildings, plant and equipment and power and ship stations, leaving a balance of profits of \$14,456.97 to which was added the surplus balance at Dec. 31, 1919 of \$395,918.30, making a balance at Dec. 31, 1920, subject to Government taxes, of \$410,375.27.

Australian Underground Railway.—Construction of the underground government rapid transit line through the business district of Sydney, New South Wales, is to be resumed, work having been stopped in 1918 on account of war conditions. The estimated cost is about \$12,000,000 at present rate of exchange. Plans have not been completed for the cantilever bridge of 1,600 ft. span which is to cross the harbor and connect two sections of the city. The cost of the bridge is estimated at \$20,000,000.

Automatic Train Stopper.—A London, Eng., press cablegram says that an Australian, R. A. Angus, has demonstrated an invention to prevent railway collisions, by running a low voltage current into the rails, and by means of special contacts linking the locomotive electrically with the signal boxes, which it is claimed will automatically stop the locomotive when necessary, the apparatus blowing the whistle, closing the throttle and applying the brakes.

FOR SALE

H.M.S. "CHARYBIDS"—late 2nd Class Cruiser converted to Merchant use.

As and where she lies at Bermuda Dockyard.

Without guarantee in her present condition.

Length, 320 feet.

Breadth, 48 feet 6 ins.

Depth in hold, 16 feet 6 ins.

Register gross tonnage, 2,730.

Steel hull sheathed with teak and coppered.

Phosphor bronze stern post, rudder and propeller brackets.

Two anchors and cable.

Has refrigerating machinery with insulating space 34,440 cubic feet. Deadweight capacity, 1,500 tons. Bunker capacity, 566 tons. Tenders will be considered inclusive or exclusive of refrigerating machinery.

Main Engines.—Twin screw, triple expansion inverted vertical type of 7,000 I.H.P. Fitted with main and auxiliary surface condensers of gun metal with brass and usual auxiliary machinery.

Boilers.—Originally fitted with eight; six in number, return tube marine type now on board, and one on wharf.

Propellers (with 2 spare blades) are of gun metal. Offers will be received by the Captain in Charge, H.M. Dockyard, Bermuda, until noon on Saturday, 21st December, 1921, and forms of tender can be obtained from the Commander-in-Charge, H.M.C. Dockyard, Halifax, N.S.

G. J. DESBARATS,

Deputy Minister of the Naval Service.

Ottawa, September 23, 1921.

Unauthorized publication of this advertisement will not be paid for.

Electric Railway Department

Electric Railway Employees' Wages, Working Conditions, Etc.

Hull Electric Co.—A press report states that negotiations have been carried on for some time between the management and its employees in regard to wages. The company desire to put in operation a reduction of 7c. an hour, equal to 15%. It was stated recently that the employees were considering making an application to the Labor Department for a board of conciliation.

Montreal Tramways Co.—As stated in Canadian Railway and Marine World for September, the Labor Department, on the application of the company's employees, authorized the formation of a board of conciliation, the men appointing A. Brossard, K.C., to represent them, and the Department appointing A. P. Frigon, to represent the company, which declined to have anything to do with the matter. The board was completed, Aug. 27, by the appointment of Judge Bazin, of the Montreal Court of Special Sessions, by the Department, the other members having reported their failure to agree on the third arbitrator. The board met Aug. 30, when L. J. Bourbonniere, financial secretary of the men's union, claimed that the company having reduced wages by 12½% dating from Aug. 16, had infringed one of the provisions of the act, viz., that conditions shall remain unchanged until the decision of the conciliation board is made known. The proceedings were adjourned to Sept. 6, when it was suggested that an endeavor be made to get the company's representatives to meet the union representatives in the presence of the arbitrators. The management refused to negotiate any further, stating that the 12½% reduction was decided upon after conferences with the men and was 7½% less than the reduction first proposed. The company would not take any part in the board's proceedings, but would send any of its officers, whom the board desired to examine, as witnesses. The board concluded its sittings Sept. 13.

New Brunswick Power Co.—A press report states that all the union men formerly in the company's employ, who declined to accept the cut in wages and the new working conditions put in force by the company, are now employed; many of them having gone into the jitney business. A suggestion has been made that the company and the men get together and endeavor to come to an arrangement, the present situation, according to a reported statement by the Mayor, being a losing one not only for the company but for the men.

United States Wage Reductions.—The Electric Railway Journal states that the average wage reduction made all over the U.S. affecting 4,500,000 electric railway employees is 15.9%. Of the 109 public utilities companies reducing wages, the majority have been between 10% and 20%, although some of them have reached as high as 40%. The iron and steel workers have received a second and in some cases a third reduction, since the beginning of the year, and in the building trades there has been a continued voluntary action on the part of workers to accept lower rates of pay in the hope of increasing building activities.

Manitoba Power Co.'s Hydro Electric Development on Winnipeg River.

The Manitoba Power Co. was incorporated under the Dominion Companies Act, several years ago, to develop, transmit and distribute electricity and carry on business as an electric light, heat and power company in all its branches. The Manitoba Legislature gave the company legislative authority by an act assented to Mar. 24, 1911. The company was, in its early days, taken over by interests connected with the Winnipeg Electric Ry. Co., but beyond carrying on investigation work on the Winnipeg River, as to flow of water, and the preparation of plans for development, nothing was done. The company is now proceeding to begin actual work with an organization of which Sir Augustus Nanton, President, Winnipeg Electric Ry., is President, and A. W. McLimont, Vice President, Winnipeg Electric Ry., is Vice President. The company is taking over

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.
Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.

President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.
Vice President, Major F. D. Burpee, Manager, Ottawa Electric Railway.

A. G. Galt, Superintendent, Montreal Tramways Company.

Executive Committee, E. P. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Cozens, General Manager, Toronto Transportation Commission; C. C. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Traction Co.; A. W. McLimont, Vice President, Winnipeg Electric Ry.; R. Mayne-Read, Superintendent, Quebec Ry., Light & Power Co.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Auditor, H. E. Weyman, Manager, Lewis County Railway.

Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co., Hull, Que.

Official Organ, Canadian Railway and Marine World, Toronto.

the Winnipeg River Power Co.'s power development plant, for this purpose, and to provide funds for the new development, has arranged with Montreal and Toronto bond houses for selling an issue of bonds.

The Winnipeg River Power Co. has its plant at the Great Falls of the Winnipeg River. In connection with this plant there are 13.5 miles of standard gauge railway running from Lac du Bonnet on the C.P.R. The new plant will be built to utilize the Great Falls, and the plans provide for a plant capable of developing 168,000 h.p. The plans for the new plant are being prepared by J. H. Martin, engineer for the company, L. E. Martin, New York, being consulting engineer.

It is reported that some 200 men are already engaged in construction work at the falls. It is proposed to build the plant in six units of 28,000 h.p. each. The estimated cost of the entire plant is put at \$10,000,000, and it is expected that the six units will be completed in 1928.

Infraction of Rules by Niagara, St. Catharines & Toronto Railway Employees.

Some months ago a collision occurred on the Niagara, St. Catharines & Toronto Ry. near Merriton, which resulted in the injury of a number of passengers. Following an investigation into the circumstances, the management dismissed those of its employees who were found to be directly responsible for the collision, and dismissed or disciplined a number of other employees who were alleged to have been guilty of disregarding regulations governing the operation of trains. The local union took the matter up, and demanded the reinstatement of the dismissed men, and the removal of the penalties on the disciplined men, a demand which the company refused. The employees persisted in their demands and ultimately a board of conciliation was authorized by the Labor Department. This board consisted of D. Dick Jr., chairman; G. D. Kelley, K.C., Ottawa, representing the company, and Jos. Gibbons, Toronto, representing the employees. The board met at Welland, May 17 and 18. Subsequently a report signed by D. Dick Jr. and Jos. Gibbons, and dated Aug. 8, was received by the Department, in which the following recommendations were made:—Dismissal of Conductor Bauer to be confirmed. Motorman Lampman to be reinstated with one month's wages as compensation for loss of time. Dismissal of Conductor Phillips found to be justified. Conductor Bowman to be paid for time lost while under suspension. Conductor Varley's loss of seniority found to have been justified. Motorman Sparrow and Conductor Terreyberry, to be reinstated and paid for all lost time in excess of 30 days. N. E. Smith to be restored to full seniority rights. The cases of conductor Wilson and conductor Hannah were withdrawn by the union, and a communication was put in on behalf of F. Richardson, S. Pratt, N. Marne and F. Mitchell admitting their breach of rule.

G. D. Kelley submitted a minority report, dated Sept. 2, in which he disagreed with the finding as to conductor Bowman, favored the restoration of conductor Varley to his former place on the seniority list, and agreed with the majority report (though giving his own reasons for doing so) as far as the Wilson and Hannah cases. He then proceeded to discuss what took place between the adjournment of May 18 and his return from a holiday on Aug. 2, when he found that a meeting of the board had been called for July 27 by telegram dated July 26, at which the Sparrow-Terreyberry cases were taken up. In dissenting from the majority finding in these cases he stated it was not justified, and recommended that their dismissal be sustained.

The Labor Department in issuing these reports made a statement taking exception to portions of Mr. Kelley's report.

The men subsequently threatened to go out on strike if the majority report was not acted upon. The management does not appear to be desirous of doing anything further in the matter, as it contents that to do anything else would be prejudicial to the travelling public's safety.

Toronto Transportation Commission Matters.

As foreshadowed in Canadian Railway and Marine World for September, the Toronto Ry. was handed over on Sept. 1 at 1 a.m. to the Toronto Transportation Commission, acting for the city, and the service was continued without any interruption.

Staff.—Previous to the transfer the Commission's official staff consisted of H. H. Couzens, General Manager; I. S. Fairly, Solicitor; A. T. Spencer, Engineer of Way; W. E. P. Duncan, Engineer of Structures; A. E. Gibson, Concrete Construction Department; and C. S. Parker, Secretary to General Manager; together with H. P. L. Hillman, acting Comptroller, who is also Comptroller, Toronto Hydro Electric System. The following appointments of heads of Departments have been made since:—

D. W. Harvey, heretofore Superintendent and Engineer, Toronto Civic Ry., appointed Assistant Manager.

H. E. Beasley, heretofore Purchasing Agent and Superintendent, Stores Department, Toronto Ry., appointed Purchasing Agent.

J. G. Coulthard, heretofore Chief Clerk, Toronto Civic Ry., appointed Chief Accountant.

W. E. P. Duncan, heretofore Chief Estimator, Carswell Construction Co., Toronto, appointed Engineer of Structures.

J. H. Forrest, heretofore Superintendent, Accident and Claims Department, Toronto Ry., appointed Claims Supervisor.

J. W. Howden, heretofore Superintendent, Timekeeping and Schedules Department, Toronto Ry., appointed Superintendent of Schedules.

J. McCulloch, heretofore Traffic Superintendent, Toronto Ry., appointed Superintendent of Traffic.

W. R. McKee, heretofore Master Mechanic, Toronto Ry., appointed Superintendent of Rolling Stock and Shops.

J. Metcalf, heretofore Traffic Manager, Toronto Civic Ry., appointed Assistant Superintendent of Traffic.

J. F. Nield, heretofore Superintendent, Substations, Toronto Ry., appointed Electrical Engineer.

J. P. Scott, heretofore Cashier, Toronto Ry., appointed Cashier.

A number of other Toronto Civic Ry. and Toronto Ry. officials have also been taken over by the Commission, but their positions have not yet been announced.

R. C. Harris, City Works Commissioner, who was also General Manager, Toronto Civic Ry., has relinquished the latter position. The following Toronto Ry. officials have not entered the Commission's service:—R. J. Fleming, General Manager; J. G. Grace, Secretary-Treasurer; W. H. Moore, Assistant to President; F. L. Hubbard, Assistant to General Manager; J. M. Smith, Comptroller; J. G. Smith, Track Superintendent; O. V. Anderson, Superintendent of Distribution; and L. Smith, Secretary to General Manager. Some of these are remaining with the company, in connection with the arbitration proceedings as to the price to be paid by the city.

Henry Herbert Couzens, A.M.I.E.E., General Manager, Toronto Transportation Commission, was born at Totnes, Devonshire, Eng., Oct. 15, 1877, and was educated at the Independent College (Taunton School), Taunton, Eng. He served subsequently as an articled pupil in both mechanical and electrical engi-

neering, with Allen & Sons, Taunton, and the Taunton Corporation Electrical Works respectively, and in 1898 was appointed Assistant Engineer, Bristol Cor-

H. H. Couzens, A.M.I.E.E.,
General Manager, Toronto Transportation Commission.

D. W. Harvey,
Assistant Manager, Toronto Transportation Commission.

poration Electrical Department, Bristol, Eng., and held that position until 1901, when he was appointed Deputy City Electrical Engineer, Bristol. He resided in 1909 on his appointment as Manager and Engineer, West Ham (London, Eng.)

Corporation Electric Supply, and in 1912 was appointed to a similar position with the Hampstead Borough (London, Eng.) Council, and continued for a year as Consulting Engineer for West Ham. He resigned that position at the end of 1912, on his appointment as General Manager, Toronto Hydro Electric System, and took up the duties of the latter position early in 1913. In 1920 he was given an indefinite leave of absence to become General Manager, Toronto Transportation Commission, and the expectation is that he will be General Manager of both.

D. W. Harvey, B.A.Sc., C.E., heretofore Superintendent and Engineer, Toronto Civic Ry., who has been appointed Assistant Manager, Toronto Transportation Commission, was born in London, Ont., Feb. 24, 1887, and, after graduating at Toronto University, was with the Ontario Power Co. and subsequently with the Toronto Structural Steel Co. At the starting of the Toronto Civic Ry., in 1911, he was given charge of construction, and in 1912 the operation and maintenance were also placed under him.

New Cars.—Out of the 210 new cars ordered, viz., 100 motor cars and 60 trailers from Canadian Car & Foundry Co., and 50 motor cars from Canadian Brill Co., about 50 have been delivered by Canadian Car & Foundry Co., and it is expected to start operating them on the Broadview, Coxwell and Danforth lines on Oct. 2.

Car Houses.—The Commission has let a contract to Wells & Gray for the erection of an addition to the Toronto Civic Ry. car house, Danforth and Coxwell Avenues, at an estimated cost of \$235,000. The extension will consist of three concrete car houses, with provision for offices and stores, and the contract includes alterations to the existing buildings, the plumbing and heating, and the provision of rolling steel doors. The existing car house accommodates 39 cars, and with the extension will accommodate 203.

Another contract has been let to Jackson, Lewis Co., for the extension of the St. Clair car houses, at the north end of a property bounded by Benson Ave. on the north, Christie St. on the west, and Wychwood Ave. on the east, with an area of 3½ acres. Another acre in the southwest corner has been bought, which squares off the site and provides accommodation for the additional cars which will operate from this division. The present car houses consist of two buildings, one built in 1913, the other in 1916, each being 200 x 40 ft., with three tracks in each unit, housing altogether 18 cars. With the additions to the buildings and yards, 50 cars will be accommodated inside and 107 outside. The extensions to the present buildings consist of two sheds to the south, 230 x 44½ ft., each containing three tracks at 13 ft. centers. On the north another section will be built, 326 x 44½ ft., containing offices, trainmen's recreation rooms, lavatories, locker rooms, stores, boiler room and a two track repair bay. All the new buildings will be of reinforced concrete, with brick and tile walls. Concrete trusses concrete columns, leaving curtain walls will span across each bay, supported on with no superimposed loads. The heating will be a hot air plenum system. The boiler room will be equipped with a low pressure, steam boiler with forced draft

and stoker feed. Two fans will circulate the air, which will pass through the vent heaters, then along the main concrete ducts, running under the pits. Secondary tile pipes will run the length of the buildings, carrying the air along under the pits. The repair section to the north will have a wood block floor, and one repair track will be equipped with hoisting machinery to raise the cars from the

block with cement grout. The special track work will be A.E.R.A. standard 122 lb. girder and 100 lb. girder guard rail. This piece of construction will connect the Toronto Civic Ry. Danforth Ave. and Gerrard St. lines with the Toronto Ry. lines at Queen St., making a new north and south line from Queen St. to Danforth Ave.

An intersection has been installed at

Land has been acquired for the construction of a loop line at the Bloor and Jane Streets terminus.

It is said that an automatic substation will be built on Eglinton Ave., North Toronto.

Omnibus Service.—A full description of the omnibusses ordered by the Commission is given on another page. A service was started Sept. 20 along Hum-

Toronto Transportation Commission's Motor Car, Exterior.

trucks. Wheel grinders will be installed and other smaller equipment for carrying out minor repairs. The whole group of buildings, both old and new will be sprinklered throughout, and a 40,000 gall. tank will be erected to supplement the city pressure. The storage sheds proper will be open both ends, and each track bay will be equipped with rolling steel doors raised and lowered by individual motors. It is expected to have the new buildings completed by December. The approximate cost is \$220,000.

Track Construction, Betterments, Etc. The Commission has about 2,000 men laying new lines, changing old ones, installing new intersections and making other betterments on various parts of the system.

The Dundas line from Keele St. is the first to be completely overhauled for the operation of the new cars, it being one of the lines with a wide devil strip. For the operation of this line a loop has been built from Teraulay St., by the back of the City Hall, then north to Louisa St., and on to Teraulay St. The new intersections have been installed and the operation of the cars round this loop started Sept. 24, the operation by the Bay, Temperance, Yonge and Queen Street loop being abandoned.

The Coxwell Ave. extension, which is being built, consists of a new double track from Queen St. east to meet the double track at Gerrard Street, with double track Y's at Queen St. and Gerrard St. South, a total distance of approximately 2,400 ft. of double track. The existing single track on Gerrard St. north to Danforth Ave. will be made into a double track, with doubletrack Y's at Gerrard St. north to Danforth Ave., and to connections with the Danforth car house yards, a total distance of approximately 2,900 ft. of single track. The straight track will be laid with 100 lb. A.R.A. type A rail, on ties and tie plates, on a 9 in. concrete base, with crushed stone cushion. The paving will be granite

the corner of Broadview Ave. and Danforth Ave., to connect the Toronto Ry. tracks with the Toronto Civic Ry. Danforth line.

A large force is changing the line, repairing the pavement and doing other

berside, High Park Ave. and Annette St. to Rummymede Road, transfers being given to and from the electric cars.

Trackless Trolley.—H. H. Couzens, General Manager, has advised the Mount Pleasant Ratepayers' Association of

Toronto Transportation Commission's Motor Car, Interior.

work on the Bathurst St. line, northerly from its connection with the Dundas St. line. A 0.75 mile extension of the Bathurst St. line to St. Clair Ave. is being built, and it is expected that it will be ready for operation in November.

The tracks are being extended on Bloor St. west, from Rummymede Road to Jane St., six blocks, 2,250 ft.

North Toronto, that if the city council will provide a suitable road surface, the Commission will give a trackless trolley service on Mount Pleasant Rd. south of Eglinton Ave., to Merton St., and later on, westerly to Yonge St. This proposition was made as a means of commencing to relieve conditions in North Toronto and pending the provision by the

city of a through connection for the district by the extension of a new street through from Sherbourne St., to serve North Rosedale, Moore Park and North Toronto.

Office Buildings.—The Commission has filed plans for the alterations to the Board of Trade Building, corner Yonge and Front Sts., which it has bought, together with two adjoining buildings on Yonge and Front Sts., respectively, and which will be occupied jointly with the Toronto Hydro Electric System. All the buildings are to have additional stories.

Amputation Cases.—The Commission has decided to give free transportation to soldiers who have suffered amputation, and will honor badges issued by the Amputation Association of the Great War, until and unless some better scheme can be devised.

Night Fares.—The Commission placed on sale, early in September, at its offices and car houses, night tickets, in books of 25 for \$3, which reduces the cash rate of 15c. to 12c. All tickets must be detached from the books in the conductor's presence.

Postmen's Transportation.—From Sept. 1 postmen have had to pay the same fare on the Commission's railway as other passengers, and the Post Office Department has bought books of 50 tickets for them, at \$3 each. For years the Toronto Ry. carried postmen at a ridiculously low bulk rate per year. The Commissioners decided that, as they are operating on a service at cost basis, a continuance of this practice would not be justifiable, and that there is no more reason for carrying postmen at a reduced rate than other Dominion Government employees, or Ontario Government employees.

Private cars will not be provided free on the system in future for any purpose, and if required by anyone will have to be paid for.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	July, 1921	July, 1920

Interest	10,488	622	42,260
Balance			26,720

Montreal Tramways Co.—The matter of new financing is reported to have been discussed at a meeting of the directors Sept. 14. It is reported that \$6,000,000 to \$8,000,000 will be required to meet obligations falling due, and to provide for additional capital expenditure during the next year or two, and that the new stock to be issued at par to present holders of stock in the proportion of one share of new stock to four of old.

E. A. Robert, President is reported to have stated that negotiations are in progress with Canadian and U.S. financial houses, in regard to the proper time to put the stock on the market on the most favorable basis.

Quebec Ry., Light, Heat & Power Co. Holders of the company's 5% currency bonds created by deed of Mar. 20, 1912, met recently in Quebec and passed reso-

lutions providing for the acceptance of \$2.40 per coupon in lieu of all coupons maturing to July 1, and outstanding; \$19.50 in cash for each 500 franc bond with coupons from July 21, 1921, attached, and \$77 par value of 5% 30-year income bonds, for outstanding bonds. Bondholders of securities created by deed of Jan. 30, 1911, passed a resolution on the same day accepting \$2.40 per coupon for interest to Aug. 1, 1921, \$29.50 for each 500 franc bond, and \$67 par value of 30-year 5% income bonds, for the surrender of their holdings.

Toronto Civic Railway.

	Aug. 1921	Aug. 1920
Revenue	\$45,154.72	\$44,342.06
Passengers	3,017,670	2,625,583

Toronto Railway.—The total revenue for August, the last month of the company's franchise prior to the taking over of the property by the city, was \$564,001.79, the city's percentage being \$103,785.08. The amount owing to the city for percentages from July 1920, is \$1,670,410.12 with interest from due date. It is stated that of this amount \$1,000,000 has been treated as paid into court by the city, on account of the purchase price.

Toronto Ry., Toronto & York Radial Ry., and allied companies:—

Surplus, after allowing for fixed charges, for July	\$50,776.85			

City Councillors Disqualified as Railway Commissioners.

The Ontario Legislature last session made the following addition to subsection 1, section 53 of the Municipal Act, R.S.O., 1914, chap. 192, sec. 53, subsec. 1, respecting the disqualification of certain persons as members of councils: "A person other than the head of the council, who is a member of a board or commission appointed, or elected, for the construction, management or control of an electric railway, street railway or steam railway, which is owned by, or leased to, or controlled by a municipal corporation, or by trustees acting for or on behalf of such corporation," and the act further provided that "The amendment made by subsec. 1 shall have effect notwithstanding the provisions of any general or special act, or any bylaw of a municipal corporation."

Two members of the London Railway Commission, managing the London & Port Stanley Ry., Alderman J. C. Wilson and J. Bridge, are affected by this provision, and are reported to have resigned their positions on the Commission.

The Hamilton St. Ry. is reported to have paid off about a dozen of its employees on Sept. 12, it being customary to reduce the staff at this time of year, owing to the contraction of the traffic, and the spare men being let go.

British Columbia Electric Ry. Franchise Proposition Rejected.

The proposed new service at cost franchise for the B.C. Electric Ry. in Vancouver, which was approved tentatively by the city council May 4, and a summary of the main terms of which were given in Canadian Railway and Marine World for June, pg. 320, came before the council again, at the end of August. The proposed franchise, it was suggested, was, if generally approved, to be made the basis of a new franchise covering all the mainland municipalities in which the company operates. Since May, the proposed franchise has been discussed at meetings of the several municipalities, without arousing much favor. As the result of the last discussion by the Vancouver City Council a resolution was passed, with only two dissentients, to give the motion for submitting the proposed agreement to a vote of the ratepayers a six months hoist. The rejection of the proposed franchise was due to a number of factors. The general objection to "giving" anything to the company and the critical attitude of the public towards any assistance given the company was one of the underlying motives. One alderman took the stump against the franchise and criticized the indeterminate feature, although the old franchise was just as perpetual. Another objection was the rate of interest or return which was fixed at 6% for the old capital and 8% for new. It was maintained by this alderman that the rate might all be a fraction of this rate in some future years.

The proposed new agreement was negotiated following the company's application to the Dominion Parliament for an amendment to the act incorporating the Vancouver, Fraser Valley & Southern Ry. Co., one of its subsidiary companies. Under the proposed amendment the whole of the company's lines were to be declared to be works for the general advantage of Canada and were to be amalgamated under a new title. The general effect of the amendment would have been to place all the company's lines under the Board of Railway Commissioners. As a result of negotiations, the company withdrew the application, and the proposed new agreement was negotiated, a preliminary condition being that the 6c. fare, which had been granted as a temporary measure, should be continued until July 1, 1922. The company is now at liberty to reinstate its application to the Dominion Government for a Dominion charter, thereby bringing it under the Board of Railway Commissioners, a step which the Board of Trade and other public bodies have registered their approval of. In the meantime, before any future action is decided on, the company has the right to charge its present fares until June 30, 1922. Its contention is that it is not possible to raise any new capital while its affairs are unstable. One of the requirements in the near future is more hydro electric development. Already extensions to the light and power and gas systems have been refused owing to the lack of funds. The Union of British Columbia Municipalities, at a meeting of delegates at Port Alberni, Vancouver Island, Sept. 1, decided to oppose vigorously any application which the company may make for a Dominion charter. The Union also decided to ask the British Columbia Government to take steps to reappoint a public utilities commission.

Arbitration of Value of Toronto Railway Co.'s Property.

The arbitration to fix the amount to be paid by the City of Toronto for the Toronto Ry. Company's properties, which were taken over by the city on Sept. 1, opened in Toronto Sept. 13, before Hume Cronyn, M.P., London, who was selected as chairman by the other two arbitrators, and Sir Thomas White, ex Minister of Finance, for the company, and Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, for the city. The company was represented by Hon. N. W. Rowell, K.C., Wm. Laidlaw, K.C., F. H. Phippen, K.C., and Robt. McKay, K.C. The city was represented by W. N. Tilley, K.C., A. C. McMaster, K.C., G. R. Geary, K.C., City Counsel, C. M. Colquhoun, of the city's legal staff, and I. S. Fairty, Solicitor, Toronto Transportation Commission.

Mr. Rowell, in opening the company's case, presented in detail all location and agreements affecting the company, and made a general statement describing the railway and other properties, the traffic, etc., and contended that the property should be valued in the condition it was when the city took it over.

Mr. McKay announced that the company would call 24 expert witnesses, outside of officials and employees, viz., 4 on the general field, 3 on land values, 3 on buildings, 3 on tracks and line, 3 on rolling stock, 3 on electric equipment, 3 on steam plants and batteries, while the city was refusing to purchase 1 on shop equipment, and 1 on office furniture, and that permission might be asked to call others. Mr. Tilley, for the city, contended that the proposed number of witnesses should be cut down. After considerable discussion the arbitrators decided to limit the number of expert witnesses to 24 for each side.

W. J. Hagenah, of Chicago, a specialist in investigating and valuing public utilities, the first witness called for the company, said he had been engaged to value the property, being given absolute charge, and had taken to Toronto a staff ranging from 12 to 20, which during the last month was increased to 40. The entire railway was measured by steel tape, he made a personal examination of the condition of all the track, and building and structural engineers valued the buildings. A complete investigation was made of overhead work, poles, wiring, cables, conductors, etc., all rolling stock was gone over, also transfer stations and batteries, and repair and machine shops. He considered 45 miles of the lines in excellent condition, 14 miles in better than 50% condition, 12 miles in generally fair condition, and that 19 miles should be taken up and relaid. He described the railway system as a well balanced one, well designed to meet Toronto traffic conditions. He testified in detail as to the condition and cost of rails, intersections, etc., and the various streets, the object of the evidence evidently being to establish what would be the replacement cost of the lines. He claimed that the poor condition of some of the lines was due to imperfections in the concrete bed beneath and between the ties, which was laid by the city, the foundations not being heavy enough and having given away, resulting in the rails sinking, and the paving blocks being displaced. He valued the entire system of tracks, cars, wires, buildings and electric and steam plant at \$20,477,612, and estimated that to re-

produce the system at present would cost \$27,161,649. After Mr. Hagenah's examination in chief had proceeded, almost daily, until Sept. 20, W. N. Tilley, K.C., for the city, asked the arbitrators if the evidence could not be less detailed, and said the city was not going to accept the basis of cost of labor and material averaged over three years, which Mr. Hagenah used in calculating the value of the track, etc. A suggestion was made that Mr. Hagenah's inventory notes, which he used in giving his descriptions, might be filed as evidence. The arbitrators and counsel discussed at some length the matter of reducing the evidence, but reached no conclusion. Mr. McKay, for the company, said he wished to emphasize certain points, but would condense the details as much as possible. After giving considerable more evidence as to traffic conditions on certain streets, Mr. Hagenah testified as to the value of machinery and tools in the company's shops, explaining that one man had made an inventory and examination, and that the average value was fixed by reference to prices charged during the last three years. Mr. McMaster, for the city, said such evidence was mere hearsay, and that people who sold things to the company should be produced. Mr. Tilley, for the city, asked the arbitrators for a ruling as to whether they would accept the three years average price when goods had been bought at certain known prices. Mr. Tilley argued this point at length. Mr. McKay replying for the company, the arguments extending over two days. Chairman Cronyn decided that the arbitrators would listen to the evidence first, and determine the basis of valuation later. Sir Thos. White, arbitrator for the company concurred with the chairman, but Sir Adam Beck, arbitrator for the city, disagreed, saying that he was not able to arrive at any conclusion regarding the value of the properties on the basis of a three years average valuation, and that he thought a great deal of time would be saved, and that the arbitrators would make greater progress, and be better able to determine the value of the properties, if they had the law defined, and also the means that they were to adopt finally in arriving at the value.

Mr. Hagenah continued his evidence on Sept. 23, dealing with the value of conduits, and stating that he had previously examined every one of the 188 man holes. When he proceeded to deal with the value of the company's head office building, Mr. McMaster pointed out that the city had declined to take over the building, the reproduction value of which was claimed to be \$116,237, and its present value estimated at 83% of that, or \$96,477. Mr. Tilley said the city does not desire to take over everything the company owns, but simply what is necessary for the physical operation of the road. This would also exclude Scarborough Beach Park, and certain other properties. The arbitration was then adjourned till Sept. 27.

The City of Toronto is paying its counsel, W. N. Tilley, \$300 a day, and A. C. McMaster, K.C., \$250 a day.

The Hull Electric Co. has ordered 2 one-man safety car bodies, 32 ft. long over bumpers, 8 1/2 ft. wide, to replace single track car bodies now in use. From Ottawa Car Manufacturing Co.

London Street Railway's Financial Position.

The London, Ont., St. Ry. owes the city \$7,500 for paving done by the city in 1919, for the company, to secure payment of which the city council obtained a judgment. As the company failed to pay the amount the council passed a resolution authorizing, subject to the City Solicitor's approval, the seizure of the company's property, the suggestion being to take the railway property just before the opening of the Western Exhibition, and operate the line, until sufficient money had been taken in to satisfy the judgment and the costs of enforcing it. Nothing, however, was done in the matter at that time, but it was reported Sept. 19 that a seizure had been made of money in the company's possession, amounting to about \$5,000, in partial satisfaction of the judgment. An alderman is reported to have stated that if the company proves conclusively that the earnings are not sufficient to pay its legitimate expenses, and the cost of the paving necessary to be done, the only wise thing to do is to increase the fares, the income realized by such increase to be used to do the paving.

The seizure of the company's funds has been the subject of negotiations, and it was reported Sept. 21 that an agreement had been reached by which the company would pay \$500 a month until the amount of the judgment, with interest and costs, is paid.

Mainly About Electric Railway People.

Sir John Gibson, K.C., President, Dominion Power & Transmission Co., Hamilton, Ont., who is stated to be one of the oldest officers of the Canadian Militia, has been appointed a Major-General.

R. C. Harris, City Work Commissioner, who had charge of the Toronto Civic Rys., was given a cabinet of silver by the employees recently, on his relinquishing charge of the lines to the Toronto Transportation Commission.

A. W. McLimont, Vice President, Winnipeg Electric Ry., visited Montreal, Toronto, and some other eastern points, early in September.

Sir Henry Pellatt, Toronto, a director of the Toronto Ry., and for many years Lieut.-Colonel in command of the Queen's Own Regiment, has been appointed a Major-General.

Percy W. Thomson, General Manager, New Brunswick Power Co., will, a press report says, relinquish the position shortly, only having taken it temporarily. He is also a director. We are officially advised that he has not resigned and will not do so until a suitable successor is found.

Nova Scotia Hydro Electric Development.—The Halifax City Council passed a resolution Sept. 2 authorizing the negotiation of an agreement with the Nova Scotia Power Commission to buy electric current developed at the St. Margarets Bay plant, for distribution in Halifax. The estimated cost of the distribution plant which will be required to be provided by the city is \$1,186,000. The Nova Scotia Tramways & Power Co. offered to undertake the distribution of the current in the city.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry.—The Board of Railway Commissioners has authorized location plans of the Eagle Place extension along Market St., to Ontario St., along Ontario St. to Port St., and along Port St. to Erie Ave., and of the Terrace Hill-Holmedale extension along St. Paul Ave. from Dundas St. to Burwell St., along Burwell St. from St. Paul Ave. to Morell St., and along Morell St. to West Mill St.; and has authorized the building of the latter extension across the Lake Erie & Northern Ry. on Morell St., Brantford, Ont. (Aug., pg. 434.)

British Columbia Electric Ry.—The Vancouver City Council was asked recently by a deputation to call upon the company to make an immediate extension of the Broadway West line.

Residents of Broadway west, Vancouver, are clamoring for an extension of that car line, for one mile, to Alma Road, or in the alternative the paving of the thoroughfare, and provision of a jitney service. The company has refused to make the extension on the grounds that it would not be justified by the population served, and that the cost of the extension would make any further expenditures while the question of its rates of fares is still in doubt.

W. G. Murrin, Assistant General Manager, is reported to have advised the Vancouver City Council, Sept. 13, that no extensions of the company's electric railway could be made at present, and that there was not sufficient traffic on the Broadway West and the Burnaby Lake lines, extensions of which were asked, to pay present operating expenses. The council passed a resolution that if the management does not change its mind within 30 days, city officials should report on the feasibility of the city putting on motor busses.

Calgary Municipal Ry.—The special intersection work necessary to give connection with the tracks laid over the new Hillhurst bridge is expected to be put in position at an early date, and the cars to be put in operation across the bridge early in October. (Aug., pg. 434.)

Cape Breton Electric Co.—C. C. Curtis, Manager, is reported to have been in Sydney Mines, N.S., recently, to discuss various matters in connection with the company's business. The question of the extension of the line to Florence was one of the matters taken up, but he stated that money could not be found at present for this. (Sept., 1920, pg. 503.)

Cornwall Street Ry., Light & Power Co.—We are officially advised that as a result of the recent vote by Cornwall, Ont., ratepayers, extending the franchise of the Stormont Electric Light & Power Co., which is controlled by the interests owning the Cornwall Street Ry., Light & Power Co., \$110,000 is to be expended on the reconstruction of the general properties, power and lighting plant, gas plant and street railway. Of this sum about \$45,000 is to be expended on renewing the street railway rails, etc., on the main street, or the street running between the G.T.R. and the C.P.R. stations and the center of the town. (Aug., pg. 434.)

Dominion Power & Transmission Co.—The Hamilton, Ont., City Council has appointed a committee to confer with the company's officials respecting the removal of the Hamilton St. Ry. tracks from Wilson St.

The relaying of tracks on the York St. line is reported to have been held up owing to a shortage of bricks for paving. (Aug., pg. 434.)

Fort William Municipal Ry.—Fort William, Ont., ratepayers voted recently in favor of expending \$30,000 for the extension of the railway to the new Chipewewa Park, on the Indian Mission, purchased recently. The City Council is reported to have decided on Aug. 23 to buy a right of way for the line from the Indians. (May, pg. 268.)

Hull Electric Co.—In the fire which swept Aylmer, Que., recently, doing about \$750,000 damage, the Hull Electric Co.'s property and equipment was damaged to the amount of \$4,000, but the cost of reconstructing the damaged lines is estimated at approximately \$8,000. We are officially advised that the company intends laying half a mile of 85 lb. rails on Main St., Aylmer, replacing the present 65 lb. rail. (Aug., 1920, pg. 450.)

Kitchener & Waterloo St. Ry.—A press report states that the Kitchener, Ont., Light Commissioners have decided to postpone building the proposed second track in the northeastern part of the city until a debenture bylaw to provide the funds has been passed by the ratepayers. (June, pg. 322.)

Lake Erie & Northern Ry.—The Board of Railway Commissioners is reported to have directed the company to build an industrial spur in the Holmedale district of Brantford, Ont., by July 19, 1922. (Oct., 1920, pg. 461.)

London & Port Stanley Ry.—A press report states that the remodeling of the station at Port Stanley, Ont., which will include putting in of a concrete foundation and changing the interior, will be started at an early date. (Aug., pg. 434.)

Ontario Hydro Electric Railways—Essex Division.—The Premier of Ontario is reported to have announced Sept. 2, that the Ontario Government will guarantee a bond issue of \$900,000 to cover the cost of improvements on the electric railway in Windsor, Ont., and vicinity. Work is reported to have been started, Sept. 19, on the construction of a double track line on East Wyandotte St. and Ouellette Ave. on a loop line from Sandwich St. on Ferry and Pitt Streets, to Ouellette Ave., Windsor. (July, pg. 381.)

Ottawa Electric Ry.—Street car service was resumed recently over the new St. Patrick St. bridge, the smaller cars only being operated over it, the larger Bank-St. Patrick cars being turned back at the end of St. Patrick St.

We are officially advised that the company contemplates the equipment of a transformer room at Nelson St. substation to step down from 12,000 to 2,200 volts. F. D. Burpee is Manager, Ottawa. (Aug., pg. 434.)

Regina Municipal Ry.—The Regina, Sask., City Council is considering the advisability of building some additional loops and extensions. (June, pg. 322.)

The Sherbrooke Ry. & Power Co. is laying 1,050 ft. of double track on Frontenac St., and renewing 850 ft. of track with concrete foundation and steel ties, on Aberdeen St. Sherbrooke, Que. (July, pg. 381.)

Toronto & York Radial Ry.—We are officially advised that the company has built two sidings on its Metropolitan Division, one at Lansing, Ont., for the Bowden Lumber Co., and the second north of Richmond Hill, for the Loyal True Blue Orange Society's Orphanage.

The Windsor, Essex & Lake Shore Rapid Ry. is, we are officially advised, making some track changes in Kingsville, Ont. Orders have been given by the Canadian Steel Foundries, Montreal, for the switch and crossing required. (Aug., pg. 434.)

Winnipeg Electric Ry.—A press report states that the company proposes to build only one track on Cornish Ave., between the Cornish baths and the Misericordia Hospital property. It is also stated that when final track arrangements are made, following the completion of the Maryland bridge, instead of two tracks curving on to Cornish Ave. and leading on to Sherbrooke St., one track will diverge on to Maryland St., as far as Wolseley Ave., meeting the Sherbrooke St. track at the intersection. A connecting link will be built from Cornish Ave. round the hospital property to Maryland St., and the onetrack line to Sherbrooke St. will branch into two tracks in front of the eastern portion of the hospital property. (May, pg. 268.)

Winnipeg Electric Ry.—The old tracks on Main St., between Sutherland and Selkirk Aves., are being taken up and replaced by new 85 lb. heavy type standard rails. The ties are being renewed, and special intersections are being put in at Dufferin and Main St., Euclid and Main St., Selkirk and Main St. Work on improving the tracks on Sherbrooke St. and Sargent Ave. is also being proceeded with. (May, pg. 268.)

Electric Railway Freight and Passenger Rates.

Cape Breton Electric Co.—C. C. Curtis, General Manager, told the Sydney, N.S., City Council, Sept. 15, that the issue of special tickets for workmen is being generally discarded.

Montreal Tramways Co.—L. J. Bourbonniere, financial secretary of Montreal Tramways Co.'s employes' union, is reported to have stated before a board of conciliation recently that the fares paid on the electric railway in Montreal are sufficiently high to make it unnecessary for the company to reduce wages, and that he thought the company should make an effort to have fares reduced. Chairman St. Cyr, of the Montreal Tramways Co., is reported to have stated that there will be no increase in the fares authorized to be charged on the company's lines.

The Nipissing Central Ry.'s Standard Passenger Tariff C.R.C. 23 was approved by the Board of Railway Commissioners' order 31,381, on Aug. 12, it having been filed on the basis prescribed in order 31,317, of July 27.

R. J. Fleming, General Manager, Toronto Ry. Co., the railway of which has been taken over by the City of Toronto, has been appointed by the Toronto City Council as a member of the Toronto Harbor Commission, to succeed the late Lieutenant Governor Lionel H. Clarke.

Proposed Sale of Toronto Ry. Co.'s Subsidiary Companies.

In connection with the holding on Sept. 30 of the adjourned Toronto Ry. Co.'s annual meeting the following circular was issued to shareholders, in explanation of the proposed sale of its subsidiary companies to the Hydro Electric Power Commission and the City of Toronto:—"The proposals cover all of the interests which the Toronto Ry. Co. has in its subsidiary companies known as—1. The Toronto Power Co. (and through it the Electrical Development Co. of Ontario, the Toronto & Niagara Power Co., and the Toronto Electric Light Co. 2. The Toronto & York Radial Ry. Co., which owns the radial railways lines running north, east and west from the city, known as the Metropolitan, Scarborough, Mimico, and Schomberg Divisions, respectively.

"The purchase price as at Dec. 1920, is \$32,734,000, payable: (a) Through the assumption by the Commission of outstanding liabilities of the various companies, amounting to \$22,775,177; (b) by the delivery of \$9,958,823 in bonds at par, approximately as follows: 1, \$6,971,295 City of Toronto 6% 20-year bonds; 2, \$2,987,528 Hydro Electric Power Commission, guaranteed by the Province of Ontario, 6%, 20-year bonds. The operations of the companies since Dec. 1, 1920, will, if the sale is confirmed, be for account of the Commission, and the bonds receivable by the Toronto Ry. Co. will bear interest from that date.

"Among the liabilities assumed by the Commission is the balance of \$13,558,917 now outstanding of an issue of 4½% debenture stock of the Toronto Power Co., due in 1941, and an issue of \$4,103,200 of 5% bonds due July 1, 1924, of Toronto Power Co. Both of these issues are guaranteed by the Toronto Ry. Co. Arrangements are being made (subject to the consent of debenture stockholders) to release the properties now under the first mentioned mortgage of \$13,558,917, together with the guarantee of the Toronto Ry. Co. and to substitute a bond of the Commission guaranteed by the Province of Ontario. This will leave the railway company's guarantee outstanding only on \$4,103,200 of 5% bonds of the Toronto Power Co., due July 1, 1924. The securing of the release of the guarantee above referred to will be a very great advantage, as it should enable the company to distribute all of the funds in its hands after July 1, 1924. In addition to the liabilities to be assumed by the Commission as above set forth, there are still outstanding approximately \$3,500,000 of liabilities of the subsidiary companies, consisting of bank loans, water power rentals, taxes, etc. The net equity, therefore, accruing to the railway company on the sale of the subsidiary companies is approximately \$6,458,823 (less discount on bonds to be sold to provide the necessary funds), being substantially in excess, with interest, made by the railway company in acquiring the assets now being sold.

"Shareholders will recall that when, in 1908, it was decided to lease the power generating and transmitting companies' plants, and to purchase certain of their bonds and capital stock, your directors were moved by two objects, the first and chief one being to preserve and ensure a supply of electrical power at reasonable rates with which to operate the company's street railway during the remainder of the franchise period, and the other

to acquire for the shareholders what then promised to become a very valuable franchise and investment when the company's railway would be taken over by the city. As to the first, their judgment has been amply vindicated, for had it not been for the arrangement then made for a cheap and ample supply of power, the company could not have borne the burden of the operation of its railway to the expiration of the franchise period. As to the second, no more promising investment could have been secured, and had it not been for government competition and the development of the feeling in favor of public ownership, with the accompanying injurious and unjustifiable legislation affecting private companies, your directors confidently believe that they would have been able to advise you to retain and operate their properties. In existing circumstances, however, we believe it to be in your interests to dispose of them to the Hydro Commission on the terms herein set out.

"The arbitration with the city is in progress. Every care is being taken to ensure the presentation of the company's case in the best possible fashion. It is impossible at this time to estimate the amount which will be awarded by the arbitrators, but it must, in any event, be very substantial. This amount will be added to the above mentioned equity of approximately \$6,458,823. From the total amount represented by the equity from the proceeds of the sale of the subsidiary companies and the arbitrators' award will have to be deducted the liabilities of the railway company proper, amounting approximately to \$5,450,000, made up of—

Outstanding bonds and interest	\$2,325,000
Percentages due the city and interest	1,750,000
Provision for sundry liabilities covering interest claims, judgments and arbitration expenses, etc., any	1,375,000

"In other words, deducting the above \$5,450,000 from the equity of \$6,458,823 above referred to, leaves a balance of \$1,008,823, after making provision, so far as can be foreseen, for all of the liabilities of the railway company proper and of its subsidiary companies. To this amount will be added the arbitrators' award and the combined amount will represent the total value of the company's outstanding shares.

"Shortly after the sale to the Commission is consummated and the proceeds of the award are received, it will be possible to make a partial distribution to the shareholders. Owing to the guarantee of the railway company on the \$4,103,200 of bonds of the Toronto Power Co., due July 1, 1924, remaining outstanding, an equal amount of cash or bonds forming part of the purchase price must be retained by the railway company until after that date. As soon thereafter as the Commission, which assumes the payment of the said bonds, pays the same, it will be possible to make a final distribution to the shareholders.

"It is to be borne in mind that these proposals require the favorable action of the debenture stockholders of the Toronto Power Co. under the 4½% mortgage due in 1941, and a meeting of such holders is to be called in London shortly for this purpose. Furthermore, they are dependent upon a final agreement being reached among the city, the Hydro Commission and ourselves. Such progress

has been made, however, as to justify your directors in submitting the proposals to you in principle for your approval and, so far as can now be foreseen, there should be no hitch in the final consummation of the bargain. Your directors unanimously and without reservation, recommend that the proposed sale be approved."

Electric Railway Statistics for 1920.

The Dominion Bureau of Statistics' Transportation Branch has issued the following preliminary report: Canadian electric railways as a whole showed a net operating revenue of \$9,804,762 for the calendar year 1920, against \$9,312,884 for 1919. The total operating revenues increased from \$40,698,586 in 1919, to \$47,047,246, and expenses increased from \$31,385,702, to \$37,242,483, the greatest increases being in maintenance of equipment, which went from \$4,717,614 to \$5,701,450, and in operation of cars, which went from \$13,806,108 to \$17,338,564. After paying taxes, interest, etc., there was a net corporate income of \$954,818, against \$3,704,066 for 1919, and after making deductions for dividends there was a total deficit of \$2,421,286. Thirteen of the 66 railways reporting declared dividends amounting to \$3,376,194; 41 of them had deficits amounting to \$3,658,911, while the other 25 showed surpluses amounting to \$1,237,625.

The total capitalization was \$170,826,404, made up of \$91,321,955 of stocks and \$79,504,449 of funded debt. The single track increased from 1,687 miles to 1,699 and the second main line amounted to 509 miles.

Passengers carried totalled 804,711,333, an increase over 1919 of 55,376,953, or 7.4%. The passenger receipts were \$43,279,009, an increase of \$5,731,553, or 15.3%. The average passenger fare collected per passenger was 5.37c, against 5.01c for 1919. This included fares from passengers on interurban lines.

The number of employees was 17,341, an increase of 401. The total pay roll was \$24,235,932, an increase of \$4,024,356, or 19.9%.

Miles of road	1,669

Freight, mail and express car mileage	\$4,538,196
Paid passengers carried	804,711,333
Tons of freight carried	2,691,150

Answers to Questions on Electric Railway Topics.

Answers to questions addressed to the American Electric Railway Association's question box, have been sent by officials of Canadian electric railway companies, as follows:

Authority for Expenditures.—What methods are used by members to compile Authorities for Expenditures, by Interstate Commerce Commission account numbers?

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg.—This company is following a system of work orders of A.F.E.'s consisting of two forms, one of which is known as a maintenance and reconstruction work order, and covers all extraordinary maintenance and repair work where it is necessary to keep a record of the cost of the particular job and obtain a proper authorization before proceeding with the work. The other form, which is known as a construction work order, covers all expenditures on account of construction, additions and betterments to property, no changes being made in the property accounts without the authorization of a construction work order. All estimates and the preparing of work orders is done by the department making the recommendation. The classification of accounts in use was prescribed by the Public Utility Commission and is based on the I.C.C., States of New York and Wisconsin, classifications, each account having a number. Account numbers are shown on the work order or A. F. E., under a general heading, followed by an estimate of the various items coming under the heading and chargeable to that particular account. Each department is supplied with a copy of the classification, and, in preparing estimates, distributions are made and classified according to the various account numbers. For the purpose of making distributions, each account number, as shown on the estimate, is assigned a letter of the alphabet, and in making distributions the work order number and the letter of the account to which the item is properly chargeable is shown. For example, suppose an estimate contained items chargeable to accounts No. 504, Grading; No. 505, Ballast; No. 506, Ties; No. 507, Rails, Rail Fastenings and Joints, the accounts would be shown on the estimate as No. 504a; No. 505b; No. 506c; No. 507d; assuming the work order number to be 100, all items chargeable to account No. 504 would be distributed as work order no. 100a; accounts no. 505 as work order no. 100b; account no. 506 as work order no. 100c, and so on. After receiving the proper approval, all copies of the work orders are sent to the accounting department, where the distribution and the estimates are verified and a work order number assigned. The work order records in the accounting department, in which all distributions are posted on the same basis, not only show the charges to the particular work order, but the estimate as well, so that when the job is finally completed the record shows both the estimate and actual expenditure. The total amount expended on a work order is closed out at the close of the year, and the respective accounts in the construction or operating ledger. The system is working out very satisfactorily, there being very little difficulty in getting the distributions made to the proper accounts, providing the estimates are properly distributed.

Power Distribution.—Are any companies using insulated negative return feeders, if so, to what extent and for what relative distances from power station to feed points?

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg.—We use insulated negative return feeders in connection with negative boosters in one substation district only. The other six substation districts we operate on the 3-wire system. In three of the six 3-wire districts we use no insulated negative return feeders at all, as our railway tracks pass alongside the stations. One other 3-wire station has a long neutral feeder tapping a distant track about three-quarters of a mile distant. The remaining two 3-wire stations are removed one or more city blocks from the nearest tracks, and return current is handled through insulated neutral feeders between rails and station. In the first substation district above mentioned there are 5 negative booster feeders reaching to points distant from the station, the average length being 5,400 ft. The boosters can generate as high as 75 volts, and the feeders vary from 500,000 c.m. to 2/0.

Re-examination of Platform Employees. Are old employees subject to periodic re-examination as trainmen; if so, how frequently, and to what extent? F. D. Burpee, Manager, Ottawa Electric Ry., Ottawa.—Only when we suspect the employee has become unfit to perform his duties. In the interests of safety, I believe that this should be done at least every five years, but it has not yet been instituted on this system.

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg.—Old employees are not subject to re-examination as trainmen, except in the case of men returning from overseas service. These men are treated the same as new employees and receive the same examination.

Electric Railway Notes.

Toronto Railway employees have provided a bronze tablet, over 5 ft. high, to be placed in the city hall, in memory of 96 of their colleagues who gave their lives in the Great War, for which 964 employees enlisted.

An Ontario Hydro Electric Ry., Essex Division, Tecumseh line car was held up between Windsor and Tecumseh, Ont., Sept. 21, by two armed men, and the conductor and three passenger were relieved of their money.

A press report states that arrangements have been practically completed for starting the operation of motor buses in London, Ont., with a general 5c. fare with transfers, and that it is expected to have 20 buses in operation.

Two London & Port Stanley Ry. conductors, Wm. Watson and Wilfrid Britton, pleaded guilty, on Sept. 16, to taking \$4 and \$10 respectively, money collected as fares, instead of turning it into the office, and were remanded for sentence.

The St. Thomas, Ont., City Council decided on Sept. 1, to suspend the Sunday operation of cars on the St. Thomas Municipal Ry. on account of the receipts for the last weeks of August being in-

sufficient to meet the cost of operation. It is proposed to renew the Sunday service next spring.

Manon and Hayball, who have been operating a motor bus service between Lambeth and London, Ont., a section of territory served formerly by the London & Lake Erie Ry. & Transportation Co.'s electric railway, now dismantled, are reported to have put on a new bus which will give a 20-minute service between the two points.

C. C. Curtis, General Manager, Cape Breton Electric Co., discussed complaints of insufficient car accommodation with the Sydney, N.S., City Council, Sept. 15. He said that everything possible was being done to relieve congestion at the rush hours, and that any suggestions as to how further to better conditions would be considered.

The St. John, N.B., City Council, as an outcome of the New Brunswick Power Co.'s electric railway employees' strike, has approved of regulations for the operation of motor bus traffic. The buses are being operated by the Union Bus Co., a 10 minute service to West St. John having been started Sept. 3. The company is stated to have 15 jitneys and busses in service, and to be employing 60 men.

In consequence of some demonstrations at Lancaster, N.B., recently, owing to the operations of the New Brunswick Power Co.'s electric railway, whose motormen and conductors have been on strike since July, the company complained that the police were lax in their duty. An investigation was opened by the Lancaster Board of Control, Sept. 13, and after some evidence had been put in the investigation was adjourned to Sept. 27.

Now that a section of the provincial highway on Dundas Road west from Toronto is approaching completion, representatives of Toronto motor bus concerns have been looking over the territory, and are talking about putting on a service. The suggestion is to start from the city boundary, run through Islington to Cooksville and possible through Erin-dale to Streetsville, giving a round trip fare less than the C.P.R. 10-trip tickets cost, or the Toronto Suburban Ry. rate to Cooksville, where the railway diverges from Dundas Road.

The B.C. Electric Ry., which proposes to begin the operation of one-man cars in Vancouver and Victoria, laid its plans before the provincial authorities recently. Ten one-man cars are proposed to augment the rolling stock while the rule of the road is being changed. It is said that Premier Oliver, who was interviewed, is in favor of the new type of car. He was called on later by a delegation from the street railway men's union. The first lines to use one-man cars will probably be either in Victoria, or some of the suburban lines in Vancouver, which now operate on a shuttle service.

Toronto-Niagara Falls Hydro Electric Ry.—The Prime Minister of Ontario stated recently that the Government had not decided what would be the ultimate disposition of the Toronto-St. Catharines-Niagara Falls proposed electric railway line, and added that nothing will be done until the Chippawa power development is completed, the financial burden of the province being already sufficiently great. Whatever the province may do ultimately about the line, no additional financial obligations will be undertaken at present.

Omnibusses for Toronto Transportation Commission.

The Toronto Transportation Commission is introducing motor-bus transportation as an aid in the solution of the city's traffic problems, and has ordered four busses from the Fifth Avenue Coach Co., New York, N.Y., and also one bus from each of two English builders, the Leyland Co., and the Associated Equipment Co., also one bus from Eastern Canada Motor Co., Hull, Que., similar to the first mentioned.

The busses ordered from the Fifth Avenue Coach Co., one of which is illustrated herewith, have the following general dimensions: height, 10 ft. 5 in.; wheel base, 14 ft. 7 in.; gauge, front wheels, 5 ft. 6 in.; rear wheel, 6 ft. They are of

deck, and to the interior of the bus. The upper deck flooring resembles that of the interior; the seating arrangement is similar to that below, but the seats are of wood slat construction. A continuous steel belt surrounds the upper deck, above which is a belt of wire mesh, and at the top, about 3 ft. above the floor, and extending all the way around the deck, with the exception of the opening to the staircase, is a brass hand railing. The upper deck has seating accommodation for 29 passengers, the total seating capacity being thus 51.

The motor is a 4 cylinder special silent sleeve valve type, of 40 h.p., lubricated by means of a force pump. Ignition is

hole for cleaning. The interior is heated by utilizing the hot gases from the motor, these passing through protected radiator coils on their way to the exhaust opening. The interior is provided with artificial illumination by 12 lights, current being supplied by the generator and also by storage batteries.

Motor busses have long been suggested for improving the traffic situation in Toronto, and the Commission has decided to try them thoroughly. The four ordered from New York have been delivered and put in service along Humberstone Ave. from Dundas St. west to Quebec Ave., then along Annette St. to Runnymede Road. This route will provide a

the 2-deck type with staircase at the rear. The framing is hydraulic pressed channel construction, of heat treated chrome nickel steel, and of ample strength and flexibility to meet the most severe road and service conditions. The weight is carried by semi-elliptical springs. The outside of the car body is of steel finish, red enamelled. The interior of the body is finished in ash. The large window space affords ample natural light. The wood floor is equipped with the transverse corrugations which have been found best suited to cope with conditions of slush, snow, etc. The inside seats for 22 passengers are arranged transversely on both sides of a central aisle, and are upholstered in rattan. Ample accommodation is provided at the front of the car for the operator, and he has an unobstructed view of the road.

The staircase leading to the upper deck is shown clearly in the illustration. The rear platform provides entry both to the staircase, leading to the upper

from a high tension magneto; the thermo-siphon cooling system is employed, and a special feature is the radiator, so designed that its freezing up would not result in damage. Selective sliding transmission is employed, with four gear changes in forward motion. The drive is of the external gear and plain bevel type. The rear axle is of heat treated forged steel, equipped with steel low level housing, and the front axle is of the I beam type, of heat treated forged steel. The wheels are of the steel disc type, the front ones being equipped with 24 x 5 in. single solid tires, and the rear with 34 x 5 dual solid tires. The service brakes are of the duplex air cooled type, and the bus is also equipped with external contracting cable emergency brakes. Worm and nut steering gear is employed, with the steering wheel located at the left. The gasoline is conveyed to the carburetor by gravity; gasoline tank is of 40 gall. capacity, and is provided with a large demountable strainer and a hand

service to a thickly populated section north of Bloor St., one of the city's chief east and west streets.

An Exception.

"Will the gentlemen please move forward a little?" called the polite conductor of the car as a dozen more passengers tried to scramble in.

"I won't," growled one hard-faced man, who clung to a strap near the door.

"Oh, I didn't ask you," said the conductor.

The Regina, Alta., City Council considered recently, complaints as to the working of the transfer system on the municipal railway. D. W. Houston, Superintendent, reported that if complaints were made at the time of occurrences they could be checked up and remedied, and that rules must be made to govern the large percentage of travellers rather than a few.

Effects of Change in Rule of Road on British Columbia Electric Railway.

By W. G. Murrin, Assistant General Manager, B.C. Electric Railway.

In accordance with the Highway Act Amendment Act 1920, passed by the British Columbia Legislature, the rule of the road was changed from left to right hand operation, to become effective in the eastern portion of the province on July 1, 1920, and in the western portion on Dec. 31, 1921. This change involves the British Columbia Electric Ry. in a \$1,000,000 expenditure to change its rolling stock, tracks, and overhead to permit of right hand operation on its 368 miles of city, suburban and interurban tracks.

In order that the magnitude of the work involved in making this change may be understood, I give below brief particulars of what has to be performed and how we propose to do it.

Track.—The following work will have to be performed in order to permit cars and trains to operate right hand with the same efficiency, safety and convenience as they are being operated now:—1. Take up and lay with new material, 44 permanent and 12 temporary cross-overs. 2. Take up and lay with new material, 7 permanent and 1 temporary Y layouts. 3. Change electric switches to adjoining tracks at 19 different points. 4. Change position of 8 derails. 5. Change spring switches. 6. Change elevation of certain portions of interurban tracks to permit of safe operation. 7. Change location of stations, shelters, and platforms at 13 points on double tracked interurban lines.

The permanent installations referred to above, indicate that tracks are constructed on paved streets, necessitating pulling up pavement, etc., and relaying them, following track changes being made. Temporary installations mentioned above indicate that tracks are constructed on non-paved streets. The new track material and special work necessary to carry out the above is on order for delivery in December. Its installation, however, cannot be commenced until after Jan. 1, when it will be proceeded with as speedily as possible. The estimated cost of track alterations is \$416,902.67.

The overhead changes in connection with this problem, are by far the highest item, and are estimated to cost \$17,722, which covers cost of making all necessary changes to cross-overs, electric switches, Y's, frogs, insulators, curves, etc., to permit of the efficient operation of the systems with right hand movement of traffic. Like the track changes, very little under this heading can be accomplished until after the change over becomes effective.

Rolling stock changes constitute the major work and expense involved in this change over, and I know of no precedent by which we might be guided in carrying them out. There are 269 units to be changed over and made suitable for right hand operation, as follows:—189 single end cars, 73 double end cars, 6 snow sweepers, 1 snow plough. This equipment comprises 20 different types of electric and cable types, requires special alterations suitable only to that particular class of car. It will therefore readily be appreciated the difficulties we have to meet in making our rolling stock changes. Work has already commenced in making temporary alterations to Vancouver city cars and we expect by the end of the

year to have practically all rolling stock units changed over in a temporary fashion, ready for right hand operation. These changes are being carried out with the least possible inconvenience to the travelling public and work is proceeding along the following lines. Eight to 10 cars at a time of a certain type are being brought into our Prior St. shops, in Vancouver, where temporary alterations to front and rear vestibules are made, as well as installation of temporary steps on right hand side of cars. The right hand openings are then boarded up, and cars put back into service. When the change over is actually about to take place the services on all lines will be considerably reduced for from one to four days, during which time the cars so released will be made suitable for right hand use, by removing the boards from the right hand side openings, above referred to, and tying up securely the gates or doors, with which all our cars are equipped, on the left hand side. When the complete cars will then be ready for service. When all units have been so changed it will be necessary to systematically again put all the cars through the shops, two or three at a time, when permanent alterations will be made, such as installation of steps, and gates or doors, to conform with government regulations, installation of mechanism to operate the same, as well as many other details too numerous to mention, but which can only be cared for following the change over taking effect. I estimate it will take approximately 18 months or two years to put all the units through the shops, and permanently equip them for right hand operation, in the same manner as they are at present equipped for left hand operation. \$498,773 is the estimated cost of changing over our rolling stock units, to conform with the change of the rule of the road.

Total Expenditure.—The above mentioned expenditures are summarized as follows:—Track alterations, \$416,902.67; overhead work, \$17,722; rolling stock, \$498,773; total, \$933,397.67.

These figures do not include indirect losses in revenue which the company is bound to suffer, from one cause or another, for months following the change becoming effective, nor do they take care of increased accident costs, which will undoubtedly be high. The B.C. Government has agreed to contribute \$350,000 towards the total expense.

The Grand River and L.E. and N. Railway Switching Service in Galt.

In connection with the Board of Railway Commissioners' recent order granting the application of the City of Galt, Ont., that the G.R. Ry. and the Lake Erie and Northern Ry., which are under the one management, operate an industrial spur in the southwestern section of the city, we are officially advised that at the earnest solicitation of the Galt city authorities, the Board of Trade and the local manufacturers interested, the G.R. Ry. Co. consented in 1910 to build a spur from its main line on South Water St., across the Grand River, through the west side industrial district, to provide the manufacturers connection with the C.P.R.

and the G.T.R. At that time a 10 year franchise was granted in respect of operations on streets to be occupied, terminating with the company's main franchise. It was, however, understood that both franchises would be renewed, as otherwise the company would not have considered the large expenditure involved in bridging the river, buying the right of way, and building the spur. The company's endeavors to secure an extension of the franchise were unsuccessful, owing to the opposition of hydro radial interests, with the result that the right to operate under the city franchise, to serve the west side industrial district expired Feb. 2. In view of the friendly relations that had always existed between the manufacturers and the company, it was felt that the service should not be discontinued abruptly, and accordingly the company continued to switch cars for two months to give the manufacturers an opportunity to take up the question of an unrestricted service. The manufacturers applied for an order directing the two companies to resume switching service without limit as to time. The Galt City Council followed with a similar application, but limiting the time of switching service to one year. The Board of Railway Commissioners granted the application with a reservation to enable the Galt City Council to move to vary or rescind the order.

The Grand River Ry., formerly the Galt, Preston & Hespeler Ry., was operated in Galt, along North and South Water Sts., up to February, when, owing to the termination of the franchise, it was transferred to a private right of way terminating at the C.P.R. freight yard, with a connection with the Lake Erie and Northern Ry. The spur line in question left the L.E. & N. Ry. and proceeded along South Water St. to near Walnut St., where it turned north, crossing the Grand River, and then through industrial plant sites, and public streets, reached the Startevant Co. and the Victoria Wheel Works' plants. (Aug., pg. 434.)

Proposed Purchase of Moncton Tramways, Electricity & Gas Co.'s Property.

Moncton, N.B., ratemakers were to vote on Sept. 29 on a bylaw giving authority to the city council to acquire the Moncton Tramways, Electricity & Gas Co.'s property, effects and franchises, as from May 31, for \$165,000, with 6% interest from May 31, until the amount is paid, under an agreement dated Sept. 9. The agreement also varies the terms of the company's franchise of May 11, 1910, as to the percentage to be paid to the city for the natural gas part of the company's business, which is not being sold. The discussion preceeding the passing of the bylaw by the council dealt with the lighting franchises, in particular, the electric railway franchise not being referred to. A similar agreement was voted on by the ratemakers July 3, 1920, and defeated by 530 to 475.

The Edmonton, Alta., Good Roads Association is reported to have called the attention of the city commissioners to a practice by motormen on the Edmonton Radial Ry. of starting up their cars while their attention is still distracted from the road ahead by making change or selling tickets.

Marine Department

General Shipbuilding Matters Throughout Canada.

Canadian Vickers Ltd., Montreal.—The passenger and cargo steamship North Shore, operated by Clarke Steamship Co., Quebec, which was gutted by fire a short time ago, has been reconstructed by Canadian Vickers Ltd. to designs and specifications by Walter Lambert, naval architect, Montreal, the work being carried on under his supervision. After its completion the owners gave a luncheon on board the ship at Quebec, among the guests being the Minister of Trade and Commerce, Sir George Foster, and Lady Foster, and Premier Taschereau, of Quebec, after which the ship sailed for Gulf points, Sir George and Lady Foster being among the passengers.

Collingwood Shipbuilding Co., Collingwood, Ont.—In consequence of this company having taken a contract from the Marine Department to finish at Toronto, on a cost plus basis, the two steel cargo steamships Canadian Pathfinder and Canadian Engineer, which the Dominion Shipbuilding & Repair Co. was building when it became bankrupt, the City of Toronto assessed the company on \$252,000 for business assessment. The company appealed to the city court of revision, and the city countered by claiming that if a business tax could not be imposed an income tax could be. The court reserved judgment on Sept. 19.

Harbour Marine Co., Victoria, B.C.—The action by J. S. Clark, naval architect, against the Harbour Marine Co., Victoria Machinery Depot Co., and C. J. V. Spratt, President of both companies, for salary and commission alleged to be due, in connection with the building of the steamships Canadian Winner and Canadian Traveller, for Canadian Government Merchant Marine, by Harbour Marine Co., was concluded at Victoria, Sept. 15, and judgment given in J. S. Clark's favor on all points, and he was also relieved of any costs in connection with his actions against any of the defendants. The judgment states that the plaintiff is entitled to his claim for \$500 a month from Dec. 1918 until the date of the taking over of the second steamship at the Harbour Marine Co.'s yards, and that he is also entitled to 5% of the gross profits made by either of the defendants, arising from the construction of these two ships, pursuant to the contract between the Victoria Machinery Depot Co. and the Dominion Government. The term, "gross profits" is defined as "the difference between the total costs of construction incurred by the defendants in carrying out the said contract, and the total sum paid by the Dominion Government to the defendants under such contracts."

Nova Scotia Steel & Coal Co., New Glasgow, N.S., launched the ocean going steam yacht Sea King, Sept. 17, for Baron Bliss, Nassau, British West Indies. She is steel built for exploratory purposes, and has the following dimensions,—length 6 p. 137 ft., breadth 42½ ft., depth molded 28½ ft. Her gross tonnage is 1,866.31, and she has an estimated deadweight carrying capacity of 3,000 tons. She is to be equipped with two 250 h.p. Vickers-Peters semi-Diesel oil engines, and all the auxiliary equipment will be electrically driven, and the same motive power will be used for the

anchor. She is being specially built to the owner's design, and has two large bilge keels for steadying purposes. The interior fittings and furnishings will be of elaborate design. The owner's apartments will occupy the center of the upper and lower decks, and will be connected by an elevator. The accommodation for officers and men will be located forward.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—The annual meeting was held at Port Arthur, Sept. 1. The directors for the current year are: James Whalen, President; P. C. Chace, Vice President; A. J. McConber, John Brennan, R. D. Hubbert, E. W. Rogers, and James Playfair. A. B. Conmee is Secretary-Treasurer.

Sydney Foundry & Machine Works, Sydney, N.S.—The marine railway which

Dominion Marine Association.

President, A. A. Wright, President, Tide-water Shipbuilders Ltd., and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

First Vice President, H. W. Cowan, Director of Operation, Canada Steamship Lines, Ltd., Montreal.

Second Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Executive Committee, W. E. Burke, H. W. Cowan and T. R. Enderby, Canada Steamship Lines, Ltd., Montreal; Yvon Dore, Simpson, McNaughton Line, Ltd., Montreal; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormack, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; G. J. Madden, George Hall Coal Co. of Canada, Montreal; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Waller, Keystone Transportation Co., Montreal; Hon. L. C. Webster, Webster Steamship Co., Montreal; A. A. Wright, Toronto, and L. Henderson, Montreal.

Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine World, Toronto.

this company has built was completed and ready for operation Aug. 29. It has a lifting capacity of 1,200 d.w. tons, and is a standard railway drydock, 200 ft. long over the keel blocks, 50 ft. wide, and gives 10 ft. of water forward and 16 ft. aft at mean high tide. It is of timber construction on pile foundation, and is operated by two 2½ in. chains and a powerful hoisting machine, capable of docking a full load in about 30 minutes. The work was done by Crandall Engineering Co., East Boston, Mass., the machinery and iron work being made by Sydney Foundry & Machine Works.

Transportation & Shipping Co., Sorel, Que., launched the steam barge Jeannot L. recently. Her dimensions are,—length 185 ft., breadth 36 ft., depth 19 ft. She has three masts, equipped with derricks, a donkey engine and boilers, with windlasses and complete equipment for loading and unloading. She is one of a number of ships of the trawler type

commenced at this plant by the Leclaire Shipbuilding Co., the former owner. Another one, Napoleon L., which was sent to Montreal, on her maiden trip, for use as a tug there and generally in the Gulf of St. Lawrence and seaboard, has the following dimensions,—length 135 ft., breadth 23½ ft. She is of steel throughout and is equipped with triple expansion engines of 750 h.p. and with wireless telegraphy.

The four wooden steamships, which were built by the National Shipbuilding Corporation, Three Rivers Shipyard Ltd. Division, Three Rivers, Que., for the French Government, and named respectively, Bouxwiller, Bouzonville, Cattenon and Cernay, have been bought by Lachance Ltd., Quebec, Que., which operates at Sorel as the Transportation & Shipping Co. We are officially advised one or two of the ships may be sold again, but, if retained by the present purchasers, the machinery will be removed, and the hulls converted into barges, the work being done at this shipyard.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., launched the s.s. Princess Louise, for the C.P.R. British Columbia Coast Service, on Aug. 29, as mentioned briefly in Canadian Railway and Marine World for September, the christening being performed by Mrs. J. W. Troup, wife of the Manager, C.P.R. British Columbia Coast Service, Victoria, assisted by Mrs. H. W. Brodie, wife of the General Passenger Agent, C.P.R., Vancouver. The former was presented by the builders with a silver tray and coffee urn, and the latter with a silver mallet, which was used to launch the ship.

The dimensions of the hull, particulars of accommodation, etc., were given in our last issue. The main engines were built by the shipbuilders, and were designed for 4,500 i.h.p. They are of the vertical, triple expansion type, with 4 cylinders, balanced on the Yarrow, Schlick & Tweedie system, with high pressure cylinder 28 in. diam., intermediate pressure cylinder 43 in., and 2 low pressure cylinders, each 50 in., all with 39 in. stroke. The high and low pressure cylinders have piston valves, and the intermediate pressure cylinder has the usual D valve, with relief balance rings on the back. All pistons are fitted with Lockwood & Carlisle rings, and the usual Stephenson valve gear is used, with an all round steam reversing gear. The main bearings, crank pins, etc., are of liberal dimensions, and the engines throughout are well fitted for the strenuous service on the coast. The condenser is circular in form, and detached from the frame of the main engine. Weir's patent dual independent air pump, independent feed pumps, and feed heater, are supplied. The circulating pump is independent, and the ballast, bilge, sanitary and fresh water pumps are all of standard make. The crank shaft is of mild steel, in two sections, with four cranks of the built up type, and it is said to be the largest shaft of this type built in British Columbia. The tunnel and tail shafting is also of mild steel, the hub of tail steel, and the propeller consists of 4 bronze blades, 13½ ft. diam.

The electric lighting system consists of two 65 kw. generators, built in England, each machine being capable of taking care of all the lighting of the ship, as well as the electric freight elevator, search light, electric heaters, etc. Included in the ship's equipment is a refrigerating plant of the (122 type, capable of taking care of two cargoes of frozen meat, as well as a separate room for ship's stores. The refrigerating room is placed 'tween decks aft, and can be conveniently loaded and discharged through the after hatch. The steam steering gear is located directly over the rudder, in the after end of the ship, and is controlled from the bridge by a line of shafting. Chadburn's telegraphs are used, consisting of tell-tale dials on the bridge, and in the engine room. In addition there is a loud speaking telephone between the bridge and the engine room, and a docking telegraph between the bridge and the after end of the ship. Four single ended boilers, built by the Vulcan Iron Works, Vancouver, B.C., are provided, each 16 ft. 2 in. dia. by 12 ft. long. They are placed in pairs with a common stokehold under each boiler, fitted with three corrugated furnaces, 52 1/4 in. external diameter, and the boilers are designed for a working pressure of 180 lb. They are equipped for burning oil fuel on the Dahl system, and have ample grate and heating surface for coal or oil at natural draft, but two large fans are installed for assisting the draft and cooling the stokehold when necessary. While the main engines and boilers were built in Vancouver, the auxiliary machinery was built in Great Britain. The ship, while about 12 ft. shorter than the company's s.s. Princess Charlotte, has a greater beam, thus providing greater tonnage. There is stateroom accommodation for 300 passengers, the provision for 44 second class passengers being included. The dining room will seat 140 persons at a time, and separate dining and smoking rooms are provided for second class passengers. The main entrance is solid polished walnut, the cabins white enamel, the dining room light oak, and the stairway to the sitting rooms are in polished mahogany. The ship was designed by R. All, B.Sc., formerly of Fairfield Shipbuilding & Engineering Co., Glasgow, Scotland.

D. C. Coleman, Vice President, Western Lines, C.P.R., at Vancouver, following the launching, said in part: "Speaking of a newspaper on one occasion I said 'The future of Vancouver lies on the ocean.' When we have failed since to agree with some persons about the proper measures to be taken for the development of the port, that sentence has been quoted with a view to our discomfiture. But I still believe it to be true, and if it was an indiscretion, as these critics suggest, to have said it just then, it is an indiscretion of which I am not ashamed. I believe the future holds much in store for this city and for this coast in the way of the growth of seaborne commerce. Some observers say that the future will see a greater increase in shipping on the North Pacific than on any other sea. I hope you will forgive what seems to be a prophecy. I remind you that for many years the C.P.R. has held for Canada the blue ribbon for supremacy in service on the North Pacific. And while prophecies are often dangerous, and sometimes foolish, I venture to predict that it will be a long time before any other company or any other nation will wrest that ribbon from

us. The C.P.R. coast steamship service in which the Princess Louise is to be employed, was once described by a none too friendly critic of our company, J. J. Hill, as the finest service of the kind in the world. As to whether or not that was an exaggerated compliment I shall leave you to judge, but I must say that the service owes its efficiency very largely to the ability and the exertions of one man. I refer to J. W. Troup. When he took charge the fleet was practically nothing but a name, and supported by the wise generosity of two successive presidents of the company, he has brought it after years of enthusiastic and capable work to its present condition. Of all the officers of character and efficiency who have devotedly served the company, there is none of whom we are more justly proud. We regarded it as only appropriate that some one very dear to him should have a part in this ceremony, and we, therefore, felt gratified and honored when Mrs. Troup, who is so universally esteemed and admired, consented to act as sponsor for the Princess Louise. The building of a ship of this character at Vancouver is an outstanding achievement. When it is completed I think you will agree that it is the first ship built in the Americas which will compare in design and finish with the best products of the great yards in the British Isles. You have every right to be grateful to Mr. Wallace and his associates for this demonstration of what can be done in British Columbia, and on your own behalf and on behalf of the owners, who have more than seen what has been done, wish to offer the builders our sincere congratulations and our very best thanks."

A. Wallace, in replying for the builders, stated that it was their ambition to change from the building of freight steamships to the more difficult work of building passenger steamships, and the construction of the Princess Louise was a step in this direction. He hoped that in the future the company would be called upon to build passenger ships of the type of the Empresses. Several of those present at the luncheon were subsequently the guests of J. W. and Mrs. Troup, at dinner, at the Hotel Vancouver.

Westminster Marine Railway Co., New Westminster, B.C., has been given a contract by the B.C. Public Works Department for the hull of a boat for the Fraser River ferry service at Agassiz, for \$75,000. The hull is to be of Douglas fir, except where otherwise specified, with two watertight bulkheads. The entrance to the engine room and men's lavatories are to be placed at one end, and the steam heating room and women's lavatories at the other. The principal dimensions will be—length 60 ft., beam, moulded, 26 ft., depth moulded, 5 ft. The whole of the machinery, shafting and fittings, will be supplied by the Department and will be fitted by it, or will be done under another contract.

Yarrows Ltd., Victoria, B.C., had the following repair work during August:—Standard Oil Co.'s s.s. Caddo, 6,329 tons, extensive overhaul and repairs; Canadian Government Merchant Marine s.s. Canadian Prospector, 5,450 tons, cleaning, painting and repairs; U.S. Shipping Board's s.s. Keystone State, 8,393 tons, engine room repairs; H.M.C. schooner Naden, 100 tons, cleaning, painting and minor repairs; C.P.R. s.s. Princess Maquinna, 1,777 tons, repairs to bow and bottom damage due to stranding; Producers Rock & Gravel Co., 2 scows.

Owners' Rights in Partially Built Ships, Under Builders' Liquidation Proceedings.

An appeal of the liquidator of Three Rivers Shipyards Ltd., and Molsons Bank, against the Superior Court's judgment of Nov. 6, 1920, wherein the liquidator was ordered to hand over to La Societe Naphthes Transports, Marseilles, France, a partially built oil tank steamship, together with all material on hand and intended for the ship, and the ship's machinery under construction, the latter material only to be handed over on payment of any amount due thereon, and reserving the liquidator's rights with regard to any additional amounts that may become due under the contract, less such amounts as the owners may have to expend for completing the ship, came before the Court of Appeal at Montreal Sept. 16. The portion of the original judgment which gave the owners possession of the unfinished ship was confirmed, but the Court of Appeal held that there was an error in the ruling that the liquidator should deliver materials, and consequently the materials in the liquidator's hands. The bank's interest in the materials is maintained, as they had been assigned to it as security for advances to the builders, under the Bank Act, sec. 88. The owners also appealed from the Superior Court's judgment, which reserved the liquidator's right to recover from the owners such further sums, if any, as might become due under the contract for building the ship, less such sums as the owners might expend in completing the ship, and this appeal was dismissed with costs.

The ship, Capitaine Damiani, was completed by the owners at the Three Rivers yard, and launched June 8.

British Ship Joiners' Strike Ended.—The strike of ship joiners at British shipyards, which has been practically ended since the conclusion of the war, was settled during August, and it is reported that the men have returned to work, in most, if not all of the yards, on the terms offered by the employers. This strike caused considerable delay to several ships under construction for Canadian as well as other services, and by affecting other of the shipbuilding trades caused considerable loss to British shipyards, owing to the transfer of finishing and repair work from British to continental shipyards.

Export Steamships Ltd. has been incorporated under the Dominion Companies Act, with \$200,000 authorized capital, and office at Montreal, to own and operate ships of all kinds, docks, elevators and general terminal facilities, and to act as forwarder and general carrier. The company is to be a private one, under the provisions of the Companies Act. C. G. Heward, K.C., R. C. Holden Jr., P. Hutchison, J. F. R. Wilkes and A. B. Wright, Montreal, are the incorporators.

The Canadian Pacific Ocean Services Ltd., operating the C.P.R. steamships on the Atlantic and Pacific oceans, has had its name changed to Canadian Pacific Steamships Ltd. We are officially advised that there is to be no change of name, and that there has been no change in the articles of association or charter.

The s.s. G. Harrison Smith, 20,000 d. w. tons, was launched by the Bethlehem Shipbuilding Corporation at Sparrows Point, Md., recently, for Imperial Oil Ltd., Toronto.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Change of Name.—The steel cargo steamship for which a contract was given to the Prince Rupert Drydock & Engineering Co., Marine Department contract 43, builder's yard no. 2, approximately 3,890 d.w. tons, and which, owing to that company's bankruptcy, is being completed by Wallace Shipbuilding & Drydock Co., was to be named Canadian English, but it has been decided to call her Canadian Britisher instead.

Launching of Steamship. We have been advised of the launching of the following steel cargo steamship for Canadian Government Merchant Marine, in addition to those mentioned in previous issues.

Aug. 31. S. S. Canadian Transporter, Marine Department contract 62, builder's yard no. 20, approximately 8,390 d.w. tons, J. Coughlan & Sons, Vancouver, B.C.

Deliveries of Steamships. In addition to the steel cargo steamships mentioned in the Canadian Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine for operation:—

Aug. 25, s.s. Canadian Engineer, Marine Department contract 49, builder's yard no. 11, approximately 3,500 d.w. tons. The contract for this ship was given the Dominion Shipbuilding and Repair Co., Toronto, and, after that company became bankrupt, the Collingwood Shipbuilding Co., Collingwood, Ont., was given a contract to complete her at Toronto, on a cost plus basis. She proceeded to Montreal light, and loaded a complete cargo of copper matte for Swansea Wales, sailing Sept. 2.

Sept. 1, s.s. Canadian Scottish, Marine Department contract 42, builder's yard no. 1, approximately 8,390 d.w. tons. The contract for this ship was given the Prince Rupert Drydock and Engineering Co., and, after that company became bankrupt, the Wallace Shipbuilding and Drydock Co., North Vancouver, B.C., was given a contract to complete her, at Prince Rupert, B.C., on a cost plus basis. We are advised, Sept. 15, that she was loading with general cargo and lumber, at Vancouver, for Australia and New Zealand.

Officers of Steamships.—The following appointments and changes of masters, chief officers, and chief engineers have been made, in addition to those mentioned in previous issues:—Canadian Carrier, chief engineer, T. Jones. Canadian Challenger, Capt. V. R. N. Porter, formerly Canadian Harvester, chief officer, Capt. R. G. Sprague, formerly master, Canadian Hunter. Canadian Engineer, Capt. R. P. Roberts, chief officer, Capt. H. Makepeace, formerly master, Canadian Recruit. Canadian Farmer, Capt. W. J. Boyd, vice Capt. J. P. Sharpe, transferred to Canadian Voyageur. Canadian Fisher, chief engineer, W. Fotheringham. Canadian Harvester, Capt. E. Manning, formerly Canadian Sower, vice Capt. V. R. N. Porter, transferred to Canadian Challenger, chief engineer, T. A. W. Duguid. Canadian Hunter, Capt. R. V. Bennett, formerly Canadian Navigator, vice Capt. R. G. Sprague, transferred to Canadian Challenger as chief officer. Canadian Miner, chief engineer, A. Brown. Canadian Navigator, Capt. W. G. Gormley, vice Capt. R. V. Bennett, transferred to Canadian Hunter. Canadian Recruit, Capt. J. P. Hubley, vice Capt. H. Makepeace, transferred to Canadian Engineer as chief officer. Canadian

Scottish, Capt. N. P. Hoeking. Canadian Sealer, Capt. A. E. LeBlanc, vice Capt. J. A. Hiltz, on leave of absence. Canadian Sower, Capt. R. A. Gowdie, vice Capt. E. E. Manning, transferred to Canadian Harvester. Canadian Trader, chief engineer, C. P. Cairns. Canadian Transporter, Capt. W. F. Spring. Canadian Trooper, Capt. F. J. Ormrod, vice Capt. R. D. Maxwell, deceased. Canadian Voyageur, Capt. J. P. Sharpe, formerly Canadian Farmer, vice Capt. A. E. Sprosen, on leave of absence, chief engineer, J. G. Phillips.

Montreal Sailings. The following dates have been announced:—

Liverpool service—Canadian Victor, Oct. 14, Canadian Ranger, Oct. 28.

London Service—Canadian Raider, Oct. 8, Canadian Trapper, Oct. 22.

Glasgow Service—Canadian Otter, Oct. 5, Canadian Navigator, Oct. 19, Canadian Runner, Nov. 2.

Cardiff and Swansea Service—Canadian Volunteer, Sept. 30, Canadian Carrier, Oct. 20.

Australia Service—Canadian Challenger, Oct. 23.

Rio Santos, Montevideo & Buenos Aires Service—Canadian Seigneur, Oct. 27.

Barbados, Trinidad & Demerara Service—Canadian Beaver, Oct. 5; Canadian Logger, Oct. 19.

Nassau, Kingston and Belize—Canadian Fisher, Oct. 18; Canadian Forester, Nov. 8.

Charlottetown and Newfoundland Service—Canadian Sapper, Oct. 6.

Vancouver Sailings.—The following dates have been announced:—

Australia and New Zealand Service—Canadian Scottish, Oct. 15, Auckland, Sydney, Melbourne; Canadian Transporter, Nov. 5, Sydney, Melbourne, Adelaide.

Oriental Service—Canadian Winner, Oct. 2, Yokohama, Takubaru.

Calcutta and Canadian Inventor, Nov. 15, Calcutta, Bombay.

The s.s. Canadian Importer, which, as reported in our last issue, became disabled through a leak, about Aug. 19, about 600 miles off shore, whilst en route from Vancouver to Australia, was towed into Victoria by the tugs Sea Lion and Sea Monarch, Sept. 13. The first report of the trouble was received Aug. 24, by the s.s. Cordova, which proceeded immediately to the point indicated and subsequently reports showed that the engine room was flooded, the machinery, including the radiotelegraph apparatus, disabled, and the ship drifting helplessly, with a considerable list. The master, Capt. C. R. Bisette, declined the assistance of the Cordova, feeling confident that his ship would keep afloat until another of the C.G.M.M. ships could arrive. The Canadian Importer was practically in the regular Australian route, and one of the boats left the ship, with 12 men, to seek assistance. The boat was well furnished with food and water, and equipped with sea anchors and a lug sail. It was picked up later by the tug Sea Lion, about 100 miles off San Francisco, as she was outbound to search for the Canadian Importer. Apart from minor troubles, due to cramped quarters, the men were in good condition, with ample food and water for a further two days. Owing to the winches equipment being inoperative, no communication could be established, and as the Canadian Importer had drifted considerably

from the original course, she could not be found at the first attempt, and it was feared that she had foundered with all hands. A persistent search was, however, kept up by the C.G.M.M. s.s. Canadian Observer, and on Aug. 31 she sighted the beacon which was kept burning on the Canadian Importer, by lumber taken from the cargo. At that time the ship had a list of 33 deg. She was taken in tow by the Canadian Observer Sept. 1, with the s.s. Canadian Winner and the Pacific Salvage Co.'s salvage tug Algerine in attendance. Pumps were placed on the Canadian Importer to control the water taken through the leak. The Algerine left Victoria, Aug. 25, for the spot where the Canadian Importer was last reported, but failed for a time to find the ship, she having drifted from the course, but found a quantity of floating lumber, which had been jettisoned, so that she might relieve the heavy list. This gave rise to the rumor that the ship had foundered. On the arrival of the tugs Sea Lion and Sea Monarch, which had been chartered by the C.G.M.M. in San Francisco, the Canadian Observer was relieved of the tow, but remained in attendance with the s.s. Algerine, until the ship was taken safely to Victoria, B.C. After docking, the Algerine was taken alongside, installed additional steam pumps, and supplied steam to run them and also the winches to discharge the cargo of lumber. After removing the cargo, it was the intention to tow the ship to the Esquimalt graving dock for general survey. At the commencement of the tow, the two tugs made an average of 3 knots an hour only, on account of the heavy sea running, but on nearing the coast, the sea abated, and an average of 8 knots was maintained for the remainder of the tow.

S.s. Canadian Recruit.—The tender of Lachance Ltd., Quebec, for salvaging the s.s. Canadian Recruit, which was sunk by collision with the Dominion Coal Co.'s s.s. Maskinonge, off Stone Pillars, near Quebec, Que., Aug. 18, has been accepted and agreed to by the salvage association, and approved by the underwriters. The salvaging plant was assembled during the early part of September, and operations were expected to commence almost immediately.

The s.s. Canadian Traveller, which passed through the Panama Canal, early in August, carried 2,000 tons of sugar, for Vancouver, B.C., from Port of Spain, Trinidad, which is 1,150 nautical miles from the Atlantic end of the canal, while Vancouver is 4,032 nautical miles from the Pacific end.

Marine Insurance.—In connection with the disasters which have occurred recently to the Canadian Exporter, Canadian Importer and Canadian Recruit, we are advised that these and all other C.G.M.M. ships, are insured up to 80% of their cost.

Collingwood Shipbuilding Co., Collingwood, Ont. See Dominion Shipbuilding and Repair Co.

J. Coughlan & Sons, Vancouver, launched the steel cargo steamship Canadian Transporter, Marine Department contract 62, builder's yard no. 20, approximately 8,390 d.w. tons, for Canadian Government Merchant Marine, on Aug. 31, and advised us Sept. 1, that she would probably be delivered to the Marine Department about Sept. 14.

We were advised Sept. 1 that no date had then been fixed for the launching of the steel cargo steamship Canadian Freighter, Marine Department contract 63, builder's yard no. 21, approximately 8,390 d.w. tons, which the company is also building for Canadian Government Merchant Marine.

Dominion Shipbuilding and Repair Co., Toronto. The s.s. Canadian Engineer, Marine Department contract 49, builder's yard number 11, approximately 3,500 d.w. tons, which was completed at Toronto, by Collingwood Shipbuilding Co. subsequent to the Dominion Shipbuilding and Repair Co.'s bankruptcy, underwent her trial trips in Toronto Bay Aug. 25, when a speed of 11½ knots was maintained on a 6 hour run. This ship is the last of two ordered by the Marine Department to be built by the D. S. and R. Co., both of which were uncompleted at the time of the company's bankruptcy and which have since been completed by the Collingwood Shipbuilding Co. She is of the single screw type, canal size, and built for ocean service. Her dimensions are—length over all 261 feet, breadth moulded 43 ft., depth moulded 24 ft., loaded draft 21 ft. The boilers were built by John Inglis Co. and the machinery, which was partly built by the D. S. and R. Co., was finished by the John Inglis Co. She was delivered to the Marine Department Aug. 25, was transferred to Canadian Government Merchant Marine, and sailed from Toronto Aug. 27, for Montreal, where she loaded a cargo of copper matte for Swansea, Wales, sailing Sept. 2.

Halifax Shipyards Ltd. advised us Sept. 13, that the steel cargo steamship Canadian Cruiser, Marine Department contract 38, builder's yard no. 3, approximately 10,500 d.w. tons, which is being built for Canadian Government Merchant Marine, the keel having been laid Oct. 2, 1919, and the hull having been launched July 9, 1921, would probably be delivered by Sept. 30. The company also advised that the steel cargo steamship Canadian Constructor, Marine Department contract 39, builder's yard no. 4, approximately 10,500 d.w. tons, also being built for Canadian Government Merchant Marine, the keel of which was laid Oct. 6, 1919, would probably be launched on Sept. 24.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—The steel cargo steamship Canadian Scottish, Marine Department contract 42, builder's yard no. 1, approximately 8,390 d.w. tons, which this company was building when it became bankrupt, and for the completion of which a contract on a cost plus basis was given Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., was delivered to the Marine Department at Prince Rupert, Sept. 1.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—See Prince Rupert Drydock & Engineering Co.

Mission River Breakwater, Fort William.—The Dominion Public Works Department has given a contract for the construction of a rubble mound extension to the Mission River breakwater, Fort William, Ont., to O'Brien & Martin, Sarnia, Ont. The extension is to commence 375 ft. southerly from the existing concrete breakwater at the mouth of the river, and to be 1,000 ft. long on the water line, and 26 ft. wide, with a top width of 10 ft. and height of 8 ft. from the datum line.

A Novel Craft, the Hydroglider

Norman A. Yarrow, a director and General Manager of Yarrow's Ltd. shipbuilding and ship repairing plant at Esquimalt, B.C., has recently become the owner of an exceedingly interesting and very clever high speed craft, called a hydroglider. It is said to be the fastest boat in Canada, and is of a special type, which is not duplicated anywhere in the Dominion. The craft, as will be seen from the accompanying illustration, is a very peculiar type, and its general appearance does not in any way indicate speed.

Its chief particulars are as follows:—The hull is made of five separate watertight pontoons, placed one behind the other, with a space between each of 4 in. to let air get underneath the boat. The bottom of the pontoons are perfectly flat. The whole boat is made of wood, American spruce and ash, and the pontoons, which come in contact with the water, are sheathed in brass. The bow resembles that of a scow, and the rudder, which is controlled by a steering

The name, hydroglider, infers that it glides on the water, which is the principle of the craft, and, when running at full speed, it skims along the surface of the water, leaving no wash, and therefore high speed can be resorted to on narrow rivers, without fear of damaging small craft or injuring the banks. It is a very interesting sensation when getting up speed to feel the boat climbing on to the top of the water, and due to the fact that it skims along on the surface, small ripples and tide-rips and currents do not affect its speed or course. The boat carries 6 passengers, and a mechanic to start and look after the engine.

There are quite a number of hydrogliders in use. Some were used during the war, and are said to have proved a great success.

T. L. Church Steamship Co. Ltd. has been incorporated under the Dominion Companies Act, with \$300,000 authorized capital and office at Montreal, to carry

The Hydroglider.

wheel similar to that of an automobile, is situated in the bow, amidships. The power plant consists of a 230 h.p. Sampson Canton-Ueno aeroplane engine of the radial type, placed well aft. It has 9 cylinders, and drives, a two bladed, 10 ft. propeller, working in the air. It is water cooled, with the radiator situated in the water between two of the pontoons. At full speed, 50 miles an hour, the engine revolutions are between 1,300 and 1,400. The fuel tank, which is situated under the turtle deck, has a capacity of over 60 gallons.

It is a very comfortable boat to ride in, with its nice upholstered seats, glass windshield, to protect the passengers from the wind, and an awning over the top to shelter one from the sun, is not unlike an automobile in its arrangement and comfort. When the boat is not in use, it can be run up on a beach, through the medium of four wheels. Owing to its peculiar construction, it is not possible for it to stand on the ground, therefore facilities are provided for short axles and broad tired wheels to be used, which are supplied with the craft, and which can in a few minutes be put on and taken off, afloat. The craft only draws about 8 in. at rest, and at full speed draws approximately 1 in. It is therefore exceedingly shallow waters can be navigated with complete safety, and at high speed, there being no fear of the propeller getting tangled up in any weeds, or breaking on rocks or flotsam.

on the business of steamship owner, agent and manager, and to act as common carrier, etc. The incorporators are, R. T. Heneker, K.C., H. N. Chauvin, K.C., H. E. Walker, Montreal, and W. R. Eakin, steamship manager, and A. E. Francis, Westmount, Que. It is understood that this company has been formed to take over and operate the s.s. T. L. Church, built by the Dominion Shipbuilding & Repair Co., Toronto, in 1919, and which has since been operating chiefly between European ports.

The grain transhipment charges at Port Colborne, Ont., which formerly were \$4.35 per 1,000 bush, were raised early in the summer to \$6, avowedly to meet the cost, and were apportioned \$4 to the upper lake ships and \$2.50 to the canal ships. The charges were subsequently readjusted, so as to leave the charge on the upper lake ship \$4.35 as formerly and to place the difference on the canal ship. Since Sept. 8 the total charge has been reduced to \$5.50, of which \$4.35 is charged to the upper lake ship and \$1.15 to the canal ship. The cost of labor, which is fixed by the Labor Department, a fourth controlling factor, is a large element in the increase.

The U.S. Concrete Ship Faith, one of the first concrete ships to cross the ocean, was offered for sale at New Orleans, La., recently, at satisfy bids, but no bid was received. Her construction cost is reported as \$750,000, and \$50,000 was spent on her boilers recently.

[illegible]

Wreck Commissioners' Enquiries and Judgments.

Enquiry—have been held and judgments delivered in connection with the following casualties:—

Loss of S.S. Canadian Exporter.

Held at Vancouver, B.C., Aug. 11 to 17, before Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Commanders F. W. Evans and J. B. Radcliffe, as nautical assessors, into the stranding and ultimate total loss of Canadian Government Merchant Marine s.s. Canadian Exporter on the shoals at the mouth of the Willapa River, near Astoria, Wash., July 31. After hearing the evidence the court came to the conclusion that the stranding and subsequent loss must be attributed to the master, Capt. Wm. Bradley, and the first mate, Newton Campbell, for the careless and unseamanlike manner in which the ship was navigated after passing Umatilla lightship. Under conditions in which it was clearly apparent that the utmost prudence, vigilance and attention should be shown, the most casual indifference was displayed. In view of the unfavorable atmospheric conditions then prevailing, and the fact of their unfamiliarity with the coast, a too fine course was set, soundings were utterly disregarded, the ship hauled in towards land without her position being verified, and the lookout kept, more especially after daylight, prior to the stranding, appeared most unsatisfactory. The master and first mate were therefore found both in default, and their certificates suspended for six months and four months respectively, as mentioned in our last issue. No possible blame for the disaster could, in the court's opinion, be imputed either to the owners, agents, or to the equipment of the ship, or to the second and third mates, chief and second engineers, or any members of the crew. The judgment was not assented to by Commander Evans, who, though agreeing with the report, and the necessity of suspending both officers' certificates, expressed the opinion that as far as regards the master only, the term of suspension was too severe, and considered that three months would have been sufficient.

Stranding of s.s. Beaverton.

Held at Montreal, Aug. 30, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and A. Lefebvre, as nautical assessors, into the stranding of Canada Steamship Lines' s.s. Beaverton, at Sister Island, in the St. Lawrence River, between Kingston, and Prescott, Ont., Aug. 14. The evidence showed that the master was in the room, the weather being sufficiently clear to observe, at a reasonable distance, objects as guidance. The compass not being used, the usual method of steering by lights was followed. There was a pilot on board, appointed by the owners, who had a deal of experience, therefore the master felt justified in seeking a rest, and under the circumstances his absence was beyond criticism, and he left proper notice to be called if needed. The pilot had been over the course often, and he thought he steered the same course as previously, keeping the Whiskey Island light astern, and Sister Island on the starboard bow, as well as the buoy. The ship touched, and he stopped the engines and the master came on deck. A curious combination of things was apparent in the absence of the master, which was

excusable, the absence of the mate, who at that very moment had been compelled to leave his post, and the disappearance of the wheelman from the bridge to help the watchman, otherwise the lookout, to look for a sounding rod, so that the pilot was left alone, steering and watching. Had he requested anyone to let go the anchor, or perform some needed essential service, such help was not available. The ship touched while going full speed and supposedly on her course. The pilot—the title is self constituted and recognized by various companies plying these waters—possesses a master's certificate, and was, prior to this trip, master of one of the company's steamships. He was not inscribed on the articles, and consequently, in the view of the law he was not a member of the crew, and was therefore considered irresponsible. The fact that he was left in full charge of the ship, without being a member of the crew, cannot be laid against him, but against a system of the company which does not meet with the approval of the court, which called the attention of owners and operators to ships plying these waters, that very recent years ago, as to the possible annoyances and dangers which might arise as a result. The court was of opinion that the pilot, with all his experience, had failed to learn that there was a current running steadily at a velocity of 2 to 2½ miles, and he therefore failed in his calculations, to consider the effect of such current on the ship, which in this case had a tendency to drive the ship to the westward of Sister Island, thus showing that his experience as a pilot is more apparent than real. The court therefore found that the master's absence from the bridge was excusable, and his actions subsequent to the grounding in accordance with good judgment, and he was exonerated, but the court was not favorably impressed with the fact that he had to abstain himself at the very moment the ship was about to enter a narrower channel than had been traversed. The pilot, J. T. M. Barry, not being a member of the crew, nor a licensed pilot, cannot have his certificate dealt with, even if it was expedient, but he was found in default, and alone to blame for the grounding. He was therefore severely reprimanded, and ordered to pay \$100 towards defraying the costs of the investigation. The court again renewed its suggestions to have all members forming a ship's crew and participating in the navigation of a ship, duly inscribed on the ship's articles, and also that no officer should leave the bridge without being relieved by some responsible person.

Stranding of s.s. Sarnian.

Held at Toronto, Sept. 9, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. H. W. King and John Williams, as nautical assessors, into the stranding of Canada Steamship Lines' s.s. Sarnian, on Espanola Island, Lake Huron, Aug. 29. The evidence, which was straightforward and to the point, showed that the Sarnian sailed from Goderich Aug. 28, the weather being hazy, and later becoming foggy, and that a course was set which would have brought her within the sound of the fog signal at Presque Isle. The master, Capt. T. H. Johnston, expected to hear the sig-

nal, but, not hearing it, proceeded, altering his course 4 deg. westward, when ships were reported downbound. He was on watch with the second officer at 6 a.m., and the fog lifted between 8 and 9.20, but at the latter time became dense. The ship was kept at full speed, about 11 miles an hour, the whistle was sounded regularly and a lookout was stationed in the bows. He heard the Detour fog whistle on the starboard bow, and altered the course 4 deg. northward, and steered for the sound, keeping it ahead. In the meantime he saw, during the clearing, and heard whistles of two ships, one on the starboard and the other on the port quarter, and as they were apparently on the same course as himself it inspired him with confidence as to his position. Intending to anchor, he signalled slow, but the ship grounded and water was found to have penetrated holds 1 and 2. Assistance was wireless for and the ship was released about 24 hours later, seriously damaged. When the ship grounded he sent alarm signals to warn the two ships coming astern and signalled the course for alteration of their helms by a circumstantial whistle, but no attempt was the speed reduced, nor any attempt made to take soundings. The speed of the ship was not a contributing factor to the grounding, though the maintenance of full speed in dense fog was considered by the court as culpable and in direct violation of any explicit law or rule, but an excuse was found for not using the lead. The real cause of the grounding was due to a current sometimes met, but which cannot be calculated as to direction and velocity, and which threw the Sarnian eastward of her course. The court was of opinion that had the master taken soundings, when he failed to hear the Presque Isle fog signal, he would have established his position. The court therefore found the master was in default for not taking soundings at Presque Isle, but, owing to extenuating circumstances, did not deal with his certificate, but reprimanded him severely and warned him to abide by the Rules of the Road and advised him emphatically as to the necessity for using the lead, and also against a feeling of absolute confidence that because several voyages had been made successfully, succeeding ones must also necessarily be successful.

Stranding of s.s. Mina Brea.

Held at Montreal, Aug. 17, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. R. G. Sprague and P. S. A. Robertson, as nautical assessors, into the two strandings of Imperial Oil Ltd. s.s. Mina Brea on a shoal off Matane, July 30, and about a mile above Sorel, Aug. 1, both in the River St. Lawrence, while in charge of a Montreal pilot. The ship was usually plies between Halifax and Montreal, and was well found, with the necessary instruments for navigation purposes, with the possible exception of a proper Admiralty or Canadian chart plan of the Gulf of St. Lawrence. Her compasses were fairly correct. In regard to the first stranding, there were extraordinary contradictions in the evidence given by the master and chief officer. The master had plotted a course at Capt. Chatte, which would have led him somewhat clear of the Matane shoal. In estab-

lishing his distance from a 4 point bearing, the court was of the opinion that, in such close proximity to land, bearings have to be accurate to obtain dependable results. It was shown that a house was selected as a point of observation, and the court expressed the opinion that the accuracy of such an observation was negligible. The master used a very large black chart and the court was not satisfied that he made a serious effort to obtain an Admiralty chart. Although the weather was a little hazy, all objects were clearly defined. The master came on the bridge about three minutes before the stranding and handed a document to the mate for signature. After doing this he saw that the ship was near to land and gave order hard aport, but the ship struck, with the buoy abaft the starboard beam. Although the master states he was only on the bridge three minutes, the mate and the wheelman, the latter being a most unsatisfactory witness, stated that the captain was on the bridge for half an hour. While favoring the master's statement, the court was led to think that the ship had already struck when the port helm order was given. No excuse could be found for the chief officer, whose watch it was, in not perceiving a buoy, and this showed that the look-out was kept at all, and his usefulness as an officer was, on this occasion, nil. With respect to the second stranding, the court accepted the theory that it was due to the state of the bottom of the ship, which was extensively damaged, thus impairing the steering. There does not appear to have been any carelessness shown in the latter grounding, but it seems to have been due to a grave error of judgment on the part of the pilot. The court thereupon found Capt. T. O. Jones in default for the grounding off Matane and suspended his certificate for two months from Aug. 17, and criticized his action in not accepting the services of a tug. It also found chief officer E. G. Jones in default, and suspended his certificate for six months from Aug. 17. In regard to the second grounding, since the second officer, practically a stranger to the St. Lawrence River, pointed out to the pilot that the ship was nearing land dangerously the court was of opinion that the pilot, Thos. Houde, committed a grave error of judgment, and after hearing all details, the court did not suspend his license, but fined him \$100 to be paid by Sept. 30, with a warning to be more careful in future.

Marine Public Works Contracts Awarded.—The Dominion Public Works Department has awarded the following contracts:—Boswell, B.C., floating wharf, F. P. Armstrong and T. F. Lean, Nelson, B. C., Aug. 23, \$7,950; Baileys Brook, N.S., extension to east pier, Denton & Condon, Digby, N.S., Aug. 21, \$2,800; Fox, Man., extension to wharf, L. Berry, Brandon, Man., Aug. 20, unit prices; Sandsip, B. C., wharf, McDonald, Watson & Wither, Victoria, B.C., Aug. 27, unit prices; Sept. 2, dredging basin at Government wharf, Belleville, Ont. Frontenac Dredging Co., Belleville, at 75c. a cu. yd.

Slump in Wooden Ships.—The S.S. Eirini, one of the wooden steamships built in Canada during the war for the British Government, under orders from the Imperial Munitions Board, at a reported cost of \$500,000, was sold at Cardiff, Wales, recently for \$4,325. She made one trip across the Atlantic, and a few minor voyages.

Dominion Canal Statistics for the 1920 Navigation Season.

Following are extracts from a report on canal statistics for 1920, collected through agents of the Railways and Canals Department, and compiled by the Dominion Bureau of Statistics' Transportation Branch.—There was a total decrease of 1,259,883 tons of freight through all the Canadian canals. The decrease in tonnage passing through the Sault Ste. Marie Canal was due to the diversion of traffic to the U.S. side, following the opening, Sept. 8, 1919, of a fourth lock there, making two U.S. locks, which

The percentage shipped through the Canadian canal for each year, was, 1917, 38.18%; 1918, 32.08%; 1919, 23%; 1920, 13.36%. It may be assumed that nearly all the wheat shown in the foregoing table as being moved from the head of the lakes to other Canadian ports, means to Port Colborne, for transfer to Montreal.

The freight rates on wheat for 1920, with those for the previous three years, from Port Arthur and Port William, on the various routes, were as follows:—

	1917	1918	1919	1920
To Montreal				
Per ton per mile	0.205c.	0.209c.	0.293c.	0.316c.
Per bushel	8.78c.	11.39c.	10.76c.	11.64c.
To Georgian Bay ports				
Per ton	\$3.26	\$3.40	\$3.55	\$3.87
Per ton per mile	0.270c.	0.277c.	0.203c.	0.259c.
Per bushel	4.25c.	4.32c.	3.15c.	4.17c.
Per ton	\$1.42	\$1.44	\$1.05	\$1.39
To other Canadian ports				
Per ton per mile	0.185c.	0.205c.	0.150c.	0.180c.
Per bushel	4.18c.	4.48c.	3.46c.	4.57c.
Per ton	\$1.39	\$1.49	\$1.15	\$1.52
To Buffalo, N.Y.				
Per ton per mile	0.196c.	0.158c.	0.143c.	0.223c.
Per bushel	5.06c.	4.11c.	3.73c.	5.70c.
Per ton	\$1.67	\$1.37	\$1.24	\$1.90

are longer and deeper than the Canadian lock. The total traffic through the Canadian and U.S. canals at Sault Ste. Marie increased over 11,000,000 tons, including increased of 29,700,000 bush. of wheat, and 9,800,000 tons of iron ore. The volume of traffic through the various canals, with increases or decreases, compared with 1919, is as follows:—

	Tons	Increase	Decrease
Sault Ste. Marie	2,477,818		1,660,267
Welland	2,276,072	108,238	
St. Lawrence	3,067,962	176,343	
Chambly	325,322	82,361	
St. Charles	136,235	27,983	3,506
Murray	136,235	27,983	
Ottawa	233,329	14,891	
Rideau	97,837		5,702
Trent	53,660	207	
St. Andrew's	5,778	2,012	
Total	8,735,583		1,259,883

Following is an analysis of the various commodities, tons, passing through the canals:—

	Agricultural products	Animal products	Manufactures	Forest products	Mines products	Total
Sault Ste. Marie	1,045,982	1,636	270,119	53,994	1,106,167	2,477,818
Welland	438,339	10	205,214	170,153	1,462,306	2,276,072
St. Lawrence	180,385	3,803	207,857	531,106	1,844,811	3,067,962
Chambly	21,643	9,185	19,185	204,654	104,457	325,322
St. Peters	8,297	1,627	7,032	1,053	43,364	136,235
Murray			8,515		127,720	136,235
Ottawa	2,672	2,469	21,860	105,302	100,826	233,329
Rideau	1,642	1,997	16,996	7,922	69,259	97,837
Trent	1,899	176	1,934	49,466	183	53,660
St. Andrew's	101		130	5,274	270	5,778
Totals	2,000,950	12,041	758,902	1,129,664	4,834,416	8,735,583

The following shows the tons of freight, origin, shipping and destination ports and quantities transported in Canadian and U.S. ships:—

	Tons
Origin, Canada	4,094,044
Origin, U.S.	4,641,353
From Canadian to Canadian ports	1,815,817
From Canadian to U.S. ports	955,958
From U.S. to U.S. ports	927,459
From U.S. to Canadian ports	3,666,153
In Canadian ships	6,251,456
In U.S. ships	2,170,927

The distribution of Canadian wheat through the Canadian and U.S. canals at Sault Ste. Marie from Port Arthur and Port William, with figures for three previous years, was as follows:—

	1917	1918	1919	1920
To Montreal	1,290,110	56,503	52,151	52,151
To Georgian Bay ports	38,774,393	38,774,393	53,793,931	31,494,474
To other Canadian ports	31,369,347	20,638,204	33,090,288	20,748,069
To Buffalo and other U.S. ports	73,471,563	21,181,716	1,127,614	53,898,995
Totals	128,374,262	62,299,271	91,574,866	109,967,888

The Marine Department's Views on the Imperial Shipping Board.

An Ottawa press dispatch says that Marine Department officials are of the opinion that provided that its functions remain purely advisory, and that all legislative action rest with the British Government, the suggested Imperial Shipping Board might achieve valuable work, but that it would be entirely unwise to accord such a board any power to regulate Canadian shipping which could, with better advantage, be left to the Canadian authorities. In the event of Canadian interests clashing with those of Great Britain, it might easily happen that the Board would give a decision favorable to Great Britain, but at the expense of Dominion ports. The absolute control by each dominion of its own shipping

interests is not, the Department holds, in any way inconsistent with the best interests of the Empire. It would be entirely unlikely that any of the Dominions would approve of an Imperial body having legislative powers.

The original plan was that the Board, composed of eight members, should have a chairman appointed by the Crown and members named respectively by the Colonial Office, the Indian Office, the Board of Trade, the Dominions of Canada, Australia, South Africa and Newfoundland. The Department agreed that with a permanent paid chairman, as recommended in the Imperial

Shipping Committee's report, the body might be expected to do the most effective work. The Department suggested further that if occasion should arise it would doubtless be of advantage to have the necessary machinery to enquire into ocean freight rates regarded as excessive or discriminatory. For the purpose of an intelligent enquiry, the Imperial Shipping Board might perform a useful public service, not only by enquiring into any complaints as to the matter of freight rates, but, if it deemed advisable, it might investigate the question of how ocean rates may be made a factor in developing trade between Canada and Great Britain, more especially as to merchandise now imported from the United States.

In the remote contingency of a dispute arising between inter-imperial shipping, it was suggested the Board might with advantage act as conciliator between the parties, its decisions, however, would have to be made effective by confirmation by the governments of the countries concerned.

Sir George Perley, Canadian High Commissioner in London, represented Canada at the Imperial Shipping Committee's sittings.

Atlantic and Pacific Ocean.

The C.P.R. s.s. Victorian is reported to have been chartered by the British Government for service during the winter in carrying civil service employes to and from India.

A shipment of approximately 2,000,000 ft. b.m. of B.C. fir was received at Three Rivers, Que., recently, via the Panama Canal. This is stated to be the first ship to make the trip from Vancouver to a Quebec port, via the canal.

The Latin-America Line, a Norwegian shipping company, as reported to have established a line of steamships between Vancouver and Puget Sound ports, and Central and South American ports, running on a monthly schedule.

A Liverpool, Eng., press report states that it is rumored there that the C.P.R. may divert some of its steamships from that port to Southampton, and that it may establish a continental service from the latter port to Cherbourg, France, similar to that now given by the Cunard Line.

The s.s. Loyalty, formerly the C.P.R. s.s. Empress of India, is at present laid up at Bombay, India, and some uncertainty is felt as to her future. During the war she was sold by the C.P.R. to one of the Indian princes, who equipped her as a hospital ship for the use of the British Government, and on the conclusion of the war she was sold to an Indian steamship company, but is reported to have been unable to obtain a surveyor's certificate.

Furness, Withy & Co. inaugurated a regular monthly steamship service from Vancouver, Portland and Seattle, to United Kingdom and other European ports, during September, and, should conditions warrant, San Francisco may also be included. The first sailing took place with the s.s. Mongolian Prince, from Portland, Ore., Sept. 15, and she will be followed by the s.s. Eastern Prince Oct. 15; s.s. Siberian Prince, Nov. 15, and s.s. El Cordobes Dec. 15. The last mentioned ship has a large refrigeration capacity. Frank Waterhouse & Co. have been appointed agents at Vancouver, B.C., Portland, Ore., and Seattle, Wash.

The C.P.R. s.s. Empress of Canada, now approaching completion for the trans-Pacific service, accomplished a

speed of 25.6 knots an hour during her recent trials, which is somewhat higher than any speed ever attained by a trans-Pacific steamship. The present record for speed on the Pacific is held by the company's steamships Empress of Asia and Empress of Russia, which averaged 21 knots. The s.s. Empress of Canada was equipped originally to burn coal, and it is stated that the change which has been made to enable her to use oil as fuel has increased her speed 2 knots an hour.

The C.P.R. is reported to have arranged a series of winter cruises to the West Indies, for which purpose the s.s. Empress of Britain will be taken from the trans-Atlantic service, her place being taken by the s.s. Empress of France. It is stated that two cruises will be made, each lasting 27 days, the first sailing being made from New York, Jan. 21, 1922, and the second on Feb. 25. Among the ports of call will be Havana, Kingston, Colon (Panama Canal), La Guaira, Caracas, Port of Spain, Barbados, Martinique, St. Thomas, Porto Rico and Nassau.

The Cairn Line s.s. Cairnross, which arrived at Montreal early in September, on her maiden trip from Great Britain, was built at Sunderland, Eng., and on her recent trials over the measured mile attained a speed of 13 knots an hour. Her dimensions are,—length b.p. 425 ft., breadth 55 ft., depth of shelter deck 37½ ft. Her d.w. capacity is 8,170 tons on 25½ ft. draft. The propelling machinery consists of a signal screw set of the latest type of double reduction geared turbines of the all reaction type, of about 3,100 shaft h.p. She is equipped with boilers, superheaters, shafting and bronze propeller. She is of the 2-deck type with complete shelter deck, built under special survey to Lloyd's highest class. The cargo handling equipment in-

Ships Registered in Canada During June, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

cludes 13 large winches, one on the poop deck with extended ends for warping and with special drums for use as emergency steering gear. The steering gear is operated by telemotor control and is placed in a steel house aft. The boilers are built for a working pressure of 200 lb. and are equipped to burn either coal or oil.

Maritime Provinces and Newfoundland.

A proposal to build a permanent wharf for the protection of the northern wing of the east ferry floats at St. John, N. B., was defeated by the city council, Sept. 13.

The Newfoundland schooner Edith Parry, was reported, Sept. 3, to have been abandoned in a sinking condition, about 60 miles west of St. Pierre, Miquelon, while bound from Sydney, N.S., to Avondale, Eng., with coal.

The Dominion Coal Co.'s s.s. Kamouraska collided with the schooner Granite, owned in Lunenburg, N.S., at the end of August, off Sydney, during a dense fog. The schooner was considerably damaged and was towed to Sydney for repairs.

The Reid Newfoundland Co. is reported to have bought the s.s. Stanley from the Marine Department. She was built at Govan, Scotland, in 1888, and is screw driven by engine of 300 n.h.p. Her dimensions are,—length 207.8 ft., breadth 32 ft., depth 17.9 ft.; tonnage, 914 gross, 395 net.

It is reported that Capt. Jos. Blois of the C.G.S. Stanley, which is stated to have been sold, has been transferred to the s.s. Arammore, with Capt. Bayers of the s.s. Dollard as first officer. The s.s. Dollard, it is stated, has been laid up for the winter.

The schooner Bernice R., owned by M. J. Parks, La Have, N.S., was lost towards the end of August, while en route from New Campbellton, N.S., to Campbellton, N.B. She was built by J. N. Rafuse & Son, Salmon River, N.S., in 1918, and had the following dimensions, length 134 ft., breadth 30.5 ft., depth 11.6 ft.; tonnage, 378 gross, 324 net.

The Halifax & Canoe Steamship Co.'s s.s. Scotia was burnt to the water's edge, Aug. 26, while tied to her wharf at Drum Head, N.S., and is stated to be a total loss. She was built at Mahone Bay, N.S., in 1907, and was screw driven by engine of 52 n.h.p. Her dimensions were, length 138.8 ft., breadth 26.8 ft., depth 9.6 ft.; tonnage, 376 gross, 268 net.

The Southern Salvage Co.'s wrecking tug Coast Guard foundered off Little Hope, near Liverpool, N.S., Sept. 8, after striking a submerged wreck and making a large hole in her hull. She was built at Shelburne, N.S., in 1904, and was screw driven by engine of 16 n.h.p. Her dimensions were,—length 77.6 ft., breadth 24.6 ft., depth 8 ft.; tonnage, 110 gross, 52 net.

The international fishing schooner races are scheduled to commence off Halifax, N.S., Oct. 25. The U.S. fishermen selected the schooner Mayflower, but an objection was entered from Canada, on the ground that she does not comply with the rules, having been built more on the lines of a sailing yacht, and thus could not carry a proper quantity of fish, and also that she did not sail for the fishing grounds within the time allowed by the rules.

Province of Quebec.

Capt. O. Langlois, owner of the schooner Mariel Manda, is suing the City of Quebec for \$2,267, as damages for the loss of both masts of his schooner, caused by the sudden closing of the drawbridge on the St. Charles River, as she was passing.

The Quebec Harbor Commissioners have installed another floating grain elevator, making four now in operation in the port, which greatly helps in speeding up the loading of grain. The last elevator is working about 15 hours a day and handles about 7,000 bush, an hour.

During the third week in August, pilots of the Quebec Corporation of Pilots, handled 89 ocean steamships from Father Point, en route to Montreal. This is stated to constitute a record. For the present season, more ocean steamships have been handled to Montreal for grain, than in any previous season, and the increase was especially marked during August.

Negotiations are proceeding with the Dominion Government for a grant towards the provision of a special winter steamship service to points along the north shore of the St. Lawrence River and Gulf. It is stated that the Government has offered to pay \$35,000 for the carriage of mails, for which it now pays \$42,000 for transportation overland by dog teams, but it is reported that a further \$20,000 is essential to assure the steamship service.

The s.s. Narragansett, which, as mentioned in our last issue, has been bought by the Canada Steamship Lines, is a steel twin crew steamship, built at Wilmington, Del., in 1913. Her dimensions are, length 320.2 ft., breadth 48.1 ft., depth 22 ft.; tonnage, 3,539 gross, 2,134 net. We are officially advised that she is to be thoroughly overhauled to make her suitable for the company's St. Lawrence River service, by the Davie Shipbuilding & Repair Co., Lauzon, Que., and that most likely her name will be changed when she is placed on the Canadian register at Montreal.

Capt. J. E. Bernier, formerly of the Gulf of St. Lawrence Shipping & Trading Co., is endeavoring to establish a winter steamship service from Murray Bay, Que., the terminus of the Quebec & Saguenay Ry., along the north shore to Clarke City, calling at Tadoussac, Gihault, Shelter Bay, Point des Monts, Franklin River, Bersimis, Trinity Bay and St. Margarets Bay. It is proposed to buy the s.s. Champlain from the Do-

minion Government, or some other suitable icebreaking steamship, and to operate her under the management of The Quebec North Shore Service Registered.

Ontario and the Great Lakes.

The s.s. William H. Wolf, owned by E. H. Horn, Milwaukee, Wis., sprang a leak in Lake Superior, Sept. 17, and after putting in to Portage, Mich., sank there. She was refloated a few days later and proceeded to Houghton, Mich., to unload.

Canada Steamship Lines' management is reported to be considering the question of lengthening its s.s. Toronto by 50 ft., to give space for 30 additional staterooms, and bring the ship to the same size as its s.s. Kingston.

The Keystone Transports' s.s. Keywest collided with and sank the schooner Oliver Mowat, near Duck Island, Lake Ontario, Sept. 1, two of the crew of five being saved. The schooner, it is stated, is owned by Hepburn & Co., Picton, Ont. She was built at Mill Haven, Ont., in 1873, her dimensions being, length 116 ft., breadth 23.8 ft., depth 9.8 ft., tonnage 170 net.

Canada Steamship Lines is reported to have taken the steamships J. H. G. Hagarty, Collingwood, W. D. Matthews, Midland King, Valcartier and Glenmount out of service, temporarily, during September, as grain had been moving in such volume that the Montreal elevators were taxed beyond their capacity. It is stated that the ships will be replaced in service immediately the congestion is relieved.

Dominion Wreck Commissioner Capt. L. A. Deane, held an enquiry at Montreal, Sept. 17, into the collision between the Keystone Transports' s.s. Keywest and the schooner Oliver Mowat, in which the latter was sunk with a loss of three lives, off False Ducks, near Kingston, while the Keywest was upbound from Montreal, and the Oliver Mowat crossing from Picton to Oswego, N.Y. Judgment was reserved.

The Toronto Harbor Commission disposed of \$4,000,000 of bonds by tender, Sept. 12, to R. A. Daly & Co., Toronto, and associates in New York and Boston, at 73.57 U.S. funds and \$2.03 Canadian at par. Seven other tenders were put in. They mature in 1953, bear interest at 4½%, and are issued under authority granted in 1913, when the Commission was authorized to issue bonds for \$25,000,000, of which \$18,500,000 have been issued to date.

Ships Added to and Deducted From the Canadian Register During June, 1921.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Dominion Government has placed buoys in channels in the Mackenzie River where there are known dangers to navigation.

The Northern Trading Co.'s s.s. Northland Echo sailed from McMurray, Alta., Sept. 12, for Fort Fitzgerald on her last trip for the season.

The Hudson's Bay Co.'s s.s. McMurray sailed from McMurray, Sept. 12, for northern ports with cargo for the company's posts on the Mackenzie River. The McMurray goes as far as the south end of Smith Portage, where cargoes are transferred across the portage and re-shipped on another steamboat for Mackenzie River points.

The Alberta & Arctic Transportation Co.'s s.s. D. A. Thomas took up her winter quarters during September at Peace River, Alta. It is stated that owing to the discontinuance of the steamship service on the Peace River, steamwrights engaged in connection with it had to travel from Fort Smith to Edmonton, via Athabasca River, and proceed north to Peace River from there.

British Columbia and Pacific Coast.

The Canadian Robert Dollar Co., which has occupied the Great Northern Ry. docks at Vancouver since 1915, has removed its Vancouver quarters to the C. P.R. docks.

The Hudson's Bay Company's motorship Lady Kindersley, which sailed from Vancouver for the north recently, has been labelled at Juneau, Alaska, as a result of a collision with Pacific Gypsum Co.'s barge Palmyra, which was being towed, near Whale Island. The tug's crew states that the Lady Kindersley paid no attention to frequent whistle signals.

The fully rigged ship Mafalda, owned formerly by Norwegian interests, but lately acquired by Sir John Jackson Ltd., contractors for the Victoria harbor work, is undergoing extensive repairs at Yarrow's Ltd. yard at Esquimalt, after which, it is stated, she will load the Sir John Jackson plant and material for transfer to Great Britain.

The s.s. Princess Louise, which was launched at North Vancouver, Aug. 29,

for the C.P.R. British Columbia Coast Service, and dealt with fully on another page of this issue, is the second ship of that name to be utilized in that service. The first s.s. Princess Louise was built at New York in 1869. Her hull was of seasoned white oak, and she was propelled by side wheels, with a beam engine. Her dimensions were—length 180 ft. 10 in., beam 30 ft., depth of hold 12 1/2 ft. She made her first trip from Olympia to Victoria, Dec. 7, 1869, and in 1879 was sold to the Hudson's Bay Co., and registered at London, Eng. In 1883 she was transferred to the Canadian Pacific Navigation Co., and in 1901 went into C.P.R. hands and was operated in the British Columbia coast service, until a few years ago, when she was sold to Marpole, Macdonald & Co., Victoria, and converted into a coal bulk. During the time she was operated by the H. B. Co., she ran to its various posts as far north as Port Simpson, and under C.P.R. management she was operated occasionally on the northern run, but chiefly in local water, calling at Victoria, Vancouver, New Westminster, Nanaimo, and some other island ports.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

51. Aug. 10—136. New Brunswick, Bay of Fundy, Deer Island, Clam Cove Head, spindle established. 137. New Brunswick, Bay of Fundy, St. Lawrence Harbor entrance, channel between Negro Point breakwater and Partridge Island, differences in depth, caution. 138. Quebec, ship channel between Quebec and Montreal, foot of Isle aux Poins, buoy established.

52. Aug. 11.—139. Nova Scotia, Cape Breton Island, west coast, Margaree, change in character of light. 140. New Brunswick, Northumberland Strait, Miramichi River to Douglstown, dredging.

53. Aug. 15.—141. British Columbia, Vancouver Island, South Coast, Esquimalt Harbor, chart issued. 142. British Columbia, Vancouver Island, east coast, Kelp Bar, gas and bell buoy to be re-established. 143. British Columbia, Queen Charlotte Sound, Blunden Harbor, uncharted rock. 144. British Columbia, Hecate Strait, northern portions, chart issued. 145. British Columbia, Chatham

Sound, Hogan Ledge, reported error of charts.

54. Aug. 17.—146. Quebec, Gulf of St. Lawrence, Pentecote River, new range lights established.

55. Aug. 22.—147. New Brunswick, south coast, Bay of Fundy, entrance to L'Etang harbor, Bliss Harbor and Black Bay, bell buoy established. 148. Quebec, River St. Lawrence, Channel patch, vessel sunk, gas buoy placed to mark wreck.

Welland Ship Canal Contracts.

As mentioned in Canadian Railway and Marine World for September, the Railways and Canals Department has awarded the contract for the completion of the work on the combined sections 1 and 2, to J. P. Porter, Halifax, N.S. We are officially advised that a partnership has been formed, consisting of J. P. Porter, G. M. Standifer, and the firm of Porter Bros., represented by B. R. Porter, under the name of J. P. Porter, Standifer & Porter Bros., to carry out the work. Steam shovel operations are being carried on under the supervision of T. Standifer, concrete work is supervised by F. Porter, engineering work by A. C. Brown, and financing and accounting affairs by W. D. Kerr. Owing to the late date of awarding the contract, the season's work will be somewhat limited, but operations have been commenced, and approximately 400 men are at work, operating two steam shovels, and pouring concrete at locks 1 and 2.

Sec. 1, the contract for which was originally let Aug. 1, 1913, to the Dominion Dredging Co., consists principally of the construction of the new harbor at Port Welland, at the Lake Ontario end of the canal, covering about 1 1/2 miles of dredging in the lake, and considerable pier work, 1 1/2 miles of canal excavation, the construction of lock 1 with its weirs and entrance walls, between Lake Ontario and bridge 2.

Sec. 2, the contract for which was originally let, Dec. 31, 1913, to Baldry, Yerburgh & Hutchinson, Ltd., includes, in addition to the excavation of the canal prism, the construction of locks 2 and 3, with their regulating and waste weirs, the substructure of four bridges in addition to one at the head of lock 2, and a large amount of watertight embankments.

Work on these, as well as other contracts was suspended in Jan. 1917, on account of war conditions, but was resumed early in 1919, on a cost plus 8% basis, and considerable work has been done at intervals since. It is estimated that on the two sections combined, there remains about 40% of the work to be completed.

Tenders have been called for the completion of the work on sections 3 and 4. Sec. 3 commences at about station 350+00, a short distance from where the Portion-St. Davids Road crosses the canal, and extends through Thorold to about station 490+00, where it joins sec. 4, which extends from that station to a short distance north of Allanburg, station 640+00, where the new ship canal joins the present canal.

The s.s. Cap Nord, one of six auxiliary twin screw, 5 masted schooners, built by Wm. Lyall Shipbuilding Co., Vancouver, B.C., in 1918, for the French Government, at a reported cost of \$500,000, was sold by auction in London, Eng., recently, to a Mr. Petersen, of Birmingham, Eng., for \$2,000.

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during August, 1921:

Articles	Eastbound	M. ft. B.M.	Canadian Canal	U.S. Canal	Total
Lumber	7,655		7,655	36,529	44,175
Flour			378,660	853,590	1,232,250
Wheat			1,419,832	8,682,435	10,102,267
Grain other than wheat			5,972,929	6,325,890	12,298,819
Copper				2,584	2,584
Iron Ore				4,383,949	4,383,949

Total Freight			221,586	7,276,350	1,977,866

Canal Statistics for August, 1921.

The Dominion Bureau of Statistics, Transportation Branch, reports as follows:—

Traffic through the Canadian and U.S. locks at Sault Ste. Marie showed a decrease from July of 640,138 tons and from Aug. 1920 of 4,277,610 tons. The decrease from 1920 was principally due to the light iron ore shipments, which decreased 4,399,872, or over 50%, while the soft coal shipments were 788,922 tons less than during July. Wheat increased 2,290,887 bush., and other commodities showed little change from last year. The passenger traffic decreased 2,481 passengers from 1920, but was 1,453 passengers over July.

Traffic on the Welland Canal increased 99,422 tons over 1920, due to increases in grain. Grain cargoes constituted over 63% of the traffic. Soft coal decreased 171,550 tons.

There was a decrease in St. Lawrence Canal traffic from July of 50,600 tons. The largest decrease was in U.S. corn, which decreased 118,587 tons. Other grains showed considerable increases over July and also over Aug. 1920.

During the last two months there have been large quantities of U.S. grain exported via Montreal, which is shipped via Georgian Bay ports and rail to Montreal, and also all water via the Welland and St. Lawrence Canals. The premium on U.S. currency and the elevation charges at New York make the all water Canadian route from Chicago, Duluth and Milwaukee about 2½¢ a bushel less than via Buffalo and New York. Both the lake and rail, and the all rail rate, from Port Arthur and Fort William to Montreal is over 5¢ a bushel less than to New York. The payment in Canadian currency reduces this still further and more than offsets the heavier insurance rates from Montreal.

Mainly About Marine People.

Hon. C. C. Ballantyne, Minister of Marine and Fisheries, and of the Naval Service, retains his position in the re-organized Dominion cabinet, which was announced by Premier Meighen, on Sept. 21.

A. E. Higgins, Vancouver, B.C., has been presented with the Royal Albert bronze medal, in recognition of gallant conduct on Aug. 27, 1919, when an explosion occurred on the Canadian Robert Dollar Co.'s s.s. Melville Dollar, of which he was third engineer.

Albert Hoare, steward of the C.P.R. s.s. Kewatin, died suddenly while she was crossing Lake Huron on Sept. 18.

Joseph W. Isherwood, the founder of the Isherwood system of shipbuilding, has been created a baronet for distinguished service in naval architecture, especially during the war. He was born at Hartlepool, Eng., in 1870, and served an apprenticeship in Furness, Withy & Co.'s drafting room at West Hartlepool, and subsequently became associated with Lloyd's Register of Shipping, as surveyor, remaining for 11 years. The Isherwood system of ship construction was patented in 1906, and in the following year he left Lloyd's to devote his time to the new system. He is a member of the Institute of Naval Architects, the Northeast Coast Institute of Engineers and Shipbuilders, the Society of Naval

Architects and Marine Engineers (New York), the Cleveland Institute of Engineers, and is also a liverrman of the Worshipful Company of Shipwrights.

J. J. McWilliams, formerly Dominion Government signal service agent at Father Point, Que., and who also represented the Shipping Federation of Canada, Canadian Pacific Ocean Services, Dominion Government Telegraphs and Great Northwestern Telegraph Co., died in New York, Sept. 7, aged 66, after an illness lasting nearly a year.

Joseph Nordman, heretofore Traveling Passenger Agent, White Star-Dominion Line, is reported to have been appointed General Continental Passenger Agent, International Mercantile Marine Co., in charge of the Passenger Department for both the U.S. and Canada, with office at New York.

W. G. Ross, President, Montreal Harbor Commission, has been elected one of the Canadian Senior Golf Association's governors.

R. Home Smith, President, Algoma Central & Hudson Bay Ry., Toronto, has been elected Chairman, Toronto Harbor Commissioners, succeeding the late Lionel H. Clarke, Lieutenant Governor of Ontario.

Shipowners' Liability for Loss or Damage.

London, Eng., press dispatch, Sept. 7: Wm. Phillips, European Manager, Canadian National-Grand Trunk Rys., and Canadian Government Merchant Marine, told your correspondent that he considered that the recommendation made at The Hague International Law Conference, defining the liability of shipowners for loss of or damage to goods carried, and establishing a uniform bill of lading, reflected credit upon Canada's parliamentarians, as the basis for the recommendation was the Canadian Water Carriage of Goods Act, 1910.

The sum of \$100, then stipulated as the liability per package, is increased by the new Hague rules to \$100, owing to the advanced value of the average individual package. This increased liability, which was proposed by merchants and underwriters as a means of ensuring that every precaution be taken by the shipowners, was willingly assumed by the latter. The Conference recommended that the new rules be incorporated in all bills of lading from January 1922.

Vancouver Harbor, Drydock, etc.

We are advised that the Ballantyne pier construction is progressing satisfactorily, that the first contract, which is for dredging and filling, is practically completed, and that the second contract for all the concrete work is in progress.

Up to the time of our advice, on Sept. 14, J. Coughlan & Sons had not started work on the drydock, for the construction of which they entered into a contract with the Dominion Government some months ago.

Nepigon Fisheries Ltd. has been incorporated under the Ontario Companies Act, with \$40,000 authorized capital and office at Port Arthur, Ont., to carry on a general fishing and fish curing business, and in connection therewith to own and operate ships, wharves, warehouses, etc. The provisional directors are: A. J. J. L., and L. V. McComber, Port Arthur.

Damages Awarded in Collision Suit.

Mr. Justice MacLennan, of the Admiralty Court, Montreal, is reported to have found that in the collision which occurred in the morning of July 16, 1920, in Lake St. Peter between Canada Steamship Lines' lake steamship Maplehurst and her tow, the barge Brookdale, and the George Hall Coal Co.'s steam tug, Margaret Hackett, both ships were at fault, and damages are assessed in proportion to the fault of each, as found by the court, viz., judgment in favor of the George Hall Coal Co. against the s.s. Maplehurst and her bail for three quarters of the damages to the tug Margaret Hackett and costs, and judgment in favor of Canada Steamship Lines against the tug Margaret Hackett and her bail for one quarter of the damages to the barge Brookdale and costs, with a reference to the district registrar, assisted by merchants, as assessors, to determine the damage due in each case.

Canadian Built Ships for Sale in Great Britain.

Among a number of ships of various types, built during the war, for war and general mercantile purposes, and which are being offered for sale in England, are a wooden steam drifter, unregistered, but known as C.D. 25, built by Davie Shipbuilding & Repair Co., Lauzon, Que., with engines by Goldie & McCulloch Co., Galt, Ont., and described as built equal to Lloyd's 100 A1 for this class, with compound single screw engines, 12 and 24 by 16 in., Scotch type boiler, 9 by 9½ ft., 140 lb. working pressure; speed about 9 knots; fuel consumption about 1½ tons day; hull capacity about 25 tons; dimensions,—length b.p. 84 ft., breadth extreme 19½ ft., depth moulded 11 ft. The following schooners built in the Maritime Provinces, and now at various ports throughout the world, are also being offered:—Mark H. Gray, built by F. Gray, Mahone Bay, N.S.; Maxwell R., by Chester Basin Shipbuilding Co., Chester Basin, N.S.; Truro Queen, and Hiram D. McLean, by McLean & McKay, Economy, N.S.; Marion G. Douglas, by the G. M. Cochrane, Fox River, N.S.; W. R. Reinhardt, by J. N. Rafuse, Lunenburg, N.S.; Cape La Have, by E. B. Ehrgott, Yarmouth, N.S.; Maid of Canada, by E. P. Rice, Weymouth, N.S.; Ruby and Dorothy, by J. R. Rafuse & Son, Conquerall Bank, N.S.; Eugenie Owen Mackay, by Pugsley & Robinson, Diligent River, N.S.

Leasing C.N.R. Port Arthur Elevators. The Canadian National Rys. received, to Sept. 24, tenders for the privilege of leasing, from Oct. 1, 1921 to Sept. 1, 1922, two working elevators, at Port Arthur, viz., A, of wooden construction, and B, of steel and concrete construction, with contiguous storage tanks of concrete and tile construction.

Great Lakes Levels.—The U.S. Lake Survey reports the levels of the Great Lakes in feet above mean sea level, for August, as follows:—Superior, 602.77; Michigan and Huron, 580.18; St. Clair, 575.29; Erie, 572.49; Ontario, 245.93. Compared with the average August levels for the past 10 years, Superior was 0.10 ft. above; Michigan and Huron, 0.75 ft. below; Erie, 0.14 ft. below, and Ontario, 0.57 ft. below.

The Ownership of the World's Mercantile Shipping.

Harrison, Watson, Canadian Trade Commissioner, London, Eng., writes:—The notes which Lloyd's Register of Shipping issues with its annual register book are usually mainly devoted to some particular subject, and this year the feature is a comparison with the steam tonnage owned by the principal countries before the war and at the present time, supplemented by an estimate of what the respective figures would have been if the war had not taken place.

In illustrating the present situation by the table which follows, it is stated that as the percentage of sailing ships to the world's tonnage is now less than 6%, as compared with just over 8% in 1914 and nearly 22% in 1902, it is considered convenient to exclude sailing ships. In this connection it is, however, remarked that the reduction in sailing tonnage since June, 1914, amounting to 641,000 tons, is a much smaller decrease than that which occurred in previous periods of six years, which shows that shortage of tonnage has given new life to the construction of sailing ships. The United States is, however, the only country which has increased sailing tonnage since 1914, and at present 43% is owned in that country. This figure, however, includes, a large proportion of sailing barges. Other countries which still possess any considerable amount of sailing tonnage are the British Empire (440,000 tons), France (282,000 tons), and Norway (240,000 tons).

The following table shows the steam tonnage owned by the principal maritime countries before and after the war:—

Country.	1902, gross.	1914, gross.	1914, net.	1920, gross.	1920, net.	Difference between 1914 and 1920, net.
United Kingdom	18,482,000	18,482,000	18,482,000	18,482,000	18,482,000	0
Br. Dominions (U.S.)	1,632,000	2,032,000	2,032,000	2,032,000	2,032,000	400,000
Seagoing	2,027,000	12,406,000	10,879,000	12,406,000	10,879,000	1,527,000
Great Lakes	2,260,000	2,119,000	141,000	2,119,000	141,000	0
Austria-Hungary	1,052,000	nil	0	1,052,000	0	1,052,000
Denmark	821,000	719,000	102,000	719,000	102,000	0
France	1,922,000	2,963,000	1,041,000	2,963,000	1,041,000	1,041,000
Germany	5,135,000	419,000	4,716,000	419,000	4,716,000	0
Greece	1,200,000	497,000	703,000	497,000	703,000	0

Italy	1,436,000	2,118,000	682,000	2,118,000	682,000	0
Japan	701,000	2,996,000	1,295,000	2,996,000	1,295,000	1,701,000
Norway	1,957,000	1,980,000	23,000	1,980,000	23,000	0
Spain	884,000	937,000	53,000	937,000	53,000	0
Sweden	1,911,000	996,000	915,000	996,000	915,000	81,000
Total abroad	26,512,000	35,794,000	9,282,000	35,794,000	9,282,000	0
World's total	45,000,000	54,200,000	17,764,000	54,200,000	17,764,000	0

Notwithstanding the large amount of ex-enemy tonnage provisionally allocated to British management, there are at present 781,000 tons less of steamships owned in the United Kingdom than before the war, and similarly the figures for France and Italy include a considerable number of ex-enemy ships. The outstanding feature of the altered conditions is an increase of the seagoing tonnage owned by the United States by nearly 10,400,000 tons, or over 500% on the 1914 figures; while German shipping, which had over 5,000,000 tons of merchant steamers, and occupied the second position in the world in 1914, has now sunk to the insignificant total of 419,000 tons. Indeed, the relative position of several countries has markedly changed. In 1914 the United Kingdom owned 41.6% of the world's tonnage, while the present percentage is 33.6; Norway, which formerly occupied the fourth place, is now seventh; and Japan has risen from

sixth to third.

Excluding ships trading on the Great Lakes of North America (about 2,300,000 tons), the United Kingdom percentage of the world's seagoing steam tonnage has decreased from 43.9 in 1914 to 35.1 in 1920, while the proportion of the United States has risen from 4.7% to 24%. The present position of the merchant steam tonnage as compared with 1914 is summarized thus:—

	Tons.
Decrease in United Kingdom	781,000
Loss to Germany	4,716,000
Total	5,497,000
Increase in the United States	10,379,000
Increase in other countries	3,613,000
Total	13,992,000
Net world's tonnage	8,501,000

As the interesting question has frequently been raised, "What would tonnage be if there had been no war?" the following careful estimate has been prepared:—Eliminating iron and wood tonnage and all ships trading on the Great Lakes of North America and assuming that the ratio of increase during the period 1914-20 would have been about four-fifths of the average ratio of increase which took place during the previous six years—which period, as it happens, included three poor years (1908-11) and three good years (1911-14)—the result is as follows:—Estimate of the tonnage of seagoing steel steamships which would have been in existence in 1920 if there had been no war:—

	Tons.
United Kingdom	21,420,000
United States	15,682,000
Germany	6,478,000
Other countries	21,050,000
Total	51,160,000

To obtain figures regarding the actual tonnage owned at present which could be correctly compared with the above estimate it will be necessary to take into account the considerable amount of ex-German tonnage, the allocation of which is not known, but presuming that it would be distributed in somewhat similar proportions as have been taken place up to now, the figures would be about as follows:—

	Tons.
United Kingdom	18,500,000
United States	10,952,000
Germany	276,000
Other countries	17,720,000
Total	47,587,000

The difference therefore between the latter figures and the estimate of what would have occurred but for the war is as follows:—

	Tons.
United States—a gain of	8,537,000
United Kingdom—a loss of	2,920,000
Germany—a loss of	1,812,000
Other countries—a loss of	3,330,000
Total loss	12,353,000
Net world's loss	3,516,000

Dealing only with these figures, apart from the question of efficiency, the result appears to be that, notwithstanding the great expansion in the shipbuilding industry, the world as a whole is still about 3,500,000 tons of steel steam tonnage the bad as compared with the above estimate. As regards the United Kingdom, in which country during the war merchant shipbuilding had to take second place, and which after the war has transferred so many ships to other flags, the

present totals show a decrease of nearly 3,000,000 tons of steel steamships as compared with what could reasonably have been expected but for the world war. On the contrary, in the United States the increase during this period has been such as to bring the total tonnage of seagoing steel steamships actually equal to the combined totals of the principal European maritime countries mentioned in the above table (other than the United Kingdom). The general inference which may reasonably be drawn from the position set forth here, combined with the activity in construction shown in Lloyd's reports on shipbuilding, is that while freights are not likely to fall to pre-war level, there must inevitably be a further substantial reduction in current rates.

In conclusion, as Canada's share of steam tonnage is included in the table reproduced, under the heading British Dominions, it seems interesting to state that according to statistics published in the register book, Canada is recorded as owning 312 sailing ships of steel steamships (seagoing and lakes) of steel, iron, wood and composite, supplemented by 312 sailing ships of all descriptions with a gross tonnage of 122,673.

Shortage of Cold Storage for Ships to England.

London, Eng., cablegram, Sept. 12.—The shortage of cool air and cold storage accommodation for shipments of Canadian perishable cargoes direct to London appears to be largely due to the diversion to other ports of certain ships formerly carrying such cargoes to London, because the accommodation at Deptford is no longer available for meat carried by the same boats. Sir George McLaren Brown, European General Manager, C.P.R., is persistently urging the London Markets Committee the need for providing alternative accommodation and suggests a lairage at Thameshaven, below Deptford, with railage to Smithfield. The Canadian Government Merchant Marine is still accepting freight payments in Great Britain at the Canadian rate of exchange. Other shipping lines are not following this example except under pressure of competition.

United States Mail Steamship Co.—It is announced that under an order of a U.S. court, the steamships hitherto operated by this company have been surrendered to the U.S. Shipping Board, and that the Board has allocated them temporarily to Moore & McCormack, the Roosevelt Steamship Co., and the United American Line, as joint managers, on behalf of the Board, under the name of the United States Line. Hickie, Borman, Grant & Co., London, Eng., have been appointed General Passenger Agents.

Australian Shipbuilding Costs.—The Commonwealth Government, about two years ago, authorized the building of several steel cargo steamships, with capacities varying from 5,604 to 6,170 d. w. tons. It is announced that building costs of those completed varied, the most expensive one costing \$146.42 a ton. Of a further six, the costs varied from \$142.67 to \$145.15 a ton, another three, of 6,155 d. w. tons each, cost \$140.95 a ton, and another five of the same tonnage, \$145.80 a ton.

The Proposal to Dam Belle Isle Strait.

By W. Bell Dawson, D.Sc., M. Inst. C.E., Superintendent Tidal and Current Survey.

The Strait of Belle Isle, which connects the Gulf of St. Lawrence with the Atlantic, north of Newfoundland, is of much importance to navigation, because a great circle on the globe, from Lake Erie along the St. Lawrence valley and across the Atlantic to London, England, passes directly through this strait. It thus lies on the most direct line of navigation from Montreal and Quebec to Great Britain. The character of its currents and its ice conditions were therefore investigated as early as 1894, as soon as the Canadian Tidal and Current Survey was organized; and it is difficult to understand why the facts as thus brought to light have taken so many years to gain general recognition. Even earlier than this, in 1854, an official of the Newfoundland Government made an examination of the character of the currents there, and reported their behavior correctly; but this report was not published until it was embodied in the Tidal and Current Survey reports.

In regard to the project which is now being discussed for the damming of this strait, it may be stated in general terms that such a proposal is based on a misconception of the facts of the case. The current in the strait is tidal, and the flow is practically equal in the two directions. This was brought out by an examination of the conditions, made by the Tidal and Current Survey in 1894, and again in a more exhaustive manner in 1906, under the personal direction of the Superintendent of the Survey. The surveying steamer, now, with deep-sea anchorage, could be anchored at any point in the strait for several days at a time. It was equipped with current meters that registered electrically on board, by which a record of the speed and direction of the current was obtained continuously day and night. There were also appliances for the investigation of the under-current; and observations of the weather conditions were obtained, with an anemometer on the vessel and the usual meteorological instruments.

The strait has a width of 10 to 18 miles for 50 miles of its length, beyond which it widens rapidly in both directions. At its narrowest part the depth of water does not exceed 35 fathoms all the way across. It was found that the current under ordinary conditions was regularly with the tide every six hours, in the usual way that tidal streams do. At times there is a greater flow in one direction than the other; and it is possible for this flow to become continuous for two or three days together, with only a variation in speed which accords with the rise and fall of the tide. But this more continuous flow may be either inward towards the Gulf or outward towards the Atlantic; and observations throughout the season from June to September showed that on the whole it is nearly equal; though there may possibly be some balance of flow in the course of the year in favor of the inward direction toward the Gulf of St. Lawrence.

A full description of the conditions is given in a recent entitled "The Currents in Belle Isle Strait," published originally in 1895 by the Tidal and Current Survey, with a later edition in 1907 containing more detailed information. In this report there are diagrams showing the complete accord between the turn of the current when undisturbed, and the rise and fall of the tide as recorded by a

registering tide gauge at Forteau Bay in the strait. The effect of the wind on the current is also fully discussed; as it may cause a superficial drift that differs from the regular inward and outward movement of the body of water which is maintained by the under-current. The water temperatures are also fully given, from the surface to the bottom, throughout the season.

It is evident from the conditions that are found in Belle Isle Strait, that there is no continuous inflow of cold water, from the Labrador current into the Gulf of St. Lawrence, which a dam across the strait would prevent. The real difficulty in the case is to account for the persistence of the idea that this continuous flow exists, when correct information was published 25 years ago in Canadian Government reports. This erroneous idea has at least been dispelled in shipping circles, as special pains have been taken to circulate correct information amongst navigators. A notice to mariners was issued at once, in Dec., 1895, when the true facts were ascertained; as it is clear that a mistaken view regarding the direction of the current in an important strait may lead to the misallocation of position, if the weather should be foggy, and that a wreck might thus result.

The only explanation that can be offered, for the belief in a constant inward flow through this strait, is that it may have originated from the casual observation of the drift of ice. Many icebergs are carried southward by the general drift of the Labrador current, past the Atlantic end of Belle Isle Strait; and when the tide is rising, or at times when the current may be dominantly inward, some of the smaller icebergs drift into the strait. Most of these go aground eventually on the shores of the strait, or beyond its inner end, and break up; so that few of them return. The inward flow is thus made visible by the drift of ice, whereas the outward flow is not so. It is thus possible for a passing observer to be misled, if he does not spend any length of time in the strait. It is also true, in the early spring, that much ice may come into the strait from the northern regions, when the current itself is inward; whereas the outward current keeps the strait clear. This may add to the impression by making the inward current the more noticeable of the two.

It is to be hoped, however, that the actual conditions, so fully described in the report referred to, will be carefully studied by others than mariners, before any scheme involving a large expenditure is entered upon.

The Trans-European Co. Ltd. has been registered in London, Eng., with £150,000 authorized capital, to carry on business as merchant bankers, and to undertake financial and commercial operations. The company's chief object is to assist in the rehabilitation of trade, and the opening up of trade routes necessary for the resettlement of Europe. Sir George McLaren Brown, European General Manager, C.P.R., London, Eng., is one of the provisional directors.

Canadian Pickfords Ltd. has been incorporated under the Dominion Companies Act, with authorized capital of \$75,000 and office at Ottawa, to carry on business as travel organizer, tourist agent and contractor; agent and broker

for transportation companies; agent for marine insurance and to act as agent in Canada for similar companies having their headquarters in Europe. The provisional directors are: J. R. Osborne, A. A. McGorry, R. J. Sims, and A. E. Thomas, Ottawa.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

The Brown Hoisting Machinery Co., Cleveland, Ohio, has issued a leaflet describing a clamshell bucket which it has added to its lines, and which is stated to be a powerful digger, and to have manganese steel digging edges, which can be easily replaced when worn. Bronze bushings are used throughout. The bucket is made in $\frac{3}{4}$ yd., 1 yd., $1\frac{1}{2}$ yd., and 2 yd. sizes.

Diamond State Fibre Co., Toronto—T. J. McFadden, Ontario Representative, has completed a two months course in technical work at Toronto headquarters and is back on the road again. J. Alex. Regan, Quebec Representative, has been getting a few pointers in the technical departments at Toronto and Bridgeport during his holidays and has returned to his duties in Quebec.

Independent Pneumatic Tool Co., Chicago—J. D. Hurley, President, has returned after six weeks European trip.

Transportation Conventions in 1921.

GRAND TRUNK PACIFIC RAILWAY COMPANY

FOR LEASE

SHIPBUILDING YARD AND DRY DOCK.

The undersigned will receive applications for a lease for a term of years of the Dry Dock and Shipbuilding Yard property of the Grand Trunk Pacific Railway Company at Prince Rupert, B.C., the property consisting:

1. Water front lots and wharves extending to an area of approximately 30 acres, together with water lots containing an area of over 60 acres.
2. All buildings, plant, shipbuilding plant, tracks and fixtures, fixed machinery and equipment thereon, according to inventory, including Locomotive Crane, Coal Dicing Tower, 50 Ton Shear, Derricks, Power House equipped with 6 400 H.P. Boilers with automatic stokers, 2 1-000 K. W. Turbo Generators, Air Compressor, Coal and Ash Hoists, and Overhead Travelling Crane; Machine Shop, Blacksmith Shop, Foundry, and Ship Shed, with equipment.
3. 20,000 Ton Floating Dry Dock in three independent sections equipped with air compressors.
4. Docks, wharves, piers, landing stages, etc.

The property is equipped with extensive track, air facilities, sewage system, steam, water and air lines.

The property will be available for lease commencing 1st November, 1921.
 Plans of property may be seen and full particulars obtained at the office of the undersigned, or at the office of J. H. Pillsbury, Inspecting Engineer, G.T.P. Railway, Prince Rupert. Conditions of lease and other information required will be furnished to responsible parties on application therefor to the undersigned.

R. M. MITCHELL,
 Right of Way and Property Commissioner,
 No. 9 Toronto Street, Toronto.

EASTERN LINES

SEALED TENDERS, addressed to A. F. Stewart, Chief Engineer, Moncton, N.B., and marked on the outside, "Tender for Ice House," will be received up to 12 o'clock noon, Thursday, October 6th, 1921, for the construction of an extension to Ice House at Chaudiere Junction, P.Q.

Plans, Specifications and blank form of contract may be seen at the following offices:
 Chief Engineer, Moncton, N.B.
 District Engineer, Quebec, P.Q.
 Division Engineer, Tunnel Station, Montreal, P.Q.

All the conditions of the specification and contract must be complied with. Tenders must be put in on the blank form of tender, which may be obtained from any of the offices at which the plans are on exhibition.

Each tender must be accompanied by an accepted bank cheque, payable to the Canadian National Railways for an amount equal to ten per cent. of the tender.

Lowest or any tender not necessarily accepted.

W. A. KINGSLAND,
 General Manager,
 Eastern Lines.

November, 1921

Train Dispatching by Telegraph, versus Telephone.

By W. J. Camp, Assistant Manager, Canadian Pacific Railway Telegraphs.

A brief resume of a portion of telegraphic history might be a suitable introduction to this paper.

The word telegraph, strictly defined, means, "To write afar off," and in the most remote times various methods were employed for communicating intelligence to a distance, such as signal fires, waving of tree branches, etc. The ancient Greeks erected towers on hilltops, and had an ingenious arrangement of water, in a tube alongside a scale, showing the letters of the alphabet. The letter to be transmitted was indicated by raising or lowering the surface of the water or liquid. Towards the latter part of the 18th century the semaphore system of telegraph was introduced, the term semaphore signifying "A sign I bear." Numerous other systems were employed at various periods, but time will not permit detailed mention.

An electric telegraph was constructed by Lesage, of Geneva, consisting of 24 wires (one for each letter of the alphabet) there being but 24 letters in that country's language. About 1815 an alphabetical telegraph was invented by Ronalds, which consisted of a dial at each end, operated by clockwork in unison. As the letter appeared in a slot, an electrical impulse was sent over the wire. Of course, should the dials not be revolving in unison the message would be unintelligible. In 1839 a system requiring 10 wires was devised by De Hee, the receiving operator detecting the signal by a shock through his thumb and finger coming in contact with the proper pair of wires. Many discoveries were made regarding electric batteries and apparatus for various purposes between 1774 and 1837. In the latter year Morse invented the electric telegraph, on the principle now generally used. His first receiver weighed over 300 lb., and when he succeeded in making a relay that only weighed 75 lb., it was thought that the height of improvement had been reached. Compare this with the telegraph relay now in general use, which weighs 3 lb., and this miniature instrument which I have actually used, weighed only 1 3/5 oz.

The first telegraph line on this continent was between Washington, D.C., and Baltimore, Md., and the first telegram over the line read: "What hath God wrought?" The signals were embossed on a paper tape, by the electric receiver. But, in a comparatively short time, telegraph operators discovered that they could read the signals by sound. This practice was, however, prohibited by the different telegraph companies for some years, until it was found that receiving by sound was far more rapid than by tape, and that there were actually less errors, and sound reading is now universal, except for very high speed automatic, and the printing telegraph.

The automatic, or high speed telegraph is only suitable for use between points where there is a very heavy traffic. Briefly described, it is a system in which

operators punch combinations of holes in a paper tape. This tape is fed into a transmitter, which forwards the signals over the wire at high speed. The signals are received on a paper tape and the tape transcribed on telegram forms. This system is employed by the British Pacific Cable Board, on a wire leased from the C.P.R. between Halifax, N.S., and Bamfield, on the southwest coast of Vancouver Island, B.C., where the cable system from Australia ends, a total distance of 4,004 miles. The circuit is worked duplex, i.e., in both directions simultaneously, and is, I believe, the longest commercial telegraph circuit in the world.

On through traffic between Australia and Great Britain, the telegram is not written out at any point. For example, the cable operator in Australia punches a tape, with an apparatus having a keyboard similar to a typewriter. The receiving tape at the first relay station is gummed on a blank and the sending operator on the next section repunches another transmitting tape from the received one, and so on to London, where the receiving apparatus is arranged to punch holes somewhat similar to the transmitting tape. This tape is then fed into a typewriter combination and automatically typed. The message from start to finish not being written out. On the cable sections, the receiving tape shows a wavy line, but on the land sections, marks dots and dashes. Here are some specimens of the land line section, showing the receiving tape at different speeds, 75, 175, 260, 422 and 624 letters a minute. The latter is the highest speed for which the apparatus here is arranged. The highest speed attained on the Halifax-Bamfield circuit for perfect work is 300 letters a minute. The regular average is 125 letters a minute. On short press circuits in Great Britain a speed is attained of 1,500 to 2,000 (?) letter a minute, punching and transcribing being distributed amongst several operators.

Some years ago experiments were made with an automatic repeater which passed landline signals on to the cable and at the distant end to landlines again. Perfect work was performed between Bamfield, Vancouver and Victoria, B.C., and London, England, but the system is of no great practical value, because the only city in Canada which has sufficient cable traffic to keep one trans-Atlantic cable working to capacity is Montreal, and the cable traffic passing through this city is divided between several companies, the Anglo-Commercial, Western Union, Direct International and Marconi Wireless. I understand Montreal is the last cable city on this continent outside of New York.

The printing telegraph came into use in Europe somewhere about 1865. On this continent the stock ticker has been in use since about 1870. I have not the dates on which printers were first used in North America for general telegraph work. The first printer circuit installed

on the C.P.R. lines was in Aug. 1912, between Montreal and Toronto. Printer circuits are now worked from Vancouver to Winnipeg; Winnipeg to Toronto; Winnipeg to Montreal; Montreal to Halifax; and many shorter circuits. All the circuits are worked duplex. By some printer systems, as many as eight messages can be transmitted simultaneously, four in each direction.

Prof. Graham Bell conceived the idea of the telephone in 1874. At that time he lived part of the year at Brantford, Ont., and the balance of the year at Boston, but his summer residence, for many years back, has been at Baddeck, Cape Breton. The first telephone message was on June 2, 1875, from Prof. Bell to his assistant in the next room, "Watson, come here, I want you." The first long distance line was from Brantford, Ont., to Paris, Ont., eight miles, in Aug. 1876.

In the early days as a transmitter, and it was considered a tremendous improvement when some intelligent genius conceived the idea of having two telephones connected in series, one held to the ear by one hand and the other to the mouth by the other hand.

Controlling trains by means of telegraph, generally termed dispatching, originated with Chas. Minot, Superintendent of the Erie Rd. This system spread rapidly, and in a short time practically all trains on this continent were controlled by telegraph. Although dispatching trains by telephone is generally regarded as of very recent origin it is a matter of fact that the long distance telephone was used for this purpose almost from its inception. For example, in the early eighties between the locomotive house and station at Quebec, nearly two miles, light locomotives were moved on "line clear" orders, transmitted over a telephone circuit.

At the Association of Railway Telegraph Superintendents annual meeting in 1884, Chas. Selden, Superintendent of Telegraphs, The Baltimore & Ohio Rd., recommended the use of the telephone for train dispatching, and in 1894 he read a paper to the Association on this subject, and suggesting the methods to be followed, such as spelling out the words, etc. The discussion of this paper and also of papers read in succeeding years, brought out the fact that many of the railways on this continent were using the telephone to a certain extent in the handling of trains. In some cases of short terminal systems, the trains were moved entirely by telephoned orders. In 1901, the Baltimore & Ohio Rd. was using the telephone for 51 miles. A regular telephone train dispatching circuit was not, however, put into service until Oct. 2, 1907, when the New York Central Rd. opened a circuit between Albany and Fonda, 44 miles. This section of line has four tracks. On Dec. 11, 1907, the Chicago, Burlington & Quincy Rd. put in operation a circuit from Aurora, 46 miles, doubletrack. This was

followed by a circuit of 106 miles, single track, of the same road on Mar. 19, 1908. The first circuit on the C.P.R. was opened for operation June 20, 1908, on single track.

The nine hour law came into effect in the United States in 1907, which prevented any telegraph operator remaining on duty for longer than nine hours, no matter how light his duties should be. This forced either the employment of an additional operator at a very large number of stations, or closing such stations during a portion of the 24 hours. As there were not telegraph operators in the country to fill the places, many telegraph stations were closed for a time, until telephone circuits could be installed. This condition caused many roads to adopt the telephone over parts of their systems, but perhaps the greatest factor in the development of the use of the tele-

phone was because it was found that a far greater amount of traffic could be handled and in a much more satisfactory manner by the use of the telephone instead of the telegraph.

The following shows the miles of railway operated by the two systems at the beginning of this year:—

	By tele- graph	By tele- phone	Per cent. by tele- phone
United States	133,317	122,022	47.8
Canada:—			
Canadian Pacific Ry.	7,031	7,522	51.7

Some Comparisons Between The Two Systems.

CALLING.

Telegraph.

Each station has a call consisting of one or two letters. This call is repeated again and again until the attention of the operator is attracted.

Sometimes the first call is sufficient, on other occasions considerable time is lost.

The dispatcher compiles it mentally while transmitting to the several stations concerned, and writes down the order when the leading station repeats it back, then checks it off as each successive station repeats. Transmitting by telegraph is only at same speed as handwriting.

INCIDENTAL COMMUNICATION.

Conversations or obtaining information slow, being practically the same as two men writing to each other all they wish to say.

On account of the slower communication, much of the personal element is absent.

All communication between dispatcher and trainmen must pass through a third party at slow speed.

The wireless system has been experimented with to some extent on the Delaware, Lackawanna & Western Ry., principally with moving trains, but has not resulted in any practical application.

I have omitted any other reference to the wireless as I have not had time to gather data. This system has proved to be of great value in providing a means of communication with shipping and isolated points, such as islands in the Pacific Ocean, where laying of cable is impracticable, either on account of heavy expense, or unfavorable conditions in the bed of the ocean.

I have refrained from any technical description of apparatus, as most of those attending these meetings have not made a study of electrical matters, and I have also condensed this paper.

The foregoing paper was read before the Canadian Railway Club in Montreal recently

Telephone.

Each station is equipped with an electric bell and a selective device which only operates on a certain combination of electric impulses. By this means the dispatcher can start the bell ringing at any station. As the bell only rings when a station is wanted it is at once noticed even should the operator be on the platform or in another room.

ORDERS.

The dispatcher writes the order at the same time as he is speaking into the telephone and thus gauges the speed to suit handwriting. In repeating the order back, however, each station operator speaks rapidly, thus saving considerable time.

CO-OPERATION.

As fast as a man speaks, and as a great deal of the dispatcher's work consists in obtaining information another saving in time is effected.

Being able to speak directly to each other, more cordial relations are established between dispatcher and operators, resulting in greater co-operation.

Every train is equipped with a telephone apparatus, and in case of being stalled between stations, the trainmen can get into immediate communication with the dispatcher.

The conductor or locomotive driver can get into personal contact with the dispatcher and rapidly explain any difficulties encountered.

Sydney & Louisburg Railway Given Running Rights Over Section of Canadian National Railways.

A tentative agreement has been entered into between the Canadian National Ry.'s directors and the Sydney & Louisburg Ry. Co., under which the latter, which is a subsidiary of the British Empire Steel Corporation, and which operates a line from Sydney to Louisburg, N.S., 40 miles, with two short branches, will have its tracks connected with the Intercolonial Ry. tracks at Sydney Jet., and the British Empire Steel Corporation's tracks connected with the I.R.C. tracks at Sydney Mines, and will use the I.R.C. tracks between those points, and also the spur tracks at Point Edward quarry, and Leitches Creek, jointly with the C.N.R. The distance between Syd-

ney and Sydney Mines is 18 miles, between Sydney and Point Edward quarry 6 miles, and between Sydney and Leitches Creek, 10.33 miles.

The S. & L.R. is not to act as a common carrier over the joint lines, but is limited to train load movements of goods and materials owned wholly by British Empire Steel Corporation, including coal, coke, ingots, scrap, silica, rock, limestone, and other materials and supplies used in connection with its business. The C.N.R. will operate S. & L.R. trains over the joint lines, with the C.N.R. crews, which will while so engaged be deemed to be exclusive S. & L.R. employees. If it can be arranged that the movements will be made by S. & L.R. employees, the C.N.R. will consent. The S. & L.R. is to pay the C.N.R. monthly for all payments made by the latter to employees engaged in S. & L.R. train movements, and in addition the S. & L.R. is to pay the C.N.R., \$2 a train mile. C.N.R. trains will have precedence over S. & L.R. trains. All train movements over the joint section will be governed by C.N.R. rules. Maintenance, repairs, and renewals of joint tracks, etc., will be done by the C.N.R., under its officials' sole direction. If any interlocking plants or other protective facilities should be ordered by the Board of Railway Commissioners, to be installed at the junction of the joint premises or at any point thereon, the C.N.R. will install them at the S. & L.R.'s expense. With regard to liability for accidents on the joint section, the provisions of the agreement between the Canadian Pacific and the Canadian Northern Ontario Ry. companies, sections 12 to 20 both inclusive, as contained in the Dominion Statutes, 1916, chap. 38, schedule A, shall apply.

The tentative agreement will remain in force until an agreement is entered into between the King, as represented by the Minister of Railways, and the S. & L.R. Co., which will embody the tentative agreement's provisions, and any other provisions approved by the Governor in council. The term of the agreement is for five years from Sept. 1921, and thereafter, unless then cancelled, from year to year, subject to 6 months notice by either party.

The traffic to be carried under this agreement will be that of the Dominion Iron & Steel Co. and the Nova Scotia Steel & Coal Co., both of which have been merged in the British Empire Steel Corporation. The Dominion Iron & Steel Co. has blast furnaces, steel mills, etc., at Sydney on the east side of the southern extremity of the harbor. Point Edward is near the extremity of the peninsula, dividing the harbor into the south arm and the northwest arm. It has extensive limestone quarries, the spur to the quarries leaving the I.R.C. at mile 6.03 from Sydney. The Nova Scotia Steel & Coal Co. has coal mines and iron furnaces at Sydney Mines, 17.76 miles by Canadian National Ry. from Sydney, and its piers and other shipping facilities are at North Sydney, which is on the west side of Sydney harbor and 15.14 miles from Sydney by the I.R.C. By the arrangement with the C.N.R., the British Empire Steel Corporation will be enabled to take coal from Sydney Mines to Sydney direct by rail. Limestone will be hauled from Point Edward to Sydney, and a return movement of coke from the Dominion Iron & Steel plant at Sydney will be handled to Sydney Mines.

Proposed Consolidation of United States Railways into Large Systems.

The United States Interstate Commerce Commission has announced a tentative plan for the consolidation of U.S. railways into 19 large systems, based upon a report to the Commission by Prof. W. Z. Ripley, of Harvard University, a recognized authority on railway economics.

The question of the consolidation of U.S. railways of the United States has been discussed for a considerable time. Since railway regulation was first adopted as a permanent institution in that country, the feeling has existed, despite laws to prevent mergers and monopolies, that a combination of the numerous individual railways into a few large groups would go far toward reducing the cost of transportation to the public, by removing the effects of excessive competition, and other economic wastes in transportation. The U.S. has been best for years with the so-called "strong and weak road problem," which has always constituted a barrier to the efficient regulation of railways. It was, and apparently still is, impossible to prescribe a scale of rates within any one of the several grand traffic divisions of the country which would give the "weak" roads adequate earnings, without giving the "strong" roads earnings which will be absolutely excessive, or which would give the "strong" roads adequate earnings without driving the "weak" roads into bankruptcy. The reasons for the existence of the elements of strength or weakness in U.S. railway properties are many. Some properties are financially handicapped, because of poor location, because their existence is not economically justified. Others have been driven into a position of financial weakness, because of an improper relationship as between capitalization and value, and others again by a combination of the two foregoing causes. Others are confronted with handicaps in the way of adverse operating conditions, while still others have weakened themselves by over-indulgence in a fierce competition in service. It is a fact that strong and weak roads will be found paralleling each other through the same portion of a rate territory, the one property thriving on the rates prescribed, the other continually on the verge of bankruptcy. To remove this barrier to efficient regulation, and to a desirable uniformity in rates, to promote an equalization of opportunity to earn a satisfactory return, and to remove the economic losses in transportation caused by competition which is too excessive, and by a too great duplication of organization, this consolidation plan was formulated, and has steadily increased in importance in the minds of those entrusted with the regulation of the railway industry. Prof. Ripley says that "one of the larger aspects of the proposed consolidation plan is that it offers a third choice, in place either of completely unified regional ownership and operation, with its lack of incentive on the one hand; or of the economic wastes which are incident to helter-skelter competition between a heterogeneous congeries of more or less imperfectly developed properties, on the other. One alternative threatens stagnation; the other has driven U.S. railroads to the verge of bankruptcy."

If being felt advisable that an explanation such as the above be given, before proceeding merely to set forth the In-

terstate Commerce Commission's proposals as to what roads are to be included in the various groups, it is similarly felt advisable to outline briefly the legislation on which the consolidation proposal is based, and to summarize briefly the main considerations entering into any programme having to do with the consolidation plan. The Transportation Act, 1920, deals with the consolidation of railways into systems by an amendment of the Interstate Commerce Act, 1887, sec. 5, paragraph 4, making it read as follows: "The commission shall, as soon as practicable, prepare and adopt a plan for the consolidation of the railway properties of the continental United States into a limited number of systems. In the division of such railways into such systems under such plan, competition shall be preserved as fully as possible and, wherever practicable, the existing routes and channels of trade and commerce shall be maintained. Subject to the foregoing requirements, the several systems shall be so arranged that the cost of transportation as between competitive systems, and as related to the values of the properties through which the service is rendered, shall be the same, so far as practicable, so that these systems can employ uniform rates in the movement of competitive traffic, and, under efficient management, earn substantially the same rate of return upon the value of their respective railway property."

The Interstate Commerce Act, 1887, was further amended as to procedure in effecting consolidation by the following paragraphs of sec. 5: "When the Commission has agreed upon a tentative plan, it shall give the same due publicity, and, upon reasonable notice, including notice to the governor of each state, shall hear all persons who may file or present objection thereto. The Commission is authorized to prescribe a procedure for such hearings, and to fix a time for bringing them to a close. After the hearings are at an end, the Commission shall adopt a plan for such consolidation and publish the same; but it may at any time thereafter, upon its own motion, or upon application, re-open the subject, for such changes or modifications as, in its judgment, will promote the public interest. The consolidation herein provided for shall be in harmony with such plan. It shall be applied to two or more carriers, by railroad, subject to this act, to consolidate their properties, or any part thereof, into one corporation, for the ownership, management, and operation of the property theretofore in separate ownership, management, and operation, under the following conditions:

"A. The proposed consolidation must be in harmony with, and in furtherance of, the complete plan of consolidation mentioned in paragraph 5, and must be approved by the Commission.

"B. The bonds at par of the corporation which is to become the owner of the consolidated property, together with the outstanding capital stock, at par, of such corporation, shall not exceed the value of the consolidated properties as determined by the Commission. The value of the property sought to be consolidated shall be ascertained by the Commission under section 10 (a) of this act, and shall be the duty of the Commission to proceed

immediately to the ascertainment of such value, for the properties involved in a proposed consolidation, upon the filing of the application for such consolidation.

"C. Whenever two or more carriers propose a consolidation under this section, they shall present their application thereto to the Commission, and thereupon the Commission shall notify the governor of each state in which any part of the property sought to be consolidated is situated, and the carriers involved in the proposed consolidation, of the time and place for the public hearing. If after such hearing, the Commission finds that the public interest will be promoted by the consolidation, and that the conditions of this section have been and will be fulfilled, it may enter an order approving and authorizing such consolidation, with such modifications and upon such terms and conditions as it may prescribe, and thereupon such consolidation may be effective, in accordance with such order, if all the carriers involved assent thereto, the law of any state, or the decision or order of any state authority to the contrary notwithstanding."

The spirit and intent of this legislation, as well as the manner in which it was anticipated that its ends would be attained, are significant. The sections above cited do not stand alone. They are integrally related to section 15 (a), paragraph 2, of the Act to Regulate Commerce, as amended, which prescribes a new statutory rule of rate-making as follows: "In the exercise of this power to prescribe just and reasonable rates, the Commission shall initiate, modify, establish, or adjust such rates, so that carriers as a whole (or as a whole in each of such rate groups or territories as the Commission may from time to time designate) will, under honest, efficient, and economical management, and reasonable expenditure for maintenance of way, track, and equipment, earn an aggregate annual net railway operating income equal, as nearly as may be, to a fair return upon the aggregate value of the railway property of such carriers held for and used in the service of transportation."

While the Transportation Act, as it now stands, does not make consolidation compulsory, it is felt that the new statutory power of rate-making will encourage the plan.

The main considerations entering into the consolidation problem are made abundantly clear in Prof. Ripley's report. As indicated by the legislation quoted above, the first requirement is that a proper measure of competition be preserved; the second is that existing routes and channels of commerce be not disturbed, and the third is that the element of financial strength in the proposed new systems be given due consideration. Practically, the third requirement is the most important of the three, for it is easily seen that uniformity in rates and in the degree of financial success enjoyed by the consolidated properties would be no more possible than it is now, if they were not arranged to give approximately the same degree of earning power and financial strength to each group within each great territorial rate division of the country. The difficulties connected with the proposed consolidation plan are obvious.

The Interstate Commerce Commission

in presenting its tentative plan says:—"Under our direction Prof. W. Z. Ripley, of Harvard University, has prepared a report to us, which is given as an appendix to this report. It is not a tentative plan, but does not follow his recommendations, but presents alternatives thereto for like consideration. We indicate the main differences. We have sought to minimize dismemberment of existing lines or systems. This tentative plan is put forward in order to elicit a full record upon which the plan to be ultimately adopted can rest, and without prejudgment of any matters which may be presented upon that record. Whenever we refer to a property, the properties controlled thereby, under lease, stock ownership, or otherwise, should be understood as included, unless otherwise indicated."

The consolidated systems as tentatively proposed by the Commission are as follows:—

System 1, New York Central, includes New York Central (with Pittsburgh & Lake Erie; Michigan Central; Chicago, Kalamazoo & Saginaw; Cleveland, Cincinnati, Chicago & St. Louis; Cincinnati Northern; Western Maryland; Fonda, Johnstown & Gloversville; Lake Erie & Pittsburgh; Central Indiana; Pittsburgh, Chartiers & Youghiogheny; Monongahela; Boston & Maine; Maine Central; Bangor & Aroostook; and all railway properties controlled by the above, except Lake Erie & Western, and Toledo & Ohio Central, (both now controlled by N.Y.C.), Zanesville & Western and Kanawha & Western (which are controlled by Toledo & Ohio Central), and the Indiana Harbor Belt. The Boston & Maine, Maine Central, and Bangor & Aroostook may be included in system 7, New England, or system 7 (a), New England-Great Lakes. Prof. Ripley rejects the trunk line treatment of the New England roads, but the Commission presents this alternative with a view to developing the situation upon a future hearing.

System 2, Pennsylvania, includes Pennsylvania (with West Jersey & Seashore; Long Island; Baltimore, Chesapeake & Atlantic; Cumberland Valley; Maryland, Delaware & Virginia; New York, Philadelphia & Norfolk); Pittsburgh, Cincinnati, Chicago & St. Louis (with Waynesburg & Washington); Grand Rapids & Indiana; Cincinnati, Lebanon & Northern Ohio; Ohio & Western; Louisville, Erie & Terminal; Wheeling Terminal; Toledo, Peoria & Western; Lorain, Ashland & Southern; Lake Erie & Pittsburgh; Central Indiana; Pittsburgh, Chartiers & Youghiogheny; Monongahela, and all other railway properties controlled by any of the above, except the Norfolk & Western and railway properties controlled by it, which may be included in system 9, which includes the Norfolk & Western.

System 3, Baltimore & Ohio, Baltimore & Ohio (with Sandy Valley & Elkhorn; Staten Island Rapid Transit); Reading System; Cincinnati, Indianapolis & Louisville; New York, New Haven & Hartford (with Central New England); Lehigh & New England; Lehigh & Hudson River; New York, New Haven & Hartford; Central New England; Lehigh & New England; and Lehigh & Hudson may be included in system 7 or system 7 (a).

System 4, Erie, Erie (with Chicago & Erie; New Jersey & New York; New York, Susquehanna & Western); Dela-

ware & Hudson; Delaware, Lackawanna & Western; Ulster & Delaware; Bessemer & Lake Erie; Buffalo & Susquehanna; Pittsburgh & Shawmut; Pittsburgh, Shawmut & Northern; Lorain, Ashland & Southern; Wabash Lines east of the Missouri River. The Delaware & Hudson; Delaware, Lackawanna & Western; Ulster & Delaware; Pittsburgh & Shawmut; and Pittsburgh, Shawmut & Northern may be included in system 7 (a). The Bessemer & Lake Erie may be included in system 5, Nickel Plate-Lehigh Valley.

System 5, Nickel Plate-Lehigh Valley, Lehigh Valley; New York, Chicago & St. Louis; Toledo, St. Louis & Western; Detroit & Toledo Shore Line; Lake Erie & Western; Wheeling & Lake Erie; Pittsburgh & West Virginia; Bessemer & Lake Erie. Prof. Ripley recommends the Lackawanna as the main stem in this system. In this tentative plan it is replaced for that purpose by the Lehigh Valley, and made available for either system 7 (a), or system 4. He also includes Buffalo, Rochester & Pittsburgh and Wheeling & Lake Erie in this system. The Bessemer & Lake Erie may be included in system 4.

System 6, Pere Marquette, Pere Marquette; Detroit & Mackinac; Ann Arbor; Detroit, Toledo & Ironton; Boyne City, Gaylord & Alpena.

System 7, New England, New York, New Haven & Hartford (with New York, Ontario & Western; Central New England); Boston & Maine; Maine Central; Bangor & Aroostook; Lehigh & Hudson River; Lehigh & New England.

System 7 (a), same as system 7, with addition of the following, which otherwise, with the exception of Buffalo, Rochester & Pittsburgh, may be included in system 4, Erie. That carrier may be included in system 5, Nickel Plate-Lehigh Valley, Delaware & Hudson; Ulster & Delaware; Delaware, Lackawanna & Western; Buffalo, Rochester & Pittsburgh; Pittsburgh & Shawmut; Pittsburgh, Shawmut & Northern.

System 8, Chesapeake & Ohio, Chesapeake & Ohio (with Hocking Valley); Virginian.

System 9, Norfolk & Western, Norfolk & Western; Toledo & Ohio Central (with Zanesville & Western; Kanawha & Michigan; Kanawha & West Virginia).

System 10, Southern, Southern (with Alabama, Georgia & Georgia Southern); Florida; Mobile & Ohio; Southern Railway in Mississippi; Northern Alabama; Cincinnati, New Orleans & Texas Pacific; New Orleans Great Northern; Alabama & Vicksburg.

System 11, Atlantic Coast Line-Louisville & Nashville, Atlantic Coast Line (with Atlanta & West Point; Charleston & Western Carolina; Louisville & Nashville; Nashville, Chattanooga & St. Louis; and Louisville, Henderson & St. Louis); Western Ry. of Alabama; Richmond, Fredericksburg & Potomac; Norfolk Southern; Atlanta, Birmingham & Atlantic; Winston-Salem Southbound; Roanoke to Winston-Salem branch of Norfolk & Western; Florida East Coast; Carolina, Clinchfield & Ohio; Georgia & Florida; Gulf, Mobile & Northern; Mississippi Central.

System 12, Illinois Central-Seaboard, Illinois Central (with Yazoo & Mississippi Valley; Central of Georgia); Seaboard Air Line; Lynchburg, Va., to Durham, N.C., branch of Norfolk & Western; Gulf of Ship Island; Tennessee Central; Carolina, Clinchfield & Ohio.

System 13, Union Pacific-Northwestern, Union Pacific (with St. Joseph & Grand Island; Oregon Short Line; Oregon-Washington Rd. & Navigation Co.; Los Angeles & Salt Lake); Chicago & North Western (with Chicago, St. Paul, Minneapolis & Omaha); Lake Superior & Ishpeming; Wabash Lines west of Missouri River.

System 14, Burlington-Northern Pacific, Chicago, Burlington & St. Louis; Spokane, Portland & Seattle. Prof. Ripley recommends extension of this system to the Pacific coast by including the Denver & Rio Grande and the Western Pacific. The Spokane, Portland & Seattle may be included in system 15, Milwaukee-Great Northern.

System 15, Milwaukee-Great Northern, Chicago, Milwaukee & St. Paul; Great Northern; Chicago, Terre Haute & South-eastern; Duluth & Iron Range; Duluth, Missabe & Northern; Green Bay & Western; Spokane, Portland & Seattle; Butte, Anaconda & Pacific. The Spokane, Portland & Seattle may be included in system 14, Burlington-Northern Pacific.

System 16, Santa Fe, Atchison, Topeka & Santa Fe (with Gulf, Colorado & Santa Fe); Colorado & Southern (with Fort Worth & Denver City); Denver & Rio Grande; Western Pacific; Utah Ry.; Northwestern Pacific; Nevada Northern.

System 17, Southern Pacific-Rock Island, Southern Pacific Co.; Nevada Northern; Chicago, Rock Island & Pacific (with Chicago, Rock Island & Gulf); Arizona & New Mexico; El Paso & South-western; San Antonio & Aransas Pass; Trinity & Brazos Valley; Midland Valley; Vicksburg, Shreveport & Pacific; Chicago, Peoria & St. Louis.

System 18, Frisco-Katy-Cotton Belt, St. Louis San Francisco; St. Louis South-western; Louisiana Ry. & Navigation Co.; Chicago & Alton; Missouri, Kansas & Texas; Trinity & Brazos Valley; San Antonio, Uvalde & Gulf.

System 19, Chicago-Missouri Pacific, Chicago & Eastern Illinois; Missouri Pacific; Kansas City Southern; Kansas City, Mexico & Orient; Kansas, Oklahoma & Gulf; Texas & Pacific; Fort Smith & Western; Louisiana & Arkansas; Gulf Coast Lines; International & Great Northern.

The report of the Commission further states: "Certain lines, such as the Minneapolis, St. Paul & Sault Ste. Marie and the Central Vermont, which are controlled by Canadian carriers, have not been specifically included in this tentative plan, because these lines form part of through transcontinental Canadian systems, in active competition with systems above set forth. The carriers included in this tentative plan comprise most of the class 1 steam railways, but very few of those in class 2 or class 3. Those not so included, whether industrial common carriers, terminal carriers, interurban and electric railways operated as a part of general steam railway systems of transportation or engaged in the general transportation of freight, 'short lines,' or others, will be considered at the hearings to be hereafter assigned, so that in the plan to be ultimately adopted provision can be made for their inclusion in the systems. We have not specifically mentioned water carriers. Where these carriers are now controlled by carriers by rail they will be considered as being included tentatively in the systems in which the controlling rail carrier has been included."

At the time of writing (Oct. 10) no dates for hearings have been announced.

Birthdays of Transportation Men in November.

Many happy returns of the day to:—
J. O. Adams, General Eastern Freight Agent, Canadian National-Grand Trunk Rys., New York, born at London, Ont., Nov. 21, 1872.

J. O. Apps, General Agent, Mail, Baggage and Milk Traffic, C.P.R., Montreal, born at Tara, Ont., Nov. 9, 1877.

H. E. Beasley, General Superintendent, Esquimalt & Nanaimo Rys., Victoria, B.C., born at Hamilton, Ont., Nov. 10, 1862.

W. C. Blake, Division Accountant, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Liverpool, Eng., Nov. 28, 1865.

C. C. Bonter, Assistant to President and Assistant Treasurer, Canada Steamship Lines, Montreal, born at Toronto, Nov. 13, 1884.

G. B. Burchell, Managing Director, Bras d'Or Coal Co., Little Bras d'Or, N. S., Nov. 1, 1877.

J. R. Cameron, Assistant General Manager, Western Lines, Canadian National-Grand Trunk Pacific Rys., Vancouver, B. C., born at Truro, N.S., Nov. 5, 1865.

F. H. Clendenning, Foreign Freight Agent, C.P.R., Vancouver, B.C., born at Montreal, Nov. 9, 1881.

F. Conway, City Freight and Passenger Agent, C.P.R., Kingston, Ont., born at Ernestown, Ont., Nov. 19, 1850.

W. L. Lighthouse, General Advertising Agent, Canadian National Rys., Toronto, born at Derby, Eng., Nov. 9, 1871.

C. P. Cushing, Purchasing Agent, C.P.R., Calgary, Alta., born at Ottawa, Ont., Nov. 13, 1886.

W. R. Davidson, General Superintendent, Western Lines, G.T.R., Chicago, Ill., born at Everton, Mo., Nov. 8, 1871.

W. R. Devenish, C.E., General Superintendent, Ontario District, Canadian National Rys., Toronto, born in County Tipperary, Ireland, Nov. 21, 1882.

A. C. Douglas, Assistant General Purchasing Agent, C.P.R., Montreal, born there, Nov. 10, 1881.

W. Downie, ex-General Superintendent, Atlantic Division, C.P.R., now of Whitley, Ont., born at Rock Currie, Ireland, Nov. 12, 1850.

Jos. Dubrule, President, Prescott & Ogdenburg Ferry Co., and General Manager Canadian Pacific Car & Passenger Transfer Co., Prescott, Ont., born at Spenceville, Ont., Nov. 14, 1872.

R. L. Fairbairn, Assistant Passenger Traffic Manager, Eastern Lines, Canadian National Rys., Toronto, born at Stillwater, Minn., Nov. 24, 1880.

J. E. Gibault, Division Engineer, Canadian National Rys., Levis, Que., born at St. Jerome, Terrebonne County, Que., Nov. 16, 1887.

G. N. Goad, Superintendent, Nipissing Division, Ontario District, Canadian National Rys., Capreol, Ont., born at Toronto, Nov. 26, 1884.

Grant Hall, Vice President, C.P.R., Montreal, born there, Nov. 27, 1863.

J. A. C. Kelman, Telegraph Traffic Supervisor, Central and Western Division, Grand Trunk Pacific Ry., born at Bowmanville, Ont., Nov. 1, 1886.

W. E. Ladley, Superintendent of Motive Power, Reid Newfoundland Co., St. John's, Nfld., born at Leeds, Eng., Nov., 1875.

J. McMillan, Manager of Telegraphs, C.P.R., Montreal, born at Liverpool, Eng., Nov. 2, 1866.

A. B. McNaughton, Superintendent,

Portland Division, Eastern Lines, G.T.R., Portland, Me., born at Annprior, Ont., Nov. 10, 1877.

H. R. Mallison, Purchasing Agent and Secretary to President, Montreal Tramways Co., Montreal, born at Toronto, Nov. 14, 1873.

C. Murphy, General Manager, Western Lines, C.P.R., Winnipeg, born at Prescott, Ont., Nov. 20, 1865.

G. H. Nowell, Master Mechanic, Lethbridge Division, Alberta District, C.P.R., Lethbridge, born at Montreal, Nov. 13, 1885.

G. Pelletier, Assistant Superintendent, Canadian National Rys., Levis, Que., born at Isle Verte, Que., Nov. 28, 1872.

W. J. Quimlan, District Passenger Agent, Canadian National-Grand Trunk Pacific Rys., Winnipeg, born at Montreal, Nov. 21, 1883.

J. J. Rose, Robert Reford Co., General Agent, Cunard, Anchor and Anchor-Donaldson Steamship Lines, Toronto, born there, Nov. 22, 1878.

G. H. Shaw, ex-General Traffic Manager, Canadian Northern Ry., Toronto, born at Smiths Falls, Ont., Nov. 25, 1859.

P. D. Sutherland, General Agent, Passenger Department, Ocean Traffic, C.P.R., Hong Kong, China, born at Toronto, Nov. 2, 1879.

L. C. Thomson, General Storekeeper, Eastern Lines, Canadian National Rys., Toronto, born at Kingston, Ont., Nov. 25, 1882.

H. P. Timmerman, Industrial Commissioner, Eastern Lines, C.P.R., Montreal, born at Odessa, Ont., Nov. 6, 1856.

Guy Tombs, ex-Assistant Freight Traffic Manager, Eastern Lines, Canadian National Rys., now Traffic Manager, Canadian Export Paper Co., Montreal, born near Lachine, Que., Nov. 22, 1877.

T. D. Utley, Car Foreman, C.P.R., Webyr, Sask., born at Leytonstone, London, Eng., Nov. 1, 1890.

T. W. White, District Engineer, Canadian National Rys., Edmonton, Alta., born at Clinton, Ont., Nov. 29, 1880.

John Whitsell, Manager, Winnipeg Electric Ry., Winnipeg, born in Iowa, Nov. 30, 1868.

H. E. Whittenberger, General Manager, Western Lines, G.T.R., Detroit, Mich., born at Peru, Ind., Nov. 9, 1869.

W. A. Whyte, District Freight Agent, Canadian National Rys., Vancouver, B.C., born at Hornsey, Eng., Nov. 24, 1890.

The C.P.R. Social and Athletic Club. Victoria, B.C., opened its winter season with a dance and card party at the Empress Hotel, Sept. 30. In addition to the athletic and other club features, the winter's programme includes a semi-monthly social gathering. The officers for the year are:—Patron, E. W. Beatty, K.C.; Honorary Presidents, Capt. Trout and H. E. Bosley; Honorary Vice Presidents, Dr. Grant, J. H. Taylor, and H. J. Wilson; President, A. M. Anderson; Vice President, J. Jackson; Secretary, F. Neild; Treasurer, Captain C. D. Newtostons.

Transportation Patents.—The Commissioner for Patents states in his report for the year ended March 31 that applications for patents connected with transportation were again prominent. There was a decrease in patents for aeronautical appliances, but an increase in the dealing with track members and couplings.

The Perfect Package Movement.

All trades and industries have been asked to co-operate in the Perfect Package Movement to be inaugurated by the railways, steamship lines and express companies in Canada and the United States, in November, which has been designated as Perfect Package Month. The purpose is to stimulate public interest in good packing of shipments, and to enable carriers to improve the transportation service. During November, an examination of all shipments sent by freight or express, will be conducted, to obtain information as to the best shipping methods carried on by the various trades and industries. In every city and town, the railway and express people will form campaign committees, to co-operate with local shippers' associations, in carrying out the plans announced. Exception reports will be made out for all faulty shipments discovered, and will be sent to the shippers' associations for tabulation, to ascertain how high a percentage for perfect packages, the shippers of that place have attained. Comparisons of the records made by the various places during November will be announced at the conclusion of the drive. The entire working forces of the railway and express carriers, comprising some 2,000,000 men, will aid in the movement. The railways, through the American Railway Association, composed of nearly all of the railways in North America, are pushing the campaign, as a means of raising the standard of the service, and the express agents are getting ready to interest shippers in the undertaking.

G.T.R. Apprentices' Prizes for Drawing.

G.T.R. apprentices won seven out of 10 prizes, offered at the Canadian National Exhibition, Toronto, recently, for mechanical drawing, taking first and second place in electrical, structural, hydraulic and pneumatic drawing, their names being W. Grandison, F. Taylor, K. Murray and H. Bailey, Stratford, Ont., shops; W. Minton, Montreal shops; F. Gooch, Toronto shops, and R. Harvey, London car shops.

There are more than 800 apprentices in the G.T.R. motive power and car shops, and W. D. Robb, Vice President, Transportation, Construction and Maintenance, who inaugurated the apprenticeship system, takes the keenest interest in maintaining the highest possible standard of instruction, which is carried out under a supervisor of apprentices. At shops where 50 or more apprentices are employed there is a permanent class instructor, and at smaller shops and at locomotive houses instruction is given weekly by a travelling instructor. In addition there is an apprentice examiner. The boys are moved from one machine, or class of work, to another, as their skill develops.

Ancient C.P.R. Tickets.—There were recently presented to the C.P.R. District Passenger Agent at Winnipeg, with a request for a refund, two unused tickets, one from Keewatin to Rat Portage, dated Aug. 3, 1887, and one from Keewatin to East Selkirk, dated March 25, 1895. They had been issued in the name of J. McNicol, then General Passenger Agent.

Railway Men's Employment and Pay for 1919 and 1920.

The accompanying table has been compiled by the Dominion Bureau of Statistics, Transportation Branch, from returns made by steam railways for the calendar year 1920, with a comparison of the average hourly compensation for 1919.

The total pay roll for 1920 was \$290,510,517, against \$233,323,074 for 1919, an increase of 24.5%. The average number of employees increased from 173,728 in 1919 to 185,177 in 1920, or 6.6%. The average hourly compensation of all employees increased from 52.2¢ in 1919 to 54.4¢ in 1920, or 19.3%. The pay roll for 1920 included this increase for only 8 months, so that the average hourly compensations would not represent the wages in effect after the general increase. Where the time of the employees was reported in days, it has been converted into

hours on a basis of 8 hours a day for 1920 and 10 hours a day for 1919.

In comparing the figures, it must be remembered that on May 1, 1920, the railways granted increases to employees, following similar action by United States Railways, due to the U.S. Railroad Labor Board's Chicago award. This increased the annual pay roll of the railways approximately 21%.

Abbreviations are used in the table as follows:—“M.W. and S. Foremen”—Maintenance of way and shop foremen. “G. General foremen, M.E. Department”—General foremen, Mechanical Engineering Department.

The Pacific Great Eastern Ry. expenditures of \$547,049.61, for salaries and wages, are included in the total for 1920, but are not distributed.

No.	Class	Average no.	Calendar year 1920 Hours on duty	Total pay	Average hourly compensation 1919 1920
1.	General officers	802	\$1,788,459	\$4,254,699.33	59.3 72.9

The Canadian Air Board is reported to have approved of a draft course of instruction in aerial navigation for university students. It is expected that the first course will be opened at Camp Bor-

don, Ont., May 1, 1922, and that the number of students will be limited to 30, all of whom must be undergraduates of Canadian universities who have taken only their first year's examinations.

The Toronto Viaduct Question.

Following a fatal accident at the foot of George St., Toronto, in July, the Mayor wrote the Chief Railway Commissioner in Ottawa, in reference to it, and to the viaduct question, to which Mr. Carvell replied, Sept. 9, in part, as follows:—"The important part of your letter is contained in the last paragraph, in which you urgently request that the Board issue an order immediately for the construction of a viaduct on the Esplanade. I fear you are laboring under a misapprehension as to the facts of the whole viaduct question. In 1915 an agreement was entered into between the city, the Harbor Commissioners, and the Canadian Pacific and Grand Trunk Ry. Companies providing for the construction of a viaduct. This agreement was approved of by an order of this Board, which has never been rescinded, and which stands today just as effectually as it did the day it was issued. Some months ago, the railway company applied to the Board for an order granting them an extension of time within which to commence the construction and a further time for the completion of the work. Two hearings were held, but, up to the present, no decision has been reached."

Imperial service medals have been awarded to the following employees on Canadian Government Railways:—Ry., J. Barrow, locomotive inspector, Truro, N.S.; W. W. Brownell, gang foreman, Dorchester, N.B.; R. J. Fraser, section foreman, Valley, N.S.; R. Gormley, pump man, Beaver Brook, N.B.; E. Kain, section foreman, Millerton, N.B.; E. R. Lockhart, section foreman, Petuocod, N.B.; D. McDonald, section foreman, Stellarton, N.S.; P. A. McDonald, painter, Moncton, N.B.; M. McGrath, locomotive wiper, St. John, N.B.; K. Mcintosh, car foreman, Truro, N.S.; J. Neil, section foreman, Iona, N.S.; E. Parsons, locomotive man, Chaudiere Jet, Que.; N. Samson, machinist, Riviere du Loup, Que.; B. Walker, conductor, Riviere du Loup, Que.; Prince Edward Island Ry., M. McCarey, stationary engine man, Charlottetown; G. McMahon, station agent, Kensington; Patrick McQuaid, ex-foreman blacksmith, Charlottetown.

Electrification in Australia.—Progress on the electrification of the Victoria Government Ry., suburban system at Melbourne, the capital of Victoria, was interfered with to such an extent by the war and the industrial difficulties which followed, that the work will not be completed until 1923. The lines already in operation, and others to be put in service this year will comprise about half the suburban system. The Railways Commissioners state that the electric systems have given satisfaction and that the complete scheme will provide a greatly improved system of transit, which will enable additional services to be afforded at less cost than for steam operation.

Fort William Wants a C.P.R. Hotel—

A delegation of Fort William, Ont., people waited on E. W. Beatty, K.C., President, C.P.R., on his visit to that city, Sept. 9, and urged the erection of a hotel there by the company, but did not obtain a promise.

A C.P.R. train with 27 passenger cars and a van, which arrived at Port Arthur, Ont., recently, with about 1,450 passengers, is said to have been the heaviest ever handled there.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have filed the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

General order 346. Sept. 23.—Striking out Sec. 182 of Regulations for Transportation of Explosives and Other Dangerous Articles by Freight, authorized by general order 204, Aug. 11, 1917, and substituting therefor a clause permitting shipment of phosphorus in metal containers.

31,424. Aug. 20.—Authorizing Grand Trunk Pacific Branch Lines Co. to move station agent at Lovett, Alta., to mile 47, Alberta Coal Branch. 31,425. Aug. 19.—Declaring that for the present, C.P.R. crossing south of Gibbs, Sask., is protected to the Board's satisfaction.

31,426. Aug. 23.—Extending to Aug. 1, 1922, time within which G.T.R. may complete spur for Crane Ltd., Toronto, as authorized by order 29,812, May 6, 1920.

31,427. Aug. 23.—Approving British Columbia Telephone Co.'s bylaw, Aug. 8, authorizing Gordon Farrell, Secretary, Jas. Hamilton, Auditor, to issue tariffs of local calls.

31,428. Aug. 18.—Amending order 31,292, July 21, authorizing Canadian National Ry. to open traffic office its terminal station at Hatfield, Ont., near Bonar, mile to 58.8, by substituting the word Alberta for Manitoba.

31,429. Aug. 19.—Approving agreement between Bell Telephone Co. of Canada, Telephone Co., Richelieu, St. Hyacinthe and Vercheres Companies, Que.

31,430. Aug. 24.—Extending for six months time within which Equimault & Nanaimo Ry. may build spur for Wells Lumber Co., Vancouver Island, B.C., as authorized by order 30,934, Apr. 29, 1921.

31,431. Aug. 18.—Approving G.R. plan of bridge to be rebuilt at Main St., Toronto.

31,432. Aug. 2.—Authorizing Grand Trunk Central Rd. to rebuild bridge 23A over York Park, near Embrun, Ont.

31,433. Aug. 2.—Authorizing C.P.R. to remove station agent at Adelaide, Ont.

31,434. Aug. 25.—Declaring that for the present C.P.R. crossing at mile 26.5, Chalk River Subdivision, 2 miles west of Carleton Place, Ont., is protected to Board's satisfaction.

31,435. Aug. 25.—Declaring that for the present, Michigan Central Ry. crossing at Carleton Place, Ont., is protected to Board's satisfaction.

31,436. Aug. 25.—Authorizing Canadian National Ry. to build spur for W. F. Hamlyn in Mary Pt., mile 6.8 Bessemer Branch, Ottawa Division.

31,437. Aug. 24.—Amending order 31,697, May 18, authorizing Grand Trunk Pacific Ry. crossing in Sec. 4, T. 11, Range 14, west 4th meridian, Sask.

31,438. Aug. 25.—Approving plans of proposed change of location of C.P.R. and G.T.R. tracks leading to interchange tracks and Galt Stove & Furnace Co., also position of diamond, also protecting G.T.R. main line north of Dundas St., Galt, Ont.

31,439. Aug. 23.—Dismissing application of Toronto Fuel Co. for reduction of rates on coal briquettes from Toronto. 31,440. Aug. 26.—Ordering Dominion Atlantic Ry. to build station at Round Hill, P.E.I., by June 30, 1922, and improve present platform facilities there.

31,441. Aug. 27.—Extending to Nov. 1, date within which Montreal Harbour Commission may plant at crossing of Pointe aux Trembles Ry. by Canadian Northern Quebec Ry. at Pointe aux Trembles, be satisfied with the plan of establishing extended period the Harbor Commissioners' trains be allowed to operate over crossing.

31,442. Aug. 25.—Authorizing Equimault & Nanaimo Ry. to build spur for Wells Lumber Co. in Lot 104, Chemainus District, Vancouver Island, B.C.

31,443. Aug. 17.—Authorizing Toronto, Hamilton & Buffalo Ry. to build spur for Armstrong Supply Co., Hamilton, Ont.

31,444. Aug. 2.—Authorizing C.P.R. to build spur for Thomas Fuel & Cartage Co., Calgary, Alta.

31,445. Aug. 26.—Reconsidering order 26,748, Nov. 19, 1917, directing Great Northern Ry. to establish train service between Cloverdale and Clayton, B.C.

31,446. Aug. 26.—Authorizing C.P.R. to build spur for Canadian Fairbanks-Morse Co., Winnipeg.

31,447. Aug. 25.—Extending to Nov. 24, time within which C.P.R. may build spur for St. Maurice Paper Co., Cap de la Madeleine, Que., authorized by order 30,362, Nov. 24, 1920.

31,448. Aug. 2.—Extending to Aug. 9, 1922, time within which Toronto, Hamilton & Buffalo Ry. may build spur for Frost Steel & Wire Co.,

Hamilton, Ont., authorized by order 30,627, Feb. 9, 1921.

31,449. Aug. 29.—Ordering Canadian National Ry. to appoint caretaker agent at Hepburn, Sask., and enlarge waiting room from 10 x 14 to 10 x 24 ft.

31,450. Aug. 27.—Exempting C.P.R. from maintenance of fences and cattle guards at certain points on its Lardo Subdivision.

31,451. Aug. 29.—Declaring that C.P.R. crossing at mile 89 MacTier Subdivision, Ont., near Eady station, Ont., is protected to Board's satisfaction.

31,452. Aug. 29.—Declaring that for the present, Canadian National Ry. crossing at mile 1, near Southwestern Jct., Chester Subdivision, N.S., is protected to Board's satisfaction.

31,453. Aug. 29.—Ordering Canadian National Ry. to appoint station agent at Rowley, Alta., and to erect a no. 3 station there.

31,454. Aug. 29.—Authorizing C.P.R. to build spur for Ontario Reformatory at mile 23.02 Hamilton-Goderich Subdivision, Guelph Tt., Ont.

31,455. Aug. 27.—Authorizing Canadian National Ry. to build spur for General Food Products Co., at mile 34.9 from Foyert, Ont.

31,456. Aug. 29.—Authorizing C.P.R. to divert and close within limits of right of way road along and to house and standard 4th to 31, 20, Range 29, west first meridian, Man.

31,457. Aug. 30.—Approving revised location of Canadian National Ry. crossing at Notre Dame de Lourdes, Man., and reconsidering order 30,943, March 23.

31,458. Aug. 23.—Authorizing St. Asashe municipality, Que., to make a highway crossing over C.P.R. about 500 ft. north of Belisle Mills station.

31,459. Aug. 20.—Ordering C.P.R. to reopen farm crossing at mile 127.3 Three Rivers Subdivision, Que., on J. Langlois' property.

31,460. Aug. 27.—Authorizing C.P.R. to install automatic bell and highway signal, instead of gates, at King St. crossing, Woodstock, N.B.

31,461. Sept. 1.—Ordering C.P.R. to appoint agent at Amman, Sask., from Sept. 15 to Dec. 31, and a caretaker agent from Jan. 1, 1922.

31,462. Aug. 30.—Extending to May 6, 1922, time within which G.T.R. may build spur to Blair Crane Ltd., Toronto, authorized by order 26,829, May 6, 1920.

31,463. Aug. 29.—Authorizing G.T.R. to close station at Oakbury, Ont., and to use Canadian National Ry. station there.

31,464. Sept. 1.—Authorizing Brantford Municipal Ry. tracks across the highway at C. & Northern Ry. on Morrell St., Brantford, Ont.

31,465. Aug. 31.—Approving location of Brantford Municipal Ry. Terrace Hill-Holmesdale extension along Paul Avenue from Dundas to Burwell St., along Burwell St. from St. Paul Ave. to Morrell St. and along Morrell St. from Burwell to Morrell St. station.

31,466. Sept. 1.—Amending order 31,357, ordering Canadian National Ry. from street line crossing at 7th Avenue, Regina, Sask.

31,467. Aug. 31.—Approving location of Brantford Municipal Ry. Eagle Place extension along Market St. from Ontario St. along Ontario St. from South Market to Port St., and on Port St. from Ontario St. to Erie Ave., Brantford, Ont.

31,468. Aug. 31.—Authorizing Canadian Atlantic Ry. to build spur for Sinsabow Pulp & Power Co. (Becker & Co. America, Ltd.) at mile 39.7, Yarmouth Subdivision, N.S.

31,469. Aug. 31.—Declaring that for the present the G.T.R. crossing on ninth line near Oakville, Ont., is protected to Board's satisfaction.

31,470. Aug. 31.—Declaring that for the present the G.T.R. crossing on ninth line near Oakville and spur for Canadian Libbey-Owens Sheet Glass Co., Hamilton, Ont.

31,471. Aug. 31.—Authorizing Grand Trunk Pacific Ry. to carry highway over its tracks between Secs. 35 and 36 and to divert road in n.e. ¼ Sec. 35, T. 14, Range 23, west 3rd meridian, at mile 43.7, Hillsdale rural municipality 440, Sask.

31,472. Extending to June 15, 1922, time within which C.P.R. may build spur for British Columbia Spruce Mills Co., Watsburg, B.C.

31,473. Sept. 2.—Authorizing C.P.R. to open traffic portion of its Langdon Northerly Branch, mile 9.4934, Sask.

31,474. Sept. 2.—Declaring that C.P.R. Matte public crossing, about 3½ miles west of Ste. Therese, P.Q., is protected to Board's satisfaction.

31,475. Sept. 2.—Reconsidering order 31,341, July 26, made on complaint of J. C. Thynne, Otter Valley, Ont., authorizing C.P.R. to make highway crossing over Victoria & Eastern Ry. & Navigation Co. (G.N.R.).

31,476. Sept. 1.—Authorizing Quebec & Lake St. John Ry. to build spur for Metabetchewan Sulphite & Power Co., at mile 181.92 Jonquiere Subdivision, Que.

31,477. Aug. 9.—Authorizing Grand Trunk Pacific Ry. to make highway crossing over its tracks at Cow Bay, Prince Rupert, B.C.

31,478. Sept. 8.—Authorizing Vancouver, Victoria & Eastern Ry. & Navigation Co. (G.N.R.) to take certain lands in Vancouver, B.C.

31,479. Sept. 9.—Extending to Sept. 15 time within which Canadian Northern Ry. may build one-car stock pen at Brancepeth, Sask., authorized by order 31,354, July 29.

31,480. Sept. 9.—Extending C.P.R. within 60 days to install wiring signal in addition to automatic bell at crossing at Dundas St., Woodstock, Ont., by Woodstock, Thames Valley & Ingersoll Ry. and C.P.R.

31,481. Sept. 9.—Approving diversion of Windsor, Essex & Lake Shore Rapid Ry., from Main St., opposite Victoria Hotel, Windsor, Ont., to Pearl and Mill Sts., and portion of Lansdowne Ave., to connection with its track on Lansdowne Ave., Kingsville, Ont.

31,482. Sept. 15.—Amending order 13,572, May 2, 1911, re crossing of G.T.R. and Georgian Bay & Seaboard Ry. (C.P.R.) at Atherton Jct., Ont.

31,483. Sept. 7.—Authorizing Canadian Northern Pacific Ry. to build across highway in Lot 21, s.w. ¼ Sec. 23, T. 20, Osoyoos Division, Yale District, B.C.

31,484. Sept. 8.—Authorizing G.T.R. to build spur for R. C. Bastard, York Tt., Ont.

31,485. Sept. 8.—Declaring that for the present the C.P.R. crossing at Victoria St., Newbury, Ont., is protected to Board's satisfaction.

31,486. Sept. 8.—Ordering C.P.R. to appoint agent at Port Hope Junction station, Sask., from Sept. 15 to Dec. 31.

31,487. Sept. 9.—Authorizing Spallumcheen T.D. B.C., to make highway crossing over Shuswap & Okanagan Ry. crossing between Secs. 13 and 24.7, Osoyoos Division, Yale District.

31,488. Sept. 12.—Authorizing C.P.R. to build spur for Midland Grain Co., Calgary, Alta.

31,489, 31,490. Sept. 12.—Approving Bell Telephone Co. agreements with Verona & Frontenac Telephone Co., Frontenac County, Ont., and Lennox telephone Co., Lennox and Addington County, Ont.

31,491. Sept. 14.—Ordering Grand Trunk Pacific Ry. to provide waiting car and 75 ft. platform, as well as a one-pen stock yard at St. Louis, Sask.

31,492. Sept. 13.—Approving revised location (Saskatchewan Land Survey) of portion of C.P.R. Moose Jaw Southwesterly Branch, Assinibois, to Consul, mile 190.75 to 237.34.

31,493. Sept. 15.—Amending changes in layout of Toronto, Hamilton & Buffalo Ry. tracks in Bridgeburg yard and in location of Michican Centre station.

31,494, 31, 495. Sept. 15.—Amending orders 13,282, re Canadian Northern Ry. and C.P.R. crossing at Conquest, Sask., and order 8,456, re Canadian Northern Ry. crossing at Carleton Place, Carleton Place, Sask., by providing that watchmen be appointed by C.N.R. instead of C.P.R.

31,496. Sept. 15.—Amending order 8,824, Oct. 23, 1907, re crossing of Grand Trunk Pacific Ry. and C.P.R. on Lots 16 and 17, Headingley Parish, Man.

31,497 to 31,499. Sept. 15.—Amending orders 9,072, Dec. 29, 1909; 8,890, Dec. 13, 1909; 8,176, Dec. 24, 1909, re Canadian Northern Ry. crossing at C.P.R. crossing at Carleton Place, Carleton Place, Sask., and at Camrose, Alta., respectively, by providing that watchmen be appointed by C.N.R. instead of C.P.R.

31,500. Sept. 15.—Amending order 18,752, Jan. 23, 1913, re Winnipeg & Northern Ry. (Canadian Northern Ry.) crossing of C.P.R. in St. Paula Parish, P.E.I.—Declaring that C.P.R. watchmen be appointed by C.N.R. instead of C.P.R.

31,501. Sept. 15.—Authorizing British Columbia Public Works Department to make highway crossing over Morrissey, Fernie & Michel Ry., at Coal Creek, B.C.

31,502. Sept. 15.—Authorizing British Columbia Public Works Department to make highway across Kettle Valley Ry. (C.P.R.) at mile 79, 3,075 ft.

31,503. Sept. 15.—Authorizing G.T.R. to build spur for Toronto Transportation Commission, west of Corwell Ave., Toronto.

31,504. Sept. 15.—Approving agreement between Bell Telephone Co. and North Guelph Municipal Telephone System, Essex County, Ont.

31,505 to 31,510. Sept. 15.—Amending orders 3,470, Aug. 14, 1907; 953, Mar. 12, 1908; 15,274, Dec. 7, 1910; 19,155, 11,242, Sept. 19, 1910; 16,597, May 23, 1912, re Canadian Northern Ry. crossing of C.P.R. near Brandon, Man., Hartney, Sask., and at St. Hubert, Q.P.

31,511, 31, 512. Sept. 15.—Amending order 9,266, Range 4, west 2nd meridian, Sask., near Forward, Sask., and at Strathcona, Alta., respectively, by providing that watchmen be appointed by C.N.R. instead of C.P.R.

31,513, 31, 512. Sept. 15.—Approving Bell Telephone Co. agreements with Magnetawan Municipal Telephone System, Parry Sound District, Ont., and Fingal Telephone Co., Elgin County, Ont.

31,513. Sept. 16.—Authorizing G.T.R. to build

spur for Waterloo Water & Light Commission, across Herbert St., Waterloo, Ont.

31,517. Sept. 15.—Amending order of Board, in s.w. ¼ Sec. 15, Twp. 15, R. 19, 1909; 367, Jan. 11, 1906; 3,493, Aug. 14, 1917; re crossings of Canadian Northern Ry. and C.P.R. at Matouli, N.B. Maryfield, Sask., at Carberry, Sask., and Morris, Man., respectively, by providing that the watchmen be appointed by C.N.R. instead of C.P.R.

31,518. Sept. 16.—Approving Canadian Northern Ry. location of freight and passenger shelter at Newell, Ont.

31,519. Sept. 16.—Approving location of Canadian National Ry. freight and passenger shelter at Newell, Ont.

31,520. Sept. 16.—Approving location of Canadian National Ry. standard 4th class stations at Neidpath, Ont.

31,521. Sept. 15.—Declaring that for the present the C.P.R. crossing at Letellier St., just south of station, in Twp. 2, Range 2, Man., is protected to Board's satisfaction.

31,522. Sept. 16.—Approving location of Canadian National Ry. 3rd class station at Hodgville, Sask.

31,523. Sept. 19.—Authorizing G.T.R. and Grand River Ry. to operate over crossing near Grand River, Ont., between S.M. Galt, Ont., without first stopping trains.

31,524. Sept. 17.—Approving location of Canadian Northern Saskatchewan Ry. 4th class station at Scapa, Sask.

31,525. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,526. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,527. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,528. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,529. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,530. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,531. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,532. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,533. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,534. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,535. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,536. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,537. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,538. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,539. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,540. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,541. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,542. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,543. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,544. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,545. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,546. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,547. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,548. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,549. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,550. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,551. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,552. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,553. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,554. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,555. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,556. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,557. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,558. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,559. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,560. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,561. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,562. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,563. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,564. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,565. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,566. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,567. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,568. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,569. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,570. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,571. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,572. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,573. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,574. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,575. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,576. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,577. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,578. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,579. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,580. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,581. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,582. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,583. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,584. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,585. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,586. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,587. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,588. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,589. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,590. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,591. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,592. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,593. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,594. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,595. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,596. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,597. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,598. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,599. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,600. Sept. 17.—Approving location of Canadian Northern Western Ry. freight and passenger shelter at Tully, Sask.

31,594. Sept. 29.—Authorizing Edmonton, Dunver & British Columbia Ry. (C.P.R.) to connect with Canadian Northern Ry. in Edmonton, Alta., by track from C.P.R. Mackenzie Ave. spur in Block 15, at grade across 116th St., Mackenzie (104th Ave., 117th and 118th Sts., to the C.N.R. in Block 15.

31,595. Oct. 1.—Authorizing C.P.R. to open for traffic portion of its Landan North Branch, Acme to Empress, from mile 38.88 to 74.29, Alta.

31,596. Oct. 1.—Authorizing C.P.R. to open for traffic portion of its Banwell-Hoize Wire Fence Co., Hamilton, Ont.

31,597. Oct. 3.—Ordering that Montreal Tramways Co. be made party to C.P.R. application for order directing City of Montreal to make repairs to subway at Forth St. so as to relieve C.P.R. from putting restrictions on use of some of its heaviest locomotives.

31,598. Oct. 3.—Declaring that for the present, third public crossing east of Prescott, Ont., at mile 110, over G.T.R. is protected to Board's satisfaction.

31,599. Sept. 29.—Authorizing C.P.R. to remove agent from Lorette, Que.

31,600. Sept. 23.—Refusing C.P.R.'s application to remove agent from Belair, Que.

31,601. Sept. 23.—Authorizing Village of St. James, Que., to extend a street across Canadian National Ry.

31,602. Sept. 23.—Authorizing Gaelp Radial Ry. and C.P.R. to operate trains over crossing at C.P.R. mile 32, without first stopping.

31,603. Sept. 23.—Extending to July 31, 1922, time within which Canadian National Ry. may make proposed changes in interlocking plant at Connecticut Station, Toronto, Ont., in connection with the new divisions, mile 6.6 St. Lawrence Division, Que., at Allenby Junction, required by order 30,488, Dec. 28, 1919.

31,604. Oct. 3.—Rescinding order 13,822, March 29, 1911, in so far as it authorizes construction of westerly 286 ft. of Canadian Northern Ry. branch from Rue de Metron to College St., Bonifance, Man.

31,605. Sept. 29.—Authorizing C.P.R. to build spur for Shaw & Hephart, at mile 9.9, Canadian North Branch, Acme to Empress, Alta.

31,606. Oct. 3.—Authorizing C.P.R. to build spur for City Coal Co., Winnipeg.

31,607. Oct. 3.—Approving Bell Telephone Co. agreements with Bromptonville Telephone Co., Richmond and Sherbrooke Counties, Que., and Burnt River Telephone Co., Victoria and Peterborough Counties, Ont.

31,608. Oct. 3.—Authorizing Quebec Roads Department to make highway crossing over Quebec Central Ry. on Lot 93, St. Francois de Beauce Parish, Que.

31,610, 31,611. Oct. 3.—Approving Bell Telephone Co. agreements with Dummer Municipal Telephone System, Peterborough County, Ont., and Havelock, Ont., and Havelock, Ont., Peterborough and Hastings Counties, Ont.

31,612. Sept. 29.—Ordering Canadian National Ry. to appoint station agent at Eldersley, Sask., by Oct. 17.

31,613. Oct. 4.—Rescinding orders 9,361, Jan. 24, 1910, and 18,221, Dec. 4, 1912, authorizing building of sidings for Kirkfield Portland Cement Co., Beley, Ont.

31,614. Oct. 4.—Declaring that for the present Canadian National Ry. crossing at milepost 788, Verreville Subdivision, near Lamont, Alta., is protected to Board's satisfaction.

31,615. Oct. 4.—Authorizing G.T.R. to build spur for Warren Bituminous Faving Co., Downie Tp., Ont.

31,616. Oct. 4.—Authorizing Canadian Northern Ry. to build spur for McColl Bros., Regina, Sask.

31,617. Oct. 4.—Authorizing the British Columbia Public Works Department to build highway over C.P.R. near Nicholson, B.C.

31,618. Oct. 4.—Extending to May 31, 1922, time within which C.P.R. may build station at Allanburg, Ont., approved by order 30,560, Jan. 14, 1921.

31,619. Oct. 4.—Authorizing Canadian National Ry. to build spur for McColl Bros., Regina, Sask.

31,620. Oct. 4.—Ordering City of Montreal to repair Forth St. subway, so as to relieve C.P.R. from putting restrictions on use of some of its heaviest locomotives, question of cost of work reserved.

31,621. Oct. 6.—Ordering City of Montreal to repair Ontario St. subway, to enable C.P.R. to operate without restriction on use of its traffic over it, to be paid by City of Montreal.

31,622. Oct. 4.—Authorizing Town of Capreol, Ont., to make highway crossing over Canadian National Ry. at Denison.

31,623. Oct. 6.—Extending for three months, time within which G.T.R. may rebuild bridge on Main St., Toronto, as required by order 29,923, July 8, 1920.

31,624. Sept. 23.—Authorizing City of Montreal to extend Sherbrooke St. across C.P.R. overhead.

31,594. Sept. 29.—Authorizing Edmonton, Dunver & British Columbia Ry. (C.P.R.) to connect with Canadian Northern Ry. in Edmonton, Alta., by track from C.P.R. Mackenzie Ave. spur in Block 15, at grade across 116th St., Mackenzie (104th Ave., 117th and 118th Sts., to the C.N.R. in Block 15.

31,595. Oct. 1.—Authorizing C.P.R. to open for traffic portion of its Landan North Branch, Acme to Empress, from mile 38.88 to 74.29, Alta.

31,596. Oct. 1.—Authorizing C.P.R. to open for traffic portion of its Banwell-Hoize Wire Fence Co., Hamilton, Ont.

31,597. Oct. 3.—Ordering that Montreal Tramways Co. be made party to C.P.R. application for order directing City of Montreal to make repairs to subway at Forth St. so as to relieve C.P.R. from putting restrictions on use of some of its heaviest locomotives.

31,598. Oct. 3.—Declaring that for the present, third public crossing east of Prescott, Ont., at mile 110, over G.T.R. is protected to Board's satisfaction.

31,599. Sept. 29.—Authorizing C.P.R. to remove agent from Lorette, Que.

31,600. Sept. 23.—Refusing C.P.R.'s application to remove agent from Belair, Que.

31,601. Sept. 23.—Authorizing Village of St. James, Que., to extend a street across Canadian National Ry.

31,602. Sept. 23.—Authorizing Gaelp Radial Ry. and C.P.R. to operate trains over crossing at C.P.R. mile 32, without first stopping.

31,603. Sept. 23.—Extending to July 31, 1922, time within which Canadian National Ry. may make proposed changes in interlocking plant at Connecticut Station, Toronto, Ont., in connection with the new divisions, mile 6.6 St. Lawrence Division, Que., at Allenby Junction, required by order 30,488, Dec. 28, 1919.

31,604. Oct. 3.—Rescinding order 13,822, March 29, 1911, in so far as it authorizes construction of westerly 286 ft. of Canadian Northern Ry. branch from Rue de Metron to College St., Bonifance, Man.

31,605. Sept. 29.—Authorizing C.P.R. to build spur for Shaw & Hephart, at mile 9.9, Canadian North Branch, Acme to Empress, Alta.

31,606. Oct. 3.—Authorizing C.P.R. to build spur for City Coal Co., Winnipeg.

31,607. Oct. 3.—Approving Bell Telephone Co. agreements with Bromptonville Telephone Co., Richmond and Sherbrooke Counties, Que., and Burnt River Telephone Co., Victoria and Peterborough Counties, Ont.

31,608. Oct. 3.—Authorizing Quebec Roads Department to make highway crossing over Quebec Central Ry. on Lot 93, St. Francois de Beauce Parish, Que.

31,610, 31,611. Oct. 3.—Approving Bell Telephone Co. agreements with Dummer Municipal Telephone System, Peterborough County, Ont., and Havelock, Ont., and Havelock, Ont., Peterborough and Hastings Counties, Ont.

31,612. Sept. 29.—Ordering Canadian National Ry. to appoint station agent at Eldersley, Sask., by Oct. 17.

31,613. Oct. 4.—Rescinding orders 9,361, Jan. 24, 1910, and 18,221, Dec. 4, 1912, authorizing building of sidings for Kirkfield Portland Cement Co., Beley, Ont.

31,614. Oct. 4.—Declaring that for the present Canadian National Ry. crossing at milepost 788, Verreville Subdivision, near Lamont, Alta., is protected to Board's satisfaction.

31,615. Oct. 4.—Authorizing G.T.R. to build spur for Warren Bituminous Faving Co., Downie Tp., Ont.

31,616. Oct. 4.—Authorizing Canadian Northern Ry. to build spur for McColl Bros., Regina, Sask.

31,617. Oct. 4.—Authorizing the British Columbia Public Works Department to build highway over C.P.R. near Nicholson, B.C.

31,618. Oct. 4.—Extending to May 31, 1922, time within which C.P.R. may build station at Allanburg, Ont., approved by order 30,560, Jan. 14, 1921.

31,619. Oct. 4.—Authorizing Canadian National Ry. to build spur for McColl Bros., Regina, Sask.

31,620. Oct. 4.—Ordering City of Montreal to repair Forth St. subway, so as to relieve C.P.R. from putting restrictions on use of some of its heaviest locomotives, question of cost of work reserved.

31,621. Oct. 6.—Ordering City of Montreal to repair Ontario St. subway, to enable C.P.R. to operate without restriction on use of its traffic over it, to be paid by City of Montreal.

31,622. Oct. 4.—Authorizing Town of Capreol, Ont., to make highway crossing over Canadian National Ry. at Denison.

31,623. Oct. 6.—Extending for three months, time within which G.T.R. may rebuild bridge on Main St., Toronto, as required by order 29,923, July 8, 1920.

31,624. Sept. 23.—Authorizing City of Montreal to extend Sherbrooke St. across C.P.R. overhead.

Railway Mechanical Methods and Devices.

Apparatus for Washing Locomotives.

The practice of washing off locomotives with oil, water and compressed air, either after they have left the ash pit on their way into the house, or after they have been turned out, is now a fairly common one. A departure from the usual practice is apparatus shown in the accompanying illustration, which is used at the G.T.R. locomotive terminal at Mimico, near Toronto, and which uses crude oil in combination with water and steam.

Oil is placed in the vertical cylinder through the funnel A. The pipe B, running underground, conveys water, under pressure, from the line in the house. A connection is made from this pipe to the bottom of the cylinder, controlled by valve D. The pressure of the water keeps the cylinder full of water below the oil, the dividing line being seen by the gauge E. The flow of water is also controlled by valves C, C. Steam from the stationary plant is carried through pipe F, and is controlled by valves H, H. The pipe J,

Apparatus for Washing Locomotives.

leading under the platform to another set of tracks, connects to a hose used in washing off the locomotives, there being a similar connection at the other side of the cylinder.

In operation, the oil valve K is opened slightly, the valve C to the right is also opened slightly to provide water under pressure, and the valve H, at the right, is opened for steam supply. All being under pressure, a jet of combined oil, water and steam, possessing high velocity, is formed, flowing through pipe J, to be directed against the locomotive to be washed off.

We are advised that the results secured by this installation are much superior to where compressed air is used, the fact of the compound being hot, and at high pressure, having a lot to do with the quick removal of grease, etc. We are

indebted to H. J. Hague, Locomotive Foreman, G.T.R., Mimico, for this information.

Good and Bad Hub Liners.

The accompanying illustrations show two hub liners as applied to the driving wheels of a passenger locomotive. Both of these are cast iron liners, put on in two sections when the wheels were on the axle, and reinforced with countersunk set screws or studs.

The liner on the axle on which is mounted the eccentrics for the Stephenson valve gear was in bad shape, and had been cutting, the grease on the inside of the wheel center and spokes being copper-colored. The dividing line between the two halves of the liner is apparent, and it will be noted that a

the table, and, by pulling handle B, the saw is drawn through the work, through a $\frac{1}{4}$ in. opening across the table. The illustration shows the saw as pulled forward for cutting. The saw frame, one end of which is shown at C, and which is rigidly attached to the pulley frame E, slides along the ways D, so that when the saw is pulled forward for the cut, the inter-relation of all pulleys and transmission of power by belting is unchanged. The uprights supporting the saw table are of metal also.

This saw is used for cutting decking, enough of which for a car can be cut up in 15 minutes, and all kinds of lumber used in car repairs, and is a handy addition to car repair equipment. For information concerning it we are indebted to W. Gouge, Freight Car Foreman, Leaside shops.

Fig. 1. Hub Liner in bad shape. Fig. 2. A good hub liner.

good even joint was not made. The heads of the countersunk studs were over a quarter inch in from the face of the liner.

In the liner on the axle on which there are no eccentrics, however, the joint between the two halves is not apparent in the illustration, and was scarcely evident at all, while the heads of the reinforcing studs were practically flush with the face of the liner. The result is that this hub liner has been in good shape, and no cutting has been taking place.

A Handy Addition to a Freight Car Repair Yard.

The accompanying illustration shows a small wood saw used in the freight car repair yard of the Canadian National Rys. Leaside shops, Toronto. It is housed at one end of the freight car blacksmith shop, and is furnished power from a motor driven line shaft, which is extended through the wall to afford a connection for the saw. The saw is 16 in. in diameter, and the table, of $\frac{1}{2}$ in. steel, is 18 in. by 4 ft.

The belt from the line shaft drives shaft A, by a pulley not shown in the illustration, and the saw is driven from shaft A, by the compound system of belting shown. The work is placed on

Stand for Rivet Shearing Tool.

The illustration on page 576 shows an air operated device, used for shearing

Arrangement of Saw for Freight Car Repair

the heads off rivets, a necessity frequently arising in car repair work; also a stand or support, which has been devised to support the front end of the machine when it is being used. The stand is on

a tripod, and consists of two sections of pipe, of different diameter, arranged as shown, together with the supporting bracket to accommodate the "barrel" of the "gun." The manner in which the support can be adjusted for height is evident. The stand is easily adjustable for angle with the horizontal, by reason of the supporting bracket being pivoted on the pin B. The use of this stand permits of the operation of the rivet cutter

Stand for Rivet Shearing Tool.

by two men, by precluding the necessity of having an extra man to guide the front end, and place the point of the chisel against the rivet.

The operation of the rivet cutter is simple. H controls a valve to shut off air when desired. F controls the operating valve; one position admits air to operate the plunger driving the cutting chisel, while another position admits air, through the small pipe C, to force the plunger back, and allows the air admitted previously to exhaust. E is a handle to facilitate operation.

The rivet cutter and stand are used in the C.P.R. West Toronto car shops, in charge of Wm. Forrest, Assistant Car Foreman, under Jas. Hannon, General Car Foreman, and are capable of operation, through the stand being used, by two men instead of three. Being light, and easily transported, and available for

A Portable Tire Heater.

work at any point of the shop, the combination is a handy addition to car shop equipment.

A Portable Tire Heater.

The accompanying illustration shows a tire heating apparatus used in the G. T.R. locomotive house at Mimico, near Toronto, in connection with the shimming and

changing of locomotive driving, locomotive truck, and tender truck wheel tires, features of it being a construction which makes it portable and easy to move around, and a preheater used in connection with it. The fuel oil tank is mounted on a 2-wheel truck, the wheels being of 10 in. diameter and 2 in. tread. For use, the tank is filled with crude oil, and a hose connection to the air connection at the top is made, with the compressed air line in the house. The fuel oil under

Support for Shop Lighting Units.

The accompanying illustration shows a type of supporting frame as made and used at the G.T.R. shops in connection with circular flood lights of the same kind as the one shown mounted in the frame. The base of the frame is of sheet iron, and the upright support, of pipe, A, is rigidly secured to the base. As shown in the illustration, the vertical pipe section is in one piece, but in many frames

Reclaiming tie plates.

pressure comes through the armored hose as shown by the arrows, and enters the preheater A, which consists of a long coil of pipe, suspended under a fire trough, made out of an old cylinder, in which a bright charcoal fire is kept burning during the tire shimming or changing operation. This preheating tends to make the oil enter a gaseous state before arriving at the burner B, with the result that a better and brighter flame is secured at the burner. On being ignited at the burner, the flame is directed around the circumference of the tire in the usual manner. For information concerning the above equipment we are indebted to H. J. Hagie, Locomotive Foreman, G.T.R., Mimico.

Reclaiming Tie Plates.

Tie plates, which have become bent and worn in main line service, are sent to the scrap dock at the West Toronto shops, C.P.R., and are sorted out from among the other scrap material in the car, and stored in a separate section of the dock. From there they are taken to the blacksmith shop, and straightened by means of a medium sized steam hammer, as shown in the accompanying illustration. Two tie plates may be laid on the block at the same time, the flanges of one fitting into the spaces between the flanges of the other, and a single blow of the hammer will straighten them up and render them fit for further service. At the time the photograph was taken, 16,000 plates were on hand to be reclaimed.

two pieces of pipe, of different diameter are used, one telescoping within the other, height adjustment being maintained by a set screw. The cord enters the

Support for Shop Lighting Unit.

upright through the coupling B, and is carried through it to the top. The hooks C, C, are to hang the slack in the cord, when the light is used on a job near the current connection. The U frame, D, is of $\frac{1}{2} \times 1\frac{1}{2}$ in. iron, secured to the vertical pipe section as shown, and drilled

for the studs E, E, threaded into the circular wall of the light casing. The outward pressure due to the spring of the U frame against the nuts E, E, has the effect of causing the lamp to keep any position given by turning it about E, E, as axis. This feature enables the operator to set the frame so that the rays of light are in any desired direction, making the device of value in any work where artificial light is a necessity. We are indebted to W. Trainor, chief engineer of the boiler and power house at the shops, for this information.

Transportation Men in the Dominion General Elections.

J. M. Campbell, President, Kingston Navigation Co., has been chosen as the Liberal candidate for Kingston, Ont.

Thos. Cantley, of New Glasgow, N.S., formerly President, Nova Scotia Steel & Coal Co., and subsequently Chairman of the Board, has resigned from the Canadian National Ry. directorate, having been chosen as the Government candidate for Pictou, N.S.

M. P. Finn, C.P.R. conductor, has been chosen by the Dominion Labor Party as candidate for Lethbridge, Alta.

G. B. Nicholson, who represented Algoma East, in the last Dominion Parliament, has been again chosen as the Government candidate. He was at one time a locomotive fireman on the C.P.R., subsequently becoming a tie and timber contractor, and is a member of the firm of Austin & Nicholson, railway tie dealers, etc., Chisleau.

Jas. Murdock, who has been chosen as the Liberal candidate for South Toronto, was born at Brighton, Eng., Aug. 15, 1871, of Scottish parentage. He came to Canada in 1875, and was brought up on a farm in Kent County, Ont., until the spring of 1890, after which his record was as follows:—April 18, 1890 to Sept. 1, 1890, ballast pit laborer, C.P.R., London, Ont.; Sept. 15, 1890 to June 12, 1902, freight brakeman, C.P.R., London, Ont.; June 12, 1902 to July 31, 1905, freight conductor, C.P.R. His labor union record is as follows:—1895 to July 31, 1905, local and general chairman for C.P.R. employees, represented by Brotherhood of Railroad Trainmen; Aug. 1, 1901 to July 31, 1905, member board of trustees for Brotherhood of Railroad Trainmen (international organization); Aug. 1, 1905, to date, Vice President, Brotherhood of Railroad Trainmen. On Aug. 7, 1918, he was appointed a member of Canadian Board of Adjustment No. 1, which deals with disputes between railways and their employees, in regard to wages, working conditions, etc. In Sept. 1920 he was appointed a member of the Dominion Board of Commerce, resigning some six months later.

W. G. Ross, formerly General Manager, Montreal Tramways Co., who has been President of the Montreal Harbor Commission for several years, has been selected as the Government candidate for St. Antoine, Montreal.

Edward E. Sheppard, a Timiskaming & Northern Ontario Ry. conductor, at North Bay, Ont., has been selected as the Government candidate for Timiskaming, Ont.

P. A. Scott, barrister, Ottawa, formerly a member of the Board of Railway Commissioners, and now Secretary of the National Dairy Council, was a candidate for the Liberal nomination for Wright, Que., recently, but did not re-

ceive any votes at the convention at Aylmer on Oct. 17.

Hon. J. A. Stewart, K.C., Minister of Railways and Canals, who represented Lanark, Ont., from a by election in May 1918 until the recent dissolution, is again the Government candidate. He is a member of the law firm of Stewart, Hope & O'Donnell, Perth, Ont., is President of Henry K. Wampole Co., pharmaceutical manufacturers, of Andrew Jergens Co., soap and perfume manufacturers, of Perth Shoe Co., women's shoe manufacturers, and of Perth Improvement Ltd., Perth, Ont., and is a director of Frost & Wood, Ltd., agricultural implement manufacturers, Smiths Falls, Ont. He was Mayor of Perth for 1900, 1903 and 1904, and subsequently Chairman of its Board of Education. He was High Chief Ranger of the Canadian Order of Foresters for 14 years.

Hon. J. A. Stewart, K.C.,
Minister of Railways and Canals.

Couldn't Hold It.

The station master, hearing a crash on the platform, ran out of his room just in time to see the express disappearing around the curve and a dishevelled young man sprawled amid several overturned milk cans and the contents of his travelling bag.

"Was he trying to catch the train?" asked the station master of a small boy who stood by admiring the scene.

"He did catch it," said the boy, happily, "but it got away again."—Chicago Herald and Examiner.

U.S. Steel Rail Prices.—A New York press dispatch of Oct. 22 said the U.S. Steel Corporation had announced a cut in steel rail prices from \$47 a ton to \$40, in reference to which President Gary said: "Present costs of production do not justify this action, but it is hoped an expected reduction in freight rates and otherwise, together with larger operations, will soon have a beneficial effect upon our costs."

McGill University's New Chancellor and Centennial.

The Governors of McGill University, Montreal, announced Oct. 3 that E. W. Beatty, K.C., President, C.P.R., had been elected Chancellor, succeeding the Right Hon. Sir Robert Borden, whose resignation was tendered in 1920. Mr. Beatty has been a member of the McGill University governing body for some years, and in 1919 was, with its consent, elected Chancellor of Queen's University, Kingston, to succeed the late Dr. James Douglas. When Mr. Beatty was asked to accept the McGill Chancellorship, negotiations were entered into between the governing bodies of the two universities, with the result that Queen's approved of the arrangement, and it is understood that Mr. Beatty will be the titular head of both universities. Mr. Beatty was installed at McGill on Oct. 13, when he spoke of the history of chancellors, and of the aim of universities. The installation ceremony formed part of the gathering held in connection with the celebration of the University's centennial.

A large number of honorary degrees were conferred by the new Chancellor, among the recipients being Phelps Johnson, ex President, Dominion Bridge Co.; G. H. Duggan, D.Sc., LL.D., President, Dominion Bridge Co., Montreal; and G. F. Porter, Chief Engineer, Canadian Bridge Co., Walkerville, Ont.: all of whom were officials of the St. Lawrence Bridge Co., and were engaged in the designing and erection of the Quebec bridge; and W. W. Colpitts, consulting engineer, New York, N.Y., who were given the honorary LL.D. degree and were afterwards entertained at luncheon at the C.P.R. Windsor St. station by the Engineering Institute of Canada's Montreal branch.

At a gathering of Toronto University graduates in Montreal, Oct. 15, there were present, among others, E. W. Beatty; H. Rolfe, President, Montreal branch, Toronto University Engineering Alumni; G. H. Duggan, W. C. Chisholm, K.C., General Solicitor, G.T.R., and W. F. Tye, formerly Chief Engineer, G.P.R. The latter was elected Vice President of the Association.

Notices of Proposed Freight Rate Changes.—The Board of Railway Commissioners is of the opinion that it should have available each day a condensed statement of proposed rate changes in freight tariffs as filed. Railways have therefore been requested to file in triplicate, with the filing advice, a statement which shall show, in connection with schedules which advance or reduce rates formerly in effect, the following information:—The C.R.C. number of the tariff or supplement. The effective date. The commodity affected (if published under an item number, proper reference thereto to be given). The points from, to or between which the rates apply. The amount of increase or decrease. A concise statement of the reason for the rate changes. If changes are made in regularly scaled class tariffs, a statement of the increase or decrease in the first class rate will be sufficient. If there is a general revision of class rates, such as those resulting from consolidation of railways, shortening of lines, new routes, etc., a general statement will be sufficient. These statements should be numbered "Freight Rate Changes," and should be numbered consecutively.

The Railway Wages Question in Canada and the United States.

In the review of wages and working conditions in Canadian Railway and Marine World for October, on pg. 527, the formation of a board of arbitration to deal with the dispute between the Canadian railways and the locomotive men, firemen, telegraphers, conductors and trainmen, was noted. Mr. Justice Macleannan, of Montreal, was appointed chairman of the board; the employees' organizations being represented by D. W. Campbell, barrister, Regina, Sask., and the railways by Isaac Pitblado, K.C., Winnipeg. The board's sittings began Sept. 28, in Montreal. The C.P.R. was represented by Geo. Hodge, Assistant to Vice President, Eastern Lines; the G.T.R. by C. F. Needham, Assistant to Superintendent of Motive Power; and the Canadian National Rys. by A. J. Hills, Assistant to the President. The brotherhoods were represented by Ash Kennedy, Vice President, Brotherhood of Locomotive Engineers; S. N. Berry, of the Order of Railway Conductors; W. J. Babe, Deputy President, Brotherhood of Railroad Trainmen; W. G. Chester, Chairman of the brotherhood's conference committee, and General Chairman, Order of Railway Conductors; P. R. Lines; W. G. Atkinson, of the Brotherhood of Locomotive Firemen and Enginemen, and Secretary of the brotherhood's conference committee, and G. K. Wark, Vice President, Brotherhood of Locomotive Firemen and Enginemen.

The main argument for the brotherhoods was presented by Mr. Wark, who claimed that the pre-war wage scales for railway employees were entirely inadequate, and that therefore they should not be taken as a standard. He also pointed out the hazardous nature of the work of the men he represented, and the magnitude of their responsibility. It was also contended by the employees' representatives generally that the railways had violated the Lemieux Act by putting the wage cut of July 16 into effect while the dispute re wages remained undecided.

Mr. Hodge, on behalf of the C.P.R., met this latter argument by stating that the application for a board under the Lemieux Act was unnecessary, and that the joint conference committee formed by the brotherhoods had not been recognized by the C.P.R., which always made a practice of settling its wage problems with its own employees. He claimed that the railways, having adopted the wage scales put into effect in the U.S., were following a reasonable course in adopting the reductions put into effect there. He pointed out that the reductions were tentative in nature, in any event, and that the company was obliged to adopt them to protect itself, in the same way that the employees had been protected in respect to retroactive dates for increased pay. He submitted figures to show that the cost of living in Canada from July, 1917 to July 1921, had increased only 17%, while in the U.S. it had increased 24%. He also pointed out that representatives of 37.7% of the employees had accepted the reductions, and that the reductions had been applied to an additional 40% of them without protest, and he considered it only reasonable that the remaining employees, who received 30% of the total wages paid, should accept the same rate of reduction.

Argument, and the presentation of evidence, for both sides, were completed on

Sept. 30, when Justice Macleannan suggested that the railway representatives meet a committee of employees' representatives in an effort to come to an agreement without the necessity of the board functioning further. It was agreed that this should be done, and a sub-committee of the vice presidents of the brotherhoods was appointed to meet the above noted railway representatives. The conference began on Oct. 3. It was hoped that an agreement would be reached on that or the following day, but such was not the case. Extension of time to include Oct. 5 was then ordered by the board of arbitration, but conference on that date failed to bring about an agreement also. On receiving a report that the conference had failed, Justice Macleannan asked the representatives of both sides to further discuss the matter with him, and as a result of discussion, an agreement was finally reached on the evening of Oct. 8, by which the employees agreed to accept reduced wages tentatively.

The Agreement.

Agreement entered into between the railways and the classes of employees as specified herein, at the suggestion of the Board of Conciliation appointed under the Disputes Investigation Act, 1907:

At the suggestion of the Board of Conciliation, it is agreed between the railways and their engineers, firemen, conductors, trainmen, yardmen and telegraphers, including all employees governed by the respective schedules thereof, as follows:

1.—Effective July 16 (Aug. 1 for Grand Trunk engineers and firemen), 1921, the railways will apply and the employees will accept tentatively the following changes in rates of pay as compared with rates of pay in effect at June 30, 1921:—

		Decrease of	
		Per mile	Per day
		cents	dollars
Passenger service.			
Engineers48	\$0.48	
Firemen48	\$0.48	
Freight service.			
Engineers64	\$0.64	
Firemen64	\$0.64	
Yard service.			
Engineers64	\$0.64	
Firemen64	\$0.64	
Hostler service.			
Hostlers64	\$0.64	

		Decrease of	
		Per mile	Per mth.
		cents	dollars
Conductors and Trainmen.			
Passenger service.			
Conductors4	\$0.60	\$18.00
Trainmen4	\$0.60	\$18.00
Brakemen4	\$0.60	\$18.00
Through and regular freight service.			
		Per mile	Per mth.
		cents	dollars
Conductors64	\$0.64	
Brakemen64	\$0.64	
Way freight service.			
Conductors64	\$0.64	
Brakemen64	\$0.64	
Yard service.			
Foremen		\$0.64	
Helpers		\$0.64	
Switch tenders		\$0.64	

		Decrease in aggregate	
		Per equivalent	Per mth.
		Per hr.	Per month
Telegraphers.			
Agents and operators6	\$12.24	
Assistant agents8	16.32	
Train dispatchers8	16.32	
Linemen8	16.32	

Based on the number of positions, the amount arrived at in the aggregate will be applied to adjust the rates for the same number of positions of agents and operators, assistant agent and train dis-

patchers, respectively, on each general superintendent's district, as may be agreed upon mutually by the district officers and representatives of the employees. For linemen the rates will be similarly adjusted between the superintendent of telegraphs and representatives of the employees.

2.—Within 15 days after notice has been given by either the railways or the employees to the other respectively, the representative of both will collectively confer further in regard to rates of pay, and, except as may be otherwise mutually agreed, any rates of pay finally agreed upon will be effective July 16, 1921, any necessary adjustments to be made accordingly provided, however, that any such adjustments will not operate to bring about any reclaim from employees of any amounts, which prior to the date of any final agreement may have been paid to them or any of them, pursuant to the terms of this tentative agreement. Should such conferences fail to bring about an agreement in regard to rates of pay, the present board of conciliation is to again meet upon 21 days notice from either party, or such earlier date as may be possible, and is to hear again the parties on the question of rates of pay, and after such hearing is to make a report thereon in accordance with the provisions of the Industrial Disputes Investigation Act, 1907, in the same manner and to the like effect as if the dispute in regard to such rates of pay was the original dispute in connection with which the board of conciliation was established. If no notice is given to the present board of conciliation prior to July 15, 1922, asking that it should again meet and hear the parties, it is understood that the services of the board of conciliation are no longer required on the question of rates of pay.

There will be no changes made effective in schedule rules before 30 days after Jan. 1, 1922. At any time hereafter any party desiring a change in existing schedule rules may, on giving not less than 30 days notice to the other party, call upon the other party to confer with respect to such rules, and any proposed changes therein, and negotiations shall then be carried on in the usual manner. In the event of failure to come to an understanding with respect to such rules, the parties will, unless otherwise mutually agreed, within 10 days of such failure, jointly apply to the Department of Labor for the appointment of a board of conciliation and negotiation with regard thereto; provided, however, that this understanding does not prejudice the right of either party to apply on its own behalf for a board.

In the event of there being a revision of schedule rules between any of the railway companies and any class of its employees represented in this agreement prior to July 15, 1922, and in the event that the date on which such revised rules are to become effective remains in dispute, that question shall be submitted to and decided by the members of the present board. A decision of a majority of the members of the said board shall be binding on the railway company and its employees concerned.

The agreement was signed by G. Hodge, for Canadian Pacific Rys.; Ash Kennedy, for the engineers; A. J. Hills, for Canadian National Rys.; G. K. Wark, for

firemen and engineers; S. N. Berry, for conductors; W. J. Babe, for trainmen; C. F. Needham, for Grand Trunk Ry. lines in Canada; J. M. Mein, for telegraphers; W. G. Chester, chairman of committee; F. S. MacLennan, chairman, board of conciliation.

It is evident that the fact of an agreement being finally reached was due in very large part to the tact and patience of Justice MacLennan, to whose work in the proceedings a warm tribute has been paid by Senator G. D. Robertson, Minister of Labor, who has pointed out that the late amendment to the Judges' Act prevents a judge being compensated for such work, and he characterized this as matter for regret, and stated that Justice MacLennan's public spirit should merit much appreciation. A great national advantage is evident in the agreement, as it precludes the possibility of any interruption in Canadian transportation at this time, a happening otherwise within the bounds of possibility due to the present situation in the U.S.

Canadian National Railways Arbitration. Concerning the dispute between the Canadian National Rys. and the Canadian Brotherhood of Railway Employees, the board of mediation and conciliation appointed under the Act respecting Conciliation and Labor, consisting of H. P. Hill, Chairman, Geo. D. Kelley, for the railways, and Harold Fisher, for the employees, held some sittings, and then asked the company and the labor organization to try and come to an agreement themselves. The discussion between the C.B.R.E. representatives, led by A. R. Mosher, and F. P. Brady, for the railways, was not productive of result, although, in addition to wage rates, there were discussed such matters as overtime, vacations, work done on holidays, length of working day, and working conditions generally. The C.B.R.E.'s claim is that the lower paid men in the railway service, who make up a large proportion of the C.B.R.E. membership, have had their pay reduced by too great an amount, considered in relation to the reduction affecting the higher paid employees. The board of conciliation met in Ottawa on Oct. 3 to consider the dispute, but in the absence of F. P. Brady, nothing was done. At a subsequent meeting, the board again referred the matter back to the principals, but in a further discussion, no agreement was reached, although Mr. Brady, on behalf of the railway, agreed to a withdrawal of all consideration of working conditions, but would not consider any change in the wage scale put into effect. In view of this, it was decided to follow the terms of the act under which the board of conciliation was constituted, and to replace that board with a board of arbitration. Mr. Hill being unable to act further, the new board was constituted with the same representatives for the railway and the employees' organization, but with Rev. Byron Stauffer of Toronto as chairman. The new board began its sittings in Ottawa on Oct. 20, when the Canadian National Rys. were represented by F. P. Brady, A. C. Egan, Auditor of Agencies, and A. E. Crilly, Assistant to General Manager, Eastern Lines. The employees were represented by A. R. Mosher, C. E. Cole, and R. Dykes, officials of the C.B.R.E. Mr. Mosher stated that the members of his organization were willing to accept a reasonable reduction in wages to help the railway to make a better financial showing, even though he did not

consider a reduction justified, and in his opinion, the proposed reduction would make the wages of his membership so low that the men and their families could not exist in comfort and decency. Mr. Egan, for the railway, pointed out that passenger rates were back on the same basis as in 1915, that freight rate reductions had also gone into effect, and indicated the decrease in commodity values generally. Hearings were continued on Oct. 22, and then adjourned to Oct. 27.

Grand Trunk Railway Arbitration.

In the dispute between the G.T.R. and the Canadian Brotherhood of Railway Employees, the arbitrators named were J. M. Godfrey, K.C., Toronto, chairman; H. H. Vaughan, C.E., Montreal, for the railway, and Peter Bercovitch, K.C., Montreal, for the men. This board was granted under the Lemieux Act, and held its first sitting in Montreal Oct. 19. C. F. Needham, representing the G.T.R., asked that employees who were not in the C.B.R.E. membership, but who were engaged in similar work in the company's employ, should be represented at the hearing also. The sittings were adjourned to get representatives of these other employees. On Oct. 20, the sittings were resumed, when there appeared representatives of the International Brotherhood of Railroad Stationmen, the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and of the Brotherhood of Stationary Firemen and Oilers, which organizations have members employed on the G.T.R. in the same kind of work as men who are members of the C.B.R.E. The representatives of these organizations, who, it is said, have but little use for the C.B.R.E., told the board that they did not want to be a party to the proceedings, and then withdrew, to be called as witnesses if needed. After the presentation of argument on behalf of both sides the chairman suggested that they try to come to an agreement by themselves. Accordingly, a meeting between G.T.R. representatives and C.B.R.E. representatives was called for Oct. 24. No agreement was arrived at this meeting, but on Oct. 25 the employees finally agreed to accept the reductions tentatively, the agreement being subject to a re-opening of the whole question on 15 days notice from either side. It was also provided that no change would be made in rules or working conditions until 30 days after Jan. 1, 1922, unless mutually agreed upon. The organizations mentioned above, in addition to the Canadian Brotherhood of Railway employees, were parties to the agreement.

The United States Situation.

In the U.S., 90% or more of the membership of the Big Four organizations voted in favor of a strike against the wage reduction of July 1, as did also the members of the Switchmen's Union. The Association of Railway Executives met in Chicago, Oct. 16, and decided to petition the Labor Board for another reduction in railway wages, sufficient to remove the remainder of the increase made by the Board's decision of July 20, 1920. During the time the railway executives were in Chicago, the labor leaders were also there, and they requested and were accorded a meeting with a committee of the railway executives. Messrs. Stone, Carter, Lee, Sheppard and Cashen, leaders of the organizations of the locomotive men, locomotive firemen and engine-men, conductors, trainmen, and switch-

men, respectively, met W. W. Atterbury, Vice President, Pennsylvania Rd.; J. Gorman, President, Chicago, Rock Island & Pacific; Carl Gray, President, Union Pacific; C. H. Markham, President, Illinois Central, and Ralph Budd, President, Great Northern. The labor leaders asked that the wage cut of July 1 be cancelled, that time and one-half for overtime service be continued, and that no further wage reductions be sought. The executives flatly refused these demands, and notified the labor leaders that a further wage reduction would be sought. The labor leaders immediately announced plans for a general railway strike to begin Oct. 30 at 6 a.m. For strike purposes, they divided the U.S. railways into four groups, the strike to begin on the roads in the four groups 48 hours apart.

Group 1, on the roads in which the strike was scheduled to begin Oct. 30, included the Kansas City Southern, Missouri Pacific, St. Louis Southwestern, International & Great Northern, Texas & Pacific, Southern Pacific, Santa Fe, Arizona, Chicago and Northwestern, Chicago, Milwaukee & St. Paul, Northern Pacific, Southern Ry., Seaboard Air Line, Virginia, Chicago Greatwestern, and Chicago, Rock Island & Pacific.

Group 2, on the roads in which the strike was scheduled to begin Nov. 1, 6 a.m., comprised the New York, New Haven & Hartford, Delaware & Hudson, Chicago & Eastern Illinois, St. Louis & San Francisco, Louisville & Nashville, Nickel Plate, Erie, Santa Fe, Atlantic Coast Line, Buffalo, Rochester & Pittsburgh, Delaware, Lackawanna & Western, Lehigh Valley, Nashville, Chattanooga & St. Louis.

Group 3, on the roads in which the strike was scheduled to begin Nov. 3 at 6 a.m., comprised the Minneapolis & St. Louis, Burlington System, Chesapeake & Ohio, New York Central Lines, Boston & Albany, Baltimore & Ohio, Western Pacific, Denver & Rio Grande, Chicago & Alton, Illinois Central, Yazoo & Mississippi Valley, Minneapolis, St. Paul & Sault Ste. Marie, Great Northern, Lake Erie & Western, Cleveland, Cincinnati, Chicago & St. Louis.

Group 4, on which the strike was scheduled to begin Nov. 5, comprised the Pennsylvania, Boston & Maine, and some other roads.

Chicago press dispatches stated that the federated shop trades, including the Railway Carmen of America, International Brotherhood of Electrical Workers, International Association of Machinists, International Brotherhood of Blacksmiths, Drop Forgers and Helpers, Amalgamated Sheet Metal Workers, and International Brotherhood of Rollmakers, Iron Shipbuilders and Helpers of America, had voted not to join the strike. Later reports stated that some of the above organizations would join a strike if it took place, and the dispatches as a whole are very contradictory. It is stated that the Brotherhood of Stationary Firemen and Oilers have decided to strike in protest against the wage reduction, but have set no date, the same applying to the maintenance of way employees. It is also stated that the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees have decided not to join a strike. It is said that the telegraphers will join the train service employees in a strike but that the signalmen will not.

The Railway Labor Board summoned the labor leaders for a conference on Oct. 20, but nothing came of it. The Government intimates that it will leave matters in the Labor Board's hands for the time being. The Board summoned the labor leaders and 500 general chairmen of unions, together with a large number of railway executives, for a conference in Chicago on Oct. 26. The public members of the Labor Board are said to have suggested that the matter could be straightened up by the railways translating the wage reduction of July 1 into lower rates to the public, deferring their application for a further reduction, and by the train service brotherhoods recalling their strike order. In view of the fact that rate reductions of large magnitude have already been made, and that even with the July wage reductions in effect, the railways are not yet able to earn the 6% return to which they are entitled under the Transportation Act, this proposal seems like an invitation to the railways to commit financial suicide, and the relationship of the proposals to a definite settlement of the wage question appears, from this distance, to be very remote, to say the least.

A strike was called on the International & Great Northern, a small road in Texas, which was calculated to be in the nature of a test. Its trainmen walked out on Oct. 22, but on the same day enough applications for work were received to man the road several times over, and it is continuing business without interruption.

In Aug. 1920, the number of employees on U.S. railways was 2,197,824; in June of this year, it was 1,586,143, a reduction of 611,681. At present, the number is a little larger, but it is probable that 600,000 railway employees are still without work in that country.

The dispute between the Pennsylvania R.R. and the Labor Board was given in detail in Canadian Railway and Marine World for October. On Sept. 26 the railway refused to appear before the Board, saying that the Board wanted to deal with matters over which it had no jurisdiction. The company does not question the Board's jurisdiction to hear and decide disputes which fall within the purview of the Transportation Act, but it points out that the U.S. Railroad Labor Board is not manning the Pennsylvania R.R. What action the Board intends to take in this matter has not been announced.

Since the above was written, a Chicago press dispatch of Oct. 27 stated that the leaders of the Big Four brotherhoods and switchmen had decided to call off their strike. The dispatch said that B. W. Hooper, public representative of the Labor Board, attended a meeting of the brotherhood chiefs and presented copies of the Board's recent resolutions not to consider wage reduction petitions for any class of workers until rules and working conditions for that class had been settled. At the conclusion of Mr. Hooper's statement, the unions held individual conferences, and then went into joint conference, with the result noted above.

C.P.R. Steel Rail Orders.—The C.P.R. has ordered 32,000 tons 100 lb. steel rails from Algoma Steel Corporation, the manufacture of which will be gone on with immediately after the completion of the 25,000 tons ordered previously, as mentioned in our October issue.

Gasoline Motor Car Trial on Canadian National Railways.

The Canadian National Rys. management is trying a gasoline driven motor car between Westport and Brockville, Brockville Subdivision, Ottawa Division, Ontario District, 44.4 miles, the car being operated in regular passenger service and making four round trips daily. It leaves Westport at 7 a.m., 11 a.m., 3 p.m., and 7 p.m., as trains 78, 80, 82 and 84 respectively, and leaves Brockville at 9 a.m., 1 p.m., 5 p.m. and 9 p.m., as trains 77, 79, 81 and 83 respectively, the run each way occupying 1½ hours. The motor car service was begun Oct. 3, previous to which date service was provided by a mixed train each way daily except Sunday, and this service has been retained. The motor car remains at Westport over night.

The car was constructed by LeDoux, Jennings Ltd., Montreal, and has been handed to the C.N.R. for trial purposes. As shown in the accompanying illustration, a 4-wheel leading truck has

Gasoline Passenger Motor Car, on trial on Canadian National Railways.

been used, and the chassis of what would otherwise be a large motorbus has been modified to suit the requirements. The length over all is 21½ ft.; height, rail to roof, 9 ft.; length of body, 18 ft.; width of body 7½ ft. There are two entrance doors, one on each side, near the front. The seating capacity is 20, in addition to the operator, the seats being finished in rattan. There is one transverse seat across the rear, accommodating 6 passengers, 2 one-passenger longitudinal seats, one on each side, and 3 seats arranged transversely on each side of the central aisle, each accommodating two passengers. The car is equipped with 6 dome electric lights, 3 on each side of the central aisle. On each side of the engine hood, which is 36 in. long, baggage carriers are arranged. The engine is of Reo manufacture.

The maximum speed which can be attained by the car is 40 m.p.h., which may be said to be more than sufficient for equipment of such light weight. Twelve miles per gallon of gasoline is being obtained, and the service the car has given to date is said to be satisfactory.

The Canadian National Rys. is reported to have made a record trip with a special train for a doctor from Vancouver, B.C., to Edmonton, Alta., 759.5 miles, in 21 hours, recently, or an hour less than the regular running time between the two points.

United States Grain Rates Reduced.

The Interstate Commerce Commission has granted the application of U.S. railways extending to Galveston, Texas, and other Gulf ports, to reduce rates on grain from central western territory to Gulf ports by 5¼c. per 100 lb. on five days' notice. Eastern trunk line and New England roads have been authorized to reduce, on 10 days' notice, domestic rates on grain and grain products between points in Virginia, Delaware, Maryland, New Jersey, Pennsylvania, New York and the New England States. The reduction will be 12¼% on the average. In this reduction, and in reductions in rates to Gulf ports, the lower rates will apply for the remainder of 1921 only.

The state railway commissions of the western states applied to the Interstate Commerce Commission for lower rates on grain and grain products. The reductions were opposed by the western railways; hearings were concluded on Sept. 1 and oral arguments were heard on

Sept. 2 and 3. No formal decision of the Commission has been announced; but we are informed, however, that reduced rates have been applied generally since the middle of September, and that a reduction of 4¼c. per 100 lb. has been made on grain and grain products from Chicago to the Atlantic seaboard. The grain traffic in the U.S. has been much heavier to date this year than in 1920, over 86% as much grain having been carried in the first 8 months of 1921 as in the whole of 1920.

Since the above was written a Washington press dispatch has stated that the Commission has ordered a reduction in western grain and hay rates of 16%, which removes one-half of the increase granted on these commodities by the general rate increase of Aug. 26, 1920. It is estimated that this reduction will mean a total reduction of \$32,000,000 in the revenue of the carriers affected. The dispatch also states that reductions in rates on coal, lumber, and other basic products are being considered.

News Privileges on Timiskaming & Northern Ontario Ry.—Arthur Stevens, of the Stevens Catering Co., Ltd., Cochran, Ont., has been given the privilege of selling, on T. & N.O.R. trains, newspapers, books, periodicals, publications, nuts, fruits, confections, cigars, stationery, fancy goods, and other articles usually sold on trains.

Mainly About Railway People Throughout Canada.

J. Abrams, wharf agent, C.P.R., Vancouver, was reported to have been drowned in the Fraser River near New Westminster, towards the end of September. It is stated that he had been in the sanitarium there for some time, suffering from morbid insanity, and it is feared that he committed suicide. A portion of his clothing was found but the body was not recovered.

Augustus Brostedt, who has been appointed General Traffic Agent, Canadian National Rys., Shanghai, China, was born in Sweden in 1877, and entered railway service in 1898, since when he has been, to 1901, operator, cashier and agent, Great Northern Ry., Moosehead, Minn.; 1901 to 1903, Travelling Passenger Agent, same road, Philadelphia, Pa.; 1903 to 1905, District Passenger Agent, same road, Pittsburgh, Pa.; 1905 to 1907, Northern Passenger Agent, same road, Duluth, Minn.; 1907 to 1913, District Freight and Passenger Agent, same road, Winnipeg; 1913 to 1915, District Freight Agent, Canadian Northern Ry., Calgary, Alta.; 1915 to 1917, District Freight and Passenger Agent, same road, Vancouver, B.C.; 1919 to Aug. 31, 1920, Assistant Freight and Passenger Agent, Canadian National Rys., Vancouver, B.C. On Sept. 1, 1920, he was appointed General Freight Agent, Canadian National-Grand Trunk Pacific Rys. and Grand Trunk Pacific Coast Steamship Co., Vancouver, B.C., and in Feb. 1921 he was assigned to special duty, and sailed from Vancouver, Feb. 10, to look into trade conditions in China, Japan, Philippines and Straits Settlements, returning to Canada in September. He will sail for the Orient within the next few weeks.

Sir George Bury, formerly Vice President, C.P.R., returned to Canada, from England, by the s.s. Metagama, Oct. 7.

Francis Ferguson Busted, Assistant Engineer, C.P.R., Vancouver, B.C., died suddenly of heart disease, at Vancouver, Oct. 2. He was born at Battery Point, Que., Oct. 10, 1858, and entered railway service in 1879, since when he had been, to 1881, chairman; 1881 to 1883, transit man; 1883 to 1887, assistant engineer in charge of construction; 1887 to 1889, in charge of location, and Division Engineer of Construction, all with the C.P.R.; 1890, locating and Division Engineer of Construction, Alberta Ry. & Coal Co.'s extension from Lethbridge, Alta., to a junction, at the International Boundary, with the Great Falls & Canada Ry.; 1890 to 1892, City Engineer, Bristol, West Virginia; 1892 to July 1904, in C.P.R. service, successively, as Roadmaster, Assistant Engineer, Resident Engineer, Engineer of Maintenance of Way and Structures, Division Engineer, and Superintendent at Nelson, B.C.; July 1904 to Feb. 1907, Assistant Chief Engineer, Western Lines, C.P.R., Winnipeg; Feb. 1907 to June 1910, General Superintendent, Pacific Division, C.P.R., Vancouver; June 1910 to Jan. 1912, General Superintendent, British Columbia District, C.P.R., Vancouver; Jan. 1912 to 1915, Engineer in charge of revision and double tracking, west of Calgary, Alta., C.P.R., Kamloops, B.C., and from 1915, Assistant Engineer, C.P.R., Vancouver, B.C.

Hubert Victor Caldwell, whose appointment as District Passenger Agent, Canadian National-Grand Trunk Rys., Liver-

pool, Eng., was announced in a recent issue, was born there, Oct. 4, 1883, and entered G.T.R. service Nov. 3, 1907, since when he has been, to July 1908, clerk, Liverpool, Eng.; July 1908 to Jan. 1910, clerk, London, Eng.; Jan. 1910 to Dec. 1915, Travelling Passenger Agent, Liverpool, Eng.; Dec. 1915 to Feb. 1919, Publicity Agent, London, Eng.; Feb. 1919 to Aug. 1921, Passenger Agent, London, Eng.

C. S. Cameron, Secretary-Treasurer, British Empire Steel Corporation, was presented with a silver cigar box by the Royal Cape Breton Yacht Squadron and a gold watch by the Dominion Iron & Steel Co.'s staff at Sydney, N.S., Oct. 13, and Mrs. Cameron was presented with a silver tray on their removal to Montreal. Mr. Cameron was for 22 years Comptroller, Dominion Iron & Steel Co.

Thomas Cantley, of New Glasgow, N.

Francis Ferguson Busted, C.E.,
Who died at Vancouver, B.C., October 2.

S., a former Canadian National Rys. directors, has been unanimously nominated as National Liberal-Conservative candidate for Pictou, N.S. He entered the Nova Scotia Steel & Coal Co.'s service in 1885, as a sales agent, gradually rising to the position of President, and afterwards was Chairman of the Board of Directors.

D. C. Coleman, Vice President, Western Lines, C.P.R., spent a few days in Minneapolis, Minn., in October.

G. C. Conn, Director of Traffic, Buick Motor Co., Flint, Michigan, who read a paper on "A shipper's view of the evolution of transportation, and its effect on steam railways," before the Western Railway Club, in Chicago, recently, was in railway service for a number of years, having been General Freight Agent, Minneapolis, St. Paul & Sault Ste. Marie Ry., Freight Traffic Manager, and subsequently Vice President in charge of freight, Pere Marquette Rd.

George E. Cowie, whose appointment as General Freight Agent, United King-

dom Traffic, Canadian National Rys., London, Eng., was announced in our last issue, was borne at Iowa City, Ia., Apr. 30, 1883, and entered transportation service in Nov. 1902, since when he has been, to Feb. 1904, clerk, Merchants Line of Canada, Liverpool, Eng.; March 1904 to Apr. 1910, clerk, Canadian Northern Ry., Liverpool, Eng.; May 1910 to Nov. 1912, District Agent, C.N.R. and Canadian Northern Steamships, Liverpool, Eng.; Dec. 1912 to July 1916, Assistant General Freight Agent, same companies, London, Eng.; Aug. 1916 to Dec. 1918, General Freight Agent, Canadian Northern Ry., London, Eng.; Jan. 1919 to Aug. 1921, General Freight Agent, Canadian National Rys., London, Eng.

John Deed, whose appointment as City Agent, Freight and Passenger Departments, Canadian National Rys., London, Eng., was announced in our last issue, was born at Kensington, London, Eng., Oct. 12, 1887, and entered transportation service in June 1903, since when he has been, to May 1910, clerk, Lunhan & Moore, freight brokers, insurance and forwarding agents, London, Eng.; May 1910 to Apr. 1912, freight clerk, Canadian Northern Ry. and Canadian Northern Steamships, London, Eng.; Apr. 1912 to Aug. 1914, chief clerk, same companies, London, Eng.; Aug. 1914 to June 1916, District Agent, same companies, Birmingham, Eng.; June 1916 to Jan. 1919, with British Expeditionary Force in France; Feb. 1919 to Aug. 31, 1921, District Freight Agent, Canadian National Rys., London, Eng.

Sir John Eaton, one of the C.P.R. directors, is assessed by the City of Toronto this year on \$349,716 income, the highest income assessment in the city. Sir William Mackenzie, ex President, Canadian Northern Ry., is assessed on \$165,289. Sir Edmund Osler, a C.P.R. director, on \$120,765, and Sir Henry Pellatt, a Toronto Ry. director, on \$66,006.

Thomas Evans, Freight Agent, Michigan Central Rd., London, Ont., was placed on the supernumerary list, Sept. 30, after 34 years service.

J. M. R. Fairbairn, Chief Engineer, C.P.R., made an inspection trip over the Western Lines during October. He was accompanied by Mrs. Fairbairn.

Miss M. W. Foster, daughter of C. B. Foster, Assistant Passenger Traffic Manager, C.P.R., Montreal, was married at Vancouver, Oct. 5, to Gordon Russell.

Sir Eric Geddes, the British Minister of Transportation, has resigned that position in accordance with his statement some time ago that he would do so after the bill providing for the grouping of British railways had passed through Parliament.

Grant Hall, Vice President, C.P.R., visited the Maritime Provinces in October, accompanied by F. L. Wanklyn, General Executive Assistant; C. H. Temple, Chief of Rolling Stock and Motive Power; J. H. Walsh, General Manager, Quebec Central Ry., and V. G. R. Vickers, Vice President, The Holden Co., Montreal.

D. B. Hanna, President, Canadian National Rys., addressed the Toronto Rotary Club, Oct. 27, speaking optimistically in regard to the C.N.R.'s future.

Sir Arthur Harris, formerly of the C.P.R. Freight Traffic Department, and

Lady Harris, who spent the summer at Murray Bay, Que., have gone to Bermuda.

Frank H. Hopkins, President, F. H. Hopkins & Co., Ltd., Montreal, railway and marine supplies, was married at Brookline, Mass., October 8, to Miss P. M. Bostwick, of St. John, N.B.

Sir John Kennedy, C.E., who died at Montreal, Oct. 25, was the eldest son of the late Wm. Kennedy, founder of The Wm. Kennedy & Sons Co., Owen Sound, Ont. He was born at Spencer's Cove, in 1838, and was educated privately at Bytown (Ottawa) High School and McGill University. He commenced his engineering career in 1853, under the late T. C. Keefer, and assisted in the construction of waterworks at Montreal and Hamilton, and also in railway and other engineering works. He was appointed Assistant City Surveyor of Montreal in 1863, and subsequently Deputy City Surveyor, resigning in 1867 on his appointment as Manager, Hull Iron Mining & Manufacturing Co.'s smelting works at Ironside, Que. In 1871 he was appointed Division Engineer on construction, Wellington, Grey & Bruce R., and subsequently became Chief Engineer, Great Western Ry., and as such built the Canadian Air Line and some minor branches, all of which are now part of the G.T.R. He also laid the first double track line in the Dominion, between Glenora and Windsor, and resigned in 1875, on his appointment as Chief Engineer, Montreal Harbor Commissioners, which position he held until Feb. 1907, when he became Consulting Engineer. During his occupancy of the position of Chief Engineer, he deepened the ship channel between Quebec and Montreal, from 20 ft. to 27½ ft., and designed and carried out all improvements in the Montreal harbor undertaken in that period. On his retirement, the Montreal Harbor Commissioners placed on record their deep sense of his lengthened and devoted service, and of his faithful and zealous performance of the same. He was a member of the Royal commission, appointed in 1886, to enquire into the leasing of water power on the Lachine canal; a member of the Royal commission appointed the same year to enquire into the causes of floods in Montreal, and to suggest remedies therefor, and a member of the Royal commission appointed in 1888 to report upon the advisability of completing the Trent Valley canal system, and was often called upon to act as arbitrator or consulting engineer on important questions relating to railways, waterways, etc. He was one of the founders of the Canadian Society of Civil Engineers in 1887, and was a councillor during several years, Vice President in 1887, 1890 and 1891, President in 1892, and was elected an honorary member in 1907. He was also a member and councillor of the Institute of Civil Engineers, England, and a member since 1875 of the American Society of Civil Engineers. He was created a knight bachelor Jan. 1, 1916. He was totally blind was several years.

Louis Lavoie, General Purchasing Agent, Canadian National Ry., Toronto, spent a short holiday in New Brunswick in October.

E. H. Lingo has returned to Dallas, Texas, after spending the summer with his daughter, Mrs. H. G. Kelley, wife of the President, G.T.R.

Sir William Mackenzie, ex President, Canadian Northern Ry., and now Pre-

sident of Toronto Ry. Co., etc., returned to Toronto on Oct. 22, from England.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., returned to Montreal towards the end of October, after a shooting trip in northern Saskatchewan.

Brigadier General F. S. Meighen, one of the C.P.R. directors, and Mrs. Meighen, left Montreal, Oct. 18, to spend six weeks in Europe.

P. Mooney, Assistant General Freight Agent, Canadian National Ry., Quebec, Que., addressed the local Kiwanis Club, Oct. 6, on Canadian railway traffic conditions.

F. W. Peters, General Superintendent, British Columbia District, C.P.R., Vancouver, B.C. had a fortnight's shooting trip in northern Alberta recently.

Edward Lawrence Roper, whose appointment as District Freight Agent, Canadian National-Grand Trunk Ry., Liverpool, Eng., was announced in a recent issue, was born there June 12, 1887, and entered transportation service in

Sir John Kennedy, C.E., who died at Montreal, Oct. 25.

1902, since when he has been, to 1911, clerk, Leyland Line, Liverpool, Eng.; 1911 to 1913, freight clerk, Manchester Liners Ltd., Manchester, Eng.; 1913 to 1914, Contracting Freight Agent, Canadian Northern Ry., London, Eng.; 1914 to Aug. 1921, District Agent, Canadian Northern Ry., latterly Canadian National Ry., Liverpool, Eng.

Hon. V. W. Smith, Minister of Railways for Alberta, sold his herd of pure bred live stock, at Camrose, recently for \$25,000.

Hon. J. A. Stewart, who was M.P. for Lanark, Ont., from May 3, 1918, until Parliament was dissolved recently, and who was appointed Minister of Railways and Canals in September, has been renominated as National Liberal-Conservative candidate for the same constituency.

Brig. Gen. J. W. Stewart, C.B., railway contractor, Vancouver, B.C., who in Alberta during October, spent a few

days shooting in the neighborhood of Kleskun Lake.

Hon. W. H. Taft, Chief Justice, U.S. Supreme Court, who represented the G. T.R. in the recent arbitration proceedings, as to the price, if any, to be paid by the Dominion Government for certain of its capital stocks, was re-elected President of the Unitarian General Conference at its meeting at Detroit, Mich., recently.

W. F. Taylor, Assistant General Storekeeper, Canadian National Ry., Moncton, N.B., died there, Oct. 15, after a short illness. He was born at Hillsboro, N.B., Aug. 20, 1855, and before moving to Moncton, Sept. 26, 1905, as General Storekeeper, Canadian Government Ry., was for some years in business at Hillsboro.

L. C. Tombs, only son of Guy Tombs, Traffic Manager, Canadian Export Paper Co., Montreal, has been appointed one of the night editors of McGill Daily, the McGill University Student Society's official organ. He is 18 years of age, and is in his second year at McGill.

Miss Irma A. Usher, daughter of C. E. Usher, Passenger Traffic Manager, C.P.R., was married at Montreal, Oct. 15 to E. S. Ibbotson.

John Mitchell Walker, whose appointment as District Agent, Canadian National Ry., Glasgow, Scotland, was announced in a recent issue, was born there, May 14, 1880, and entered transportation service in Aug. 1895, since when he has been, to Dec. 1907, in outward freight department, Allan Line; Dec. 7, 1907 to Aug. 31, 1921, General Agent, G.T.R., and agent, Canadian Express Co., all at Glasgow.

Mrs. F. L. Wanklyn, wife of the General Executive Assistant C.P.R., returned to Montreal recently, after spending the summer in Great Britain.

F. L. Wanklyn, General Executive Assistant, C.P.R., addressed the New England Railway Club at Boston, Mass., Oct. 13, on the work of the Canadian overseas railway corps in France. Among other C.P.R. officials present were: Grant Hall, Vice President; C. H. Temple, Chief of Motive Power and Rolling Stock, and J. H. Walsh, General Manager, Quebec Central Ry.

Cecil Wayne, Traffic Manager, of the Chinese Government's Nankin-Pekin Line, was a visitor in Vancouver early in October and returned to China by the C.P. R. s.s. Empress of Asia after having spent a holiday in England.

John Benjamin Windross, who has been appointed relieving Manager of Hotels, Canadian National Ry., Winnipeg, was born at Whitehaven, Eng., July 5, 1873, and has been at various times from Aug. 1907 to Feb. 1921, Assistant Manager, Chateau Louise, C.P.R., Lake Louise, Alta.; Assistant Manager, Chateau Frontenac, C.P.R., Quebec, Que.; acting Manager, Chateau Frontenac, C.P.R., Quebec, Que.; Manager, Empress Hotel, C.P.R., Victoria, B.C.; Assistant Manager, Davenport Hotel, Spokane, Wash.; Assistant Manager, Hotel del Coronado, California, and from Feb. to Sept. 1921, Manager, Macdonald Hotel, Canadian National Ry., Edmonton, Alta.

J. W. Wortman, Assistant Auditor of Traffic, Canadian Government Ry., Moncton, N.B., who has been granted six months leave of absence from Sept. 1, prior to superannuation, sailed from Vancouver, B.C., Oct. 9, for Australia, by the Canadian Government Merchant Marine s.s. Canadian Scottish.

Railway Development, Projected Lines, Surveys, Construction, Betterments, Etc.

Alberta & Great Waterways Ry.—Track laying on the new location is reported to have reached Secs. 31 and 32, Tp. 28, Range 8, west 4th Meridian, approximately mile 285, or about 6 miles short of the intended terminus at McMurray. The location is close to the mouth of Deep Creek, where it is proposed to lay out a terminal yard. For this purpose a spur of about 0.75 mile will be laid on the flats alongside the Clearwater River, so that the river traffic may be taken care of. The grading for this piece of line is reported to have been completed Oct. 15, and the track work was expected to be finished by Nov. 1. Temporary shelters and other accommodation will be provided. The Deputy Minister of Railways for Alberta made an inspection of the work recently.

The grading of the 6 miles between the present track end and McMurray is reported to be well in hand. It will be completed and track laid next spring. (Oct., pg. 528.)

Burrard Inlet Tunnel & Bridge Co.—The Dominion Parliament will be asked at its next session to extend the time for the construction of the bridge, tunnel and connecting railways at the second narrows of Burrard Inlet, Vancouver, B. C., which the company was incorporated to construct. (Oct., pg. 528.)

Edmonton, Dunvegan & British Columbia Ry.—The Board of Railway Commissioners has authorized the construction of a connection between the E.D. & B.C. Ry. and the Canadian Northern Ry. in Edmonton, Alta., by a track from the C.P.R. Mackenzie Ave. spur in Block 15, at grade, across 116th St., Mackenzie Ave. 117th and 118th streets to the C. N.R. in Block 19. This connection is being made to enable E.D. & B.C. Ry. trains to use the C.P.R. station. (Oct., pg. 528.)

Greater Winnipeg Water District Ry.—Ballasting between St. Boniface and Deacon, 6.5 miles, is reported to have been started Sept. 29. The track between these two points is being raised 18 in. and the work was expected to be completed by Oct. 31.

The Administrative Board on Oct. 13 authorized the purchase of 25,000 ties from settlers along the line, for use in 1922.

Hudson Bay Ry.—The Pas, Man., Board of Trade, on Oct. 13, in view of the forthcoming general election, passed a resolution calling upon the leaders of political parties in the field to declare a policy as to the railway from Pas to Port Nelson in order "that the people may know whether this railway is to be allowed to go to rot or to take its place in the national scheme of transportation."

Kettle Valley Ry.—E. W. Beatty, President, C.P.R., and party on their recent trip to the west, motored over the route of the extension southerly from Penttice into the new British Columbia irrigated lands. Grading is completed to the north end of Dog Lake, and preparations have been made for carrying the traffic by steamboat and barge to the south end of the lake. Surveys have been completed for a line from the south end of the lake to the irrigated lands, about 18 miles, and we are officially advised that a contract for grading has been let to A. E. Griffin & Co., Vancouver. Work is reported to have been started, the

general contractors having sublet the work in two sections to Sharp & Leader, and D. B. Griffin & Co., respectively. The first named firm is reported to be working from Okanagan Falls to McIntyre, and the latter firm from McIntyre to the Demonstration Farm.

A press report states that the branch line, which was built in connection with the mining and smelting operations at Copper Mountain, is being repaired and put in order for the restarting of work.

Pacific Great Eastern Ry.—A press report states that instructions have been given by the British Columbia Railways Department to have a solid fill made on some trestle work on the line between North Vancouver and Whytecliffe, B.C., which is in unsatisfactory condition.

The B.C. Premier is reported to have stated that there was no truth in statements made recently that it was proposed to close down construction work on the line. (Oct., pg. 529.)

Squamish to Lake Alice Logging Railway.—A press report states that construction will be started at an early date on a logging railway from Squamish, B.C., northerly to Lake Alice, where it is reported that 2,000,000,000 ft. of logs are available for transportation. It is proposed to take over and operate in connection with the railway the old booming area of Squamish formerly operated by the old Howe Sound & Northern Ry.

Quebec Central Ry.—As stated briefly in Canadian Railway and Marine World for October, the Q.C.R. completed its extension from Scotts Jct., Que., to a connection with the Canadian National Ry. near the south end of the Quebec bridge. The line was opened for traffic, Oct. 2. The new line, which is 19 miles long, leaves the Q.C.R. main line at Scotts Jct., and connects with the Canadian National Ry. at Diamond Jct. The stations on the new line are Bras, 6 miles; Ville Lambert, 10 miles, and Breakeyville, 16 miles, all these distances being from Scotts. A description of the line was given in Canadian Railway and Marine World for May, pg. 242. The general construction was done by J. T. and J. F. Davis, Montreal, and some special work, building of fences, etc., by Eastern Townships Construction Co., Sherbrooke. The work was under the charge of F. H. Hibbard, Resident Engineer, and J. T. Morrell, Chief Engineer.

The company is using the new piece of line as a part of its main line into Quebec City, and is using its old line from Scotts Jct. to Levis as a branch. A mixed train service connecting with main line trains, and a local passenger train between Lake Frontenac and Levis. The new main line therefore runs from Sherbrooke, via Scotts Jct., to Diamond Jct., whence traffic is operated over the Canadian National Ry. and the C. P.R. into the Palais station, Quebec, 16.9 miles. The route is: from Diamond Jct. to Joffre, formerly Chaudiere Jct., 2.26 miles; Joffre to Quebec Bridge, 3.48 miles; Quebec Bridge to Cadorna, 7.86 miles; thence over the C.P.R. tracks into Palais station, 3.30 miles. A very satisfactory and mutual agreement has been arrived at with the Canadian National Ry. for trackage rights between Diamond Jct. and Cadorna, and also with the C.P.R. for running rights into Quebec with terminal accommodation and

facilities at the Palais station. (Oct., pg. 529.)

Timiskaming & Northern Ontario Ry. As a result of a conference between the Premier of Ontario and the Timiskaming & Northern Ontario Ry. Commission at North Bay, Sept. 27, it was decided to proceed with the construction of an extension from Cochrane, Ont., towards James Bay, Ont. We are officially advised that the extension will be from Cochrane to the vicinity of New Post, on the Abitibi River, about 70 miles. The route has not been definitely decided upon, but it was expected that the preliminary surveys would be completed early in October, and that the location surveys would be pushed forward as rapidly as possible, so that the work may be put under contract by the end of the year. Tenders will probably be invited by Dec. 1. A press report stated that the Premier was expected to turn the first sod of the extension Oct. 29.

We are officially advised that the Commission has not at present under consideration any proposition for the development of electrical power on the Abitibi River, near the terminus of the proposed extension of the railway as stated in press reports.

A deputation from North Timiskaming waited on the Commission Oct. 11 and urged the construction of a branch line from Liskeard to the head of the lake. (Oct., pg. 529.)

Reduced Freight Rate for Fodder for Farmers' Live Stock in Quebec.—A press dispatch of Oct. 19 said that the Quebec Minister of Agriculture had announced that owing to the failure of the hay crop he had succeeded in getting the railways to give the following reductions in freight rates: 33% on corn forwarded from Montreal or from any ports of the Great Lakes to any station in the Province of Quebec; 33 1/3% on grain shipments forwarded from Port Arthur, Port William, Westfort and Armstrong, to any point in the province; 25% on hay, which restores the rate in effect in Sept. 1920. The reductions on hay will only apply to points within the province. Only farmers and agricultural societies may get the benefit of these lower rates. All cars to be billed to the Quebec Department of Agriculture and to be delivered to buyers upon receipt of an order to the Department.

Railway Thieving.—Elic Martin, Longueuil, Que., was arrested Oct. 14 charged with stealing cigars and tobacco while in transit on the Quebec, Montreal & Southern Ry. He pleaded guilty, and was remanded for sentence. Thefts from the company's cars had been under investigation for some considerable time, and ultimately Martin was found to have been disposing of stolen goods. The detectives expect to be able to locate the actual thieves.

Railway Lands Patented.—Letters patent were issued during September for railway lands in Manitoba, Saskatchewan, Alberta and British Columbia, as follows:—

	Acres
Canadian Northern Ry.	24.29
Canadian Northern Saskatchewan Ry.	17.76
Canadian Northern Western Ry.	26.83
Canadian Pacific Ry.	12,254
Nicola, Kamloops & Similkameen Ry.	9.82
Total.....	85,944

Steel Rails and Car Repairing Ordered to Relieve Unemployment.

The following order in council, no. 3,800, was passed at Ottawa, Oct. 6:—"The committee of the Privy Council have had before them a report, dated Oct. 4, 1921, from the Minister of Railways and Canals, stating that he has discussed with the Canadian National Rys. management, and with the chief executives of the Grand Trunk Ry. Co. the question of unemployment in its relation to the railways now under Government control and operation. Serious consideration has been given to the possibility of the National Rys., including the Grand Trunk, so anticipating their requirements as to permit the placing in the immediate future of next year's orders for rails and accessories, and for the rebuilding and repair of freight equipment, in order that present unemployment may be relieved and work provided during the winter. Under normal conditions, it is the practice to place such orders during the early spring months, and to confine rebuilding and repair work, as far as possible, to system shops. The Minister believes that, in view of the present abnormal industrial situation, the usual practice might well be varied to the extent of placing, at an early date, next year's orders for rails and accessories, and, in addition to repair work now being done in railway shops, by arranging with the various equipment companies throughout Canada to participate in the rebuilding and repair of freight equipment. In doing so, however, it is only fair to the railways, that expenditures so incurred shall not be considered a charge against the current year's operation or financing, and while the management will make every effort to see that repair work undertaken outside the railway shops is done at fair and reasonable prices, any increased expenditure involved should not be a charge against the railways, but against such financial provision as may from time to time be made by the Government to deal with unemployment. And in order that there may be no question of considerations other than unemployment influencing the placing of these orders, the Minister suggests that the allocation of this business be on the concurrence of labor, whose departmental officials are closely in touch with conditions affecting labor throughout Canada, and whose officials shall co-operate with the Department of Railways' officials in dealing with this situation so far as it affects the railways under Government control.

"In order that the management may have a free hand, and that the business may be distributed to best advantage, it is considered advisable that the order in council to authorize the purchase of 40,000 tons of rails from the Algoma Steel Corporation for next year's delivery be cancelled, and that such new business as may be given the Algoma Steel Corporation be contingent upon the general situation as it may develop. The Minister, therefore, recommends, on the advice of the Deputy Minister of Railways and Canals; that order in council of Aug. 13, 1921, no. 2,461, granting authority to the management to order 40,000 tons of 85 lb. steel rails from the Algoma Steel Corporation for next year's delivery be and hereby is cancelled in so far as it relates to the 40,000 tons in question. That, having due regard to the unem-

ployment situation, as well as to the requirements of the railways, the management of Canadian National Rys. and the management of the Grand Trunk Ry. be authorized to order on next year's account, and not exceeding next year's prices, a maximum of 75,000 tons of rails and necessary accessories, and to arrange for the rebuilding or repair of 2,000 cars at suitable points at fair and reasonable charges, and that the expenditure so incurred be provided for in the supplementary estimates to be brought down at the next ensuing session of Parliament. That in placing orders for the rebuilding and repair of freight equipment, the charges against the railways shall only be the fair and reasonable cost of the same in the company's shops, and that any extra expense involved be a proper charge against unemployment generally and regarded as such. That in neither case shall expenditures incurred this year, in anticipation of next year's requirements, be chargeable against current operation or finance.

"The committee concur in the foregoing recommendation and submit the same for the consideration of the council.

Acting under the authority of the foregoing, the Canadian National Rys. management offered two orders, each for 20,000 tons of 85 lb. steel rails, to Algoma Steel Corporation, Sault Ste. Marie, Ont., and to Dominion Iron & Steel Co., Sydney, N.S., to be rolled this winter and delivered next spring. The Algoma Steel Corporation accepted the offer, but up to the time of writing, Oct. 29, the Dominion Iron & Steel Co. had not accepted, the matter of price being in controversy. Additional orders will follow, both for the C.N.R. and the G.T.R.

Under the further authority of the order in council the Canadian National Rys. management has given orders for general repairs, including the application of metal draft arms to 2,000 C.N.R. box cars, divided as follows: Canadian Car & Foundry Co., 500 at Amherst, N. S., and 500 at Montreal; Eastern Car Co., 500 at New Glasgow, N.S.; National Steel Car Co., 500 at Hamilton, Ont. Under authority from the Exchequer Court, on account of the Grand Trunk Pacific Ry. being in a receiver's hands, the C.N.R. management has also given an order to Canadian Car & Foundry Co. to similarly repair 1,000 G.T.P.R. box cars at Port William, Ont.

Owen Sound Interswitching Committee.—The Owen Sound, Ont., City Council adopted a report recently authorizing its interswitching committee to negotiate with the railways entering the city and with the Dominion Government relative to the building of a lift bridge across the mouth of the harbor and as to the apportionment of the cost. A special committee of the local board of trade is co-operating in the matter.

E. Wilson, of the Laurentide Co.'s forestry division, Grand Mere, Que., in speaking at a luncheon at Ottawa, Oct. 10, is reported to have expressed his appreciation of the work done by the Canada Air Board in rendering aid to forestry engineers in their work in the direction of forest fire protection and forest patrol, and to have suggested that the whole of this kind of work should be taken over by the Board.

Failure of a Suit Against Canadian National Railways.

The Canadian National Rys., which was described in the writ as "a body corporate, having its head offices for the Province of Quebec in the City of Montreal," was recently sued by William Champ, an employee, to recover \$6,000 damages for injuries received in the St. Malo, Quebec, shops, in 1920. The Canadian National Rys. in defence questioned the court's jurisdiction, and took exception to the form of the action. Mr. Justice Survevor gave judgment, Oct. 12, dismissing the action. He pointed out that the St. Malo shops were built by the Dominion Government in connection with the National Transcontinental Ry., and were used for purposes in connection with the Canadian Government Rys. Under the laws affecting the N.T. Ry., actions of the present description, so far as the provincial courts are concerned, are limited to sums of \$500 and under; actions for larger sums having to be brought in the Exchequer Court. When the Canadian Northern Ry. was taken over, and directors appointed, the duty of managing the Canadian Government Rys. was assigned to them. Under an order in council of Dec. 20, 1918, the directors were authorized to use as a collective or descriptive designation the name Canadian National Rys., with a reservation of all existing rights and liabilities as previously, notwithstanding designation. On June 6, 1919, an act for the incorporation of the Canadian National Railways Co. was passed, which provided that actions, suits or other proceedings in respect of the operation of the railways might be brought against the company before any court of competent jurisdiction in Canada. No appointment of directors, other than the maintenance in office of the Canadian Northern Ry. directors, has taken place, and no head office had been designated; in fact the Canadian National Ry. Co. has not begun to exist. The companies forming part of the Canadian Northern Ry. have never ceased to be ordinary companies and therefore subject to the jurisdiction of the provincial courts. The Canadian Government Railways were originally described as His Majesty the King, and as such were amenable solely to the Exchequer Court. Until the Canadian National Ry. Co. actually exists any action arising out of the operation of the National Transcontinental Ry., or the Intercolonial Rys. must be taken before the Exchequer Court of Canada, and not before any of the provincial courts. He had no power to refer the case to the Exchequer Court, but he hoped that the plaintiff would be so treated by the Government that he might receive a fiat notwithstanding that the cause of action occurred more than a year ago. He dismissed the action without costs, inasmuch as the management of the railways by the use of the title Canadian National Railways, was instrumental in leading the plaintiff and his counsel into error.

The International Auto Ferry Co. is reported to have been formed with \$250,000 authorized capital, to operate a ferry between Port Huron, Mich., and Sarnia, Ont., for the transfer of automobiles. It is expected that the ferry will be in operation next summer.

Grand Trunk Railway Report for 1920.

The G.T.R. Co.'s annual report for the calendar year 1920 has been issued from Montreal, instead of from London, Eng., as formerly, being signed for the first time by Howard G. Kelley, President, whereas former reports were signed by the Chairman of the Board in England, and, prior to the creation of that office, by the President in England. The size and form of the report have been changed, and the figures are given in Canadian currency, instead of in sterling as formerly. Following are extracts from the report:—

Income Account, Condensed Statement.			
	Year 1920	Year 1919	
Operating revenue	\$81,442,647.32	\$68,744,355.54	
Operating expenses	76,213,815.16	66,374,431.53	
Net operating revenue	5,228,832.16	8,369,927.01	
Railway taxes and undeductible railway revenue	1,303,967.25	1,170,556.31	
Railway operating income	3,925,764.91	7,199,076.70	
Non-operating income	7,706,272.77	6,146,809.21	
Gross income	11,632,037.68	13,345,876.91	
Deductions from gross income	16,231,142.21	12,982,607.01	
Net income transferred to profit and loss		\$563,269.90	
Net loss transferred to profit and loss	\$4,599,104.53		

The operating revenues for the year (the largest in the company's history, were \$81,442,647, an increase as compared with 1919 of \$12,698,289 or 18.47%. Revenue from freight traffic was \$58,102,053, an increase of \$9,788,502 or 20.25%. Number of revenue tons carried, 26,322,423, an increase of 3,029,717, or 31.01%. Revenue tons carried one mile, 5,028,651,524, an increase of 448,305,090, or 9.79%. Average haul per revenue ton was 191.04 miles, a decrease of 2.85%. Freight revenue per train mile was \$5.27, an increase of 76c., or 16.85%. Average revenue per ton was \$2.20732, an increase of .13313, or 6.42%. Average revenue per ton mile was \$0.01155, an increase of .00100, or 9.48%. Revenue from passenger traffic was \$16,648,180, an increase compared with 1919 of \$1,823,323, or 12.05%. Number of passengers carried was 12,206,977, an increase of 586,387, or 5.04%. Average revenue per passenger was \$1.38840, an increase of 0.08685, or 6.67%. Average revenue per passenger mile was \$0.03199, an increase of 0.00498, or 18.47%. Average haul per passenger was 43.40 miles, a decrease of 4.79 miles, or 9.94%. Revenue from mails was \$550,239, an increase of \$31,459, or 5.73%. Revenue from express was \$2,659,571, an increase of \$529,866, or 21.87%. Revenue from milk was \$233,950, an increase of \$23,967, or 11.41%. Revenue from switching was \$785,317, an increase of \$104,077, or 32.82%. Revenue from dining and buffet was \$349,430, a decrease of \$39,069, or 10.06%. Revenue from demurrage was \$576,057, an increase of \$156,599, or 37.15%.

Operating expenses for 1920 were \$76,213,815, an increase of \$15,839,384 over 1919, or 26.25%. This increase was entirely due to increased rates of wages and prices of fuel, materials and supplies, etc. Maintenance of way and structures increased \$2,527,096, or 26.66%. Maintenance of equipment increased \$4,565,595, or 27.61%. Traffic expenses increased \$302,795, or 30.24%. Transportation expenses increased \$7,

804,331, or 25.41%. Average loaded cars per freight train mile were 20.47, an increase of .64 or 3.22%. Average empty cars per freight train mile were 7.93, a decrease of .81, or 9.27%. Average total cars per freight train mile were 28.40, a decrease of .17, or 0.60%. Average load per loaded freight car mile was 23.61 tons, an increase of .69 tons, or 3.01%. Average load per freight train mile was 455.89 tons, an increase of 27.97 tons, or 6.54%. General expenses increased \$108,820, or 27.92%. General expenses increased \$536,055, or 23.81%.

Wages.—The U.S. Labor Board awarded an increase in wages to employees of approximately 23.5%, effective May 1, 1920, which award was accepted by Canadian railways. The increases in rates authorized by the Board of Railway Commissioners and the U.S. Interstate Commerce Commission to meet this advance in wages did not become effective until Sept. 13, 1920, and Aug. 26, 1920, respectively.

1918	No. employees	Total pay roll	Increase per cent over 1918
1918	25,342	\$39,152,476.36	41.34%
1919	23,817	\$24,617,415.35	41.34%
1920	31,686	\$53,757,736.60	77.82%

Taxes for 1920 were \$1,280,062, an increase over 1919 of \$114,752, or 9.85%. Taxes per mile of road operated were \$268.07, compared with \$244.04 in 1919.

Agreement with Dominion Government.—Under the terms of this agreement the Government has since May 21, 1920, financed the company's obligations.

Railway Rolling Stock Orders and Deliveries.

The Timiskaming & Northern Ontario Ry.'s six cabooses, being built by Canadian Brill Co., Preston, Ont., are expected to be shipped by Nov. 15.

The Montreal Locomotive Works shipped 3 locomotives for South African railways, by the Elder Dempster & Co.'s s.s. Calgary, which sailed from Montreal, for South Africa, Oct. 8.

The C.P.R., between Sept. 12 and Oct. 13, received 1 van from its Angus shops, Montreal, 2 vans from its Winnipeg shops, and 25 steel frame box cars from National Steel Car Corporation.

The first shipments of the 500 tank cars, which Canadian Car & Foundry Co. is building for the Russian Soviet Government, were expected to be made towards the end of October, by the Canadian Government Merchant Marine steamships Canadian Challenger and Canadian Seigneur, to be followed during November by the steamships Canadian Ranger and Canadian Miller, with the balance, the complete shipment being made before the close of St. Lawrence navigation.

The Toronto Transportation Commission is offering for sale by tender, the following construction equipment: 3 locomotives, 3 ft. gauge, 4-wheel connected, saddle tank, 10 x 16 in. cylinders, 4½ ft. wheel base, weight 36,500 lb., by H. K. Porter Co.; 20 dump cars, 3 ft. gauge, two way dump, 4 cu. yd. capacity, diamond frame arch bar trucks; and 3 flat cars, 3 ft. gauge, steel under frame, 8 x 40 ft. platform, diamond frame arch bar trucks, 40,000 lb. capacity, by Kilbourne & Co. 1 1/2 ft. gauge, No. 1, revolving, 1½ yd. dipper, mounted on traction wheels, weight 26 tons; 1 Marion shovel, No. 35, revolving, 1½ yd. dipper, mounted on traction wheels, weight 38 tons; and 250 tons of steel rail, 45 lb. A.S.C.E., with bolts, plates and switches.

The Greater Winnipeg Water District Commissioners will receive tenders to Nov. 9, for the supply of a car, to be delivered at the St. Boniface terminals by Dec. 31, to be operated by an internal combustion engine fed by gasoline or fuel oil, for passenger and way freight purposes on their railway. The car is to have a seating capacity for 40 adult passengers, and to be divided by partitions so that the rear part shall seat 25, and the middle part 15, which part may be used as a smoking compartment, and the forward part of the engine, and capable of holding 2 or 3 tons of freight. A lavatory is to be provided on the rear platform, and the smoking compartment is to be of such dimensions that, if required, it may be filled with seats similar to those in the rear compartment, without loss of space. The car is to be equipped with pony trucks, and capable of maintaining a speed of 35 miles an hour. Heating is to be provided and the use of the engine exhaust should be arranged for as an auxiliary heat. The car should be able to move a loaded box car of 40 tons gross, and to accelerate to 25 miles an hour in 2 minutes on level tangent track. The equipment in general is to conform to A.R.A. Mechanical Division requirements. Fuel tank should have capacity for fuel for a 200 miles run. The actual running distance from St. Boniface terminal to the terminal at Waugh, is 92 miles, and the car may be called upon to make, at first, 4 round trips a week, and later on, 6 or more, at least, one round trip each 10 hours. The maximum grade is 4% and the maximum curve 7 deg. 30 min., except on Y's, where there is one 15% curve.

Proposed Abandonment of Red Mountain Railway.

A sitting of the Board of Railway Commissioners was scheduled for Nelson, B.C., Oct. 29, to hear, among other applications, one of the Great Northern Ry. for permission to discontinue the operation of the Red Mountain Ry., to take up the rails and other equipment with a view to the abandonment of the branch. The Red Mountain Ry. was incorporated by the Dominion Parliament in 1893, and the line, which is an extension of the Great Northern Ry. branch of Columbia & Red Mountain Ry., was opened for traffic in 1896. It extends from the International Boundary near Northport, Wash., to Rossland, B.C., 9.59 miles, and, with sidings and yard tracks, has a total of 13.52 miles, laid with 56 and 80 lb. steel rails. The company owns some rolling stock, and some additional rolling stock jointly with the Columbia & Red Mountain Ry. Co. The entire capital stock and bonds are owned by the Great Northern Ry. Co. The railway has not run its operating expenses for several years past.

Alleged Ticket Stealing.—W. Ryan, formerly C.P.R. telegraph operator at Hope, B.C., was arrested Oct. 17, in Winnipeg, charged with stealing eight books of blank railway tickets, and was remanded to permit arrangements being made for his removal to British Columbia for trial. It is stated that he used some of the tickets to travel between various points, and that he sold others to finance his other expenses between periods of employment. Each book contains 100 tickets, and most of them have been recovered.

Important Results of Operation of Supply Trains on the C.P.R.

A short time ago supply trains were run over the whole of the C.P.R. main line from Fort William to Vancouver, including all terminals; and, in addition, on the Manitoba Division, from Winnipeg to Napinka, and La Riviere, thence to Souris, and back to Winnipeg over the Glenboro Subdivision; from Portage la Prairie to Bredenburg; thence to Minnema; Elkhorst; Neudorf; and McAuley to Virden. On the Saskatchewan District, in addition to the main line, the territory covered was from Moose Jaw to Assiniboia, thence east to Weyburn; from Portia to Moose Jaw, going north from Moose Jaw through Outlook and Kerrobert to Macklin; from Hardisty to Bredenburg and from Lanigan to Neudorf. On the Alberta District, from Crownest to Dunmore; from Calgary to McLeod; from Bassano to Swift Current via Empress; and from Calgary to Edmonton. On the British Columbia District, from Procter to Midway. The first experiment with a supply train was made in Winnipeg terminals on April 18, and then the district between Fort William and Winnipeg was covered. Four trains were in operation at the one time, one in each province included in Western Lines territory, and the work generally speaking commenced during the first week in May, and finished about the second week in June.

The supply trains were designed primarily to gather up all material which was not needed, whether it was new material; second hand fit for use; second hand requiring repairs, or scrap. A further function of the train was to see that all forces were equipped with tools in good repair, to avoid high priced labor working with inefficient tools, or material, and at almost every place visited, exchanges were made, leaving track forces, and others, with a full outfit of good tools, and taking away any scrap they might have, as well as effecting an exchange of good tools for those requiring repairs.

Each train consisted of about three or four box cars, and three or four flats, and usually a rail hoist, also the regular supply car, which operates every month on way freights, for delivering material to stations and section forces; a tool car, containing new tools for exchange with those requiring repairs; a gasoline and oil car, to fill outstanding requisitions for gasoline and oil for section foremen's motors and station agents' use in lamps; a boarding car for the extra gang; a caboose for the train crew, and a superintendent's business car for the officers.

The district storekeeper was in charge of each train, and had with him an extra gang of six men. The superintendent, division engineer, bridge and building master and roadmaster were required to travel with the train, and in addition to the work outlined this gave an excellent opportunity for a thorough inspection of the company's premises on the territory travelled.

The methods employed consisted of making a most exhaustive search of the whole of the company's Western Lines. This included underneath buildings, as well as in them. In some cases this was found to be a slow proceeding, but on the whole about 50 or 60 miles a day were covered on double track and possibly 90 miles a day on single track, exclusive of terminals.

The material recovered was loaded in about 700 cars, but all of them did not carry full loads. Credits, based on 100% for new standard material, and scrap credit for everything else, were issued to the Operating Department, to the amount of nearly \$160,000. The estimated cost of repairs to materials recovered will be between \$40,000 and \$50,000. This material, if bought new, would have cost about \$400,000. The scrap picked up will realize about \$35,000. The cost of operating the trains did not exceed \$12,000.

Canadian Railway and Marine World is indebted to T. Fawcett, General Storekeeper, Western Lines, C.P.R., Winnipeg, for this information.

The Great Northern Railway's Marcus-Princeton Line.

The report that the C.P.R. is about to acquire the G.N.R. line from Marcus, Wash., to Princeton, B.C., has been revived, the latest report stating that the transfer was to have been completed by Sept. 15, but that some hitch had occurred which had put the deal off for the present. The G.N.R. has a line running northerly from Spokane to Marcus, whence it branches northeasterly to Nelson, B.C., with a branch from Northport, Wash., to Rossland, B.C., and northwesterly to Grand Forks, B.C., and thence running backward and forward across the International Boundary, with branches serving the mineral country round Grand Forks, passing through Princeton and on to Vancouver. At Orville, in the east bend into the U.S., the line is joined by a branch from Wenatchee. The Canadian sections of the line are known as the Vancouver, Victoria & Eastern Ry. The distance from Marcus to Princeton is 206 miles, of which 108 miles is in British Columbia. It is stated in connection with the matter that Orville is the objective point of the line which the C.P.R. is building from Penticton southerly under the Kettle Valley Ry's charter.

Canadian Transit Co.—American Transit Co.—These are the titles of the Canadian and the United States incorporations, to build a bridge across the Detroit River, with terminal facilities and railway connections in Windsor, Ont., and Detroit, Mich. The directors of both companies are the same, viz.: J. W. Austin, C. E. Fowler, W. B. Gregory, A. F. Healey, C. S. King, J. O. Murfin, W. J. Pulling, C. O. Reame, A. A. Templeton, C. B. Vandusen, Hiram H. Walker. The officers are as follows: Canadian Transit Co., President, W. J. Pulling; Vice President, C. S. King; Secretary-Treasurer, C. E. Fowler. American Transit Co., President, W. A. Gregory; Vice President, Hiram B. Walker; Second Vice President and Secretary, C. E. Fowler; Treasurer, J. W. Austin. Application is reported to have been made to the Michigan Public Utilities Commission for authority to sell stocks and bonds for \$150,000,000, for construction purposes. This amount, it is estimated, will be sufficient to build a bridge for general traffic, and a double track electric railway, and it is stated that \$15,000,000 more would provide a lower deck for steam railway traffic. (Aug., pp. 419.)

Shipment of Phosphorus in Metal Containers.

The Board of Railway Commissioners passed general order 346, Sept. 23, as follows: Re general order 204, Aug. 11, 1917, authorizing, for the observance of railway companies accepting explosives for carriage, the Regulations for the Transportation of Explosives and Other Dangerous Articles by Freight; and the application of the Electric Reduction Co., of Buckingham, Que., for a change in the regulations, to permit of the shipment of phosphorus in metal containers. Upon reading what is filed in support of the application and on behalf of the Railway Association of Canada and the Bureau of Explosives, revised regulations in line with those approved by the Interstate Commerce Commission being recommended on behalf of the Bureau of Explosives, the Board orders that sec. 1832 of the Regulations for the Transportation of Explosives and Other Dangerous Articles by Freight, as authorized by general order 204, be struck out and the following substituted therefor, viz.:

"1832 (a). White or yellow phosphorus must be placed in water, in sealed metal vessels enclosed in wooden boxes (see Specification 18) or in metal drums of not exceeding 25 imperial gallons capacity, complying with Specification 5; provided that drums of not exceeding 8 imperial gallons capacity must be constructed of full 16 gauge and drums of not exceeding 24 imperial gallons capacity of not less than full 14 gauge.

"(b). Containers of metal phosphorus must be packed in sealed metal containers enclosed in wooden boxes, complying with Specification 18."

Sault Ste. Marie Bridge.—A defect developed in the supports of the C.P.R. international bridge across the St. Marys River, at Sault Ste. Marie, Oct. 7, which caused the suspension of railway and general traffic for some days and ship traffic through the canal had to be conducted with special care, owing to the fact that the north half of the lifting span only was capable of being operated. We are officially advised that there was no accident, and that the concrete block counterweight was all right. The necessary repairs were made, and traffic was resumed Oct. 13. During the few days the bridge was closed, passengers were transferred, by water, and freight traffic was diverted.

Exchange and Surcharge on International Freight and Passenger Business. In accordance with the Board of Railway Commissioners' order of Jan. 14, 1921, the rate of exchange in connection with shipments of freight between points in Canada and the United States, from Oct. 1 to 14, was 9 13/16%, and from Oct. 15 to 31 it was 9 11/32%. The surcharge on this traffic was 6%. The rate of surcharge on international passenger business from Oct. 1 to 14 was based on 10% exchange, and from Oct. 15 to 31 on 9% exchange.

The Title Bond Guaranty Trust Corporation of Canada has been organized in Montreal, with Sir Lomer Gouin as President. Among the other directors are Sir Herbert Holt, Vice President, and C. R. Hosmer, who are C.P.R. directors; A. D. MacTier, Vice President, Eastern Lines, C.P.R., and Senator J. M. Wilson, director, Montreal Tramways Co.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devoted to Steam and Electric Railway,
Marine, Shipbuilding, and Railway, Harbor and
Canal Contractors' Interests.

Official Organ of various Canadian Transportation
Associations.

Published on the first of each month at
70 Bond Street, Toronto, Canada.

ACTON BURROWS,
Proprietor and Editor.

AUBREY ACTON BURROWS,
Business Manager.

Member of
Associated Business Papers,
Audit Bureau of Circulations
Canadian National Newspapers
and Periodicals Association,
Canadian Press Association.

Authorized by the Postmaster General for Can-
ada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage,
Canada, United Kingdom, most other British Pos-
session, except Australia, and to Mexico, \$2 a
year. Extra postage to United States, 50c. a
year; to other foreign countries, except Mexico,
\$1.50 a year.

SINGLE COPIES, 25 cents each, including
postage.

The best method of remitting is by express or
post office money order. If remittance is made
by cheque, 15 cents should be added to cover cost
of collection, unless cheque is payable at par in
Toronto or Montreal.

ADVERTISING RATES furnished on application.
ADVERTISING COPY must reach the publishers
by the 10th of the month preceding the date of
the issue in which it is to appear.

Canadian Pacific Railway Earnings and Expenses for August.

C.P.R. gross earnings for August show an increase of \$1,291,336 over those of July, and were the largest for any month this year. They were, however, less than those for Aug. 1920 by \$930,503. While the Aug. 1921 earnings show that there was not the traffic moving that there was in Aug. 1920, yet the fact of such a substantial increase, compared with July and preceding months, is an indication that the volume of traffic is increasing, and that economic and business conditions as a whole are improving. In previous months this year, the decreased earnings, as compared with corresponding months last year, were secured on rates which were much higher than those in effect last year; but in August many freight rate reductions had gone into effect, and passenger fares had gone on the same basis as in 1920, which fact, taken into consideration in comparing the figures, indicates that Canadian commerce is more rapidly gaining normal proportions than is commonly supposed. A heavy grain traffic, principally from Georgian Bay ports to the Atlantic seaboard, has undoubtedly played a large part in the good showing made in the C.P.R. gross for August, the movement of export grain to Montreal being very large.

Operating expenses for August showed a satisfactory decline from the high figure for Aug. 1920, when they were \$15,793,956, and for August this year, \$14,488,126, a decrease of \$1,305,830. A large part of this decrease must be attributed to wage decreases effective July 16; in fact the wage decrease would account for practically the entire difference, thus indicating that maintenance expenses were relatively as large as in Aug. 1920, presumably in preparation for the heavy autumn grain trade. The operating ratio for August 1921 was 84.7%.

While gross revenue decreased, operating expenses decreased by a greater amount, making an improvement of \$375,326 in the net earnings, which were \$2,576,139. This net exceeded that of July by \$521,824, but was smaller than that of June, May and April by \$528,618, \$171,412 and \$69,992 respectively. It was, however, greater than that earned in January, February or March.

Comparing the results of the first 8 months of this year with the corresponding period of 1920, the total gross earnings for the first 8 months of 1920 were \$127,428,115, and for the first 8 months of 1921 were \$116,892,866, a decrease of \$10,535,249. No better indication of the great reduction in business activity, which began last autumn, could be obtained, when the differences in rates prevailing are also taken into consideration. However, as above pointed out, an improvement has been evident in the July and August figures, and preliminary figures to hand for September indicate that this is being well maintained.

Comparing the net earnings for the 8 months period, it is seen that the net in the first 8 months of 1921 exceeded that of the first 8 months of 1920, by \$2,332,137, the total net for the period this year being \$17,580,621. While this improvement over 1920 is gratifying, it must not be lost sight of that this is the smallest figure for the first 8 months of the year, with the exception of 1920, for a good many years. For the first 8 months of 1919 the net earnings were almost

\$19,000,000; for corresponding periods in 1918, 1917, 1916, and 1915, they were over 20, 28, 29 and 20 million dollars.

While these figures for net earnings for an 8 month period may seem large, it must be remembered that the value of the C.P.R. property devoted to the public use is in excess of a billion dollars, and on consideration of this fact it is evident that the returns secured by the company have been moderate indeed. If the terms of the United States Transportation Act were applicable to the C. P.R., its shareholders would be entitled to an annual return of something in excess of \$60,000,000.

During the recent agitation for decreased railway rates, much stress was laid on the fact that the C.P.R. appeared to be able to more than meet its dividend requirements for 1921, and for that reason, it was said, a decrease in rates was justified. But the mere fact of a likelihood of ability to barely meet dividend requirements would not justify a general rate reduction, nor would a reduction made on such a basis justify a continuation of the high degree of confidence in the securities of Canada's greatest industrial corporation. Such a reduction would indicate that no provision could be made for future additions and betterments necessary in the public interest, and would bring with it the probability of decreased service and a lower standard of maintenance. While conditions in the railway industry have been slowly improving, the fact remains that they have not improved to an extent sufficient to restore the C.P.R. to its former standard of earnings, the proposition being further demonstrated by the fact of the results this year to date being obtained in great measure by large maintenance economies. A proper sense of proportion is a great necessity in any analysis of railway operating figures. If due consideration be given to all relevant facts, it will be seen that, while railway operating conditions are improving, there must yet be a substantial increase in traffic offering, and a further decrease in expenses, before a reduction in unit revenues, superimposed on the reductions already voluntarily made by Canadian railways, can be seriously considered.

Daily newspapers, or at least the great majority of them, which are clamoring for reductions in railway freight rates, should take a little of their own medicine. During the Great War they advanced their subscriptions very largely, in many cases doubling them. How would it be for them to set an example by restoring pre-war prices? Canadian Railway and Marine World is glad to be able to say that it did not advance its subscription one cent, it being the same to-day as before the war, notwithstanding the fact that for a considerable time the publisher paid for paper three times the pre-war price, and is today paying considerably more than double the pre-war price, while every other item in the cost of production has increased largely, and in some cases enormously, all of which increases Canadian Railway and Marine World has absorbed, and has not passed on to its readers.

Canadian National Ryas. trains 7 and 8, heretofore operated between Regina and Saskatoon, Sask., on week days only, are now being operated on Sundays also.

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising.

Canadian Government Merchant Marine.—S. C. SHIPMAN, formerly City Agent, Grand Trunk Ry., 44 Leadhead St., London, E.C., Eng., has been transferred to Canadian Government Merchant Marine staff at 17 Cockspur St., London, S.W. 1, Eng.

Canadian National Express Co.—E. A. NOVIS, heretofore Travelling Freight Agent, G.T.R., Liverpool, Eng., has been appointed Local Agent, Canadian National Ex. Co., at 17 Cockspur St., London, S.W. 1, Eng., reporting to E. J. Wearing, European Express Agent, Liverpool, Eng.

For other appointments, see under "Among the Express Companies," on pg. 598.

Canadian National Rys.—F. E. BIRCH, heretofore Travelling Passenger Agent, Canadian Northern Ry., with office at 21 Charing Cross, London, Eng., has been appointed Travelling Passenger Agent, Canadian National-Grand Trunk Rys. Office, 17 Cockspur St., London, S.W. 1, Eng.

A. BROSTEDT, heretofore General Freight Agent, Canadian National-Grand Trunk Pacific Rys. and Grand Trunk Pacific Coast Steamship Co., Vancouver, B. C., has been appointed General Traffic Agent, with general supervision of the traffic interests, freight and passenger, in China, Japan, Straits Settlements and the Philippines. Office, Shanghai, China.

E. W. CAMERON, heretofore Assistant Superintendent, Battleford, Carlton and St. Brieux Subdivisions, Saskatoon Division, and Dauphin Division, Prairie District, Humboldt, Sask., has been appointed Assistant Superintendent, Neepawa Division, Prairie District, vice J. H. McDiarmid, whose appointment as Assistant Superintendent, Fort William Division, Sioux Lookout, Ont., was announced in our last issue. Office, Neepawa, Man.

A. H. DAVIS, City Ticket Agent, Brandon, Man., is reported to have been appointed City Ticket Agent at Edmonton, Alta.

H. P. FULLER has been appointed Assistant Roadmaster, Kamisack Subdivision, Prairie District, Kamisack, Sask.

A. T. HERBERT, Roadmaster, Neepawa, Man., has resumed his duties, and G. Jenkins, who was acting during his absence, has been assigned to other duties.

O. M. HIGGINS, heretofore Night Chief Dispatcher, has been appointed Chief Dispatcher, Saskatoon, Sask.

W. B. LOGAN, heretofore Storekeeper, Moncton, N.B., has been appointed acting District Storekeeper, Maritime District, vice W. F. Taylor, Assistant General Storekeeper, deceased. Office, Moncton, N.B.

G. A. ROBERTS, heretofore trick dispatcher, has been appointed Night Chief Dispatcher, Saskatoon, Sask., vice O. M. Higgins, promoted.

F. L. SEATON, heretofore Travelling Auditor, Winnipeg, has been appointed acting Assistant Auditor of Traffic, Canadian Government Rys., St. John, N.B., vice J. W. Wortman, who has been granted 6 months leave of absence from Sept. 1.

R. J. SLOANE, heretofore chief clerk, District Passenger Agent's office, Winni-

peg, is reported to have been appointed City Ticket Agent, Brandon, Man., vice A. H. Davis, transferred.

JAMES STEPHENS is reported to have been appointed chief clerk to District Passenger Agent, Winnipeg, vice R. J. Sloane, promoted.

A. J. WALSH has been appointed Roadmaster, Qu'Appelle Subdivision, Prairie District. Office, Regina, Sask.

J. B. WINDESS, heretofore Manager, Macdonald Hotel, Edmonton, Alta., has been appointed relieving Manager, Hotel Department. Headquarters, Winnipeg.

The position of locomotive foreman, Brockville, Ont., heretofore held by J. CLARK, has been abolished.

A. Brostedt,
General Traffic Agent for the Orient, Canadian
National Rys.

The Canadian National Rys. Passenger Department office at 21 Charing Cross, London, Eng., has been closed, in consequence of the removal of the European Manager's office from Orient House, 22 New Broad St., to the former G.T.R. offices at 17 Cockspur St.

Canadian Pacific Ry.—A. J. GARD has been appointed acting local freight agent, Vancouver, B.C., vice G. L. McCrae, appointed wharf agent there.

J. H. HALL, heretofore Night Locomotive Foreman, Sherbrooke, Que., has been appointed Night Locomotive Foreman, London, Ont., vice W. G. French, transferred.

C. E. JENKINS has been appointed London Booking Agent. Office, 62 Charing Cross, London, S.W. 1, Eng.

J. W. KEPPEL, heretofore General Foreman, Vancouver, B.C., has been appointed Master Mechanic, Regina Division, Saskatchewan District, vice W. G. McPherson, whose appointment as Master Mechanic, Moose Jaw Division, Saskatchewan District, Moose Jaw, was announced in our last issue. Office, Regina.

G. L. MCCRAE, heretofore local freight

agent, Vancouver, B.C., has been appointed wharf freight agent there, vice J. Abrams, deceased.

J. J. MORTON, heretofore Import Freight Agent, Chicago, Ill., has been appointed Foreign Freight Agent, New York, vice F. G. Frieser, resigned.

R. QUINN, heretofore General Foreman, Revelstoke, B.C., has been appointed General Foreman, Vancouver, B.C., vice J. W. Kennel, promoted.

H. L. SCOTT, heretofore Locomotive Foreman, Arrostook, N.B., has been appointed Locomotive Foreman, McAdam, N.B., vice M. Kennedy, assigned to other duties.

H. WALKER, heretofore relieving Locomotive Foreman, Ontario District, has been appointed Locomotive Foreman, Arrostook, N.B., vice H. L. Scott, transferred.

Esquimalt & Nanaimo Ry.—F. E. TEBB, heretofore dispatcher, has been appointed Chief Dispatcher, vice J. D. Fraser, whose appointment as acting Superintendent was announced in our last issue. Office, Victoria, B.C.

Grand Trunk Ry.—W. WALMSLEY, heretofore chief clerk, has been appointed Assistant to Auditor of Revenues, vice G. A. Godfrey, appointed acting Auditor of Revenues, Western Lines, Detroit, Mich., as announced in our last issue.

See also Canadian National Rys.

Michigan Central Rd.—L. M. ABBS, chief clerk, Freight Department, London, Ont., is reported to have been appointed Freight Agent there, vice T. Evans, superannuated.

Reid Newfoundland Co.—As stated in Canadian Railway and Marine World for October, R. C. Morgan, Superintendent, Winnipeg Terminal Division, C.P.R., who left Winnipeg, Aug. 21, for St. John's, to decide whether to accept the position of General Manager, Reid Newfoundland Co., left St. John's on Sept. 13, after having written President H. D. Reid, stating his reasons for declining the position. A subsequent press report stated that he visited New York on his return trip to Winnipeg, and has changed his mind and decided to go back to St. John's. A St. John's paper of Oct. 5 announced his return there, but stated that it was not known whether this was with the consent of the Reid Co.'s directorate, or whether he had come back at the request of the Government, which, in extending aid to enable the company to continue operating the railway for a year, stipulated that a general manager should be secured, either from Canada or the United States, and that the appointment should be subject to the Government's approval. No official announcement is available at the time of writing, Oct. 29, but we are advised by the C.P.R. Western Lines management at Winnipeg that Mr. Morgan "has received six months leave of absence, in connection with work he is to do for the Newfoundland Ry."

An all-British company is being formed, according to a press report, to give a daily air service between London, Paris, Brussels and Amsterdam, and a twice a week service to Canada and the United States. It is stated that the aircraft to perform the latter service will have a capacity of 50 passengers, and be able to make the trip in 45 hours.

Sir Joseph Flavelle on the G.T.R. System.

Sir Joseph Flavelle, Bart, Chairman of the Board, G.T.R., accompanied by H. G. Kelley, President; J. E. Dalrymple, Vice President; Thomas W. D. Robb, Vice President, Transportation, Construction and Maintenance; Major F. L. C. Bond, Chief Engineer, G.T.R., and Engineer Henry, of the Railways Department at Ottawa, returned to Montreal Oct. 19 after having gone over the G.T.R. lines between Montreal and Levis, and Montreal and Portland, Me., during which they stopped at the most important stations and looked over the terminals, the trip being one of a series of inspections planned to enable Sir Joseph to see the whole system.

While in Montreal, Oct. 19, Sir Joseph attended a gathering at the Engineer's Armoury, Point St. Charles, when the E. J. Chamberlain shield for first aid work was presented to a team from the company's Montreal employees. In addition to the shield, which is retained for a year by the team, the individual members receive medals. A Royal Humane Society's medal was presented to C. A. Neill, a conductor, for saving a boy from drowning in the Ottawa River, at the risk of his life.

Sir Joseph, in making the presentations, said, in part:—"I was simply amazed during my tour of the G.T.R. System with President Kelley and other officials at the splendid manner in which the road was conducted in every way, and the general spirit of Grand Trunk family loyalty I found everywhere among the employees. It was a real surprise to me and I cannot say too much of what I have seen as to the manner in which the system has been kept in shape, and the general manner in which the employees were evidently trying to preserve the ideas of good public service. In this I am speaking as a man who has been associated with large industrial enterprises from my youth up, so that I can speak as one who knows what real efficiency and service mean."

Prince Rupert Drydock & Shipbuilding Plant.—In consequence of the Prince Rupert Drydock & Engineering Co.'s bankruptcy, this plant will revert to the owners, the Grand Trunk Pacific Ry. Co., and will be operated under Canadian National Rys. management, on behalf of the Minister of Railways, who is receiver for the G.T.P.R. Any satisfactory work that may be offered in the way of ship building, ship repairing, etc., will be taken, and the plant will also be utilized as far as possible for repairing the railways' rolling stock and other bridge equipment, etc. It will be in charge of J. H. Pillsbury, who was manager for the Prince Rupert Drydock & Engineering Co., and who will report to A. E. Warren, Assistant General Manager, Western Lines, C.N.R.

Sir William Van Horne's Estate.—The Imperial Privy Council has allowed the appeal of the Royal Trust Co. against the British Columbia Finance Minister, in connection with the duty payable to the province by the late Sir William Van Horne's estate. The B.C. Government claimed \$14,000, but it was decided that Sir William was built up on an erroneous basis, and that \$8,523 is the correct amount payable. The B.C. Government is to pay the costs of the appeal, as well as the Supreme Court costs.

Canadian National Railways Have Net Earnings for the First Time.

D. B. Hanna, President, Canadian National Rys., issued the following statement, Oct. 10:

"It is a matter of extreme gratification to me to be able to announce to the Canadian people that during the month of August, this year, the gross revenues secured from the operation of the Intercolonial, Prince Edward Island, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, exceeded the expenses by a substantial amount. The mileage included in the statement is over 17,000 miles. The gross earnings were \$10,536,461.74; the working expenses \$10,489,230.39; and the net earnings \$47,231.44.

"August is not a specially busy month, as it marks the end of the crop year in the Canadian west, and as the new grain does not begin to move until September, in large quantities, to the lake carriers and to the sea.

"This is the first monthly period, since these railways have been operated by the Board, that it has been possible to present such a favorable statement. While I do not wish to appear as unduly optimistic, I do believe that the economies effected, as one result of consolidation, are beginning to be reflected in operation, and that the day is not far distant when the National Railways will be on asset in which all Canadians may take pride.

"No one would venture to foretell the future, with trade conditions as unsettled as they are today. It would, however, appear that the end of serious operating losses on the National Railways is appreciably near; nearer, in fact, than the most sanguine of us had hoped for. We are beginning to reap the fruits of the great and complicated work of consolidation which was begun when the merging of the Canadian Northern and Canadian Government lines was accomplished in 1918. The work continued when the Grand Trunk Pacific Ry. was turned over to the Canadian National Board for operation."

The Minister of Railways' Opinion.

Hon. J. A. Stewart, in commenting on the figures, is reported to have said:—"The financial position of the Canadian National Rys., as announced by Mr. Hanna, bears out the view held by the Government that a decided improvement in revenue would be shown during the first four months of the year. It means that a deficit for Aug. 1921 amounting to \$4,000,000, is transformed into a surplus of \$47,231 for Aug. 1921. The gross earnings for Aug. 1921 were \$10,536,461, compared with \$10,065,917 for Aug. 1920, an increase of \$470,543. The working expenses for Aug. 1921 were \$10,489,230, compared with \$14,067,237 for Aug. 1920, a reduction of about \$4,000,000. Another fact that should be noted is that President Hanna's statement, while including the Grand Trunk Pacific, which is being operated by the Canadian National management, does not include the Grand Trunk, which, for the time being, is under separate control, and operated in co-ordination with the Government lines. I am informed that net revenue from railway operation of the Grand Trunk for the eight months ended Aug. 31 last, was \$3,403,616, compared with \$1,529,636 for the corresponding period of 1920, while the net revenue for August alone was \$1,910,994. The fact that the Gov-

ernment lines are making a much better showing than during the corresponding period last year should serve to dissipate some of the pessimism which surrounds the discussion of Canada's present railway situation."

The Deputy Minister of Railways' Views.

Major Graham A. Bell, C.M.G., Deputy Minister of Railways, and one of the C.N.R. directors, is reported to have said: "This is what we have been working toward for months. That we got to this point in August, which is not a good earning month, is most heartening. There will be a surplus now for every month to the end of the year. September and October, when the new crop moves, should bring even better results. Taking the whole year, we will be well within the estimate which we gave to Parliament last year as to our requirements this year, and that estimate was better than the year before. If this had been a prosperous trade year we would have made a big hole in the fixed charges. We have picked up all deferred maintenance, and there is no false economy of that kind in order to achieve this result. When the G.T.R. also is incorporated and co-ordination extended in the same way to it, an even greater advantage should accrue to the National lines in working toward a condition where receipts can pay, not only operating expenses, but fixed charges."

The September Results.

President Hanna issued the following statement Oct. 29:—"It naturally gives me great pleasure to follow up my recent announcements of net earnings in August by stating that for September the results of operation of the National System show net earnings of a substantial amount over the cost of operation. The figures are: Gross earnings, \$11,500,126.24; working expenses, \$10,995,371.37; net earnings, \$504,754.87. These figures embrace the operations of the Intercolonial, National Transcontinental, Grand Trunk Pacific and Canadian Northern Railways, in all, some 17,000 miles. This statement merely confirms what I stated recently to the effect that the Canadian National Rys. situation should not be regarded from too gloomy a viewpoint. We have a fine staff of loyal, capable, hard-working officers, to whom, with the co-operation of the employees, this pleasing result is naturally due, and I feel that the announcement will do much to encourage them to make greater efforts toward securing still better results."

E. H. Fitzhugh, vs. Central Vermont Ry. et al.—In regard to this suit, particulars of which were given in Canadian Railway and Marine World for June, pg. 314, the hearing of which was first fixed for Concord, N.H., on May 17, and postponed to Sept. 6, when it was further adjourned to enable certain legal conditions raised by the individual defendants to be decided by the Vermont Supreme Court, we are advised that it will probably come up again early in November.

A British Columbia railway employees' deputation waited on the B.C. Government Oct. 7, to urge amendments to the Workmen's Compensation Act, so as to increase the indemnity to injured workmen from 55 to 66 2/3%, and in other ways.

Freight and Passenger Traffic Notes.

Fort William, Ont., is reported to have had 97,588 carloads of wheat unloaded there for the year ended Aug. 31 compared with 57,452 carloads in the previous year.

The United States Consul General at Victoria, B.C., estimates that 250,000 tourists from the Pacific States have visited British Columbia this year.

The Edmonton, Dunvegan & British Columbia Ry. began operating its trains into and out of the C.P.R. station at Edmonton, Alta., Oct. 6, abandoning its own station at 121st street.

Twenty carloads of fish from Lesser Slave Lake and Lac la Biche, Alta., passed through Edmonton recently for Chicago, having been taken to Edmonton by the Edmonton, Dunvegan & British Columbia Ry., and the Alberta & Great Waterways Ry.

The Canadian National Railways is reported to have issued an order that freight cars containing intoxicating liquors must be placed next the conductors' vans, and that an officer of the railways' police department must keep watch over them while in transit.

The C.P.R. now puts on board its inward Atlantic steamships at Father Point, Que., a customs officer and baggage checkers, to examine and check baggage, prior to the ships reaching Quebec, and avoid delays to passengers in disembarking.

The C.P.R. has been authorized, by the Board of Railway Commissioners, to reduce its service between Nelson and Slocan City, B.C., from a mixed train daily except Sunday, to a mixed train three times a week, the dates of service to be selected by the company.

F. J. G. Comeau, General Freight Agent, Dominion Atlantic Ry., is reported to have estimated that more than 2,000,000 barrels of apples will be shipped from the Annapolis valley in Nova Scotia this year, and that the United States will receive 1,000 carloads of them.

The St. John, N.B., City Council has amended its bylaws so as to provide a charge of \$2.50 for every railway car passing over the city trestle to Sand Point and South Rodney wharf, West St. John, and to increase the wharfage rates on grain from 5c. a ton of 2,240 lb. to 6c. a ton of 2,000 lb.

The Canadian National Rys. are reported to have handled through Port Arthur, Ont., recently, a shipment of 10,000 kgs of Dutch herrings for western points, the largest shipment of the kind ever handled at Port Arthur freight sheds. The consignment was received from United States lines at Sarnia, and carried to Port Arthur by the Northern Navigation Co.

The Reid Newfoundland Co. is operating an express train from St. John's to Port aux Basques, Nfld., leaving at 1 p. m. on Sundays, Tuesdays and Thursdays. Sleeping cars are provided, the charges being \$5 for a lower, \$4 for an upper berth, and \$15 for a drawing room. A steamship runs from Port aux Basques to North Sydney, connecting with the Canadian National Rys. trains.

When the old Pacific Great Eastern Ry. Co. bought the right of way for the North Vancouver-Whitby line, it agreed to provide an hourly service. On the British Columbia Government taking

over the company's property, the Premier refused to sign the agreements with the owners, claiming that the terms were imprudent and exorbitant. The hourly service has never been given, and recently the traffic was further reduced by cutting off two trains a day between North Vancouver and Altamont. J. F. Mahon and associated owners applied to the B.C. courts to enforce the agreement or in default for \$600,000 damages. When the case came up on Oct. 3 an adjournment was made to enable an arrangement to be arrived at.

Alberta & Great Waterways Ry.'s new passenger service, which was inaugurated with the new rolling stock recently, runs to the end of track, mile 272, and makes the trip to Lac la Biche, 110 miles, in 6½ hours, 3 hours less than previously. Beyond this point the time is slower. A new time schedule was put in operation Sept. 1, the train leaving Edmonton, 9:30 a.m. every Friday, reaching Lac la Biche at 4 p.m.; leaving again at 5 p.m. and reaching the end of track at 12:35 Saturdays. The return train leaves the end of track at 2:55 p.m. on Saturdays, reaching Lac la Biche at 10:10 a.m. Sundays, leaving there at 11 a.m. and arriving in Edmonton at 5:30 p.m. The train is equipped with dining and sleeping car accommodation, in addition to the ordinary day cars.

Canadian Ticket Agents Association's Annual Meeting.

The Association's 35th annual meeting was held at Ottawa on Oct. 11, about 140 members being present.

At the morning session the Canadian National-Grand Trunk Rys. gave an exhibition of moving pictures, which were described by W. S. Thompson, of the G. T.R. Press Bureau. In the afternoon pictures of a trip across the continent were presented by the C.P.R. and described by A. B. Calder, of the company's executive staff.

One subject discussed was the railway companies withdrawal from their agents, not exclusively engaged in railroad work, of the privilege so long enjoyed of free transportation for their wives and other dependents to attend the annual gatherings. All agreed that it was a serious blow to the Association and expressed the hope that at no distant date the companies would adopt more generous action.

Officers were elected as follows:—J. A. McDonald, Valleyfield, Que., President; A. C. Roraback, North Bay, Ont., 1st Vice President; C. L. Von Gunton, Blenheim, Ont., 2nd Vice President; S. Burrows, Belleville, Ont., 3rd Vice President; E. de la Hooke, London, Ont., Secretary-Treasurer; B. Caswell, Smiths Falls, Ont., Auditor; W. Jackson, Clinton, Ont., A. M. Hare, Tillsonburg, Ont., C. B. James, Orillia, Ont., W. J. Moffatt, Toronto, and W. C. Macfarlane, St. John, N.B., Executive Committee.

Owing to incessant rain, the outdoor programme had to be cancelled.

The railway passenger departments were represented during the meeting, etc., as follows:—Canadian National Rys., by C. K. Howard, Tourist Agent, Toronto. Canadian Pacific Ry., by A. B. Calder, of the executive staff, Montreal; W. H. Mell, G.P.A., Eastern Lines, Montreal; H. B. Beaumont, G.A. Passenger

Department, Ocean Traffic, Toronto; and W. Fulton, A.D.P.A., Toronto. Grand Trunk Ry., by C. W. Johnston, A.G.P.A., Montreal; E. C. Elliott, D.P.A., and W. S. Thompson, Press Bureau, Montreal.

On Oct. 13, the members went to Montreal, where they were entertained by the C.P.R. on board the s.s. Metagama, being received by W. G. Annable, G.P.T. A., Ocean Traffic; W. Ballantyne, A.P.T. M., Ocean Traffic, Montreal; H. B. Beaumont, G.A., Passenger Department, Ocean Traffic, Toronto, and Capt. Turnbull. After being shown over the ship, they were entertained at luncheon on board, speeches being made by W. G. Annable, J. Ransford, the Association's retiring president, and Capt. Turnbull.

Improvement in Grand Trunk Railway Operating Results.

A statement was issued from the G.T.R. general offices in Montreal Oct. 11, giving the following earnings, etc., for August:—

Gross operating revenue	\$10,231,238.00
Operating expenses	8,330,238.41

Net revenue from operation	\$1,910,944.59
Operating ratio	81.31%

Net income after meeting all fixed charges for the month, \$96,292.34.

Net operating revenue for eight months from Jan. 1 to Aug. 31, shows an increase over 1920 of \$1,773,719.

The following statement was also given out:—"These figures, which are for the Grand Trunk proper as distinct from the Grand Trunk Pacific, reflect the complete success which has attended the efforts of the management along the line toward the more economical operation of the system. Under the unsettled commercial conditions, gross earnings, in common with those of all other railways, have declined, and the problem has been to reduce operating costs to a point where they will be in satisfactory ratio to the gross income. It may be noted in this connection that the ratio of operating expenses to gross operating revenue, which for the eight months of this year is 81.31%, is 12.26% lower than the ratio of operating expenses to revenue for the year ended Dec. 30, 1920, as shown in the annual statement published a week or two ago."

A Railway Manager's Libel Action.

A. B. Buckworth, General Manager, Pacific Great Eastern Ry., was given a verdict for \$1 and costs in the British Columbia Superior Court, Oct. 1, in his action for libel against the Sun Publishing Co., Vancouver. The Vancouver Sun alleged in an article that Mr. Buckworth and a produce merchant had toured the country served by the railway and secured options on the entire potato crop, and that subsequently Mr. Buckworth cut the railway rate on potatoes from \$6.80 to \$3.40 a ton. These allegations were denied and the jury found as stated above.

Threat against Chairman of Board of Railway Commissioners.—W. R. Motherwell, Liberal candidate for the representation of Regina, Sask., in the House of Commons, is reported to have said at a nominating convention at Prince Albert, Sask., recently: "If I am honored with the seat of a private member in the next House of Commons, one of my first duties will be to put a motion on the order paper, asking for the expulsion of Hon. Frank Arncliffe as Chairman of the Board of Railway Commissioners."

Steam Railway Operating Revenues, Expenses and Other Statistics for July.

The following comparative table, for portation Branch.

be available for comparative purposes for 1922.

The column headed "Canadian Government," includes the Intercolonial, Prince Edward Island, National Trans-

rence and Adirondack Ry., which is not able to give the 1920 figures, and is therefore being omitted from 1921 reports, as its inclusion would not show a true comparison. The 1921 figures, however, will

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern," includes the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government.

The column headed "Canadian Pacific," includes also the Montreal and Atlantic, and Esquimalt & Nanaimo Rys. The column headed "Grand Trunk" includes its Canadian lines only.

The Railways' Operating Results for July.

The operating and financial positions of Canadian railways continue to improve, as shown by the returns for the month of July (given on the preceding page), when the railways as a whole had a larger percentage of their operating revenues remaining, after paying operating expenses, than for any month in 1920, or so far in 1921. While the gross operating revenues show a decrease compared with July 1920, the operating expenses show a greater proportional decrease. The gross operating revenues for all railways decreased 9.9% compared with July 1920, but increased 5.7% over June 1921. Compared with July 1920, the Canadian Government Rys. gross operating revenue decreased 19.4%; the Canadian Northern decreased 2.7%; the Canadian Pacific decreased 10%; the Grand Trunk decreased 11.6%, while the Grand Trunk Pacific increased 1.8%. Compared with June of this year, the Canadian Government Rys. gross revenue increased 4.4%, the Canadian Northern increased 17%, the Canadian Pacific increased 8.9%, while the Grand Trunk decreased 1.7% and the Grand Trunk Pacific decreased 1.2%.

Compared with June 1921, the freight revenues increased, the passenger revenues substantially so, the latter, however, being largely due to a seasonal increase in traffic. Mail and express revenues were both smaller in July than in June, but the increase in miscellaneous revenue and in freight and passenger earnings combined to make the 5.7% increase in gross revenue noted above.

Maintenance of way expenses were considerably smaller in July 1921 than in July 1920, the decrease being 22%, and maintenance of equipment expenses were 18% smaller than in July 1920. While a decrease of wages taking effect July 16, undoubtedly had an effect in decreasing these expenditures, and while a reduced traffic would also tend to make expenditures on these accounts smaller, the fact remains that the combined effect of these two influencing factors would not produce the decrease noted, which forces the conclusion that the programme of maintenance restriction put into effect early in the year by the railways generally was continued throughout July. The transportation expenses for the railways as a whole decreased 15% compared with July 1920, which is about all the reduction which could be hoped for, when considering the higher unit cost of moving a reduced traffic, on the one hand, and the recent wage reduction, on the other. The decrease in operating expenses was fairly evenly distributed among the several railways, with the exception of the Grand Trunk Pacific, the Canadian Government Rys. expenses being reduced 15%, Canadian Northern 19%, Canadian Pacific 13%, and Grand Trunk 14%. The reduction in the Grand Trunk Pacific maintenance expenses is notable, they having been about cut in two, and the total operating expenses reduced by 40%. The increase in the transportation expenses of this road is a logical consequence of the increased freight traffic

handled in July 1921, compared with July 1920.

For the railways as a whole, the operating ratio for July was 93.67, which, as noted above, is the best performance for any month in 1920, or so far in 1921. This compares with an operating ratio of 101.71 in July 1920, and of 94.53 in June 1921. While the Canadian Government Rys. cut operating expenses to a large degree, as noted above, the falling off in gross revenue was such as to produce a less favorable operating ratio in July 1921 than in July 1920, the figures for the two months being 118.70 and 113.72 respectively. The performance for July represents a large improvement over that of June, however, when the ratio was 133.26. The Canadian Northern ratio was the smallest this year to date, being 108.36, compared with 122.88 in June 1921 and 131.11 in July 1920. The Canadian Pacific shows an improvement over July 1920, when the ratio was 90.91, the figures for July 1921 being 87.10. This is a falling off from June, however, when the operating ratio was but 78.61. The Grand Trunk, with an operating ratio of 85.63 in July 1921, bettered its performance of July 1920, when the figure was 88.36, and of June 1921, when the figure was 88.70. The Grand Trunk had the most favorable operating ratio of any of the railways shown in July 1921. The Grand Trunk Pacific's improvement in operating ratio over July 1920 is most gratifying, the figures for July 1921 being 131.16, compared with 232.39 for July 1920. It also made an improvement over June 1921, when the figures were 134.20.

The traffic statistics show that the large falling off compared with last year continued throughout July. The revenue ton mileage handled by the railways as a whole decreased 30%, or 770,000,000 ton miles, which indicates that Canada in July still had a long way to go before her productive capacity could be said to be fully employed. The Canadian Government Rys. revenue ton mileage decreased 37%, the Canadian Northern decreased 23%, the Canadian Pacific decreased 30%, and the Grand Trunk decreased 39%, while the Grand Trunk Pacific had an increase in its freight traffic of over 29,000,000 ton miles, or 44%. Revenue passenger mileage for the railways as a whole shows a decrease of 21% compared with July 1920. The Canadian Government Rys. passenger traffic decreased 38%, the Canadian Northern 18%, the Canadian Pacific 20%, the Grand Trunk 11%, and the Grand Trunk Pacific 12%. These percentages indicate to what an extent Canadian railway business fell off within a year. Revenue ton mileage and number of passengers carried one mile, however, show a good increase over the corresponding figures for June.

Freight train mileage decreased by 24.5% compared with July 1920. As noted above, revenue ton mileage decreased 30%; the train mileage could not be decreased in proportion to the revenue ton mileage, which inevitably tends

to increase the operating expense per unit of traffic handled. The figures for train loading, 407 tons a train for July 1921, and 452.8 tons for July 1920, show that the opportunity for operating full tonnage trains is more limited under the lighter traffic conditions. As stated above, revenue passenger mileage fell off 21% for the railways as a whole; but passenger train miles decreased only 8.2%. Thus it is further demonstrated that unit costs of doing the business are increased as the volume of business offering decreases. The figures for the ratio of loaded freight car miles to total freight car miles, 65.9% for July 1921, compared with 75.4% for July 1920, indicates that conditions of reduced traffic make for a more unbalanced traffic, and that operating expenses are further increased by the necessity of hauling more empty cars in freight trains.

The change which has taken place in railway operation in Canada as between July 1920 and July 1921 is expressed perhaps as well as it could be by the figures showing the operating revenue, expenses, and net revenue, and traffic on the basis of per mile of road operated. The decrease in gross earnings, together with a greater decrease in operating expenses, having the effect of converting a deficit into a net revenue, are shown in figures which adequately convey a correct impression of conditions, as is also the revenue freight tonnage handled.

The average length of haul in freight service shows a remarkable increase, from 234.7 to 285.8 miles. An even greater increase is shown over June 1921, when the average freight haul for all roads was 216.8 miles.

The payroll in July 1921 decreased \$5,344,971 from that of July 1920, or 21%. While the wage reductions effective July 16 were partly responsible for this, the greater part of the decrease was due to the smaller number of employees in service, and, undoubtedly, smaller individual earnings due to less mileage made or time worked. The payroll in July was but slightly smaller than in June. Taking into consideration the reduced wages in the latter part of July, the additional labor required in July as compared with June was about proportional to the additional traffic handled.

The receipts per freight train mile show that the higher rates prevailing in July 1921 gave a higher train mile earning than in July 1920, despite the reduced revenue tonnage per train. Passenger rates were based on the same basis as in 1920, throughout the month, and although the average rate per passenger mile was larger than in July 1920, the passenger train mile earnings were smaller than in July 1920, due to the reduced traffic.

The average freight receipts per ton mile, 1.332c, show that freight rates as a whole are still considerably higher than in 1920, but it is evident that they are not high enough to make the total freight revenues equal to those of last year, when applied to the decreased vol-

ume of traffic handled. The difference in rates in the two months, July 1920 and 1921, is about three-tenths of a cent per ton mile on the average, for all roads. A comparison of the freight receipts per revenue ton mile for the different railways is interesting; it shows that the Canadian Government Rys., Canadian Northern and Grand Trunk Pacific derive most of their freight revenue from low grade commodities, taking a low rate, while the C.P.R. and Grand Trunk handle a larger proportion of high grade commodities, which serves to make the average rate per ton mile higher for those roads than for the other three. The Grand Trunk Pacific, in particular, earns its freight revenue on a very low unit rate, the average receipt per ton mile of .807c. being very low.

While our introductory statement, to the effect that the operating and financial position of Canadian railways continues to improve, is correct, it nevertheless requires some qualification. There is no doubt that the railways are able to retain a larger proportion of gross operating revenues, after the payment of operating expenses, than they have been able to in the past year or two, but at the same time it would be better for all concerned if those gross operating revenues were being secured on a much larger traffic than is being handled at present. A much larger traffic would involve a re-

duction in the unit cost of handling it, and further reductions in freight rates could then be considered, but it is evident that no decreases of any magnitude should be made while operating expenses remain at their present levels. A close analysis of the July figures shows the position the Canadian National Rys. occupy, and the extent to which a reduction of their traffic affects their operating results. It is worthy of note that these lines have reported a small operating surplus for August, due to the application of the wage reduction during the entire month, and the enforcement of economy to the uttermost. This is gratifying, but we would like to emphasize the point that further improvement in their position, and in the railway situation generally in Canada, does not lie so much with the railways themselves from now as it does with the country, and the rapidity with which population increases and commerce and industry expands. A large and permanent improvement in Canadian railway operating results demands as a prerequisite a largely increased traffic to provide work for the railways which are already in operation, and when that traffic is increased to a point where it is measurably close to the capacity of the lines, the railways may be trusted to see to it that it is carried at rates more favorable to industry than in any other country.

branch has been completed and a train service is being given over it. Ballasting and surfacing is reported to be in progress on a further mileage.

A siding is reported to have been built from a line south of Moose Jaw, to some sodium sulphate deposits which are being developed by a United States company near Dunkirk.

Moose Jaw Station.—The new station building at Moose Jaw, Sask., was opened for traffic, Oct. 15. A description and front view of this building was given in Canadian Railway and Marine World for June, 1920, p. 291.

Alberta District Construction.—The Weyburn-Lethbridge line construction of sections of which have been built from time to time, is approaching completion. During the summer construction was in progress on an 18 mile section from Altman, at the Saskatchewan-Alberta boundary, westerly to Payne, Alta., which it is expected to complete this year. The completion of this section will leave a gap of about 20 miles between Payne and Manyberries, which is the present terminus of the 85 miles already built easterly from Sterling, where the connection is made with Lethbridge. E. W. Beatty, President, is reported to have stated on his recent visit to the west, that construction of this mileage would be undertaken in 1922.

Tracklaying on the line from Acme, easterly into the Drumheller coal field, 35 miles, is reported to have reached Kirkpatrick, on the bank of one of the branches of the South Saskatchewan River. The question of the erection of a bridge over the river is under consideration.

A number of stations have been built in the district during the summer, one of the largest being at Cardston.

The Board of Railway Commissioners has authorized the opening for traffic of the extension of its Langdon North Branch, from Acme to Empress, mile 38.88 to 74.20. (Oct., pg. 540).

Railway Accidents Throughout Canada.—The total number of accidents reported to the Board of Railway Commissioners in September was 167, resulting in 24 persons being killed, and 160 being injured. Of those killed, 1 was a passenger, 7 were employees, and 16 others, while of those injured, 20 were passengers, 110 employees, and 24 others. Under others are included 10 highway crossing accidents, in which 3 persons were killed, and 12 injured. In 6 of these accidents, the crossings were unprotected, in 3 there were gates, and in 1, an electric bell. In 6 cases, automobiles were concerned, in 1, a motorcycle, and in 3, pedestrians.

Elimination of Waste on Railways.—The American Society of Mechanical Engineers' Railroad Division will discuss the elimination of waste on railways, in connection with the general consideration of that topic at the society's annual meeting in New York, Dec. 9. Three papers will be presented, viz.: Avoidable waste in locomotives as affected by design, by Jas. Partington, American Locomotive Co.; Avoidable waste in operation of locomotives and cars, by Wm. Elmer, Pennsylvania Rd.; Avoiding waste in car operation; the container car, by W. C. Sanders, New York Central Rd.

National Cartage & Storage Ltd. is the new name of the Canadian National Transfer Co., Ltd., at Winnipeg.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John River Bridge.—We were advised recently that it was expected to complete the erection of the superstructure of the new bridge over the St. John River at the Reversible Falls, St. John N.B., by the end of October. The work was started June 1, and the center section of the bottom chord was placed Oct. 7, thus connecting the east and west cantilever arms. The total weight of the superstructure, including the light 70 ft. girder approach spans, is approximately 2,400 tons. The contractors are the Dominion Bridge Co., Montreal, C. E. Fitzpatrick being superintendent and F. Bowman being engineer in charge of the operations.

The New Brunswick Government has instituted an action in the Chancery Court, to determine whether the control of the erection of bridges over navigable waters rests with the Dominion Government, or with the province. It is said that the C.P.R. will be represented by counsel, as the question has been raised mainly through the construction of the bridge at St. John.

Interprovincial & James Bay Ry.—The C.P.R. has operated for many years a branch line from Matawa, Ont., to Timiskaming wharf, Que., 37 miles, and a line built subsequently from Kipawa Jct., mile 36, to Kipawa, 9 miles. For a number of years after these lines were in operation residents of the district to the north discussed the possibility of the extension of these lines to Ville Marie, on the Quebec shore of Lake Timiskaming. These efforts resulted in the incorporation of the Interprovincial & James Bay Ry. Co., which subsequently came under C.P.R. control. The Quebec Legislature on several occasions voted a land subsidy in aid of the construction of a line from Kipawa to Ville Marie, and Dominion aid was also promised. In 1912 the Minister of Railways approved location

plans for a line from Kipawa for about 70 miles to Ville Marie, and construction was started, 10 miles of line to the White Creek being completed, but further construction was stopped prior to the outbreak of the war in 1914. The project was revived in 1919, and in 1920 the Quebec Legislature authorized a cash subsidy of \$1,600 a mile, and a further cash subsidy not to exceed \$6,400 a mile in the event of the Dominion Parliament not voting a subsidy, for the construction of a line from the present terminus of the branch line at Kipawa or Timiskaming via Ville Marie to the Des Quinze River Falls, 66 miles. Following surveys and negotiations, a contract was entered into between the C.P.R. Co. and the Quebec Government for the work. A new route has been located from the end of track at White Creek, farther inland than that approved by the Dominion Government in 1912, with a branch from station 482 into Ville Marie, approximately 8 miles long, and then bearing away westerly to the Des Quinze River, at the falls, a total length of 60 miles, making, with the 10 miles built in 1912-13, a total length of 70 miles. We are officially advised that a contract has been let to Angus & Taylor, North Bay, Ont., for clearing, grading and culvert work on this 60 miles.

Manitoba District Construction.—A press report states that construction has been gone on with during the summer on a line running north from Russell, Man., and that some track has been laid. Russell is 11 miles northerly from Binsearth, on a branch line, which is now being extended northerly.

Saskatchewan District Construction.—Considerable work was done during the summer of the new branch line from Langman, Sask., northerly to the Saskatchewan River, which as projected will be about 50 miles long. A portion of the

Changes in Canadian National Railways' Maritime and Quebec Districts, Divisions and Subdivisions.

The following changes have been made on the C.N.R. Maritime and Quebec Districts.

Truro Subdivision, Halifax Division, Maritime District, from Truro to Springhill Jct., N.S. (but not including Springhill Jct.), 59.54 miles, heretofore under J. T. Hallisey, Superintendent, and J. D. McNutt, Assistant Superintendent at Truro, has been consolidated with the former Amherst Subdivision, Moncton Division, Maritime District, from Springhill Jct. to Moncton, 124.75 miles, heretofore under A. C. Barker, Superintendent, and W. A. Fitch, Assistant Superintendent, Moncton, the consolidated subdivision being named Springhill, and placed in Moncton Division under Messrs. Barker and Fitch.

Newcastle Subdivision, Moncton Division, Maritime District, from Moncton to Newcastle, N.B., 78.58 miles, heretofore under A. C. Barker, Superintendent, and W. A. Fitch, Assistant Superintendent, at Moncton, has been changed to Harcourt Subdivision and transferred to Campbellton Division, under R. H. Martin, Superintendent, and H. V. Musgrave, Assistant Superintendent, Campbellton, N.B.

Loggieville Subdivision, Moncton Division, Maritime District, from Nelson Jct. to Loggieville, 13.49 miles, heretofore under A. C. Barker, Superintendent, and W. A. Fitch, Assistant Superintendent, at Moncton, has been transferred to Campbellton Division, under R. H. Martin, Superintendent, and H. V. Musgrave, Assistant Superintendent, Campbellton, N.B.

Centreville Subdivision, from Westfield Beach to Centreville, N.B., 157.84 miles; Fredericton Subdivision (renamed Nashwaak) from Derby Jct. to Fredericton, 109.75 miles; and Stanley Subdivision, from Stanley Jct. to Stanley, 5.40 miles; heretofore in Campbellton Division, under R. H. Martin, Superintendent, and H. V. Musgrave, Assistant Superintendent, Campbellton, N.B., have been transferred to Edmundston Division, under F. Griffin, Superintendent, Edmundston, N.B., and R. Z. Walker, Assistant Superintendent, South Devon, N.B.

Edmundston Division, under F. Griffin, Superintendent, Edmundston, N.B., and R. Z. Walker, Assistant Superintendent, South Devon, N.B., as re-arranged, has been transferred from Quebec District to Maritime District, of which J. C. O'Donnell is General Superintendent, at Moncton, N.B. Edmundston Division's new territory is as follows:—Chipman Subdivision, Pacific Jct. to Napadogan, N.B., 106.67 miles; Grand Falls Subdivision, Napadogan to Edmundston, N.B., 112.91 miles; Glendyne Subdivision, Edmundston, N.B., to Monk, Que., 123.96 miles; Nashwaak Subdivision, Derby Jct. to Fredericton, N.B., 109.75 miles; Stanley Subdivision, Stanley Jct. to Stanley, N.B., 5.40 miles; and Centreville Subdivision, Westfield Beach to Centreville, N.B., 157.84 miles.

Armagh Subdivision, Monk to Diamond, Que., 100.98 miles, heretofore part of Edmundston Division, Quebec District, has been transferred to Lewis Division, Quebec District, under E. L. Desjardins, Superintendent, G. Pelletier, and J. A. Trudel, Assistant Superintendents, Lewis, Que.

Bridge Subdivision, Lewis Division,

Quebec District, heretofore extending from Charny to Bridge, Que., 3.2 miles, has been extended to Cadoma, Que., a further 7.9 miles, and including the Marine Branch, and is under E. L. Desjardins, Superintendent, Lewis Division, and J. H. Pakenham, Assistant Superintendent, Bridge Subdivision and Quebec Terminals.

La Tuque Subdivision, St. Maurice Division, Quebec District, which formerly extended from Bridge to Fitzpatrick, Que., 125.87 miles, now extends from Cap Rouge to Fitzpatrick, 123.82 miles.

Chaudiere Subdivision, Lewis Division, Quebec District, heretofore extending from Chaudiere to Ste. Rosalie Jct., Que., 115.98 miles, has been extended east to Lewis, 9.22 miles, making its total mileage 125.20 miles, and its name has been changed to Drummondville Subdivision.

Mileages.—These transfers have made the following changes in mileages of the districts and divisions:—

	Old.	New.
Maritime District—	368.01	368.01
New Glasgow Division	205.48	145.94
Halifax Division	323.45	393.66
Moncton Division	682.17	497.57
Campbellton Division	616.93	616.93
Edmundston Division	1,679.11	2,021.71
Quebec District—	442.54	554.64
Lewis Division	444.52	554.64
Edmundston Division	386.3	386.3
Saguenay Division	464.0	464.0
Montreal Division	466.60	462.3
St. Maurice Division	497.9	497.9
Cochrane Division	2,701.86	2,855.14

Subdivisions' Names Changed.— The following changes have been made in the names of subdivisions:—

Port Wade Subdivision, Bridgewater Division, Maritime District, Bridgewater Jct. to Port Wade, N.S., 93.5 miles, changed to Middleton.

Amherst Subdivision, Moncton Division, Maritime District, Springhill Jct., N.S., to Moncton, N.B., 65.21 miles, changed to Springhill.

Newcastle Subdivision, Moncton Division, Maritime District, Moncton to Newcastle, N.B., 78.58 miles, changed to Harcourt, and transferred to Campbellton Division, Maritime District.

Fredericton Subdivision, Campbellton Division, Maritime District, Derby Jct. to Fredericton, N.B., 109.75 miles, changed to Nashwaak Subdivision, and transferred to Edmundston Division, Maritime District.

Napadogan Subdivision, Edmundston Division, Quebec District, Pacific Jct. to Napadogan, N.B., 106.67 miles, changed to Chipman Subdivision, Edmundston Division, and transferred to Maritime District.

Monk Subdivision, Edmundston Division, Quebec District, Edmundston, N.B., to Monk, Que., 123.96 miles, changed to Glendyne Subdivision, Edmundston Division, and transferred to Maritime District.

Mont Joli Subdivision, Lewis Division, Quebec District, Mont Joli to Riviere du Loup, Que., 83.84 miles, changed to Rimouski.

Riviere du Loup Subdivision, Lewis Division, Quebec District, Riviere du Loup to Lewis, Que., 114.69 miles, changed to Montmagny.

Chaudiere Subdivision, Lewis Division,

Quebec District, heretofore from Chaudiere to Ste. Rosalie Jct., Que., 115.98 miles, extended east to Lewis, 9.22 miles, total mileage 125.20 miles, and changed to Drummondville.

Joffre Subdivision, Lewis Division, Quebec District, heretofore from Lewis to Chaudiere, 9.28 miles, now included in Drummondville Subdivision, and from St. Charles Jct. to West Jct., Que., 16.84 miles, changed to Diamond.

Fitzpatrick Subdivision, St. Maurice Division, Quebec District, from Fitzpatrick to Parent, Que., 118.78 miles, changed to Manouan.

Parent Subdivision, St. Maurice Division, Quebec District, from Parent to Doucet, Que., 102.54 miles, changed to Oscalan.

Doucet Subdivision, St. Maurice Division, Quebec District, Doucet to O'Brien, Que., 107.09 miles, changed to Amos.

O'Brien Subdivision, Cochrane Division, Quebec District, from O'Brien, Que., to Cochrane, Ont., 112.5 miles, changed to Makamik.

Hearst Subdivision, Cochrane Division, Quebec District, from Hearst to Grant, Ont., 125.1 miles, changed to Pagwa.

Grant Subdivision, Cochrane Division, Quebec District, from Grant to Armstrong, Ont., 131.2 miles, changed to Kowkash.

Grand Trunk Railway Employees' Pension Claims.

The following press dispatch was sent out from Toronto recently:—"Hon G. D. Robertson, Minister of Labor, in passing through Toronto en route to Hamilton, said that the war reason to hope that the grievance of G.T.R. railway train service employees, because of pensions on retirement being denied, will soon be adjusted. The Government held that the employees' claims had been regarded as a charge against the fund from which pensions were paid, and arranged for representatives of the employees to submit their case to the Cassels arbitration board for consideration. The investigation, however, developed the fact that the pension fund was exhausted in 1918, and no further provision being made for its continued maintenance, pensions from that time were paid out of earnings. The arbitrators expressed the view that the present G.T.R. directors should give the matter further attention, which suggestion is being acted upon. In view of the well known sympathy of the Government to the proposal that the Pension Fund Act and regulations should be interpreted and administered in the manner originally intended and applied up to 1910, said the Minister of Labor, it is reasonable to expect that the claim of the employees will be adjusted on that basis, at least from the date the Government became owner of the property."

Canadian Railway and Marine World communicated, in regard to the above, with the Minister of Labor, who replied: "The press dispatch quite accurately describes the facts and is substantially correct."

The Canadian National Rys. rest house at Edmundston, N.B., was destroyed by fire, Oct. 20. R. Hannah, a locomotive man, of Moncton, N.B., lost his life.

Canadian National Railways Construction, Betterments, Etc.

St. John Station.—A press report states that it is expected to begin work this year in preparation for the erection of a new station at St. John, N.B.

Little Buctouche River Bridge.—Tenders are under consideration for the construction of the bridge over the single track railway bridge over the Little Buctouche River, mile 26.1, Buctouche Subdivision, Moncton Division, Maritime District. This bridge is situated between Irishtown and Tankville, on the old Moncton & Buctouche Ry.

Newcastle-Tracadie Connection.—A press report states that a survey is to be made for a line from Newcastle, N.B., on the old Intercolonial Ry. main line to Tracadie, the terminus of the extension of the old Caraquet & Gulf Shore Ry., now incorporated in the Canadian National Ry.

Coffee River Bridge.—We are officially advised that the contract for the substructure of the bridge over the Coffee River, mile 41.1, Doucet Subdivision, St. Maurice Division, Maritime District (National Transcontinental Ry), described in our last issue, has been let to Jos. Gosselin, Ltd., Quebec.

Chaudiere Ice House.—Tenders were received to Oct. 6 for the construction of an extension to the ice house at Chaudiere Jct., Que.

Winnipeg Through Freight Track.—A piece of double track is reported to be under consideration between Water St. to Clarke St., Port Rouge, Man., the object of which is to enable through freight traffic to be carried without having to go through Winnipeg. The trestle work for the first mile was reported to have been completed Oct. 11, and it was stated that everything was ready for track laying. It is expected to have the whole work completed early in November.

Melfort Northerly.—Track laying is reported to be in progress on the line under construction from Melfort, Sask., northerly along the valley of the Carrot River, and it is expected to reach mile 23 before the end of the year.

North Battleford-Turtleford Extension. A press report states that grading on the extension of the North Battleford-Turtleford branch has been completed to St. Walburg, Sask., and is being continued to Guelph. Some bridge and culvert work will have to be done before the line is ready for track laying.

Rivers and Edson Water Supply.—Tenders have been received for the construction of an earth dam at Rivers, Man., and for the developing of the water supply reservoir at Edson, Alta., on the Grand Trunk Pacific Ry.

Edmonton Grades.—The Canadian Northern Ry. and Grand Trunk Pacific Ry. tracks enter Edmonton on different levels and a project is said to be under consideration changing the levels of both, so as to give them a common level. S. J. Hungerford, Vice President, Operation and Maintenance, and A. E. Warren, General Manager, Western Lines, explained the proposals to the city council recently. The G.T.R. tracks are to be lowered about 16 ft. from the east end of the trestles at 58th St., to 74th St., will be raised about 7 ft. for about 2,000 ft. Subways will be provided at the Fort Trail and Norton St., with a 4% gradient. The estimated cost of the work is about \$250,000. The city gave its con-

sent to the alteration of street crossings to suit the new levels.

Edmonton Station.—S. J. Hungerford, Vice President, Operation and Maintenance, and A. E. Warren, General Manager, Western Lines; discussed with the Edmonton, Alta., City Council recently plans for a new station in the city. The site will be east of 101st Street, extending through two blocks, giving it a 3-way approach. The freight sheds will be located west of 101st Street. The plans, it was pointed out, would mean the closing of three streets, and the provision of two subways. No objection was made, and it is said that the railway engineers and architects will proceed with the preparation of the plans for the layout of the tracks, and for the station building.

Onaway to Whytecourt Branch.—Track laying is reported to have been completed on this line from Robinsons Crossing to Whytecourt, Alta. Whytecourt is on the Athabasca River, at the junction with the McLeod River, and is about 107 miles northwest of Edmonton. It is expected that the extension will be placed in operation at an early date.

Grain in Elevators.

Returns for the week ended Oct. 14, to the Dominion Bureau of Statistics, Internal Trade Branch, show that the quantity of grain in store at the various elevators throughout the Dominion increased by 12,556,476 bush., as follows:—Wheat, 10,639,945, oats 1,419,222, barley 279,498, flax 153,875, and rye 62,936.

Receipts of wheat at country elevators were 18,335,983 bush, and shipments were 10,890,848 bush.

The interior terminal elevators showed increases of wheat 57,446 bush., barley 2,009 bush., and rye 1,517 bush. Oats showed a decrease of 27,003 bush. In the public and private terminal elevators at Fort William and Port Arthur, there were increases as follows:—Wheat 1,896,497 bush., oats 547,794 bush., barley 33,013 bush., rye 32,746 bush., while in flax there was a decrease of 32,925 bush. The receipts of all grains were 11,042,459 bush., and the shipments were, by ship 8,259,716 bush., and by rail 33,968 bush. In the private terminal elevators at Winnipeg, there were decreases of 2,004 and 9,497 bush. in oats and barley respectively, and increases of 1,436 bush. of wheat and 129 bush. of flax.

In the eastern public elevators, there were increases as follows:—Wheat 992,734 bush., flax 35,335 bush., rye 57,102 bush., and decreases, oats 86,747 bush., barley 15,104 bush. The receipts of wheat were, by ship, 3,390,545 bush., by rail, 825,198 bush., and the shipments were, by ship, 1,075,831 bush., by rail, 1,635,562 bush.

There were 8,493,221 bush. of U.S. grain in the eastern public elevators, compared with 1,814,185 bush. at the same period last year. Of this amount, 3,297,216 bush. consisted of wheat, and 3,835,558 bush. corn.

The C.P.R. is reported to have given the Town of Ingersoll, Ont., seven acres of gravel land on the town's westerly limit in consideration of having used considerable gravel from town pits some years ago.

Reduction in Livestock Rates from Western Canada to St. Paul and Chicago.

We are officially advised that the C.P.R. rates and the Canadian National-Grand Northern and Canadian National-Northern Pacific joint rates, on livestock from the prairie provinces to St. Paul, Minn., and Chicago, Ill., where they were over 50c. per 100 lb., were on Oct. 8 reduced 20%. No reduction was made in rates of 50c. or less per 100 lb. Following are examples of the old and new rates. From Moose Jaw, Sask., to St. Paul, old 69c., new 55c.; from Moose Jaw to Chicago, old 96c., new 77c.; from Calgary and Edmonton, Alta., to St. Paul, old 88c., new 70½c.; from Calgary and Edmonton to Chicago, old \$1.15, new 92c.

Large reductions in live stock rates were made by the Canadian railways within Canada in August, as stated in Canadian Railway and Marine World for September, pg. 466. The U.S. Interstate Commerce Commission recently granted U.S. western railways authority to disregard the usual tariff rules in order to permit reduced live stock rates in the western states, and recommended that rates higher than 50c. per 100 lb. be reduced 20%. Practically all live stock rates from points west of the Missouri River to Chicago have been reduced on this basis, it being estimated that the reduction in the railways' revenues will be over \$10,000,000.

The Pullman Co.'s report, for the year ended July 31, contains the following figures:—\$67,242,066, including \$60,315,717 from the earnings of cars for 11 months ended July 31, \$979,166 Government compensation for Aug. 1920, and \$5,947,131 returns from manufacturing interests, etc. Total expenses, including declared dividends of \$9,559,280, were \$70,720,902, an excess of expenses over revenue chargeable to surplus account of \$3,478,835. Total assets are given as \$163,248,989, compared with \$195,311,947 on July 31, 1920.

Refrigerator Cars' Brine Tanks.—The American Railway Association's Mechanical Division, has issued the following circular:—"In view of the fact that all refrigerator cars with brine tanks have not yet been equipped with device for retaining the brine between icing stations, and in accordance with the recommendation from the committee on car construction, the effective date of sec (f) of Interchange Rule 3 is extended to January 1, 1922."

Sheep Penning at Fort William.—The Canadian National Ry. are reported to have leased their freight sheds along the Kaministiquia River, Fort William, Ont., to R. C. Harvey, Lethbridge, Alta., who proposes to utilize them during the winter to house 10,000 sheep, which he will bring in to fatten on the screenings from the elevators. It was stated recently that there was no market for these screenings, and that they were being dumped into the water. The sheep, it is reported, will be brought east in November.

Whistles for Motor Cars.—The Board of Railway Commissioners is considering the question of requiring railway companies to equip motor cars with whistles for purposes other than the transportation of passengers, with whistles or bells, to be sounded when approaching crossings.

The United States Railways' Financial and Operating Position.

Details of the bill providing for the funding of debts owed to the U.S. Government by U.S. railways were given in Canadian Railway and Marine World for September and October, and, as noted, the bill was passed in the House of Representatives, but had not been passed by the Senate at the beginning of the Congressional recess. Congress has long since convened, but the bill has obtained very little consideration in the Senate to date, being held up by questions of taxation and foreign relations. It is expected that the bill will meet with considerable opposition in the Senate debate concerning it, as some senators seem inclined to the view that it would be merely a means of affording a measure of charity to the railways. However, it is stated that the Administration is supporting the bill, and Chairman Cummins of the Senate Committee on Interstate Commerce has pointed out that the main purpose of the bill is to enable the Government to obtain cash on the railway securities which it has received from the railways and which it is proposed to obtain, so that it may pay the railways what it owes them without going to Congress for an appropriation. While the Government might insist upon the debts of the railways to it being set off against the debts of the Government to the railways, it is obvious that to do so would involve the withholding of a privilege to the railways which the U. S. Government has afforded to foreign Governments, and it is recognized, apparently, that the railways are in no position to get along without the sums owed them by the Government at present.

It was pointed out in a previous issue of Canadian Railway and Marine World that the Government had accepted railway securities to the extent of \$381,000,000 for equipment bought for the railways by the Government during the period of Federal control. The securities, or equipment trust certificates, which have been held by the Railroad Administration, have found a good market of late, over \$94,000,000 of them having been sold to investment houses for the Railroad Administration by the War Finance Corporation. If the market for these securities continues, it is probable that the limit of \$500,000,000 placed on the amount of the securities which the railways may dispose of to the War Finance Corporation through the Railroad Administration may be reduced considerably. At all events, it is felt that the legislation will be put through the Senate in such a way as to allow the Railroad Administration to pay the railways what the Government owes them, and to allow the railways to issue securities for what they owe the Government, in addition to their debts for equipment secured by Government action during the period of Federal control.

Consequent on the wage reduction effective July 1, and on the continuance of economy in maintenance and other expenditure, U.S. railways shew a better operating return for August than for some time. The net operating income earned was \$90,000,000, which represents a return on the value of the properties of 5% annually. To earn the 6% upon their value, as calculated by the Interstate Commerce Commission, they should have earned \$108,000,000. However, the fact of their having earned 5% is grati-

fying, in that it is by far the best monthly performance since the termination of Federal control. Total operating revenues were \$504,000,000, a decrease of 9% compared with Aug. 1920, but operating expenses, \$381,000,000, showed a decrease of 44% compared with Aug. 1920. This large decrease is not indicative of the change actually taking place, since operating expenses in Aug. 1920 included a large back time wage payment on account of the Chicago wage award. The total net operating income of U.S. railways for the year beginning with the termination of the guarantee period following Federal control, viz., Aug. 31, 1920, and ended Aug. 31, 1921, was \$530,000,000. But to earn the 6% provided for in the Transportation Act, the railways should have earned a net operating income of \$1,116,000,000. The rate at which they have earned for the year is but 2.8%, and incidentally it may be pointed out that this is the lowest return U.S. railways have earned for 20 years, with the exception, of course, of when they were under Federal control and for the six months immediately following, when their net return was guaranteed by the Government. With present rates, traffic and operating expenses, U.S. railways are just beginning to get back to a proper financial basis. But rate reductions are demanded in all parts of the country. It is evident, even on casual examination, that any rate reductions of consequence will put the railways back into the unfavorable financial position which they have occupied for the past few years, unless operating expenses are correspondingly reduced. The actions of U.S. railway regulating authorities during the next few months may, therefore, be well watched with interest.

The Federal tax on transportation, viz., 8% on passenger fares and 3% on freight, is still in operation in the U.S. There has been some agitation for the repeal of these taxes, and it is stated that the Government is seriously considering the matter. One plan proposed is to remove half of these taxes this year and the remainder in 1922, and it is stated that Senate leaders have agreed upon elimination of all these taxes at the end of this year. No definite move toward their elimination has, however, been made.

The unfavorable economic conditions prevailing have affected U.S. railway traffic in almost identically the same degree as they have affected that of Canadian railways. Statistics for the first six months of 1921 show that U.S. railways carried 800,000,000 tons of revenue freight during the period, a decrease of 22% compared with the first six months of 1920. During the last two months, car loading has shown a considerable increase. While a lot of this increase is admittedly seasonal, it is also evident that business activity and traffic are increasing. There were 873,305 cars loaded with revenue freight during the week ended Sept. 24, and 901,178 cars during the week ended Oct. 1. While this loading was less by about 100,000 cars than in corresponding weeks in 1920, it represents a good increase over the loading for precedings weeks of this year. The movement of grain and perishables is showing a large increase over that of 1920, but coal, coke, live stock, forest

products and ore, account for the net decrease.

Hearings before the Senate Committee on Interstate Commerce, in connection with its enquiry into the general railway situation, will, it is expected, be resumed in the near future. The last hearings preceding the beginning of the Congressional recess were reviewed in Canadian Railway and Marine World for July, pg. 373. The hearings were suspended during the recess, before which the railway executives had completed their testimony, and the representatives of the National Association of Railroad Security Owners had testified briefly. Representatives of railway employees and of shippers have yet to be examined by the committee, and it is probable that representatives of security owners will be examined further.

Canadian Built Tank Cars for Russian Soviet Government.

As mentioned in a previous issue of Canadian Railway and Marine World, the Russian Soviet Government is having built by Canadian Car & Foundry Co., 500 steel tank cars, of 50 tons capacity each, for transporting oil from the Caucasian oil wells to Black Sea ports. The cars will be shipped from Montreal before the close of navigation, by Canadian Government Merchant Marine steamships Canadian Challenger, Canadian Miller, Canadian Ranger and Canadian Seigneur, to Novorossisk. The first shipment was expected to be made before the end of October.

The general dimensions are as follows:

Length over end sills	39 ft. 6 1/2 in.
Truck centers	19 ft. 11 in.
Truck wheel base	14 ft. 7 in.
Gauge	54 in.
Height from top of rail to top of leading platform	14 ft. 4 1/2 in.
Length of tank inside	26 ft. 10 1/2 in.
Diam. of tank inside	7 ft. 2 1/2 in.

They are designed to carry crude oil, naphtha, kerosene and benzine, and are equipped with Nobel devices, consisting of two different arrangements, one for handling benzine, and the other for handling crude oil, kerosene and naphtha. Benzine will be loaded direct into the tank through the dome, and will be unloaded by a special syphon arrangement, with a small hand pump on top of the dome for starting the flow. For carrying benzine, a special type of float is provided, with tape gauge and rewinding drum, to indicate the level of the liquid in the tank. When crude oil or other similar liquid is carried, it will be loaded through the dome manhole, and discharged through an outlet valve in the bottom of the tank, connecting with two discharge pipes located outside of the side sills. The cars are, in addition, equipped with safety valve in the dome head. The materials used are in accordance with American standard practice. The tanks are built up from four sheets, running full length of the tank, consisting of one top sheet 3/4 in. thick, two side sheets 3/4 in. thick, and one bottom sheet 1/2 in. thick. The tank heads are 1/2 in. thick, and the dome sheet and dome head are each 5/16 in. thick. The trucks are of the standard arch bar type of A.R.A. 50 ton design, with Simplex truck bolsters, modified to suit the Russian railway gauge of 5 ft. The specialties include Russian railway standard

screw couplings and drawbar hooks, forged steel buffers with helical coil springs, Westinghouse 10 in. Russian type automatic air brakes, Simplex bolsters, special design of unloading platform, with ladder from sill to top of car, and hand rails on platforms, special design of brakeman's platform, with seat at end for operating hand brake, which is the Russian type screw brake, with bell crank connection to foundation brake rigging. The underframes are of structural steel shapes, plates and bars, having two center sills running full length, consisting of 15 in. channels, two side sills running from bolster to end sills consisting of 9 in. channels, and angle side sills running between the bolsters are built up, and the cross bearers consist of plates and angles supporting side sills.

Railway Earnings.

Canadian National Railways.

Following are approximate monthly gross earnings for the Canadian Northern Ry. System and Canadian Government Ry. for the year ending the Intercolonial Ry., Prince Edward Island Ry., National Transcontinental Ry., and various local lines have been acquired by the Dominion Government in the Maritime Provinces and in Quebec, enroute.

	1921	1920
January	\$8,781,839	\$7,267,662
February	8,160,341	6,516,095
March	9,497,140	7,761,282
April	7,644,935	7,937,477
May	7,774,147	8,305,850
June	7,885,548	7,776,638
July	8,837,354	9,083,674
August	9,481,530	9,482,960
September	10,418,538	9,985,681

\$78,561,863 \$74,107,168
Approximate gross earnings for two weeks ended Oct. 14, \$5,429,367, against \$5,659,715 for same period 1920.

Canadian Government Railways.

Following are total operating revenues, total operating expenses, and net operating deficits, for the Intercolonial, Prince Edward Island, National Transcontinental, and local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government and added to the Canadian Government Ry., as far as they are available to date:

	Revenue	Expenses	Net deficits	
	1921	1921	1921	1920
Jan.	\$3,627,804	\$4,347,728	\$ 820,423	\$ 608,178
Feb.	8,526,658	4,867,491	840,833	1,206,925
Mar.	8,596,144	4,538,904	943,761	1,286,265
Apr.	3,363,072	3,915,995	652,923	115,191
May	2,914,973	8,728,949	813,976	618,909
June	2,859,866	8,811,205	951,809	608,466
July	2,988,662	8,547,879	568,827	608,669

\$22,775,996 \$28,257,651 \$5,482,052 \$4,864,093
Incr. 196,918 814,872 617,959

Canadian Northern Railway System.

Following are approximate monthly gross earnings for the Canadian Northern Railway System:

	1921	1920
January	\$5,094,100	\$4,760,700
February	4,480,121	3,962,800
March	6,119,700	4,657,700
April	4,978,500	4,732,623
May	4,742,200	4,853,500
June	4,608,500	4,417,331
July	5,626,900	6,185,500
August	7,708,500	6,899,700
September	7,957,400	6,140,500

\$48,654,600 \$48,920,128
Approximate gross earnings for two weeks ended Oct. 14, \$3,704,000, against \$3,477,600 for same period 1920.

Following are total operating revenues, total operating expenses, and net operating deficits, for 1921 and 1920, as far as they are available, to date:

To date	Revenue	Expenses	Net deficits	
	1921	1921	1921	1920
Jan.	\$5,851,220	\$7,558,780	\$1,887,660	\$1,672,283
Feb.	5,676,782	6,861,337	1,285,555	1,839,768
Mar.	8,812,790	6,746,912	934,122	1,280,887
Apr.	4,904,927	6,827,789	1,933,712	911,821
May	4,427,904	6,742,052	1,314,058	1,041,273
June	4,205,811	6,536,771	1,240,890	1,084,816
July	6,027,917	5,448,014	420,997	1,603,874

\$35,985,811 \$44,201,611 \$8,218,000 \$9,437,209
Incr. 3,884,793 2,168,684
Decr. \$1,221,209

Canadian Pacific Railway.

Following are monthly gross earnings, working expenses and net profits for 1921, compared with 1920:

	Gross	Expenses	Net	Increases
Jan.	\$14,465,430	\$13,824,005	\$641,425	\$55,484
Feb.	12,768,987	11,956,355	812,632	99,613
Mar.	14,705,727	12,254,818	2,405,909	493,144
April	13,761,840	11,116,709	2,646,131	304,285
May	13,892,045	10,598,439	3,293,605	56,609
June	14,461,643	11,556,885	3,044,758	473,940
July	15,772,929	12,718,613	3,054,316	434,839
Aug.	17,064,266	14,488,126	2,576,140	375,327

\$116,930,866 \$99,312,245 \$17,580,621 \$2,332,137
Incr. \$10,555,249 \$12,967,886

Appointed gross earnings for 1921, September, \$19,180,000, and for two weeks ended Oct. 14, \$9,281,000, against \$19,703,000 and \$11,045,000 for same periods 1920.

The discrepancies between the above figures and those issued by the Dominion Bureau of Statistics is owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimaux & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. ones. The figures supplied the Bureau are exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World.

Grand Trunk Railway.

Following are total operating revenue, total operating expenses for lines in Canada for 1921, also total net operating revenue or deficit for 1921 and 1920, as far as they are available to date, as compared with those for 1920, as far as they are available to date:

	Gross	Expenses	Net revenue or deficit	
			1921	1920
Jan.	\$6,137,539	\$6,886,930	\$699,391*	\$624,310*
Feb.	5,468,732	6,439,839	29,693	690,857*

Traffic Orders by Board of Railway Commissioners.

Copperage Stock Classification and Rates.

31,625. Oct. 5.—Re application of the Sutherland, Innes Co. for a classification on copperage stock which will bring the same down to the lumber rate basis. Upon hearing the application at Chatham, Ont., on June 28, the applicants, and the Grand Trunk and the Canadian Pacific Railways, being represented, and what was alleged; and upon the report and recommendation of the Board's Traffic Officer, the Board orders 1. That the application that the present commodity rate on lumber should be extended to copperage stock generally be refused. 2. That the Canadian National and the Canadian Pacific Railways be required to publish and file tariffs applying the lumber commodity rate of 17c. per 100 lb. on shipments of copperage stock from Smiths Falls to Montreal; such tariffs to be filed with the Board so as to become effective within 10 days from the date of this order.

Class Rates from Pacific Termini Reduced.

31,648. Oct. 11.—Re application of Canadian Manufacturers' Association for consideration of readjustment in class rates applicable from Vancouver, Victoria, and New Westminster to points in British Columbia, Alberta, Saskatchewan and Manitoba, placing them on the basis outlined in general order 125, May 30, 1914, dealing with what is known as The Western Rates Case. Upon hearing the application at Vancouver, Oct. 12, 1920, the Canadian Manufacturers' Association, the Vancouver Board of Trade's Transportation Bureau, and the Canadian Pacific and Canadian National Railways being represented at the hearing, and what was alleged, and upon consideration of the submissions filed, the Board orders that the C.P.R. publish and file tariffs, to become effective on or before Dec. 1, 1921, showing special class rates from Pacific termini, as follows, viz., between Vancouver and New Westminster, and points east thereof—

1. To and from Glacier, B.C., the rates to be no greater than those of the Pacific standard tariff for 290 miles.
2. To and from points west of Glacier, the Pacific territory Town tariff basis to be applied, subject to the rates to Glacier 1/2 as maximum.
3. To and from points beyond Glacier within Pacific territory, the maximum first class rates to be those of the Pacific standard tariff for the through mileage, made up of the actual distance beyond Glacier, added to the above mentioned assumed distance of 290 miles west of Glacier.
4. To and from points in Prairie territory west of Fort William, the maximum first class rates to be those west of Canmore and Crownset, plus the Prairie standard first class rate difference between the actual mileage west of Canmore and Crownset and the actual through mileage to or from the Prairie destination or shipping point, as the case may be.

From the first class rates constructed as above, the rates for classes 2 to 10 to be extended in accordance with the scaling of the standard tariff, so as to preserve the proportion between the classes. If the exact first class rate is not given in the Pacific standard tariff, the next higher rate is to be used.

Rates on Cotton Grain Bags, Binder Twine and Binder Cord.

31,673. Re application of N. W. Hawkes, Agent, New England Freight Association Tariff Bureau, acting for and on behalf of railway companies under the Board's jurisdiction, for permission to publish, on one day notice, revised rates on cotton grain bags, binder twine, and binder cord. Upon its appearing that the changes desired are for the purpose of correcting clerical errors, the Board orders that the application be permitted to publish as a supplement to his Tariff C.R.C. 1, so as to give effect to the proper rates on cotton grain bags, binder twine, and binder cord; the said supplement to be made effective upon one day notice.

The C.P.R., in connection with the special trans-Atlantic sailings to England for the Christmas season, has announced that on shipments of Nov. 12, through tourist sleeping car service will be operated from Calgary, Edmonton, Moose Jaw, Regina and Winnipeg to the Atlantic seaboard.

Among the Express Companies.

The Canadian Ex. Co. is being sued by Canadian Fish & Cold Storage Co., Prince Rupert, B.C., for \$10,750.47 for alleged breach of contract and negligence.

Canadian National Express Co.

E. A. Novis, heretofore Travelling Freight Agent, Grand Trunk Ry., Liverpool, Eng., has been appointed Local Agent, Canadian National Ex. Co., at 17 Cocksbur St., London, S.W. 1, Eng., reporting to E. J. Wearing, European Express Agent, Liverpool, Eng.

W. C. Cranston, whose appointment as General Agent, Canadian National Ex. Co., Vancouver, B.C., was announced in a recent issue, was born at Galt, Ont., Dec. 10, 1883, and entered express service in May, 1904, since when he has been, to June 1905, driver, Canadian Ex. Co., Galt, Ont.; July 1905 to Dec. 1906, messenger, same company, Toronto; May 1907 to Apr. 1910, messenger, Canadian Northern Ex. Co., Edmonton, Alta.; Apr. 1910 to Apr. 1911, agent, same company, Regina, Sask.; Apr. 1911 to June 1920, agent, same company, Saskatoon, Sask.; July 1, 1920 to Aug. 1921, joint agent, Canadian National and Canadian Ex. Co., Saskatoon.

Fred Cumberland Salter, whose appointment as Manager, Foreign Department, Canadian National Ex. Co., Montreal, was announced in our last issue, was born at Sarnia, Ont., Aug. 31, 1863, and entered transportation service in 1882, as a ticket clerk, Northern & Northwestern Ry., Toronto; Jan. 18 to July 22, 1884, operator, G.T.R., Caledonia, Ont.; July 22, 1884 to Apr. 6, 1885, operator and clerk, G.T.R., Clinton, Ont.; Apr. 6, 1885 to Aug. 1, 1887, operator and clerk, G.T.R., Buffalo, N.Y.; Aug. 1, 1887 to Jan. 1, 1889, operator, G.T.R., London, Ont.; Jan. 1, 1889 to 1891, Soliciting Freight Agent, Commercial Express Line, Buffalo, N.Y.; 1891 to 1893, agent for New York State, Commercial Express Line, Buffalo, N.Y.; 1893 to 1896, Travelling Freight Agent, Northern Pacific Ry., Buffalo, N.Y.; 1896 to Feb. 15, 1904, General Agent, N.P.R., New York, N.Y.; Feb. 15, 1904, to June 1, 1908, European Traffic Agent, G.T.R., Liverpool, Eng.; June 1, 1908 to Sept. 1921, European Traffic Manager, G.T.R., and Canadian Ex. Co., London, Eng. He is a son of the late Canon Salter, at one time at Brantford, Ont.

Appointments.—In consequence of the consolidation of the Canadian National Ex. Co. and the Canadian Ex. Co., as the Canadian National Ex. Co., the following appointments have been made, in addition to those mentioned in Canadian Railway and Marine World for September and October.

L. B. Allen, Tariff Clerk, Canadian National Ex. Co., Winnipeg, before the consolidation of the two companies, has been assigned to other duties.

C. E. Potts, formerly Travelling Agent, Canadian National Ex. Co., Toronto, has been appointed chief clerk in Superintendent's office, London, Ont.

C. A. Roach, formerly Route Agent, Canadian Ex. Co., with headquarters at Montreal, has been appointed chief clerk in Superintendent's office, Montreal.

The title *Lost Express Freight Agent*, and *Route Agent*, used formerly by Canadian Ex. Co., have been abolished, and the title *Travelling Agent*, used by Canadian National Ex. Co. before the con-

solidation, has been retained.

The following have been appointed travelling agents, with headquarters at the places named, their former positions being also given.

B. W. Bailey, North Bay, Ont., formerly agent, Canadian Ex. Co., there.

G. L. Bishop, Edmonton, Alta., formerly agent, Canadian National Ex. Co., North Battleford, Sask.

J. Bolduc, Montreal, formerly Travelling Agent, Canadian National Ex. Co., with same headquarters.

S. E. Brennan, Saskatoon, Sask., formerly Travelling Agent, Canadian National Ex. Co., with same headquarters.

J. Charest, Mont Joli, Que., formerly Route Agent, Canadian Ex. Co., with same headquarters.

V. J. Clave, Saskatoon, Sask., formerly Route Agent, Canadian Ex. Co., with headquarters at Winnipeg.

H. E. Fraser, Dauphin, Man., formerly agent, Canadian National Ex. Co., there.

H. E. Golding, Halifax, N.S., formerly Lost Express Freight Agent, Canadian Ex. Co., with headquarters at St. John, N.B.

H. N. Lingley, Truro, N.S., formerly Route Agent, Canadian Ex. Co., with same headquarters.

W. C. McGonegal, Cochrane, Ont., formerly Route Agent, Canadian Ex. Co., with headquarters at North Bay, Ont.

J. T. Madigan, Hamilton, Ont., formerly Route Agent, Canadian Ex. Co., with same headquarters.

S. O. Martin (relief), Moncton, N.B., formerly Agent, Canadian National Ex. Co., Ottawa, Ont.

R. J. Mellich, Stratford, Ont., formerly Lost Express Freight Agent, Canadian Ex. Co., with headquarters at Toronto.

E. S. Murray, London, Ont., formerly Route Agent, Canadian Ex. Co., with same headquarters.

G. H. H. Nase, St. John, N.B., formerly Route Agent, Canadian Ex. Co., with same headquarters.

W. H. Nattress, Winnipeg, formerly Route Agent, Canadian Ex. Co., with headquarters at Edmonton, Alta.

W. F. Pillar, Winnipeg, formerly Travelling Agent, Canadian National Ex. Co., with same headquarters.

H. C. M. Porritt, Toronto, formerly Route Agent, Canadian Ex. Co., with same headquarters.

A. Proteau, Quebec, formerly Agent, Canadian National Ex. Co., Chicoutimi, Que.

J. W. Proulx, Montreal, formerly Lost Express Freight Agent, Canadian Ex. Co., with same headquarters.

A. Scholey, Edmonton, Alta., formerly messenger, Canadian Ex. Co., with same headquarters.

E. O. Shannon, Belleville, Ont., formerly Route Agent, Canadian Ex. Co., with headquarters at Montreal.

H. M. Wallace, Ottawa, Ont., formerly agent, Canadian Ex. Co., Belleville, Ont.

G. H. Waterhouse, Belleville, Ont., formerly Route Agent, Canadian Ex. Co., with headquarters at Montreal.

R. J. Dawson, formerly Route Agent, Canadian Ex. Co., with headquarters at Halifax, N.S., is on extended leave of absence, owing to ill health.

Dominion Express Co.

Miss Delphine Burr, daughter of W. H. Burr, Traffic Manager, Dominion Ex. Co., was married at Toronto, Oct. 8, to

Capt. J. H. Keens.

The Dominion Ex. Co.'s service was put in force over the Edmonton, Dunvegan & British Columbia Ry., and the Alberta & Great Waterways Rys. Oct. 6, its traffic being handled through its office at Edmonton, Alta.

A Dominion Ex. Co.'s messenger was held up on board a C.P.R. train, near Moose Jaw, Sask., Oct. 19, and about \$5,000 in paper money was taken from the safe, by a masked robber, who is believed to have boarded the train at Swift Current, Sask., and to have left it before it reached Moose Jaw. The messenger was found on the floor of the car, tied to the steam pipes.

Telegraph, Telephone and Cable Matters.

Commercial Telegraphers Union of America's annual convention was held at Toronto, Oct. 2.

The Pacific Cable Board is reported to be considering the laying of a second cable across the Pacific Ocean.

John McMillan, Manager of Telegraphs, C.P.R., was a guest and a speaker at the Kiwanis Club luncheon at Calgary, Alta., Oct. 6.

Canadian National Telegraphs have opened offices at Dominion, Que., and Hay Lake, Alta., and have closed offices at Baker Brook, N.B., Elsie Cape, Greening, Little Metis, Beach, Pointe au Pie, and Rockfield, Que.; Clifton House, Niagara Falls, Foresters Falls, Joe Lake, Lake Joseph, Mimico, Muskoka Lakes or Bala Park, Royal Muskoka Hotel, Sparrow Lake and Wilgar, Ont.; Beaconia, East Selkirk, Grand Beach and Victoria Beach, Man.; Alberta Beach and Evansburg, Alta.

The radiotelegraph station which the Marconi Wireless Telegraph Co. is building at Laprarrie, Que., is designed for experimental purposes, and will be the most up to date and efficient station of its kind. It will be fitted with a continuous wave, 15 k.w. valve transmitter, an earth screen, and receiving apparatus, which will be selective both as to direction and sense, in addition to the ordinary resonance selectivity. The station will be adapted for duplexing and remote control, and is designed to operate directly off the public electrical power supply, without the use of running machinery.

At a Post Office Telegraph and Telephone Society meeting in London, Eng., Oct. 19, F. J. Brown, Chairman, discussed Great Britain's increased communication with the Dominions. He outlined the development of the Imperial cable, which he described as a "soma" of the war. In spite of submarine perils, the German cable between Emden and New York, via the Azores, was diverted to Penzance at the English end, and Halifax, N.S., at the Canadian end, and is now working between London, Eng., and Halifax, carrying a load of 230,000 words a week on the average. He also announced the completion of the wireless telegraph station at Lenfield, Eng., and that the corresponding station at Cairo, Egypt, will be completed and ready for service by the end of the year, thus forming the first link in the chain of stations connecting England with South Africa. He also stated that two other stations will be erected in England and Egypt, to form the first link in a similar chain, connecting England with India, Singapore, Hong Kong and Australia.

Electric Railway Department

Track Construction and Rehabilitation by Toronto Transportation Commission.

Since the City of Toronto took over the Toronto Ry. Co.'s city lines, and handed them, together with the Toronto Civic Ry., to the Toronto Transportation Commission, for operation, many improvements to the physical property have been undertaken, some of which have already been referred to by Canadian Railway and Marine World. These improvements include extensive additions to rolling stock, additions to car houses, construction of new lines and connections between former Toronto Ry. Co. lines and Toronto Civic Ry. lines, rehabilitation of existing lines, and extensions of yard and track facilities at car houses. The construction of new lines and repairs to existing tracks has been pushed most vigorously, and great progress has been made towards bringing the property up to a state of first class physical condition.

The work completed in connection with track construction and rehabilitation includes the following:—

1. Construction of second track on Coxwell Ave., from Gerrard St. east, to Danforth Ave., 3,000 ft.

2. Construction of a new double track line on Coxwell Ave. from Queen St. to a junction with the Toronto Civic Ry. line at the corner of Gerrard St. and Coxwell Ave., 2,900 ft. This, and the additional track noted above, as no. 1, make a new double track north and south route between Queen St. and Danforth Ave., in the east end of the city, which will handle a lot of the north and south traffic, and in addition provide a short route for cars from the Danforth Ave. car houses to Queen St.

3. Construction of new loop at east end of Danforth Ave. line, at Luttrell Ave. This line was operated formerly by the Toronto Civic Ry., with double end safety cars.

4. Installation of new intersection at Coxwell Ave. and Danforth Ave. This intersection, of solid manganese steel, is a double track three-part Y, that is to say, both the north and south tracks on Coxwell Ave. connect by curves to the eastbound and westbound tracks respectively on Danforth Ave., both to the east and west.

5. Installation of new intersection at Coxwell Ave. and Gerrard St.; this also being a double track three part Y, with manganese steel insert.

6. (a) Construction of curves to allow cars proceeding south on Coxwell Ave. to branch on to upper Gerrard east, a solid manganese steel installation. (b) Addition of new single track curve for cars proceeding west on Gerrard St. to turn south on Coxwell Ave.

7. Installation of solid manganese steel double track three-part Y at intersection of Coxwell Ave. and Queen St.

8. Construction of connecting link between Toronto Ry. Co. and Toronto Civic Ry. lines on Danforth Ave. near Broadview Ave., 120 ft. of new double track.

9. Construction of connecting link between Toronto Ry. Co. line and Toronto Civic Ry. line on Gerrard St. East, near Greenwood Ave., 220 ft. of new double track.

10. Installation of new curve to allow

westbound cars on Danforth Ave. to turn south on Broadview Ave., and installation of new clearance curve for northbound cars on Broadview Ave. to turn east on Danforth Ave.

11. Installation of new three-quarter grand union, solid manganese steel type intersection at Church and Queen East.

12. Installation of similar three-quarter grand union at intersection of Queen and Victoria Sts.

13. Rehabilitation of northbound track on Church St. from Queen St. to Dundas St., 1,200 ft. of new single track.

14. Installation of new clearance curve, from northbound track on Church St. to eastbound track on Dundas St. East.

15. Construction of new single track on Albert and James Sts., to complete a loop, 610 ft., with installation of new

Yonge St. from Front St. north to Carlton St., 4,396 ft. This involved tearing up the existing track and roadbed, and the diverting of traffic via Carlton and Church Sts. A 9 in. concrete slab base was laid, while oak ties, 122 lb. steel A.E.R.E.A. standard, and tie rods spaced 6 ft. apart were used. The street is being rebuilt with concrete paving base and paved with granite blocks.

21. On College St., between Spadina Ave. and McCaul St., 1,800 ft., the track is being rebuilt, new steel being laid and the devil strip widened.

22. On Dundas St., between Howard Park Ave. and Ritchie Ave., 550 ft., the track is being reconstructed, new 122 lb. steel being laid.

23. Construction of new double track line on Bathurst St., from Dupont St. to connect with the Toronto Civic Ry. line on St. Clair Ave., the track to be laid being equivalent to 5,564 single track ft.; 122 lb. steel is being used.

24. Rehabilitation of track on Bathurst St., from College to Bloor St., 4,575 ft. of double track; 122 lb. steel is being used.

25. Complete rehabilitation of tracks on Yonge St., between Bloor St. and Pryce St., 3,388 ft.

26. Complete rehabilitation of tracks on Yonge St. between College St. and Bloor St., 3,377 ft. This necessitates diversion of southbound traffic via Bloor and Church St., northbound traffic being carried on a temporary track.

27. Complete rehabilitation of tracks on Bathurst St. between Front St. and Queen St., 2,600 ft.; between Dundas and College Sts., 1,450 ft., and between Bloor and Dupont Sts., 2,834 ft.

28. Complete rehabilitation of tracks on Avenue Road, from Davenport Road to Dupont St., 800 ft., and from McMaster Ave. to Alcorn Ave., 500 ft.

29. Construction of new double track line on Teraulay St. from College St. to Bloor St., 3,300 ft.

30. Construction of double track on Wychwood Ave., south from St. Clair Ave., 240 ft., and installation of double track three-part Y at St. Clair Ave. and Wychwood Ave.

In addition to the loops mentioned above at the Jane St. terminus of the Bloor St. line, at Luttrell Ave. on the Danforth line, and to the north of the City Hall loop, a new loop is being constructed at the west end of the line on St. Clair Ave.

There is also planned for this year the extension of the Toronto Civic Ry. line on Bloor St. West from Lansdowne Ave. to St. Helen Ave., with a Y on the latter.

New diamond crossings are being installed at the intersection of Bathurst St. and a G.T.R. single track, and at the intersection of Queen St. with a G.T.R. double track.

Speaking generally, the devil strip, or space between the Toronto Ry. Co.'s double track lines, was 3 ft. 10 in. and on the Toronto Civic Ry. it was 5 ft. 4 in. The Commission is widening the devil strip to 4 ft. 4 in., which will give a clearance between two of the new cars which in no place will be less than 12 in.,

Canadian Electric Railway Association.

Honorary President, Thomas Ahearn, President, Ottawa Electric Railway.
Honorary Vice President, George Kidd, General Manager, British Columbia Electric Railway.

President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co.
Vice President, Major F. D. Burpee, Manager, Ottawa Electric Railway.
Treasurer, A. Gaboury, Superintendent, Montreal Tramways Company.

Executive Committee, E. C. Coleman, General Manager, Dominion Power & Transmission Co.; H. H. Cuzens, General Manager, Toronto Transportation Commission; C. G. Curtis, Manager, Cape Breton Electric Co.; W. S. Hart, Managing Director, Three Rivers Traction Co.; A. W. Belmont, Vice President, Winnipeg Electric Ry.; R. Mayne-Ryder, Superintendent, Quebec Ry., Light & Power Co.; Lt. Col. G. C. Royce, General Manager, Toronto Suburban Ry.; and C. L. Wilson, Assistant Manager, Toronto & York Radial Ry.

Auditor, H. E. Weyman, Manager, Lewis County Railway.
Secretary, L. E. Moreland, Chief Clerk, Hull Electric Co., Hull, Que.

Official Organ, Canadian Railway and Marine World, Toronto.

curves at intersections of Albert and Teraulay Sts., James and Albert Sts., and James and Louisa Sts.

16. Installation of four new curves at ends of both branches of Spadina Crescent, on Spadina Ave. between College and Harbord Sts., and rehabilitation of track on Crescent.

17. Installation of new temporary manganese steel crossing at intersection of Dundas St. and Ossington Ave.

18. Construction of temporary connection between Toronto Ry. Co. line on Avenue Road, and the Toronto Civic Ry. eastbound track on St. Clair Ave. A double track three-part Y will be installed at this intersection later.

19. Construction of new double track extension to the Toronto Civic Ry. line on Bloor St., from Runnymede Road to Jane St., 2,198 ft., grading for loop at Jane St. completed, loop to be constructed in near future.

In addition to the above, the following jobs were well advanced at the time of writing, Oct. 20:—

20. Rehabilitation of double track on

on either curve or tangent. Cars will be able to operate past each other on all curves at intersections. As stated previously in Canadian Railway and Marine World, the original gauge of 4 ft. 10½ in. has been retained.

In addition to the above, the yard and track facilities at the various car houses are being enlarged. At the St. Clair Avenue car house, 14 pieces of special work, including turnouts, etc., are being installed, and 6,805 ft. of additional yard and running track is being put in. At the Danforth Ave. car house, 19 sections of special track work and 10,713 ft. of additional yard trackage are being put in. The steel for the special work is of 108 lb. section, and for the yard tracks of 70 lb. A.S.C.E. section. Work on the yard extensions at these two car houses is now well advanced. At the Connaught Ave. car house, 4,419 ft. of additional track is to be constructed. Additional

installation in the near future.

About 2,600 men, in addition to the regular operating organization, are employed by the Commission on construction and rehabilitation.

The manner in which the track work is being carried on speaks volumes for the officials in charge of the planning and organization of it, the work proceeding rapidly and smoothly, while the absence of delay, despite the obstacles naturally connected with the commerce and traffic of a large city, is remarkable. Interference with the regular street car service throughout the city has been reduced to a minimum, automobile and truck operation having been facilitated by the skillful placing of closed road barriers and of men to indicate the alternative routes. Citizens generally have expressed great satisfaction with the high degree of efficiency characterising the work of reconstructing the system.

Toronto Transportation Commission's Track Reconstruction, Queen and Victoria Sts., looking south.

new material yards have been established at Merton St., Coxwell Ave., and on the old Hillcrest race track, at Bathurst St. and Dovercourt Road.

About 70 intersections have been ordered by the Commission, exclusive of the special intersections, turnouts, etc., mentioned for use in the yards at the car houses. The intersections put in up to the middle of October are mentioned above; about three per week will be installed in future. The Commission is also equipping the system extensively with electric switches, 18 having been installed to date, at the following intersections: Broadview Ave. with Danforth Ave.; Gerrard St., Queen St., and Dundas St.; at intersections of King St. with Queen St. and Shaw St.; at intersections of Parliament St. with Queen St., Gerrard St. and Carlton St.; at intersections of Queen St. with Church St., Ossington Ave., and Shaw St.; at intersections of Teraulay St. with Albert St. and Dundas St.; at intersections of Church St. with Queen St., Dundas St. and Richmond St.; and at intersection of College St. and Ossington Ave. The Commission has ordered 40 electric switches for

Motor Omnibus Notes.

A motor bus service in connection with the Peterborough, Ont., Radial Ry. is said to be under consideration.

The Montreal Tramways Commission is considering a plan for the operation of an auxiliary auto bus service from St. Catherine St. to Wellington St. The route would be on Atwater Ave. and Charlevoix St., about a mile and a half. The suggestion came from the city council, and is reported to have been favorably received by the Montreal Tramways Co.

Plans for the operation of a motor bus service along Dundas St., west of Toronto, are taking shape, and it is expected that a regular service will be put in operation from West Toronto to Cooksville as soon as the new highway is opened, which it is expected will be early in November. Work on Hurontario St. from Port Credit to Cooksville is expected to be completed about the same time, and it is suggested that a service be also given between Sunnyside via Port Credit and Cooksville.

Electric Railway Finance, Meetings, Etc.

British Columbia Electric Ry. and allied companies:—

	2 mos. to Aug. 31,	2 mos. to Aug. 31,
	1921	1920
Gross	\$84,154	\$94,002
Expenses	628,552	594,120
Net	215,202	216,488

Calgary Municipal Ry.—A press report gives the following figures for the nine months ended Sept. 30:—

	1921	1920
Revenue	\$704,484.11	
Expenditures	703,868.20	

Surplus	\$595.21	\$40,350.68
Operating expenses to revenue	99.9%	106.2%
Passengers carried for Sept.	1,178,659	1,156,022
Passengers carried, Jan. 1 to Sept. 30.	11,461,681	12,930,935

	1921	1920
Revenue for September	\$71,616.67	\$68,774.74
*Deficit.		

Cape Breton Electric Co.—

	12 mos. to Aug. 31,	12 mos. to Aug. 31,
	1921	1920
Gross	\$65,048	\$56,886
Operating and taxes	48,011	49,691
Net	17,037	7,195
Interest	5,772	6,927
Balance	11,265	1,464

Edmonton Radial Ry.—An Edmonton, Alta., paper says:—The street railway is not in nearly as bad condition financially this year, though not on a paying basis. The total loss for August was \$12,876, compared with a loss of \$27,840 for Aug. 1920. The loss for the past eight months is \$41,898, compared with a loss of \$124,210 for the corresponding eight months of 1920.

Regina Municipal Railway.—

	1921	1920
Receipts for September	\$26,870	\$24,352
Passengers carried	435,526	393,223

It is estimated that the deficit on the year's operations will be about \$10,000. The August figures showed a profit of \$2,300, and September a profit of about \$500 over and above operating expenses and fixed charges, thereby reducing the losses of the earlier months of the year.

Sydney & Glace Bay Ry.—The Royal Trust Co. is inviting tenders from holders of the S. & G.B.R. Co.'s 5% first mortgage gold bonds for bonds to be bought on account of the sinking fund as an investment for \$4,862.27.

The S. & G.B.R. connects Sydney with Glace Bay, N.S., and is operated by the Cape Breton Electric Co.

The Winnipeg Electric Ry. is reported to have paid a dividend on its 7% preference stock of 1¢ per share. That a dividend was to be declared on the common stock was stated by F. M. Morse, Secretary, to be without foundation.

	8 mos. to Aug. 31,	8 mos. to Aug. 31,
	1921	1920
Gross	\$238,822	\$385,616
Expenses	265,728	284,990
Net	125,095	83,626

Sir John Jackson (Canada) Ltd., a subsidiary of Sir John Jackson Ltd. of England, which has been in business for about eight years, and closed its Montreal office some time ago, having now completed its contract for building the Orgen Point breakwater at Victoria, B.C., for the Dominion Government, is winding up its affairs. It is reported to have bought the sailing ship, Mafalda, to convey its plant to England. Its Manager has expressed dissatisfaction with the way in which contracts are awarded in Canada.

Toronto Transportation Commission Matters.

Appointments.—The following appointments have been made, in addition to those mentioned in our last issue:—

H. Cowan, heretofore Inspector of Equipment, Toronto Ry., is appointed Chief Inspector of Rolling Stock, reporting to Superintendent of Rolling Stock and Shops.

Chas. Deacon, heretofore foreman machinist, Toronto Ry., is appointed General Foreman, Mechanical Department, reporting to Superintendent of Rolling Stock and Shops.

George Philp, heretofore Electrical Foreman, Motor Repair Shop, Toronto Ry., has been appointed Foreman, Electrical Department, Motor Repair Shop, reporting to Superintendent of Rolling Stock and Shops.

M. Power, heretofore Master Car Builder, Toronto Ry., is appointed General Foreman, Car Department, reporting to Superintendent of Rolling Stock

and Shops. now consulting engineer there, and C. S. Wright, of C. S. Wright & Co., railway supplies, Toronto, each of whom has a half interest in Canada in the Peter Witt electric car design, are suing the Commission for \$7,000, for royalty of \$50 each on 140 motor cars supplied by Canadian Car & Foundry Co., and which, plaintiffs claim, infringe their patent. It is said that the Canadian Car & Foundry Co. agreed in its contract to protect the Commission against any claims for infringement.

Equipment for Sale.—The Commission is offering for sale by tender, 340 single end city service street cars, as follows: Single truck closed motor cars, 4—18 ft., 2—20 ft., 15—21 ft., 117—22 ft.; single truck convertible motor cars, 30—23 ft.; double truck convertible motor cars, 1—27 ft., 1—30 ft.; double truck closed motor cars, 12—25 ft., 34—30 ft., 3—36 ft.; single truck convertible trailer cars, 36

25c., the latter being equal to 3 4/7c. each, compared with 3c. cash, or 10 tickets for 25c., as charged before the Toronto Ry.'s transfer to the city. Children's night fares were fixed the same as for adults. The city's public and separate school boards have been endeavoring to get the rule changed, so as to include all school children, and after a conference, the Commission's General Manager, H. H. Couzens, wrote each of the boards on Oct. 13 as follows:—"The Commission has instructed me to say that they are prepared to authorize special tickets, at the same rate as now applies to children's fares, available for use on school days only, between 8 and 9 a.m., 12 noon and 1:30 p.m., and 3:30 p.m. and 4:30 p.m. These tickets to be limited to children within the age limits specified in the Adolescent Act, viz., 16 years, and to be applicable only to children of residents in the city attending the pub-

Trailer Car, Toronto Transportation Commission.

and Shops.

George Sweetlove, heretofore Foreman, Armature and Coil Department, Toronto Ry., is appointed General Foreman, Electrical Department, reporting to Superintendent of Rolling Stock and Shops.

M. Switzer, heretofore Master Mechanic, Toronto Civic Ry., is appointed Assistant to Chief Inspector of Rolling Stock.

Appropriations.—Toronto City Council, some time ago, appropriated \$7,000,000 for the general work of rehabilitation and extension of the lines taken over from the Toronto Ry. Co. An application for \$4,000,000 more has been approved by the Board of Control, but has not yet been dealt with by the City Council.

Cars Received.—Up to Oct. 17 the Commission had received 85 motor cars and 15 trailers from Canadian Car & Foundry Co., leaving 15 motor cars and 35 trailers to be delivered, which are expected to be received before the end of November. No deliveries have been made by Canadian Brill Co., which has an order for 50 motor cars.

Royalty on Cars.—Peter Witt, formerly City Commissioner of Cleveland, Ohio,

—19 ft.; single truck closed trailer cars, 2—16 ft., 69—22 ft., 17—18 ft. The single truck motor cars are mounted on Blackwell, Curtis and Peckham trucks, and are equipped with G.E. 67 and G.E. 1,000 motors, K-10 controllers and hand brakes; and the trailers are mounted on special trailer gear. The double truck motor cars are mounted on Curtis and Brill trucks, and are equipped with G.E. 80, G.E. 67 and G.E. 1,000 motors, E-6 and E-10 controllers and Macann storage air brakes. The Commission has on hand a stock of spare equipment for these cars, and this will be disposed of to parties buying cars. All the cars have a wheel gauge of 4 ft. 10 1/2 in.

The Commission has invited tenders to Nov. 18, for the following construction plant, which it has for sale:—3 locomotives, 20 dump cars and 3 flat cars, all 3 ft. gauge, 250 tons 45 lb. rail, 1 Marion shovel and 1 Thew shovel.

Track construction and rehabilitation, being done by the Commission, is dealt with fully in a separate article, on another page of this issue.

Children's Fares.—As stated in Canadian Railway and Marine World for September, the Commission fixed the fares for children, not in arms, and not over 51 in. high, at 4c. cash, or 7 tickets for

lic and separate schools, high schools, colleges, High School of Commerce and Technical School, under the jurisdiction of the Board of Education and the Separate School Board. The proposal does not apply to private schools, the object being to limit it to those for whom free education is provided. This offer is made subject to the Board of Education and the Separate School Board arranging for the distribution of the tickets to those scholars who are entitled to receive the same, that is to say, those scholars who need to use the cars for the purpose of attending school, and only sufficient for this purpose. The Commission to deliver tickets as required to fill the needs of the boards for the purpose outlined above. The object of this arrangement is to eliminate as far as possible the abuse of these tickets, which experience has shown to be considerable. The arrangement as outlined is the one which in the Commission's opinion will best meet the object in view, and at the same time avoid interference with traffic. Your board will, I know, realize that the Commission's duties are confined to transportation, and in putting forward this plan they have gone outside the strict line of duty in the endeavor to facilitate the work of your board, and the Com-

mission confidently looks forward to the kind co-operation of your board in safeguarding their interests. Tickets are being prepared along the lines indicated above, and I shall be glad to advise you as soon as we can obtain a guaranteed delivery date."

North Toronto Fares.—The Toronto City Council has arranged with the Commission so that, pending the taking over of the Toronto & York Radial Ry.'s Metropolitan Division within the city, passengers using that company's cars between Farnham Ave. and the north city limit at Yonge St., will be carried to and from any part of the city on payment of the same fare as charged by the Commission on the city lines it operates, and the city has assured the Commission that operation of this arrangement shall not be at the Commission's expense. Special tickets are used, one portion of the city lines, and one for the T. & Y.R. Ry., the city paying the T. & Y.R. Ry. for people travelling on its cars with such tickets.

Mainly About Electric Railway People.

Herbert Hamilton Beasley, whose appointment as Purchasing Agent, Toronto Transportation Commission, Toronto, was announced in our last issue, was born at St. Thomas, Ont., Aug. 1, 1867, and entered electric railway service in May, 1892, since when he has been, to 1897, timekeeper, Toronto Ry.; 1898 to 1908, General Storekeeper, same company; 1909 to 1910, General Storekeeper and Purchasing Agent, same company; 1910 to 1912, General Storekeeper and Purchasing Agent, same company, and Toronto Power Co., 1913 to Dec. 1921, General Storekeeper and Purchasing Agent, same companies, and Toronto & Niagara Power Co.

Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, is announced as one of the speakers at the Public Ownership League of America's Convention, to be held at Chicago, Ill., Nov. 19 to 21.

Lady Beck, wife of Sir Adam Beck, Chairman, Hydro Electric Power Commission of Ontario, died at the Toronto General Hospital, Oct. 17, following the funeral took place at Hamilton, Ont., Oct. 17, when there was a suspension of service for one minute, throughout the hydro electric system. She was a woman of pronounced executive ability, and pleasing personality. Throughout her life, her chief interest lay in charitable work, and during the war, she devoted her energies to the Red Cross Society's work, being a member of the Dominion board, as well as President of the London Red Cross Society. She was also interested in the Queen Alexandra Sanatorium at London, the pre-ventorium at Byron, a similar institution at Hamilton, and, in conjunction with Sir Adam, erected and equipped a nurses' home, in connection with the sanatorium at London, as a thank offering for the recovery of their only daughter from a serious illness. Her chief recreation was with dogs, horses, and shooting. She was a successful horsewoman, secured many prizes at various horse shows in Canada, the U.S. and England, and on several occasions, acted as one of the judges at the great New York horse shows.

J. S. Beckwith, heretofore Divisional Superintendent, in charge of the North

Division, Winnipeg Electric Ry., has been appointed acting Traffic Superintendent, vice W. F. Edwards, Traffic Superintendent, resigned.

W. F. Edwards, Traffic Superintendent, Winnipeg Electric Ry., Winnipeg, has resigned, in order to visit relatives and friends in Great Britain.

A. Gaboury, Superintendent, Montreal Tramways Co., has been elected Third Vice President, American Electric Railway Transportation and Traffic Association.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and Mrs. Gale, spent some time at Tadoussac, Que., recently.

J. G. Grace, Secretary-Treasurer, Toronto Ry. Co., was married at Toronto, Oct. 15, to Mrs. J. L. Chandler.

Senator Frederic Nicholls, Chairman of the Board, Canadian General Electric Co., died at Toronto, Oct. 25, after a short illness. He was born in England, Nov. 23, 1856, was educated at Stuttgart,

Wurtemberg, Germany, and came to Canada in 1874. For a short time he was a newspaper reporter, then he was Secretary of the Canadian Manufacturers Association for seven years, and founded, and was up to 1893 proprietor and editor of, the Canadian Manufacturer, then the Association's official organ. He formed the first electrical company in Canada, the Toronto Incandescent Electric Light Co., which adopted the underground system of electrical distribution, and which developed into the Canadian General Electric Co., of which he was first Managing Director, Vice President and afterwards President until a year ago, when he retired and became Chairman of the Board. He was, at different times, on the directorate of several transportation and allied companies, including the Canadian Northern Ry. Co., of which he was the first President, Toronto Ry. Co., Canadian Allis-Chalmers Ltd., Toronto & Niagara Power Co., Electrical Development Co. of Ontario, Dominion Steel Corporation, etc.

Toronto Railway Co.'s Annual Report and Meeting.

Following are extracts from the directors' report for the calendar year 1920, presented at the oft adjourned annual meeting on Sept. 30:—While the gross revenue for the year increased over the previous year by \$674,996.48, the charges exceeded the revenue by \$417,426.19.

Gross earnings	\$7,909,891.86
Charges for operating, maintenance, etc.	6,625,508.04
Net balance from operation	\$1,284,383.82
Deficit carried forward	\$417,426.19
	\$1,700,810.01
Other charges:—	
Bond interest	\$109,175.21
War and Ontario Government taxes	31,766.10
	\$140,941.31

Payments to city:—	
Percentage on earnings	\$1,308,339.96
Pavement charges	98,782.40
General taxes	152,746.34
	\$1,559,868.70
	\$1,700,810.01

Notwithstanding the large increase in wages granted to employees referred to in our last report, the company had to face another heavy increase this year. When the agreement made by the Ontario Railway and Municipal Board, under which we were paying 50, 52½ and 55c, an hour expired in June 1920, the men demanded a flat rate of 85c, an hour, which the company refused to grant, and being unable to effect an amicable settlement, the company applied to the Government for a conciliation board, which was appointed under the chairmanship of Mr. Justice Maclellan, of Montreal. This board rendered a decision that the men had not made out a case for any increase in wages, and recommended that the prevailing rate should continue up to the end of the franchise. The employees refused to accept the award and made a new demand upon the company that they be paid a maximum of 66c, an hour. Your directors decided to abide by the conciliation board's award, with the result that the men went on strike on June 23, 1920. Rather than subject the company to the previous experience of being taken over by the Ontario Railway and Municipal Board, the company requested that board to act as mediators, and after formal hearings, the board recommended as a compromise 5c, an

hour increase be granted to the men, all other working conditions to remain the same. This was accepted by the men, who returned to work on June 27, having been on strike four days. There was no alternative for your directors, but to accept this compromise, since it is altogether likely had the board taken over the property it would have granted at least this much more to the men. The increase amounted to approximately \$400,000 a year.

The tenth drawing of the company's currency and sterling bonds, under the terms of the mortgage deed dated Sept. 1, 1892, took place on June 22, 1920. Under said terms the company draws annually during the last 10 years of its franchise 5% of the amount of bonds issued, thus reducing, during the 10 years mentioned, the outstanding bonds to 50% of the original issue, and all bonds so drawn are to be redeemed on or after Aug. 31, following the date of drawing, from which date no interest is payable on the bonds so drawn. There has been drawn to date a total of \$2,275,360.

The profit and loss account showed a credit balance of \$5,578,527.16 at Dec. 31, 1919, which after deducting the deficit for 1920 was reduced at Dec. 31, 1920, to \$5,140,100.67.

The number of passengers carried was 197,346,726, against 182,377,494 in 1920. The percentage of charges, etc., to passenger earnings was 84.2, against 79.5 in 1920.

The old directors were re-elected, with the exception of Senator C. P. Baubien, who retired, W. D. Moore, Assistant to the President, being elected to succeed him, making the board as follows:—Senator William Mackenzie, President; Senator Frederick Nichols, Vice President; Brig. Gen. Sir Henry M. Pellatt, H. H. Pitts, F. W. Ross, G. H. Smithers, Hugh Mackay, K.C., E. R. Wood, W. H. Moore.

Canadian Grain Elevators for South Africa.—A Cape Town press dispatch states that it has been officially announced that, subject to certain formalities, a contract for the erection of 36 grain elevators at different points in South Africa will be given to a Canadian firm. A portion of the machinery will, it is said, be bought in Great Britain.

Electric Railway Notes.

Regina, Sask., Municipal Ry. made some changes in operation of lines, Oct. 3, resulting in a faster service.

Sarnia City Council has decided to ask the Ontario Railway and Municipal Board to order the Sarnia St. Ry. to equip its cars with air brakes.

Edmonton, Alta., Radial Ry. staff has been reduced, a press report states, by laying off 4 painters, 4 carpenters, 15 trackmen, a blacksmith and a lineman.

The Winnipeg Electric Ry. Old Timers' Association held its opening social event of the season, a whist drive and dance, in Norman Hall, Oct. 12.

Cornwall, Ont., St. Ry., Light & Power Co. is, we are officially advised, making considerable repairs to its rolling stock, but no new cars are being bought.

The Hamilton, Ont., St. Ry. put into effect on Sept. 29 changes under which a number of stops are cut out on several of the routes, and some new stops are established.

The Ottawa Electric Ry. Co.'s franchise expires Aug. 14, 1923, and the company is calling the citizens' attention to the fact, and inviting them to give consideration to the question of what is to be done about it.

C. North, Ontario Highways Department traffic officer, who was charged recently by C. Johns, Manager, St. Thomas Municipal Ry., with passing a standing street car on his motorcycle, was convicted and fined.

The London, Ont., Railway Commission, operating the London & Port Stanley Ry., has approved of certain matters connected with the sale of lands in Port Stanley to the L. & P.S. Ry. Co., after an inspection by the directors.

London, Ont., St. Ry. has issued a notice to employees that passengers must not be put off the cars for violation of the rules as to the use of transfers. Conductors are directed to use discretion and courtesy in dealing with infractions of the rules.

The British Columbia Minister of Railways is reported to have stated that the Government has not opened negotiations with the B.C. Electric Ry. for the taking over by it for operation of the Pacific Great Eastern Ry.'s North Vancouver-Whitcliffe section.

W. McRae, Chief Inspector of Equipment and Appliances, British Columbia Railways Department, attended a conference of automobile owners in Vancouver, Oct. 6, to discuss matters in connection with the change in the rule of the road, which becomes effective in December.

The Edmonton, Alta., Radial Ry. put some changes in operation on the McKeen's Lake line on Sept. 29 which gives two trips an hour to the end of the line, instead of the former service. This is the best that the management can do, as at present there is only one car available for this service.

The Port Arthur, Ont., Public Utilities Commission has under consideration, we are officially advised, the advisability of converting the cars used on its main line for operation as one-man cars. One-man cars have been operated on the belt lines for a considerable time.

The Mayor of Winnipeg has been asked by residents of Selkirk to take up with

the Winnipeg Electric Ry. their desire that the Winnipeg, Selkirk & Lake Winnipeg Ry. cars be run further into Winnipeg than at present. The suggestion is that cars be taken in as far as the Board of Trade building.

Owing to the breakage of the electric engine operating Black's bridge, over the Lachenaie Canal, traffic on the Montreal & Southern Counties Ry. has been considerably delayed. On Oct. 10, one train was reported to have been delayed 70 minutes, and on the following morning a train was delayed 45 minutes.

The British Columbia Electric Ry. is about to install at its Stave Falls plant, a fourth generator with a capacity of 8,000 k.v.a., and which has been on the ground for some time without being erected. An extension of the power house will be necessary. The new unit will not be in operation, it is expected, before March.

An increasing number of jitney and taxi drivers in St. John, N.B., are being brought up before the magistrates for breaches of traffic bylaws. A considerable number of the drivers are former employees of the New Brunswick Power Co., and members of the local street railway men's union, who were displaced by the company recently.

New Westminster, B.C., City Council on Oct. 4 discussed the British Columbia Electric Ry.'s proposal to operate one-man cars. The Street Railway Men's Union wrote objecting to the proposal on the ground that it would throw 16 men out of work. The mayor claimed that the operation of one-man cars would be dangerous on account of the hilly streets.

The Sarnia, Ont., City Council passed a resolution recently to ask the Ontario Railway and Municipal Board to order the Sarnia St. Ry. to equip its cars with air brakes, but the matter has been taken up direct with the company, instead of with the Board. The company has 10 motor cars, 5 of which are in operation each day. They are equipped with efficient hand brakes, and the management contends that it would be a hardship to have to install air brakes at present.

The London & Port Stanley Ry. management has been investigating the wrong use of tickets, by which there has been considerable loss of revenue. Three conductors have been prosecuted for having a share in the transaction, and on Oct. 6 Ernest Partridge, formerly employed as a conductor and latterly a detective, was sent for trial, by the London Deputy Police Magistrate, for conspiring with E. W. Honsinger, of St. Thomas, Ont., to defraud the railway, by handling tickets. Honsinger, who is a dental surgeon, is reported to have disappeared.

The Port Arthur, Ont., Civic Ry.'s schedule, just put in operation Oct. 14, provides as follows:—Main line to Fort William: 12 minute service from Current River, between 5.30 a.m. and 11.45 p.m., week days, and 24 minute service between 5.30 a.m. and noon, and 12 minute service until 11.45 p.m. on Sundays, with night cars at midnight, 1.20, 2.40 and 4 a.m. Sarnia St. line: 20 minute service between 5.30 a.m. and 11.40 p.m., week days, and between 6 a.m., and 11.40 p.m., on Sundays. North Belt line: 30 minute service between 5.35 a.m. and 12.05 a.m. on week days, and Sundays.

South Belt, Current River and Hodder Ave. line: Hourly service between 6.30 a.m. and 10.30 p.m., week days and Sundays.

There was a general attack on the New Brunswick Power Co. cars in St. John, N.B., Sept. 26, when the windows of 14 were smashed by a mob of sympathizers with union men who have been displaced. Four people were injured, and one man was arrested. The regular service was restored by the company, Sept. 27. The city council passed a bylaw Sept. 29 for the prohibition of all parades in the city, unless a permit had previously been obtained, with a view of preventing any further disturbances. A boy who was brought before the St. John magistrates, Oct. 1, admitted having broken car windows, was given a lecture and let go. On Oct. 5, a bolt was found on the line at the curve at the corner of King and Ludlow Sts., which might have thrown a car off the tracks.

The Manitoba Court of Appeal gave judgment, Oct. 7, confirming the decision of the local county court in an action brought against the Winnipeg Electric Ry. Co. by D. W. Shunk. Plaintiff boarded a Corydon Ave. car at the Union station in May, 1920, obtaining a Deer Lodge transfer. He left the Corydon car at the corner of Main St. and Portage Ave., and boarded a westbound Deer Lodge car, the conductor of which refused to accept the transfer, claiming that under the company's instructions as to the use of transfers, the plaintiff should have remained on the Corydon Ave. car until he arrived at the corner of Portage Ave. and Sherbrooke St., that being a diverging point. The plaintiff was ejected from the car, some force being used. The county court judge awarded the plaintiff \$50 damages. The Court of Appeal in confirming the judgment found that regulations governing issuance and use of transfers are covered by bylaw 543, sec. 6, incorporated in the company's charter, and the company has no authority to make the rule that transfers can be used only at the last diverging point.

Tenders for Purchase of Construction Plant

Tenders will be received by registered post only, addressed to R. C. Harris, Commissioner of Works, City Hall, Toronto, up to 12 o'clock noon, Tuesday, November 15th, 1921, for the purchase of Construction Plant as follows:—

- 3 only Locomotives
- 20 only Dump Cars.

Envelopes containing tenders must be plainly marked on the outside as to contents.

Specifications and forms of tender may be obtained at the Works Department, Room 12, City Hall.

The highest or any tender not necessarily accepted.

R. C. HARRIS,
Commissioner of Works.
October 27th, 1921.

Canadian Electric Railway Association's Activities.

The Canadian Electric Railway Association's Executive Committee met at Toronto recently, the President, G. Gordon Gale, Vice President and General Manager, Hull Electric Co., being in the chair, and disposed of a considerable amount of business.

A report by Lt. Col. J. E. Hutcheson, General Manager, Montreal Tramways Co., and W. S. Hart, Managing Director, Three Rivers Traction Co., concurred in by E. P. Coleman, General Manager, Dominion Power & Transmission Co., on rules for installation and maintenance of electrical supply and signal lines, prepared by the Hydro Electric Power Commission of Ontario, stated that while great credit was due the Commission's staff for the preparation of the rules, and while they in general follow standard practice, the wording in some cases is ambiguous, the standards adopted differ to some extent from those in use by some of the larger companies, and there is much repetition in the draft, the committee considering that the subject might safely be taken care of in a very much smaller volume. It was decided to co-operate with the Commission, with the Canadian Electrical Association, and others in forming a set of rules for installation and maintenance of electrical supply and signal lines following standard practice.

It was decided to suggest to all member companies that they should become members of either the national or provincial safety leagues, and to suggest to the National Safety League that all automobile drivers be required to pass an examination.

The President reported that all electrical railway companies which are paid for transportation facilities on a mileage basis had received the additional remuneration provided by the Dominion order in council passed Feb. 16, 1921, and published in Canadian Railway and Marine World for April, 1921, but that companies being paid on a lump sum basis had received no increases, the matter being still under consideration by the Post Office Department.

The President explained that some smaller companies considered the annual membership fee of \$100 excessive, and that for this reason membership was principally confined to the larger companies, and it was decided to communicate with prospective members, advising that the Association has under consideration the revision of fees to be based upon the gross earnings derived from railway operation, and inviting them to consider membership on the proposed basis.

The fees suggested tentatively are as follows:—On \$100,000 gross earnings, \$25 a year; on over \$100,000 and under \$200,000, \$50 a year; on over \$200,000 and under \$400,000, \$75 a year; on over \$400,000 and under \$700,000 a year, on over \$700,000 and under \$1,000,000, \$125 a year; on over \$1,000,000, \$150 a year.

The President explained that a number of member companies had second hand equipment for disposal, and it was decided that the Secretary advise them that the Association's official organ, Canadian Railway and Marine World, is available for advertising such equipment.

It was decided to hold the next annual meeting at Quebec on June 1 and 2, 1922.

The Canadian Electrical Association

having appointed a committee on relations with other associations, a committee consisting of the President, and D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co., was appointed to co-operate with the Canadian Electrical Association, and others, on matters of common interest.

Arbitration of Value of Toronto Railway Co.'s Property.

Particulars of the proceedings up to Sept. 23, before the arbitrators, Hume Cronyn, M. P. for London, Ont., chair; Sir Thomas White, representing the company; and Sir Adam Beck, representing the City of Toronto, were given in Canadian Railway and Marine World's last issue. When the hearing was resumed on Sept. 27, W. J. Hagenah, of Chicago, the company's first witness, was again examined, and testified that its head office building, corner of King and Church Sts., is necessary to the railway's operations, that it was specially designed for handling cash, and that there are special vaults with a secret alarm system. On cross examination, he admitted that the bulk of cash fares is handed in by conductors at the barns in different parts of the city, and that some of it is collected from them on the streets. W. N. Tilley, K.C., for the city contended that the building is not necessary to the operation of the railway, being principally devoted to office purposes. He testified that the city is not bound to take over any property which is not necessary for the railway's operation, and which the company could sell for other purposes. Counsel on both sides argued at length as to the manner in which evidence should be given, and after a recess the Chairman gave the following ruling by the arbitrators:—"We feel it our duty, so far as our powers and discretion allow, to hear and decide the case presented in that fashion which will tend to clarify the issue and expedite the hearing. We hesitate to interfere with the task entrusted to counsel by their clients, but, nevertheless, venture to suggest that the facts regarding items not in dispute be first submitted. Subsequently evidence to bring disputed items within the terms of the reference and counter evidence, if any, may be heard and the case terminated by proof of value of those items which we may decide to include. The burden of proof rests in the first place on the Toronto Ry.; should, therefore, counsel for the railway prefer to take up first the items in dispute that option should be given them."

On Sept. 28 it was announced that the company claimed \$2,433,067 more than the value of its physical assets made up of various items, the cost of which it was claimed would have to be incurred by the city if it had had to construct a complete system like the one taken over. The city's counsel contended that the claim was not entitled to consideration.

W. J. Hagenah's cross examination was taken up intermittently from Sept. 29 to Oct. 6, during which he admitted that he had never built or operated a street railway.

F. Poucher, of the National Trust Co.'s real estate department, testified on Oct. 4 and 7, as to the value of the company's real estate, and on the latter day the arbitrators, the counsel and city and company officials, inspected some of the tracks, etc. On Oct. 11, there was a long argument between counsel, as to the

production of certain of the company's books. On Oct. 12 and 13, Victor A. Dorszeski, Chief Engineer for W. J. Hagenah, was examined and cross examined in regard to valuation work he had done on the company's property, particularly of the electrical equipment.

A postponement of the arbitrators' sittings for over a fortnight was caused, first by Lady Beck's illness, and then by her death, but the sittings were resumed on Oct. 26, when Sir Adam Beck was present again, and Mr. Dorszeski's cross examination was continued. He was followed on the witness stand by F. L. Hubbard, Assistant to General Manager, Toronto Ry., who testified as to the extent of the system, its operation, and various other matters.

Electric Railway Freight and Passenger Rates.

Hamilton St. Ry. — E. P. Coleman, General Manager, Dominion Power & Transmission Co., was called to the city council's special railway committee on Oct. 12 a draft bylaw for the operation of the company's lines on a service at cost plan. He is reported to have stated that the company had been struggling along since the end of the war on rates of fares fixed when the charter was given in 1892, which provided that the company was not to pay its employees less than 15c. an hour, which indicated how low operating expenses then were. During the war there had been a great boom in business throughout the city, and the street railway had reaped benefit together with other concerns, and by economical management had managed to make money on what was on the average a 4c. fare. At the present time the company is not making enough to pay actual operating expenses. The company felt inclined to ask for a temporary increase in rates, as a preliminary to a consideration of the adoption of a service at cost plan. There were two methods of railway administration now open, first, municipal ownership, and second, a real partnership between the railway company and the city. Through this latter plan, the city would receive the benefit of the experience of the people accustomed to running such properties and the personal interest of the owners. The service at cost plan could be inaugurated by the council without the submission of a bylaw to the ratepayers. The city need not lose the revenue it now receives from the company if the suggested plan be adopted, and although it was not possible to state with any degree of certainty what the fare would be under that plan, he was of opinion that after a short period of its operation a 5c. fare would be sufficient. He promised to submit further particulars of the plan, so that it could be more fully discussed at a future meeting.

Moncton, N.B., ratepayers voted, Sept. 29, on a bylaw to purchase the Moncton Tramways, Electricity & Gas Co.'s property, effects and franchises, as from May 31, for \$165,000, with 6% interest from May 31 until the amount be paid. The board of trade and some other local interests conducted a strong campaign against the proposal, and the ratepayers refused to approve of the bylaw by a vote of 869 to 526. This is the second occasion on which the ratepayers have defeated a similar bylaw, the previous occasion being on July 3, 1920, when the vote was 630 against and 475 for.

Safety Cars for Hydro Electric Power Commission of Ontario.

The Hydro Electric Power Commission of Ontario has ordered 25 safety cars, 18 of which are for the Hydro Electric Ry. Essex Division (formerly the Sandwich, Windsor & Amherstburg Ry.), and

axles by helical gearing. Although many cars not much lighter than these are equipped with motors of about 25 h.p., it has been decided by the Commission's engineers that a motor with a some-

electrical manufacturing companies have developed and are making a 35 h.p. motor suitable for this type of car. The motor to be used has not yet been determined on, and the same applies to con-

Safety Car, Ontario Hydro Electric Railways.

7 for Guelph Radial Ry. They will be of the single truck type, with the following dimensions:—

Length over all 30 ft. 3 1/2 in.
Length over end vestibule 29 ft. 3 1/2 in.
Length over end of car body 27 ft. 7 1/2 in.
Width over all 8 ft. 6 1/2 in.
Width over sheathing 8 ft. 4 in.
Height from rail to top of roof 10 ft. 4 5/16 in.
Height from under side sills to top of roof 8 ft. 3 3/16 in.
Height from top of rail to top of platform 27 1/2 in.
Height from top of rail to floor 29 11/16 in.

The weight of the car body will be about 11,000 lb., of the electrical and air brake equipment about 5,500 lb.; and of the truck, about 5,000 lb., making the total weight approximately 21,500 lb.

The truck will be of the Brill type 79-E-2, modified, the weight of the car being supported by elliptical springs attached to the ends of the side members of the truck, and vertical coil springs extending from the under side of the underframing to the top of the side members of the truck. The two central coil springs will carry 25% of the weight of the car body, between them, the other 75% being distributed among the four elliptical springs at the truck ends. The journals will be 3 3/4 x 7 in., and the solid rolled steel wheels will be 26 in. diam. The truck wheel base will be 9 ft.

Two motors will be connected to the

End Elevation, Safety Car, Ontario Hydro Electric Railways.

what higher rating will be more suitable to meet the climatic and other operating conditions, and for that reason motors of from 35 to 40 h.p. will be installed. The

trollers, rheostat, trolley bases, trolley poles, circuit breakers, lightning arrestor and other electrical equipment. The cars will be equipped with double end control, and two trolley poles will be used. The air brake equipment has not been definitely decided on, but it may be stated that the cars are to be equipped with motor driven compressors, suspended from the underframing, the capacity of the compressor to be such that 15 cu. ft. of free air a minute can be compressed to a pressure of 90 lb. per sq. in. when operating at 600 volts. The air brake equipment will also include compressor governor, safety valves, brake valves equipped with sanding feature, at each end of car, and other standard parts. Two hand brakes will be added.

A feature of the car will be the pneumatically operated safety arrangement in connection with the opening and closing of the doors. The brake valves will be equipped so that after the brake has been applied, the movement of the brake valve handle to a further position will open the exit door, while movement of the handle a little further to another position will open the entry door. The apparatus will be so arranged that it will be impossible to start the car while either of the doors is open. The ad-

vantage of having the two halves of the folding door open separately is evident. Opening the exit door first, will enable the passengers to start making their exit before passengers waiting to board the car may start entering, and will thus afford a large degree of assistance to the car operator in regulating the traffic. Two air sanders, and a galvanized iron sand box will be included in the equipment, as will also two snow scrapers.

The underframing is to be of structural steel shapes and plates, the side sills to be continuous. The floor and side framing will include cross beams to transfer the floor load to the side trusses, and the end and vestibule framing have been designed with a view to special provision against the destructive effect of collisions. The side sheathing will be of $\frac{1}{4}$ in. steel plate, securely riveted to the side sills and side plates. The bottom flooring will be of $\frac{3}{4}$ in. white pine, and the surface flooring of $3 \times 3 \times \frac{1}{4}$ in. maple, with two layers of tarpaper insulation between the pine and maple. The roof will be of the plain arch type and of composite construction. The roof boards will be of 9/16 in. poplar, and 8 oz. canvas will be used. The roof carline framing will be of poplar, reinforced on each side by steel plate $\frac{1}{4}$ in. thick.

The interior will be finished in cherry or birch, with window sashes of similar finish, and all metallic fixtures will be of bronze. The head-lining will be of 3/16 in. agasote. The side windows will be equipped with pantasote curtains, the windows will be of plate glass $\frac{1}{4}$ in. thick. The vestibules at each end of the

car will be equipped with three drop windows; the vestibules will be sheathed outside with 3/32 in. sheet steel and inside with ash panel frames. The platforms will be 2 1/16 in. below the level of the car floor. The folding vestibule doors will be of cherry or birch, operating as described above, and the doors will be fitted with a wired glass panel in the lower portion, and 3/16 in. plate glass in the upper portion.

Lighting will be by 46-watt lamps, arranged in lock wall sockets, and equipped with opal reflectors. There will be four ventilators on each side of the car, and heating will be by the use of each car, of eight 1,000 watt Cutler-Hammer double coil truss plank electric heaters, wired four to a circuit, the heater wires running in conduit under the car body, or in metal moulding within the body, the heating system having thermostatic control. The cars will be equipped with dash type incandescent headlights at both ends.

The seating capacity will be 34. The accompanying floor plan shows the seating arrangement.

The cars, which were designed by the Hydro Electric Power Commission's engineers and are being built by Canadian Birch Co., Preston, Ont., will have all the latest improvements applicable to safety cars. The electrical and air brake equipment will be decided on in the near future, and it is expected that delivery of the cars will be commenced early in February.

The Winnipeg Electric Ry. is having five cars built from the same design.

ditions, they regret that no satisfactory agreement could be reached. In order to meet the present day conditions, it was then decided to reduce the wages of the employees by about 12 1/2% to take effect on Aug. 16, 1921. The employees requested a board of conciliation under the Lemieux Act, which was granted by the Minister of Labor. The company feeling, however, that the reduction of wages decided on was more than reasonable under the existing conditions, decided not to take part in the arbitration.

The sub-station at Cote St., referred to last year, was put in operation in the latter part of August; two units being completed. The other two units, it is expected, will be ready for operation in December.

At the annual meeting on Sept. 27 the shareholders passed a resolution stating that the company's service is the most practical and efficient of any organization of its kind in the world. The directors and officers were all re-elected as follows: A. Robert, President; J. W. McConnell and Hon. C. G. Foster, Jr., Vice Presidents; Wm. C. Finley, P. McIntosh, W. G. Ross, J. M. McIntyre, Hon. J. M. Wilson and Hon. Lorne C. Webster. J. E. Hutcheson is General Manager, and Patrick Dubee, Secretary-Treasurer.

Change of Rule of Road in British Columbia.

As the time for making the change in the rule of the road from left to right is drawing nearer, plans are being discussed in Victoria and Vancouver, regarding the details. Work on the B.C. Electric Ry. rolling stock is going ahead rapidly, and orders have been placed for some new special work for tracks leading into New Westminster interurban station and several other locations. The original proposal was to make the change at midnight on Dec. 31, but, owing to difficulties in operation, this will be impossible. It is certain that the change will be made some time after the last car reaches the barns and before the first car emerges the next day. The suggestion is that 5 a.m. on a Sunday be the time.

Various bodies in Vancouver are considering the best means for educating the public. The Automobile Club has asked for public co-operation and the Board of Trade is taking the matter up also. A campaign will be conducted, it is expected, by means of banners, automobile stickers, front and rear signs on all vehicles, moving pictures, school addresses, and so forth.

The B.C.E.R. Co. expects to have only a partial service in operation the first day, but to be at normal within a few days thereafter. Due to people being unaccustomed to the new direction and the new loading points, the service will be slower than usual and more cars will be required. Some relief will be given by means of the new one-man cars ordered for Victoria. A police suggestion is that white lines be painted at each crossing and that regulations against jay walking be rigidly enforced. Education will also be done to the end that pedestrians will look first to the left and then to the right as they cross streets. Should fog or snow arrive just before or after the change, the difficulties will be enormously increased. The B.C.E.R. Co. is changing two of its snow sweepers, in case snow may fall.

Montreal Tramway Co.'s Annual Report and Meeting.

Following are extracts from the Montreal Tramways Co.'s directors' report for the year ended June 30.

Revenue.	
Allowance from contract	\$2,355,970.24
Other revenue	65,358.96
Gross revenue	\$2,421,329.20
Expenses.	
Interest on bonds	\$1,082,418.33
Interest on debentures	849,313.36
Other expenses	17,510.85
Total expenses	\$1,950,272.34
Net income	461,056.86
Less dividends for the current year	388,993.75
Surplus for the year	72,063.11
Add surplus at June 30, 1920	911,175.24
Total	\$1,013,238.35
From which has been appropriated for:	
deferred dividends to be paid on common stock 2 1/2% quarter ended March 31, 1919	96,529.00
General surplus	\$ 916,709.35

The gross revenue for the year was \$2,421,329.20 and the expenses \$1,950,272.34, leaving a net income of \$461,056.86, from which there has been declared four quarterly dividends of 2 1/2% each, amounting to \$388,993.75, leaving a balance carried to credit of general surplus account of \$72,063.11, which, added to \$911,175.24 at the credit of this account last year makes a total of \$1,013,238.35, from which there has been appropriated \$96,529.00 on account of deferred quarterly dividend paid during the year, leaving a balance at credit of general surplus account of \$916,709.35.

Your directors desire to point out that from the coming into force of the contract, viz., Feb. 10, 1918, to June 30, 1921, the revenue has not been sufficient to meet the requirements of the contract,

as shown by statement of operations under new contract, but it is hoped that under existing conditions the situation will materially improve.

Under the authority of a resolution of shareholders adopted Sept. 30, 1911, your directors authorized an issue of \$4,000,000 of 5% debenture stock, to be disposed of from time to time as required. During the year \$150,000 was disposed of, which, together with the issue of \$1,000,000 sold in 1919, leaves a balance of \$2,850,000 to be disposed of from time to time as required. During the year the company issued \$1,000,000 of its 5% thirty year gold bonds, being 75% of the capital expenditures made from Jan. 1, 1918, to Oct. 31, 1920, in conformity with the trust deed. The bonds are held in the treasury, and will be disposed of by the directors when conditions are more favorable.

Under the terms of the contract the company has to provide from its own funds a guarantee fund amounting to \$500,000 in amounts of not less than \$100,000 a year. Your directors beg to report that \$100,000 has been paid into the guarantee fund since the close of the company's fiscal year, making \$300,000 now in the fund, according to the terms of the contract.

During the year the company paid its usual quarterly dividends on its common stock, at the rate of 2 1/2% per quarter, and also paid the quarterly dividend in 1919 of \$100,000 for the quarter ended March 31, 1919, leaving two quarterly dividends still in arrears.

Your directors desire to report that after numerous discussions with the employees respecting a readjustment of wages, to comply with present day con-

Marine Department

General Shipbuilding Matters Throughout Canada.

B.C. Yacht & Boat Builders Ltd., Victoria, B.C.—In connection with the financial difficulties of this company, which built two motor patrol boats for the Dominion Marine Department, the British Columbia Department of Industries, in the local daily press, practically placed the blame on the Dominion Government, on the ground that it would only pay \$75,000 for the boats, whereas they cost the builders \$90,000. In reply to this complaint, Alex. Johnston, Deputy Minister of Marine has issued a statement, which is summarized as follows:—In the spring of 1920, the Department called for tenders for building two motor patrol boats for the B.C. service, and received seven tenders from B.C. firms, ranging from \$66,250, which was the B. C. Yacht & Boat Builders' tender, to \$112,400. Enquiries were made as to the company's status, and assurances were received from various sources, which were considered reliable, that the company was composed of returned soldiers, and was thought to be competent to carry out the contract. The company suggested some alterations in the plans and specifications, which would lessen the cost, and subsequently entered into a contract to build the two boats for \$62,750, in 140 working days. At that time the company had neither plant nor site, but immediately set about to establish itself and obtained a 10 year lease of a site in Victoria, from the B.C. Government, where the plant was subsequently installed. One obstruction after another presented itself, financial and otherwise, until a change of management was decided on by the directors, and construction was only begun in September. In November, the company's Manager, W. C. Winkel, arrived in Ottawa, accredited by the company's Presidency and presented a memorial stating that the boats could not be built for the contract price, \$62,750, and asked to be relieved of the existing contract, and to be given a new contract, which would provide for the Government paying the cost of labor and material, which was guaranteed would not exceed \$75,000. As this was slightly lower than the next lowest tender, the Minister decided that, if he could get some assurance that the company could actually complete the boats for \$75,000 he would recommend that the proposition be accepted. Accordingly, H. A. Butt, an expert shipbuilder, in the Department's service, and A. J. Dallain, Accountant in the Department's Victoria agency, were instructed to go through the company's books and plant, to secure data, and they reported that the boats could be built within the estimate of \$75,000, and arrangements to that end were concluded. The Department contends that, in view of these facts, it cannot be claimed that it has acted unfairly.

Collingwood Shipbuilding Co., Kingston, Ont.—The overhauling of Ontario Car Ferry Co.'s car ferry Ontario No. 2, which was docked Sept. 17, was completed Sept. 26. Canada Steamship Lines s.s. Toronto was docked towards the end of September, for repairs to bottom damage. With regard to the proposed lengthening of this steamship for the accommodation of additional staterooms, we are

advised that it will not be undertaken at present, traffic conditions during the season, and the prospects for next season, not being considered to warrant the expenditure.

J. Coughlan & Sons, Vancouver, B.C. In connection with the practical completion of the steamships on order for Canadian Government Merchant Marine, S. H. Coughlan is reported to have said that the company has no intention of giving up the shipbuilding business. There are no orders on hand, but plans are on file for the building of some 10,000 d.w. tons ships, and the company is bending its energies to the securing of new business, and it hopes to lay some keels next year. While it has been

Dominion Marine Association.

President, A. A. Wright, President, Tidewater Shipbuilders, and Vice President and Managing Director, Davie Shipbuilding & Repairing Co., Montreal.

First Vice President, T. R. Enderby, Operating Manager, Canada Steamship Lines, Montreal.

Second Vice President, Hon. L. C. Webster, President, Webster Steamship Co., Montreal.

Executive Committee, The President, First Vice President, Second Vice President, and W. E. Burke, Canada Steamship Lines, Montreal; H. W. Cowan, G. U. Price, Ltd., Vancouver; J. W. Bagnall, Esq., Vancouver; Naughton Line, Montreal; W. B. Ellisworth, Imperial Oil Ltd., Toronto; L. L. Henderson, Montreal; G. J. Madden, George Hall Coal Co. of Canada, Montreal; A. E. Mathews, Mathews Steamship Co., Toronto; W. J. McCormick, Algoma Central Steamship Co., Sault Ste. Marie, Ont.; Col. G. P. Murphy, C.M.G., Ottawa Transportation Co., Ottawa, Ont.; E. W. Oliver, Niagara, St. Catharines & Toronto Navigation Co., Toronto; W. H. Smith, Ontario Car Ferry Co., Montreal; J. F. Sowards, Kingston, Ont.; J. F. M. Stewart, Point Anne Quarries Ltd., Toronto; John Walker, Keystone Transports, Montreal.

Counsel, Francis King, M.A., Kingston, Ont.

Official Organ, Canadian Railway and Marine Weekly, Toronto.

carrying on its shipbuilding business, it has built 21 steel cargo ships of an aggregate of 182,100 d.w. tons, for the British Government, through the Imperial Munitions Board, for the Canadian Government Merchant Marine, and a few for private ownership. Pending further shipbuilding orders, the company will continue its structural steel business, which has attained considerable dimensions. It has a contract with the Dominion Government for building a drydock, the contract providing for aid at the rate of 4½% for 55 years on an expenditure of \$2,500,000, but negotiations are proceeding for a new contract, so that a floating, instead of a stationary, drydock may be built, in conjunction with the Wallace Shipbuilding & Drydock Co., North Vancouver.

Dominion Shipbuilding & Repair Co., Toronto.—The liquidator, Osler Wade, issued the following circular to creditors Sept. 29:—The Government ships were completed and the Marine Department vacated our yards on Aug. 31. As anticipated in my report of Dec. 14, 1920, the estate has succeeded in realizing a

large quantity of the merchandise on hand, which was disposed of to the Government for the purpose of completing these ships, with the result that the bank's lien of some \$260,000 on the assets of the estate has been reduced to about \$45,000. In addition to this lien, there are other secured claims, aggregating about \$55,000, and it is believed there is sufficient merchandise on hand to satisfy these claims in full eventually, leaving for the purposes of the unsecured creditors the plant, the buildings, and the book debts. The plant has been extensively advertised for sale, but no tenders were received in response to the advertisements, which, it was announced, would be opened on Aug. 31, and under a direction of your committee, advertisements are now running in the press, announcing the dismantling of the plant and soliciting enquiries for individual machines. Detailed lists of the machines in booklet form are being mailed to some 5,000 dealers and users, in the hope that something substantial may result from the campaign. In the meantime, negotiations are pending with parties who make a specialty of dismantling industrial plants, and enquiries for buildings alone are being followed up, and it is hoped that these various schemes will eventually result in your committee realizing a respectable amount on the fixed assets. The affairs of Christopher Hannevig, who was indebted to the company for a considerable amount, are in the hands of the bankruptcy courts of New York State. No estimates are at hand as to what amount of dividend will be available from this source, but it will require at least \$100,000 to liquidate the balance of the secured and preferred claims, and the process of liquidation is likely to be slow from this date forward, owing to the very nature of the assets. Having this in view, it will be some months before it will be possible to make any estimate as to when a payment can be made to the ordinary creditors, but as the liquidation proceeds, and as soon as the preferred claims have been disposed of, a further report will issue.

Fraser & Brace Ltd., Montreal, did repair work during September on Canadian Government Merchant Marine steamships Canadian Coaster and Canadian Harvester; Webster Steamship Co.'s s.s. Stuart W.; Nova Scotia Steamships' s.s. General Currie; Walford Shipping Co.'s s.s. Caledonia; Fairhaven Transportation & Coal Co.'s s.s. Henry B. Hall.

Nova Scotia Steel & Coal Co., New Glasgow, N.S.—The steam yacht Sea King, for Baron Bliss, Bahamas, British West Indies, the launching of which was announced in our last issue, was expected to be completed and ready for delivery by the end of October. Her dimensions are,—length 13 ft., beam 28½ ft., depth 13 ft. The owner's quarters are aft, and are finished in mahogany, and the decks throughout the ship are of teak. The ship is schooner rigged, with a large foremast, and a derrick to take a 4-ton motor boat. She is equipped with two 250 h.p. semi-Diesel oil engines, built by Vickers-Petter, Ipswich, Eng., for a speed of 11 knots, and there are two auxiliary Vickers-Petter oil engines driv-

ing a shaft, which in turn drives two dynamos, ballast pump and CO2 refrigerating machine. She is also fitted with large storage batteries. The steering engine is a combination of hand and air, and was designed by the owner for this particular ship. Accommodation for officers and crew are forward of the engine room, the pantry and galley being in a separate deck house on each side of the engine room. All fittings and furnishings are as usually supplied for a first class yacht.

Port Arthur Shipbuilding Co., Port Arthur, Ont.—Following are extracts from the directors' report for the year ended June 30, 1921, issued over the signature of Jas. Whalen, President:—Considering that we have secured no contracts for new ship construction this year, I consider that the company is fortunate in being able to show even a small net profit. The only ship construction done during the year was the completion of two freight steamships of approximately 4,000 and 3,000 d.w. tons, respectively, commenced last year. Nothing that I can say will explain how drastic has been the reduction in volume of business, or how greatly our company has been affected by the depressed business conditions that developed during the year, as well as a comparison of the amount of construction work in process, which fell off from \$1,974,027 at the closing of last year to \$39,984 at the closing of this year. Shipbuilding has been at a standstill during this year, and it will yet be some time before conditions are adjusted to a point where it will be resumed on a normal basis. Were the conditions to meet, your management energetically pushed the development of other work to keep your plant busy, which, at the same time, can be continued and carried on in future years, in conjunction with shipbuilding. We entered definitely into the building of pulp and paper making machinery and equipment. The services of engineers thoroughly acquainted with the designing and building of this machinery and equipment were engaged. Designs and plans of a number of machines were completed and rights to build in Canada several machines and auxiliaries required by the trade, recognized to be leaders in their respective fields, secured. An amount of work has already been secured by this new department that, considering the existing conditions, is very encouraging. The manufacture of pulp and paper is one of Canada's principal industries. We have an enormous supply of the principal raw materials required for the making of pulp and paper, and ample water power for their development. The supply of these raw materials in the United States is rapidly diminishing, and Canada is the natural source for the supply of pulp and paper for this country. The pulp and paper market has been hard hit by the present business depression, but the future of the industry in Canada is assured. Once normal conditions are restored, this industry should develop with a rapidity that will equal anything it has experienced in the past. The business of building the machinery, and equipment required for this industry has an equally promising future, and your company is prepared to take an important part in this work. Situated at the head of Lake Superior, in the center of a large pulpwood producing area, in which pulp and paper mills are rapidly being built, we are in a very advantageous position for

participating in this work. The company has also decided to commence the manufacture of low-pressure boilers for heating purposes. We have the western Canadian market principally in mind for these boilers. Our position is exceptionally favorable for participation in this business in the western market. Port Arthur is as close to this market as it is possible to bring the materials required by boat. We can land these materials in our plant at the cheaper water freight rate with one handling. We already have a boiler shop equipped with all the machinery and tools required to build this class of boiler, and large enough to take care of the business through its initial stages. The possibilities of this business are great and in deciding to participate in it your directors are convinced that in a few years a large and profitable business can be built up. During the year preferred stock, having a par value of \$93,200, was retired, also \$60,000 of mortgage bonds. Capital expenditures made during the year amounted to \$88,821, and were for plant improvements and additions, which included the erection and equipment of a modern fireproof building for transforming electric current, through which a saving of 15% on the price of the electric power will be effected."

The financial statement shows the following results for the year:—Gross profit from operations, after deducting cost of material, labor and manufacturing overhead, \$216,070.50; Less general and administrative expense, \$153,053.08; net operating profit, \$63,017.42; add miscellaneous income, \$88,659.17; \$151,696.59; deduct bond interest, exchange and miscellaneous charges, including estimated Dominion tax, \$89,786.93; net earnings for year, \$61,909.66.

Prince Rupert Shipbuilding Yard and Drydock.—The Canadian National Ry.'s Right of Way and Property Commissioner, Toronto, has invited applications for leasing, for a term of years, the Grand Trunk Pacific Ry.'s shipbuilding yard and drydock at Prince Rupert, including waterfront lots, and wharves of approximately 30 acres, water lots of over 60 acres, all buildings, plant, tracks, fixed machinery, and equipment, 20,000-ton floating drydock, docks, wharves, piers, landing stages, etc.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—The shareholders of this company, which undertook to build four wooden barginets, to assist in the civil re-establishment of returned soldiers, and to relieve unemployment, for which special loans were granted by the Dominion Government, have laid their grievances before the Government, in the hope of obtaining some further assistance towards the lessening of their losses, on account of the company's failure. It is claimed that repeated telegrams sent to the Government have failed to elicit any response, and a final message, in the nature of an ultimatum, was sent, to the effect that unless a reply was received by Oct. 12, as to the Government's policy towards the shareholders, a full statement covering the entire operations would be given to the press. This was confirmed by the directors, Oct. 13, and a statement was authorized and prepared and given out for publication. A press report of Oct. 24 stated that an arrangement has been reached with the Government for the completion of the programme originally outlined.

Yarrows Ltd., Victoria, B.C., did the

following repair work during September: Ship Mafalda, 1,425 tons, altered, repaired, cleaned and painted; Vancouver Steamship Co.'s s.s. City of Vancouver, 5,497 tons, docked, cleaned and painted; C.P.R. s.s. Princess Victoria, 1,943 tons, repairs to main steam pipe, etc.; Standard Oil Co.'s s.s. Caddo, 6,329 tons, drydocking survey, repairs to bottom damage, drawing tail shaft, repairs to rudder, and cleaning and painting; steam tug Mysry, engine room repairs. The contract for repairs to the Nippon Yusen Kaisha s.s. Toyohashi Maru was awarded to Yarrows Ltd., and carried out in the early part of October. This is the second contract obtained by the company recently, in direct competition with U.S. yards on the Pacific coast.

Drydock for Vancouver.

An agreement for the construction of a stationary drydock of the second class at Vancouver, B.C., between the Dominion Government and J. Coughlan & Sons, Ltd., Vancouver, B.C., was signed Oct. 27, 1920. The agreement provides for the construction of a stationary drydock of the following dimensions:—Length from caisson stop to head wall, 725 ft. Length from back of sill to head wall, 700 ft. Clear width of entrance at bottom, 110 ft. Width of entrance at top, 116 ft. 2 1/4 in. Depth over sill at extreme high water, 32.23 ft. Depth over sill at higher water (equivalent to high water ordinary spring tide), 30 ft.

Under the provisions of the Dry Docks Subsidies Act, the Government agreed to pay a subsidy of 4 1/2% for 35 years on the cost of the drydock, which, for the purpose of the subsidy calculations, was placed at \$2,500,000. Apart from the requirement of the site, nothing has been done in the way of construction, or even of preparation of the site, and enquiries made have elicited the information that while J. Coughlan & Sons can probably finance the project today, they do not, at present, see sufficient work ahead of them to warrant the expenditure, but that there would doubtless be ample work by effecting a combination with Wallace Shipbuilding & Drydock Co., North Vancouver.

J. Coughlan & Sons and Wallace Shipbuilding & Drydock Co., the latter company having submitted a tender for the construction of a floating drydock, at the time the stationary drydock agreement was made with J. Coughlan & Sons, are combining with the object of getting authority to build a floating drydock at North Vancouver, and have submitted a proposition to the Dominion Public Works Department.

Burrard Drydock Co. Ltd. has been incorporated under the Dominion Companies Act, with authorized capital of \$1,000,000 and office at North Vancouver, B.C., to build in Vancouver harbor, a floating drydock with patent and other slips, work shops, machinery, piers, and wharves, effecting a general shipbuilding and ship repairing business; to apply for subsidies under the Drydock Subsidies Act, and to enter into a contract with the Dominion Government in connection with such subsidy. The incorporators are:—C. Wallace, Wallace Shipbuilding & Drydock Co., North Vancouver; J. J. Coughlan, J. Coughlan & Sons, Vancouver; R. A. Pringle and L. Cole, Ottawa, Ont.

The American Association of Port Authorities held its annual convention at Seattle, Wash., Oct. 13, and decided that the next one would be held at Toronto.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Launching of Steamships.—We have been advised of the launching of the following steel cargo steamships, for Canadian Government Merchant Marine, in addition to those mentioned in previous issues.

Sept. 24, s.s. Canadian Constructor, Marine Department contract 39, builder's yard no. 4, approximately 10,500 d.w. tons, Halifax Shipyards Ltd., Halifax, N.S.

Oct. 6, s.s. Canadian Britisher, Marine Department contract 43, builder's yard no. 2, approximately 8,390 d.w. tons. The contract for this ship was given Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C., and after that company became bankrupt Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., was given a contract to complete her at Prince Rupert, on a cost plus basis.

Oct. 12, Canadian Freighter, Marine Department contract 63, builder's yard no. 21, approximately 8,390 d.w. tons, J. Coughlan & Sons, Vancouver, B.C.

All of the 63 steel cargo steamships ordered under the Dominion Government's shipbuilding programme have now been launched.

Delivery of Steamships.—In addition to the steam cargo steamships mentioned in Canadian Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine for operation:—

Oct. 12, s.s. Canadian Logger, Marine Department contract 64, builder's yard no. 10, approximately 8,390 d.w. tons, Midland Shipbuilding Co., Midland, Ont.

Oct. 22, s.s. Canadian Challenger, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, Davie Shipbuilding & Repairing Co., Lauzon, Levis, Que.

Oct. 22, s.s. Canadian Transporter, Marine Department contract 62, builder's yard no. 20, approximately 8,390 d.w. tons, J. Coughlan & Sons, Vancouver, B.C.

Officers of Ships.—The following officers have been appointed to the various ships, in addition to those mentioned in previous issues: Canadian Aviator, Capt. W. J. Davies, formerly on s.s. Thomas J. Drummond, vice Capt. E. Randall, on leave of absence; Canadian Britisher, chief engineer, L. Chappelow; Canadian Cruiser, Capt. A. L. Starratt, returned from leave of absence; Canadian Engineer, chief engineer, W. R. Jones; Canadian Farmer, Capt. W. J. Boyd, vice Capt. J. P. Sharp, transferred to s.s. Canadian Voyager; Canadian Forester, chief engineer, T. P. Cubitt; Canadian Planter, Capt. E. R. Roop, formerly on Canadian Volunteer, vice Capt. W. H. Miller, transferred to Canadian Volunteer; chief engineer, G. V. Brown; Canadian Raider, chief engineer, W. Percival; Canadian Volunteer, Capt. W. H. Millar, formerly on Canadian Planter, vice Capt. J. R. Roop, transferred to Canadian Planter; Canadian Voyager, Capt. J. P. Sharp, formerly on Canadian Farmer, vice Capt. A. E. Sprosen temporarily out of service; Thomas J. Drummond, Capt. W. J. Cunningham, vice Capt. W. J. Davies, transferred to Canadian Aviator; Simon F. Tolmie (barquentine), Capt. J. C. Stewart.

Refrigerator Accommodation.—The following Canadian Government Merchant Marine ships are already equipped with refrigeration apparatus, etc.:—Canadian

Commander, Canadian Conqueror, Canadian Leader, Canadian Victor, Canadian Scottish, Canadian Skirmisher and Canadian Traveller. The following ships, which are under construction, will be similarly equipped, Canadian Freighter, Canadian Britisher, Canadian Transporter, Canadian Cruiser, and Canadian Constructor. The Canadian Highlander, which was delivered Dec. 15, 1920, is also to be similarly equipped.

Montreal Sailings.—The following sailings have been announced:—

Liverpool Service: Canadian Commander, Nov. 11; Canadian Hunter, Nov. 20.

London Service: Canadian Otter, Nov. 11.

Glasgow Service: Canadian Squatter, Nov. 8.

Cardiff and Swansea Service: Canadian Trooper, Nov. 16.

Australia Service: Canadian Victor, Nov. 20.

Barbados, Trinidad and Demerara Service: Canadian Harvester, Nov. 2; Canadian Coaster, Nov. 16; Canadian Beaver,

To London: Canadian Raider, Dec. 7; Canadian Trapper, Dec. 21; Canadian Rancher, Jan. 4; Canadian Raider, Jan. 25; Canadian Trapper, Feb. 8; Canadian Rancher, Feb. 22; Canadian Raider, March 15; Canadian Trapper, March 29.

To Glasgow: Canadian Aviator, Dec. 17; Canadian Otter, Jan. 7; Canadian Hunter, Jan. 21; Canadian Aviator, Feb. 4; Canadian Otter, Feb. 25; Canadian Hunter, March 11; Canadian Aviator, March 25.

To Cardiff and Swansea: Canadian Navigator, Dec. 13; Canadian Squatter, Jan. 3; Canadian Navigator, Feb. 4; Canadian Squatter, March 1.

Winter Sailings from Halifax, N.S., to places mentioned below:—

Australia and New Zealand: Canadian Spinner, Dec. 28; Canadian Constructor, Jan. 25; Canadian Miller, Feb. 22; Canadian Pioneer, March 22.

Brazil and Plate: Canadian Volunteer, Dec. 7; Canadian Seigneur, Jan. 14; Canadian Ranger, Feb. 11; Canadian Challenger, March 11.

Steel Cargo Steamship Canadian Scottish, approximately 8,390 d.w. tons, Canadian Government Merchant Marine.

Nov. 20.

Nassau, Kingston and Belize Service: Canadian Forester, Nov. 8.

Charlottetown and Newfoundland Service: Canadian Sealer, Nov. 5; Canadian Sapper, Nov. 19; Canadian Sealer, Nov. 20.

Vancouver Sailings.—The following sailings have been announced:—

Australia and New Zealand: Canadian Transporter, Nov. 8, Auckland, Sydney, Melbourne, Adelaide; Canadian Freighter, Nov. 30, Auckland, Sydney, Melbourne; Canadian Skirmisher, Dec. 30, Auckland, Sydney, Melbourne; Canadian Traveller, Jan. 24, Sydney, Melbourne; Canadian Scottish, Feb. 24, Sydney, Melbourne.

Oriental Service: Canadian Prospector, Nov. 25, Kobe, Shanghai; Canadian Highlander, Dec. 27, Yokohama, Shanghai; Canadian Winner, Jan. 20, Takubaru, Shanghai.

India Service: Canadian Inventor, Jan. 4, Calcutta, Bombay.

Winter Sailings from St. John, N.B., to United Kingdom:—

To Liverpool: Canadian Explorer, Dec. 14; Canadian Commander, Dec. 28; Canadian Leader, Jan. 11; Canadian Explorer, Feb. 1; Canadian Commander, Feb. 15; Canadian Lender, March 1; Canadian Explorer, March 22.

Barbados, Trinidad and Demerara: Canadian Logger, Dec. 14; Canadian Harvester, Dec. 28; Canadian Coaster, Jan. 11; Canadian Beaver, Jan. 25; Canadian Logger, Feb. 8; Canadian Harvester, Feb. 22; Canadian Coaster, March 8; Canadian Beaver, March 22.

Nassau, Kingston & Belize: Canadian Fisher, Dec. 2; Canadian Forester, Dec. 23; Canadian Fisher, Jan. 13; Canadian Forester, Feb. 3; Canadian Fisher, Feb. 24; Canadian Forester, March 17.

St. John's, Nfld.: Canadian Sapper, Dec. 6, Dec. 20, Jan. 3, Jan. 17, Jan. 31, Feb. 14, Feb. 28, March 14, March 28.

Mexican Trade.—The new Minister of Trade and Commerce is reported to have stated in Winnipeg recently, while on his way to Vancouver, that it is planned to secure an extension of shipping facilities between Canada and Mexico by means of Canadian Government Merchant Marine.

The s.s. Canadian Commander arrived at Liverpool, Eng., after a stormy and somewhat hazardous voyage, during which 60 cattle were swept overboard or drowned in the holds. Leaving Montreal on Sept. 30, the ship encountered very severe weather when a week out, and at the height of the storm, during which Capt. J. D. Mackenzie, of North Sydney, N.S., was on the bridge for 48

hours, the ship had to put about and run before the storm. The stock fittings were smashed and cattle drowned or injured, the wireless installation destroyed, the main hatch smashed in, and the poop railings carried away by seas, which officers describe as the worst in their experience. The ship took two weeks for the voyage, landing the cattle at Glasgow before proceeding to Liverpool.—Copyright cablegram to Montreal Gazette.

The s.s. *Canadian Exporter*, which was wrecked on Willapa Spit near Astoria, Wash., July 29, is reported to have been sold to the Premier Lumber Co., Vancouver, for \$2,000. She broke in two, and the fore part was swung round, by the action of the tide, at right angles to the after part, and, generally speaking, the wreck was in poor condition and the chances of salvage slight. It is stated that a certain amount of fittings and machinery has been saved, and also a quantity of lumber, but that the amount realized for this is more than swallowed up by the cost. It is expected that the forward half will be floated.

The s.s. *Canadian Importer*, which has been undergoing a general survey at Esquimalt, B.C., drydock, since she was towed in, after having sprung a leak while en route to Australia, will, subject to confirmation, be repaired by B.C. Marine Engineers and Shipbuilders Ltd., Vancouver. It is stated that five tenders, for the necessary repairs, were received, and that the lowest, for slightly under \$12,000, was accepted. The repairs are not extensive, and are confined almost solely to the engine room and engines. The engines will have to be overhauled, as also will the auxiliary machinery.

The s.s. *J. A. McKee* arrived at Toronto, Oct. 17, with a cargo of sugar. She left St. John, N.B., with 2,000 tons of sugar, 400 tons of which was discharged at Montreal, 600 tons at Toronto, and the balance was taken to Port Arthur, where, after discharging, she will take a cargo of grain downbound. She has been engaged for some time carrying coal from Sydney, N.S., to Lewis, Que., for Canadian National Ry., but having completed that work for this season, she is being utilized for the lake grain traffic, in which she was engaged, prior to her acquisition by the Dominion Government, when owned by the Western Steamship Co., Toronto.

The *Simon F. Talmie*, one of the wooden barquentines built at Victoria, B.C., under special aid from the Dominion Government, by Victoria (B.C.) Shipowners Ltd., and taken over by the Marine Department, on account of the company's failure, has been handed over to Canadian Government Merchant Marine, for operation. She was built at the Cholberg shipyard, and finished by the Victoria Machinery Depot Co. She was at Vancouver, during October, fitting out for her first trip, and was expected to load lumber for Australia. She is in charge of Capt. J. C. Stewart.

J. Coughlan & Sons, Vancouver, B.C., launched the steel cargo steamship *Canadian Freighter*, Marine Department contract 63, builder's yard no. 21, approximately 8,390 d.w. tons for Canadian Government Merchant Marine, Oct. 12. The christening was performed by Mrs. C. Wallace, wife of the President, Wallace Shipbuilding & Drydock Co., North Vancouver. This is the last of the C.G.M.M. ships to be launched by this firm.

The s.s. *Canadian Transporter*, Marine Department contract 62, builder's yard no. 20, approximately 8,390 d.w. tons, the keel of which was laid Jan. 6, and which was launched Aug. 31, was ready for delivery on Sept. 14, but, on account of the Department having extra refrigerating work done by outside contractors, the trial trip was postponed at the Department's request. The trip was made on Oct. 21, she was transferred to Canadian Government Merchant Marine Oct. 22, proceeded to load a cargo at Vancouver and will sail for New Zealand and Australia on Nov. 8.

Davie Shipbuilding & Repairing Co., Lauzon, Lewis, Que., delivered the steel cargo steamship *Canadian Challenger*, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, to the Marine Department on Oct. 22, when she was transferred to Canadian Government Merchant Marine for operation, and left for Montreal to load timber for Russia, with which she will sail early in November.

Halifax Shipyards Ltd., Halifax, N.S., launched the steel cargo steamship *Canadian Constructor*, Marine Department contract 39, builder's yard no. 4, approximately 10,500 d.w. tons, for Canadian Government Merchant Marine, Sept. 24, the christening being performed by Mrs. F. B. McCurdy, wife of the Dominion Minister of Public Works. The Canadian Constructor is one of the two largest ships ordered by the Dominion Government. Her general dimensions are: length overall 445 ft., length b.p. 430 ft., breadth moulded 56 ft., depth moulded 38 ft., draft loaded 29 ft., approximate tonnage, 10,500 d.w. She is of the three deck type, with poop and forecastle, and is equipped with triple expansion engines, with cylinders 29½, 50 and 80 in. diam. by 54 in. stroke, 4,000 i.h.p., supplied with steam by 4 single ended boilers, each 15½ x 11½ ft. at 180 lb., at a speed of 12 knots at sea under full load. Accommodation is provided for 6 passengers. She is fitted with the latest life saving devices and cargo handling facilities, including a 30-ton derrick for handling extra heavy shipments. A telescope mast is fitted, to enable her to travel the length of the Manchester Ship Canal. The keel was laid Oct. 6, 1919, and she was launched July 21. A Halifax press dispatch says that she left there Oct. 23 for Sydney, N.S., to load 8,000 tons of coal, with which she will make a trial trip back to Halifax, and will then load partly there for Australia, completing her cargo at New York.

Midland Shipbuilding Co., Midland, Ont., delivered the steel cargo steamship *Canadian Logger*, Marine Department contract 54, builder's yard no. 10, approximately 8,390 d.w. tons, to the Marine Department Oct. 12. She was transferred to Canadian Government Merchant Marine for operation and took a grain cargo from Midland to Montreal.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—The steel cargo steamship *Canadian Britisher*, Marine Department contract 43, builder's yard no. 2, approximately 8,390 d.w. tons, of this company was building when it became bankrupt, and for the completion of which a contract was given to Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., was launched at Prince Rupert, Oct. 6.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C. See Prince Rupert Drydock & Engineering Co.

Steamship Service to the West Indies.

The Dominion Trade and Commerce Department is inviting tenders up to Jan. 31, 1922, for a steamship service between Canada and the West Indies, either weekly or fortnightly, from St. John, N.B., or Halifax, N.S., or either weekly or fortnightly from St. John and Halifax alternately, for five or 10 years, tenders to state the earliest date on which the proposed service can be established. The steamships to be employed are to be from 5,000 to 6,000 gross tons, capable of maintaining an ocean speed of 12 knots and providing accommodation for 100 first class, 30 second class and 100 steerage or deck passengers, and to be provided with 'tween decks. A reasonable proportionate allocation of passengers and cargo accommodation is to be made as between the West Indian islands, and there are to be no unfair differences in the rates of freight as between the larger and smaller colonies at a similar distance from St. John or Halifax. Freight and passenger rates will be subject to the Department's approval. The steamships to be employed are to be built so that, should traffic warrant, cold storage may be provided, but alternative tenders may be submitted, either with or without cold storage, and provision must be made for carrying mails.

Steamships on the outward sailings are to call one week at Bermuda, Barbados, Trinidad and British Guiana, and on the homeward route at Trinidad, Grenada, St. Vincent, Barbados, St. Lucia, Dominica, Montserrat, Antigua, Nevis, St. Kitts and Bermuda; and on the alternate weeks, outward at Bermuda, St. Kitts, Nevis, Antigua, Montserrat, Dominica, St. Lucia, Barbados, St. Vincent, Grenada, Trinidad and British Guiana, and on the homeward route, at Trinidad, Barbados and Bermuda.

Operation of Lights on Great Lakes and St. Lawrence River.

All Canadian lights and fog alarms on Lake Superior will be kept in operation until the close of navigation, with the exception of Caribou Island, which will be closed Dec. 10, Otter Island, Quebec Harbor, Daviaux Island and Michipicoten Island, east end, which will be closed Dec. 15, Gargantua, Michipicoten Harbor, Corbell Point and Ile Parisienne, which will be closed Dec. 20, Slate Island, Battle Island, Lamb Island, Shaganash, Point Porphyry, Thunder Cape, Welcome Island, Pie Island and Victoria Island, which will be closed after the last sailing to or from Port Arthur and Fort William.

All Canadian lights and fog alarms on Lake Huron—Georgian Bay, Lake St. Clair, Lake Erie, Lake Ontario and connecting waters will be maintained in operation until the close of navigation, excepting the southeast shoal lightship on Lake Erie, which may be removed after Dec. 1, and Lonely Island light, Georgian Bay, which may be closed before the general close of navigation.

All Canadian lights on the River St. Lawrence will be maintained in operation until the close of navigation.

All gas buoys and other floating aids to navigation will be maintained in position as long as ice conditions permit, and in cases where it is necessary to remove gas buoys, the more important lights will be marked by spars.

Orders for Steel Cargo Steamships for Canadian Government Merchant Marine Ltd.

The following is a complete list of steel cargo steamships which the Dominion Marine Department has been authorized, by order in council, to place orders for, and which orders are to be carried out. The vessels given in the column headed "Long tons a.w.", and which are preceded by an asterisk (*), show the total deadweight capacities as determined after the ships have been completed. The other figures in the column headed "Gross tons a.w.", show the capacities as determined before the ships have been completed. The order of the ships is in the order in which they were ordered. The figures given and as may be ascertained after the ships have been completed, are subject to modification as they may vary above or below the figures given and as may be ascertained after the ships have been completed.

Where the total price does not agree with the finally ascertained deadweight tons multiplied by the price per ton the extra amount is for charges from specifications, additional equipment, accommodations, etc.

The following contractions are used in the column giving the type of the vessel to be built: s.d., single deck; 2.d., two deck; 3.d., three deck; p. poop; b. bridge; f.e.l., forecastle

The C.P.R. Steamship Princess Louise and Her Predecessor.

The illustrations given on this page show the s.s. Princess Louise, now under going completion and fitting out, for the British Columbia Coast Service, and her predecessor, of the same name, taken over by the C.P.R., from the Canadian Pacific Navigation Co., in 1901. A comparison of the two ships shows the immense strides made in the class of ship utilized in the coast service, since the C.P.R. entered the business.

The s.s. Princess Louise, built at New York, N.Y., in 1869.

The first s.s. Princess Louise was built at New York in 1869. Her hull was of seasoned white oak, and she was propelled by side wheels, with a beam engine. Her dimensions were,—length 180 ft. 10 in., beam 30 ft., depth of hold 12½ ft. She made her first trip from Olympia to Victoria, Dec. 7, 1869, and in 1879 was sold to the Hudson's Bay Co., and registered at London, Eng. In 1883 she was transferred to the Canadian Pacific Navigation Co., and in 1901 went into C.P.R. hands and was operated in the British Columbia coast service, until a few years ago, when she was sold to Marpole, Macdonald & Co., Victoria, and converted into a coal hulk. During the time she was operated by the H. B. Co., she ran to its various posts as far north as Port Simpson, and under C.P.R. management she was operated occasionally on the northern run, but chiefly in local water, calling at Victoria, Vancouver, New Westminster, Nanaimo, and some other island ports.

The new s.s. Princess Louise, built by Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., has the following dimensions,—length b.p. 317 ft., beam 48 ft., depth of hold 18½ ft. She is equipped with vertical, triple expansion type of engines, balanced on the Yarrow, Schlick and Tweed system, with cylinders 28, 43, 50 and 50 in. diam., having 4 bronze blades. She has complete electric lighting plant, electric freight elevators, searchlight, refrigerating plant, etc. Steam is supplied by 4 single ended boilers, each 16 ft. 2 in. x 12 ft., equipped for burning oil or coal at natural draft. There is stateroom accommodation for 300 passengers, and dining room accommodation for seating 140 persons at a time. With the exception of the auxiliary machinery, which is all of standard British make, the ship is entirely a British Columbia production.

The Panama Canal Tolls Question.

The U.S. Senate on Oct. 10 passed a bill providing for the exemption of U.S. coastwise ships from payment of tolls for the passage of the Panama Canal, and its subsequent progress was suspended temporarily.

The bill provides only for the exemption of U.S. ships engaged in the carrying trade between Atlantic and Pacific coast ports, and it is said that its main object is to test the feeling of Congress for the extension of the toll exemption

zens or subjects in respect of the conditions of the charges of traffic or otherwise."

In 1912, under President Taft, U.S. ships engaged in the coasting trade were exempted from the payment of tolls for passage through the Panama Canal, but the tolls on them were reimposed in 1914, under President Wilson. The question was incorporated in the Republican party's policy for the presidential election in 1920, which resulted in the election of President Harding, who is reported to hold the view that while the exemption is a matter of right, it can be dealt with better by diplomatic negotiation than by legislation.

Should the bill in its present form become law, it would be possible to ship freight intended for Europe, by U.S. ships, from any Canadian or U.S. port on the Pacific coast, to any U.S. port on the Atlantic, where it could be transhipped to other ships crossing the Atlantic; and again goods could be shipped at any Canadian or U.S. port on the Atlantic coast to any U.S. port on the Pacific coast, for transshipment across the Pacific, in both cases, without paying Panama Canal tolls, while British or Canadian ships, passing from coast to coast, or direct through the Panama Canal, to the Orient, or Australasia, would be discriminated against to that extent.

The argument used in the U.S. Senate, that U.S. money built the canal, and therefore U.S. ships should receive the benefit, does not hold, when the full history of the project is considered. At the time of the signing of the Clayton-Bulwer Treaty, the rights of Great Britain and the U.S. in the matter were, at least, equal, and the condition imposed on the U.S., under the Hay-Pauncefote Treaty in 1901, viz., the use of the canal by all ships of all nations observing the rules, on terms of entire equality, was

to all U.S. ships using the canal, whether engaged in coastwise or foreign trade.

The British Embassy at Washington, D.C., has filed a protest with the U.S. State Department, asserting that Great Britain would consider the enforcement of such a law as a violation of the treaties which promised equal treatment

The s.s. Princess Louise, C.P.R. British Columbia Coast Service, built at North Vancouver, B.C., in 1921.

for ships of all nationalities. In 1850, Great Britain and the U.S. entered into the Clayton-Bulwer Treaty, to build a canal across the Panama Isthmus, and to share jointly in its control. No construction was done, under this agreement, and, under the Hay-Pauncefote Treaty of 1901, all the rights in ownership and construction under the previous treaty were transferred to the U.S., and a clause was added as follows: "The canal shall be free and open to all vessels of commerce and war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation or its citi-

zens or subjects in respect of the conditions of the charges of traffic or otherwise."

Welland Ship Canal Wages.—The Labor Department announces that the questions of wages and working conditions on the Welland Ship Canal, which were in dispute, have been settled, that the pay ranges from 37½c. an hour for laborers to 87c. an hour for engineers. The wages are effective from Sept. 1, and working conditions from Oct. 1.

Establishment of Seaplane Stations.

Seaplane stations have been established by the Canadian Air Board at:—

Dartmouth, N.S., on the point at the entrance to Eastern Passage, Halifax harbor, approximately lat. n. 44 deg. 38 min., long. w. 61 deg. 31 min. 50 sec.

Victoria Beach, Manitoba, on the east shore of Lake Winnipeg, 100 yds. south of the Government wharf at Victoria Beach, approximately lat. n. 50 deg. 40 min., long. w. 96 deg. 32 min.

Vancouver, B.C., on the old Jericho Admiralty Reserve and English Bay, at the south side of the entrance to Vancouver harbor, approximately lat. n. 46 deg. 16 min. 15 sec., long. w. 123 deg. 11 min. 30 sec.

Mariners are advised to give these stations a wide berth, and warned that it is dangerous to pass or anchor within half a mile of them. The stations will be marked by distinguishing signals, particulars of which are not yet available, and are attended by Government launches carrying a distinguishing flag. All instructions given by these launches should be complied with as far as possible.

Chilled Meat Shipments from the Pacific via Panama Canal.

The s.s. *Kinderdijk*, of the Holland-American Line, passed through the Panama Canal on Aug. 26, carrying in cold storage 100 tons of mutton, shipped from Vancouver, B.C., and Seattle, Wash., to London, Eng. Press dispatches report that this is the first shipment of chilled meat from Canada to Europe by way of the canal, as it has customarily been handled by refrigerator cars between the Pacific and Atlantic coasts and over Atlantic steamship lines.

In the first 6 months of this year, 71,036 tons of mutton in cold storage were shipped through the canal from Australia and New Zealand for the United Kingdom. Other shipments in cold storage from Australasia in that period included 33,720 tons of beef, 30,316 tons of

cheese, 19,057 tons of butter, 10,752 tons of tallow, 2,272 tons of glaxo, 2,038 tons of casein, and 61,882 tons of cold storage classified as "other." In all, the cold storage shipments from the Australasian area through the canal in the 6 months aggregated 186,073 tons.

The cold storage carriage through the canal from Australia and New Zealand is an old established service, dating back to the first year of canal operation. The cold storage service from the Pacific coast to Europe is about a year old, the first vessel of the Holland-American Line, bound from Vancouver and other west coast ports for Europe, having passed through the canal on Sept. 8, 1920. The demand for cold storage space, home-bound, on this route has exceeded the supply.

Welland Ship Canal Contracts.

The Railways and Canals Department invited tenders in September to be sent in by Oct. 5 for building sections 3 and 4 combined, Welland Ship Canal. On Sept. 30 the Department issued the following statement:—"The Government has decided to postpone for the present the call for tenders for sections 3 and 4 combined, of the Welland Ship Canal, which is the subject of advertisement at present. When the decision was reached to advertise this work, the possibility of an immediate election was not taken into account. The contract is one which will involve probably \$16,000,000, and the Government feels that the letting of such an important contract between dissolution and the date of election might be open to objection, hence the decision to postpone the call for tenders and continue the work for the present on force account."

Doheny, Quinlan & Robertson are the present contractors for section 3, on a cost plus basis. No work has been done on section 4, but some of the dredging, which it was intended should be included in that section, has been added to section 5, the contractors for which are the Dominion Dredging Co., Midland, Ont.

Shipbuilding Wages and Prospects in Great Britain.

The British Labor Ministry on Oct. 6 issued the award of the arbitrators in the wages dispute between employers and employees in the shipbuilding trades. The award calls for reductions of wages as follows: riveters, 25%; caulkers and drillers, 15%; shipwrights, platers and others, 2½%.

Archibald Hurd, the naval and maritime chief, states that it is open to serious question whether the award will enable the industry to recover from the depression from which it is now suffering. He states that the high cost of production has caused work on about 100 ships to be suspended, and that there are at least 200 berths vacant in Great Britain. He adds: "Generally, it may be said that an ordinary cargo boat cannot be built for less than from £16 to £18 a ton, and of that 80% goes into wages. Forty per cent. of the men in the industry now are unemployed, and the number will rapidly increase unless production costs are brought down. Very few orders, and those for vessels of a special type, have been placed in Great Britain this year. The whole industry is slowing down, and only radical measures will prevent a general stoppage in the next few months. The outlook was never blacker than at present."

International Ferry Ltd. has been incorporated under the Dominion Companies Act, with \$200,000 authorized capital and office at Sarnia, Ont., to operate a ferry service, for automobiles, passengers and conveyances of all kinds, between Sarnia, Ont., and Port Huron, Mich., and to carry on a general navigation and steamship business. The principal incorporators are: G. C. Stevenson, master mariner, Port Huron, Mich., and N. L. LeSueur, barrister. The company is reported to have leased the Government dock at Windsor, Ont., and to be negotiating for the lease of docking accommodation at the foot of First St., Detroit, Mich., at an annual rental of \$10,000.

Ships Registered in Canada During July, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Safety First at Halifax Shipyards.

By M. L. Fraser, Field Officer, N.S., Accident Prevention Association.

On entering the Halifax Shipyards Ltd. plant at Halifax, N.S., the first thing to attract attention is a large sign board, placed where no eye can miss it, having on it in large letters "Safety First." The visitor, and the man going in for his first day's work in the yard, meet these two vital words face to face, and they cannot but make an impression, which, if fostered, at all, will make him a more careful man. The big sign board is also a constant reminder to all who pass its way that safety first is an important item in the affairs of today, and is so regarded by the Halifax Shipyards Ltd. Bulletin boards displaying safety bulletins are placed here and there throughout the plant, in places where they will be read by the greatest number. They show graphically all kinds of hazards, types of carelessness and teach the safe way to do things. They stay on the boards for one week and are then replaced by new ones.

One of the primary essentials in the carrying on of effective safety work in any plant is co-operation between management and man. Here, this co-operation is maintained by means of a general safety committee, organized in Dec. 1920, and composed of 24 men. Five of them are company officials, and 19 are men from the yard, each department having its own representative. The personnel is changed at the end of a six months term of office. Meetings are held regularly once in every two weeks. At present D. Scouler, Superintendent of Hull Construction, is chairman; G. W. Grossan, Superintendent of Engineering, Vice Chairman; D. G. Ferguson, Superintendent of Employment, Secretary. J. F. Paige, Operating Manager, a member ex-officio, and frequently attends the meetings. The committee's duties are to interest themselves in all matters pertaining to employees' safety, to make recommendations for guarding dangerous places and machines, and to further the cause of safety in the plant in every possible way. Each member is particularly responsible for the department which he represents.

First aid to the injured is recognized as being closely allied with safety first. Proper attention to injuries, given as soon as possible after they are received, not only alleviates the pain of the wound, but in very many cases prevents it from becoming aggravated, as in the case of serious blood poisoning, resulting from a slight scratch which was not properly taken care of at first. The shipyards have a model first aid room, modern and complete in every detail, which is in charge of two graduate nurses, and for a portion of each day the company's doctor is in attendance. The men are urged by every possible means to go to this dressing station with every injury, no matter how slight. During last winter a class in first aid to the injured was carried on among the employees and 15 certificates were awarded by the St. John's Ambulance Association to members of the class successfully passing the examinations. St. John's Ambulance certificate holders are competent to render first aid and are a valuable acquisition to any plant.

It is gratifying to those interested to know that good results are being obtained as a result of the safety first and

accident prevention work. For the first six months of 1921 the number of accidents occurring per month was 38.07% less than the number per month for the last eight months of 1920. The days lost per month on account of accidents were reduced 47.3% in the same period. The eight month period is given for 1920 for the reason that accurate figures are not available for the entire year. It is evident that that number of accidents has been reduced 38.7% and their severity 47.3%. Of course these figures are based on a unit, or standard, working force, and therefore are absolute in their meaning. These reductions have without any doubt been entirely brought about by the efforts of the safety committee, the bulletin service, mechanical guarding, and to the general educational campaigns.

The safety activities which have been briefly outlined are a result of the efforts of the Nova Scotia Accident Prevention Association, its chief object being to promote industrial safety throughout the province. J. E. McLurg, General Manager, Halifax Shipyards, is also President of the Accident Prevention Association, and he unhesitatingly affirms that the time, energy and money spent in accident prevention, and first aid work, is not only well spent, from a humanitarian point of view, but is as well a sound business investment, with a high rate of return, and that production without safety is inefficient. Accident prevention is absolutely an essential part of the industrial programme.

H.M.S. Charybdis for Sale.—The Naval Service Department is offering for sale the H.M.S. Charybdis, formerly second class cruiser, but now converted for use as a merchant ship, as she lies at Bermuda dockyard, without guarantee as to her condition. Her dimensions are,—length 220 ft., breadth 49½ ft., depth of hold 25½ ft., tonnage, 2,730 gross. She has a steel hull sheathed with teak and coppered, phosphor sternposts, rudder and propeller brackets, two anchors and a cable. She has refrigerating machinery with insulating space for 34,440 cu. ft., a capacity of 1,450 d.w. tons, and bunker capacity of 566 tons. Tenders will be considered both inclusive and exclusive of the refrigerating machinery. The main engines are twin screw, triple expansion, inverted, vertical type of 7,600 h.p., and with main and auxiliary surface condensers of gun metal with brass, and usual auxiliary machinery. The ship was originally fitted with 8 boilers, 6 return tube marine type boilers are now on board, and one on the wharf.

Great Lakes Levels.—The U.S. Lake Survey reports the levels of the Great Lakes, in feet above mean sea level, for September as follows:—Superior, 602.67; Michigan and Huron, 580.04; St. Clair, 574.99; Erie, 572.17; Ontario, 245.43. Compared with the average mean stage for the past 10 years, Superior was 0.05 ft. below; Michigan and Huron, 0.68 ft. below; Erie, 0.27 ft. below; Ontario, 0.74 ft. below.

The Pacific Coast Association of Port Authorities, of which Col. G. H. Kirkpatrick, President, Vancouver Harbor Commissioners, is President, held its annual convention at Vancouver, B.C., Oct. 17.

Grain Cargoes from Vancouver.

A recent London, Eng., copyright cablegram to the Montreal Gazette states: "Officials of the Johnson Line of Stockholm, in declining to accept a cargo of 100,000 British Columbia ties for the Sudan, have written the British Columbia authorities in London that all their tonnage in the North Pacific will be needed for the movement of grain, flour and other cargo via the Panama Canal. The Johnson Line, which has a fleet of motor ships, made the experiment of taking a cargo of Canadian wheat through the Panama Canal to London recently. It arrived in perfect condition and the company hopes to carry on a permanent trade in this line."

Canadian Railway and Marine World sent a copy of the above to C. Gardner Johnson, Vancouver, agent for the Johnson Line of Stockholm, who replied: "I know nothing of what the report outlines. It is true that grain cargoes will be offering very shortly, and if any of the steamships referred to are available, I shall endeavor to get the grain cargo as I did nearly a year ago. The motorship Buenos Aires, which carried a grain cargo to London so successfully in 1920, is in port as I write (Oct. 20)."

Canada Steamship Lines' Traffic.

J. F. Pierce, Passenger Traffic Manager, Canada Steamship Lines, is credited, in a press report, with the following statement:—"Notwithstanding that lessened traffic from the other side of the Atlantic and from the United States affected transportation on the Great Lakes of Canada and on the St. Lawrence, the passenger traffic season which has just closed for Canada Steamship Lines has been in many ways a successful one. Traffic started early in June, and was consistently good right up to the end of the regular season, so much so that the company decided to extend its Toronto, Thousand Islands and Montreal service an extra week to Sept. 26. Traffic on the Great Lakes and Northern Navigation Division was heavier than in 1920, which was a banner year. Traffic between Toronto and Montreal was within 10% of 1920, and from Montreal eastwards within 7% of the standard of the record season of 1920, and at the same time involved much smaller operating expenses, so that in all likelihood the season will be found to have been the most satisfactory from the earning point of view in the company's history."

G.T.R. Pier at Portland, Me.—The Maine State Pier Site Commission has paid to the G.T.R. and the Eastern Steamship Lines \$207,875 for their title and interest in the Galt and Franklin wharf properties, and such of the adjacent real estate as has been determined necessary for the construction and operation of a state pier. The amount paid to the G.T.R. is stated as \$97,344.20 and to the Eastern Steamship Lines, \$210,533.30.

The Norwegian s.s. Otta was towed into St. John's, Nfld., Oct. 17, by the Canadian Government Merchant Marine s.s. Canadian Trooper. The Otta was bound from Montreal, with 6,000 tons of grain, for Europe, and was picked up by the Canadian Trooper, about 400 miles east of Belle Isle, with her rudder stock broken.

The Salvaging of the Steamship Canadian Importer.

By G. W. Gore, Master of the Tug Sea Lion.

On Aug. 13, the s.s. Canadian Importer, of 8,800 tons, belonging to the Canadian Government, left Vancouver, B.C., loaded with 4,000,000 ft. of lumber, bound for the various ports of Australia. Being a long-legged brute, drawing 26 ft. on even keel, and of narrow beam, with a high deckload, she was inclined to be somewhat cranky.

After rounding Cape Flattery, the course was set to the southward and westward and soon after passing out, the ship took a decided list to starboard. As she had done the same thing on previous voyages, nothing much was thought of it at the time. She was kept on her course, but the list kept on increasing, until water finally poured into the fire room from No. 2 hold, shortly afterwards putting out the fires under the boilers and rendering the ship helpless. In this position she lay, gradually listing over, as the water poured into the fire and engine room, until she had a 30 degree list to starboard and her after end was flooded, the water finally reaching to the height of the cylinder heads on the main engine, a depth of 26 ft., leaving her in a most precarious condition.

On Aug. 19, the day after the ship filled, a volunteer crew of the second and third officers and nine men set out in one of the ship's lifeboats, seeking assistance for their disabled craft. After a harrowing experience of 15 days in an open boat the crew were eventually picked up. In the meantime the s.s. Cordova sighted the Canadian Importer and sent in wireless calls for assistance to be sent and then left in search of the missing lifeboat.

On Sept. 2 at 2 p.m. the tug Sea Lion, loaded with fuel and an ample supply of provisions at San Francisco, proceeded to sea in search of the Canadian Importer, then lying helpless 600 miles off shore. Passing through the north channel at 3 p.m., Point Reyes was made as darkness shut in. Our course was set a little to the southward of the last position of the Canadian Importer, as received by wireless, allowing for the drift she was making to the southeast. I gave the second officer on watch orders to keep a strict lookout for the missing crew in the Canadian Importer's lifeboat. I repeated the same orders to the chief officer, who came on watch at midnight, also remarking that no doubt they would show a light, if we came anywhere near them. At 12.45 the first officer called me, stating that he thought the missing lifeboat was in sight. On looking through the darkness on the starboard hand, there appeared the red glow of a Coston signal light, looking with its baleful, glaze-like the evil eye of some unknown denizen of the deep. We knew at once it was the lifeboat, and immediately the Sea Lion's wheel was ported until we were heading for them, the range lights on the tug showing those in the lifeboat that their signal had been seen. At 1 a.m. we arrived alongside the lifeboat, having hauled the Sea Lion into the wind and taken her in such a position as to make a lee for them on the starboard side of the tug. Words could not express the delight of the two officers and nine men as they knew they were once more safe on board ship. As they struggled over the Sea Lion's side, assisted by our crew, they presented a sorry and unkempt ap-

pearance, the result of 15 days exposure to the elements of sea and sky in an open boat. Weak and unshaven, but still alive, they were soon drinking copious draughts of hot coffee and eating to fullness the many sandwiches our cook prepared for them. Drying out their clothing and making them comfortable for the rest of the night was the work of a short time. With true maritime spirit they all decided to go back with us to their ship. Daylight, a hearty breakfast, and later hot salt water baths and a change of clothes, with judicious medical aid, soon had them all feeling better and improved in spirit 100%. There was a moderate northwest wind blowing but a large westerly swell running, when the lifeboat came alongside the tug. After three ineffectual attempt to lift the boat in the Sea Lion's davits, it was decided to tow her astern.

On Sept. 5 at 9 a.m. we arrived alongside the Canadian Importer and put the lifeboat's crew, now greatly improved in body and spirits, aboard their ship. The Canadian Importer's deckload had been cast overboard and she had been partially pumped out by wrecking pumps, put aboard by the Pacific Salvage Co.'s wrecking steamship *Algerine*, leaving her with only a 10 degree list to starboard. The Canadian Winner, another Canadian Government Merchant Marine ship, was towing the disabled ship, but immediately let go on our arrival and that afternoon departed for Puget Sound. The Sea Lion's hawser was made fast to the Canadian Importer's port cable, and we started on our long tow from latitude 38-55 north, longitude 135-24 west for Victoria, B.C., being accompanied by the s.s. Canadian Observer as an escort. The weather at that time was fine, clear and smooth.

On Sept. 6 at 9 p.m. the tug Sea Lion, hove in sight and, putting a hawser aboard the ship, the two tugs continued on their long journey. With the exception of two days strong northerly winds, fine weather was experienced throughout the trip, the ship steering better with wind and sea ahead than with wind abeam or astern. We reached Victoria on Sept. 13, at 8 a.m., just one month after the Canadian Importer had started on her ill fated trip, having towed her 803 miles in 7 days and 21 hours, an average of 4.24 knots an hour under all conditions of weather, wind and sea. We docked the Canadian Importer at the outer dock in Victoria harbor at 11 a.m., being greeted with hearty cheering by the vast crowd assembled to meet her arrival. The two tugs were objects of great interest to the many who passed along the piers where they were tied up, and many favorable comments were made on the successful feat they had just accomplished. At 3 p.m., as the Sea Lion and Sea Monarch left for San Francisco, they were given three rousing cheers by the Canadian Importer's crew and the crowd on the dock. The powerful tugs which had so ably represented the Ship Owners' and Merchants Tugboat Company took their departure from the harbor of Victoria.—Pacific Marine Review.

The Lake Erie Excursion Co., incorporated in New York State, has been licensed to carry on business in Ontario with \$500,000 capital.

The Panama Canal's Seven Years Record.

The Panama Canal completed seven years of operation on Aug. 14. During that period, 13,416 passages of commercial ships were made, with an aggregate net tonnage of 95,869,942. The cargoes carried by these ships totalled 91,578,920 long tons, of 2,240 lb. The traffic was divided as follows: from the Atlantic to the Pacific, 6,388 ships, 21,933,325 net tons, carrying 22,215,402 long tons of cargo; from the Pacific to the Atlantic, 7,028 ships, 23,936,617 net tons, 29,363,518 long tons of cargo.

The report for the financial year of 1921 shows that 33% of all the shipping passing through the canal in that year was British, and 32% of all the cargo handled was carried in British bottoms. During 1915, 1916 and 1917, these percentages varied from 41 to 45, the decline in percentage being stated to be due to the rapid increase of U.S. shipping during and after the war.

The most important British trade served via the canal, during 1921, was between Europe and Australia and New Zealand, the latter place being taken by that between Europe and the west coast of South America, the relative importance of other trade being in order, as follows,—U.S. to Australia and New Zealand, U.S. and far east ports, and Europe and the west coast of North America.

Marine Public Works Contracts.—The Public Works Department gave a contract for building a training and landing pier at the Riviere du Lievre Lock, Poupore, Que., on Sept. 23, to W. H. Kelly, Buckingham, Que., for \$9,176.50; construction of wharf, Mansons Landing, Cortez Island, B.C., Sept. 26, W. Greenlee, Vancouver, B.C., \$4,985; repairs to wharves, Hope Bay, North Pender Island and North Gabriola Island, B.C., Sept. 30, Vancouver Pile Driving & Contracting Co., Vancouver, B.C., schedule of prices; rubble mound extension to Mission River breakwater, Fort William, Ont., Oct. 4, O'Brien & Martin, Ottawa, \$1,391½ a ton of stone to enter into the work.

The Mackenzie Basin Fisheries Ltd. has been incorporated under the Dominion Companies Act, with \$200,000 authorized capital and office at Calgary, Alta., to carry on a general fishing and fur business, and to operate ships for transportation of freight and passengers. The incorporators are: C. J. Ford, L. H. Miller, G. A. Costigan, Miss M. Acton and G. Kirkpatrick, Calgary, Alta.

Motorboat Nokomis for Sale.—The Public Works Department received tenders to Oct. 25 for the purchase of the motorboat Nokomis. She is a cabin cruiser, with hull of cypress, 1½ in. thick, and with frame of white oak, rebuilt in 1920. She is equipped with Buffalo medium type engine of 20 h.p., with 20 in. propeller, also bell, searchlight, side lights and anchor. She has an average speed of 9 miles.

The Hudson's Bay Co.'s s.s. *Nascopee*, which has made its usual annual trip to the company's trading stations in Hudson Bay, is making a second trip to the Arctic regions, something which has not been attempted before. The second trip is to take a cargo of reindeer from Norway to Baffin Land, the *Nascopee* having sailed from Norway during October.

Atlantic and Pacific Oceans.

The White Star Line has reduced its second class cabin rates to Scandinavian and Finnish ports by \$20.

A general reduction in third class passenger fares on steamships from Canadian to European ports came into effect in the latter part of September. The average decrease was \$25. The rate from New York was similarly reduced, the fare from New York to Rotterdam and Antwerp being reduced by \$21.50.

The s.s. Edam, which was scheduled to sail from Montreal, on the Canada Line's service to Rotterdam, Hamburg, Dantzig and Libau, was reported to have been in collision with the British s.s. Glenogle, in the North Sea, at the end of September, and all her scheduled sailings were cancelled.

The U.S. Shipping Board's s.s. Princess Matoika, operated by the United States Line, on the route between Bremen, Germany, and New York, will, in future, call at Halifax, N.S., westbound. Other steamships operated in this service are the Hudson and Potomac. Pickford & Black are agents at Halifax.

The Anchor-Donaldson Line expects to have two new steamships ready for service between Montreal and Glasgow, Scotland, by the reopening of St. Lawrence navigation. The s.s. Athenia is expected to sail from Glasgow, for Montreal, Apr. 21, 1922, and the s.s. Letitia later in the season. Each of these ships will be approximately 14,000 tons gross.

The bulk of the New Brunswick potato crop, which in past years has been shipped to U.S. points, will, on account of the tariff arrangements, be shipped to European ports. It is stated that Furness, Withy & Co. are contracting for the supply of 15 steamships during the season, to ship the potatoes from St. John, N.B., and that the crop is now moving in that direction.

The s.s. Treviso has been transferred from the British to the Canadian register by the Tava Steam Shipping Co., Cardiff, Wales. She was owned formerly by the North of Ireland Shipbuilding Co., Londonderry, Ireland, and was built there in 1915. Her dimensions are—length 250 ft., breadth 42.5 ft., depth 17.4 ft., tonnage 1,813 gross, 1,095 net, and she is screw driven by engine of 153 h.p.

The White Star Line's s.s. Teutonic was sold by the British Admiralty recently, to a firm of Dutch shipbreakers, for breaking up. She was built at Belfast, Ireland, in 1889, and, at that time, was considered the world's finest passenger steamship. She did valuable service during the war, as a transport, etc., and it was considered that she was not worth the expense necessary to recondition her for service.

The s.s. Bayern, the first steamship carrying the German flag to enter New York harbor since the commencement of war in 1914, arrived there, Sept. 30. She is owned by the Hamburg-American Line, and is said to be the first of a series to be placed on the route by the company, in conjunction with the United American Line. She carried 2nd class passengers mainly, with a few first class, the accommodation for such being limited.

The Norwegian s.s. Royal, bound from North Shields, Eng., to Montreal, ran ashore on Mistaken Point, Newfoundland, Oct. 13, and is reported to have been abandoned. She was built at New-

castle, Eng., in 1902, and has the following dimensions,—length 365 ft., breadth 48 ft., depth 25½ ft., tonnage 3,833 gross, 2,497 net. She is not equipped with wireless and consequently did not obtain bearings from the direction finding stations.

The C.P.R. s.s. Grampian, which was badly damaged by fire, and which sank subsequently in 30 ft. of water, at Antwerp, Belgium, early in the year, will probably be back on her route on the reopening of St. Lawrence navigation in May, 1922. She was abandoned to the underwriters, and was raised and towed to England, where considerable work has been done on her. During the war she carried troops and supplies between Alexandria, Egypt, and the Dardanelles.

Furness Withy & Co. Ltd. is reported to have obtained a contract for the service of two first class passenger steamships in winter and one in summer between New York and Bermuda, and to have made arrangements for the erection of an hotel and golf course in Bermuda. It is also reported to have bought the Trinidad Shipping & Trading Co.'s business in Trinidad, including three first class steamships, which have been overhauls between New York, Grenada, Trinidad and British Guiana.

The C.P.R. will inaugurate a new steamship service early in December between Canada and the West Indies, the s.s. Sicilian sailing from St. John, N.B., Dec. 5, for Havana, Cuba, calling at Boston, Mass., and Nassau, Bahamas. It is stated that the service will be maintained throughout the summer, the Canadian port being Montreal. The s.s. Sicilian, which has been operating for some time between Canada, Havre, France; Antwerp, Belgium; and London, Eng., has been completely refitted for the West Indian service.

The American-Hawaiian Line's s.s. Arizona, bound from Tacoma, Wash., to Vancouver, B.C., struck a reef at Limekiln Point, near Roche Harbor, San Juan Island, Oct. 4, and tore a large hole in her hull. The Pacific Salvage Co.'s steamship Algerine was quickly on the scene from Victoria, and installed pumps on the Arizona, which kept the water from gaining while she made for Esquimalt, where she was docked for repairs. She is 471 ft. long, and is stated to be the largest ship which has been docked at Esquimalt. The dock there is 485 ft. long, with the gate fixed at the outer end. After a survey was made, tenders were asked for the repairs.

The C.P.R. s.s. Empress of Japan completed her 154th trip across the Pacific

Ocean, when she arrived at Vancouver, B.C., Oct. 10. She was built at Barrow, in-Furness, Eng., and brought to Canada in 1891, and at that time was the fastest steamship in the Pacific service, only being displaced by the newer C.P.R. Empresses. She is still in excellent condition, and recently completed the trip from Yokohama in a little less than 12 days, allowing for the meridian day, at an average of 16½ knots. She is still being operated with the original boilers. With the newer steamships already added, and to be added to the company's Pacific service, it has been decided to offer the Empress of Japan for sale.

The Cunard Line s.s. Ansonia is expected to be ready for service between Montreal and London, Eng., about the end of April, 1922, for the opening of St. Lawrence navigation in May. She will be about 13,000 tons gross, and will have accommodation for 486 cabin, and 1,178 third class passengers. Other of the company's new ships to be assigned to this route are Andania, Alania, Ausonia and Ascania, all being of similar type to the Ansonia. In place of some of the older ships, of similar names, which were lost during the war, when the Cunard Line lost 15, including all those engaged previously on the St. Lawrence route.

Elder, Dempster & Co.'s s.s. Calgary sailed from Montreal, Oct. 8, on her maiden trip to African ports, and reports state that the amount of cargo carried was not very encouraging, being only about a third of the capacity. It is, however, anticipated that when the world's business returns to normal, the service will be fully justified. The new ship, in built at Clydebank, Scotland, early this year. Her dimensions are—length 440 ft. lin, breadth 59 ft. 2 in., depth 31 ft. lin.; tonnage, 7,200 gross, 4,486 net, 11,000 d.w. The propelling machinery is of the geared turbine type, and she is fully equipped with refrigerating machinery, suitable for the route crossing the equator. There is accommodation for 12 first class passengers.

The Hudson's Bay Co.'s s.s. Baychimo returned to Montreal, Sept. 29, after establishing a post for the company at Pond's Inlet, Baffin Land, said to be the most northerly post yet established by the company. With the exception of the old time whaling steamships from Dundee, Scotland, she is stated to be the first freight steamship to go up that inlet. The ice conditions in the north were reported to be out of the ordinary, and though large icebergs were sighted, there was open water generally. During the

Ships Added to and Deducted From the Canadian Register During July, 1921.

time the ship was north she was in continuous communication by wireless with the company's s.s. Nascope, then in Hudson Bay. She was purchased by the H. B. Co. early this year, and was formerly the German s.s. Angermannfehn, built in Sweden in 1914 for the Baltic trade, about 1,200 tons gross.

The United States Shipping Board is reported to have severed relations with the Liverpool Lines Conference, because of inability to reach a satisfactory understanding with the latter regarding what it considers a proper U.S. participation in the ocean freight business from Egypt and elsewhere to U.S. ports and to Liverpool. Reports state that more than half of the Egyptian cotton crop is consumed in the U.S., and it is stated, on this ground the Shipping Board insisted that not less than 50% of this movement should be made in U.S. ships. A tentative agreement was reported to have been reached some time ago, on this point, providing that U.S. ships could participate in the Egyptian cotton freight business to the extent of 50% of the movement direct to U.S. ports, but nothing was agreed on as to the movement from Egypt to United Kingdom ports.

A London, Eng., press report stated recently that the Canadian Chamber of Commerce there had announced that a new steamship service between Canada and England, making the voyage in four days, was on the way to becoming an accomplished fact. Sir George McLaren Brown, European General Manager of C. P. R., London, who is President of the Canadian Chamber of Commerce, stated subsequently that the announcement was made by the publicity department without the knowledge or consent of the officials or members of the council, and was incorrect. Such a scheme has been talked of for many years, and has been laid before the Imperial Shipping Committee, but it is considered that no such step should be taken unless the governments of overseas dominions are all agreeable, and in any case, during the present condition of the shipping business, it is outside the range of possibility.

Maritime Provinces and Newfoundland.

The Eastern Steamship Lines reduced the passenger rate from St. John, N.B., to Boston, Mass., on Oct. 5, by steamship, to \$6, with \$2 additional for stateroom.

The Newfoundland schooner Marjorie Mahaffey ran ashore at Mistaken Point, Oct. 8, while bound to St. John's from Barbados, with molasses, and became a total loss.

The Commercial Cable Co. has deposited with the Public Works Department at Ottawa a description of the site and plans of an extension to its wharf at Halifax, N.S.

The Cape Breton Electric Co.'s s.s. Electronic was hauled out on the Sydney Marine Railway during September for general overhaul and repairs, prior to her winter service.

The s.s. Baleine, formerly a trawler owned in Dunkirk, France, and latterly owned by Leonard Fisheries Ltd., Canso, N.S., ran aground on Cape Hogg, near Sand Point, in Canso Strait, Sept. 30, during a heavy fog.

The Royal Mail Steam Packet Co.'s s.s. Chignecto was seized by customs off-

cials at Halifax, N.S., recently, when a quantity of rum was found while in the possession of members of the crew, who are West Indian natives.

The Halifax, N.S., Board of Trade announces that it is taking steps for the improvement of the cattle shipping facilities at that port, in view of the prospective large increase in the shipment of cattle to British ports during the winter.

The French steam trawler Gabrielle, which went ashore on Petries Lodge, near North Sydney, N.S., in Nov. 1920, and which was sold subsequently to F. Clarke, Sydney, N.S., for \$1,590, was refloated recently. It is stated that only slight repairs will be necessary to make her fit for service again.

Canada Steamship Lines' s.s. Manoa, which was to have made her last trip of the season from Montreal to Newfoundland, made additional sailings, Oct. 13 and 29, and will make a third additional sailing, Nov. 17, in response to requests from Newfoundland residents. The usual calls were made at Gaspé, Que., and Charlottetown, P.E.I. It is stated that the Manoa will make a series of special winter cruises to the south.

A steamship service has been started between St. John, N.B., and ports along the south shore of the Bay of Fundy, including Harborville, Halls Harbor, Scotts Bay, Hampton, Port Lorne and Port George. The s.s. Bay Queen is being used on the route, and two trips a week are being undertaken. Among those interested in the business are A. H. Ashton and H. Babbage, Halifax, N.S.

The lighthouse tower under construction at Liscomb Island, off the south coast of Nova Scotia, is expected to be completed about Nov. 10, when the present flashing red and white light will be shown therefrom. The tower is on land, 35 ft. above high water, and is 50 ft. northwest of the old lighthouse. It is octagonal in shape, and built of reinforced concrete, surmounted with an iron lantern at a height of 45 ft., the light being at an elevation of 72 ft.

The s.s. Bernard M., owned by Wedgeport Steam Trawling Co., Wedgeport, N.S., is reported to have been sold for service in the inter-island traffic in the West Indies. She was built at Wedgeport in 1919, and is screw driven by engine of 66 h.p. Her dimensions are,—length 142 ft., breadth 26.3 ft., depth 12.4 ft.; tonnage, 377 gross, 194 net. She is undergoing considerable alterations at Yarmouth, N.S., before sailing to take up her new service. The hull is being thoroughly overhauled, caulked throughout, and copper fastened below the water line. Hatches, winches, etc., are being changed to handle heavy freight, and the deck house is being extended to accommodate staterooms, and a number of second class passengers. The work is expected to be completed during November.

Ontario and the Great Lakes.

Keystone Transports Ltd. is reported to have bought the s.s. Neebing, recently engaged in U.S. coasting trade, for service between Montreal and Lake Erie ports.

The s.s. Ritchie, owned by Woodward Bros., Winnipeg, is reported to have been destroyed by fire at Davidson & Smith Elevator Co.'s wharf, Port Arthur, Sept. 28.

The Port Colborne & St. Lawrence

Navigation Co., a subsidiary of the Maple Leaf Milling Co., Toronto, has bought the s.s. International, in England, for its service between Port Colborne and Montreal. She arrived in Canada during October.

The U.S. Lighthouse Service is carrying out construction operations at the West Noeshish channel light stations 21 and 24, St. Mary River, and mariners are requested to check the speed of their ships as much as practicable, in passing, to avoid damage to the work.

The Lake Erie Navigation Co.'s steamship s.s. Marquette and Bessemer No. 1, ran aground at Farran's Point at the end of September, and was released Oct. 2, after having about 350 tons of her cargo lightened. Damage sustained was considered slight and she proceeded to Montreal after reloading her cargo.

The Marine Department has established a green steel cylindrical gas buoy, showing an occulting green light, west of Psyche shoal, and about 3 miles from False Ducks lighthouse, on Swetnam Island, to mark the position of the wrecked schooner Oliver Mowat. The buoy is placed immediately southeast of the wreck.

Canada Steamship Lines Ltd., as mentioned in our last issue, is considering the question of lengthening its s.s. Toronto by 40 ft., providing for an additional 32 staterooms. We are officially advised that it has not been definitely decided, but if it is carried out, the work will be done by the Collingwood Shipbuilding Co., at its Kingston yard.

Canada Steamship Lines' tug Mary P. Hall, which ran aground near Iroquois, while engaged in salvaging the s.s. City of Hamilton, in June, is reported to be sold to Donnelly Wrecking Co. Salvage Co. She has been overhauled and fitted for wrecking work, at Kingston. She was built at Ogdensburg, N.Y., in 1898, and was owned formerly by Montreal Transportation Co.

Four wooden barges arrived at Hamilton, early in October, in tow, carrying 3,000 tons of sulphur. This was mined in Texas and shipped to New York by the coast route, and from thence by the New York State barge canal to Buffalo, N.Y., and thence through Lake Erie, the Welland Canal and Lake Ontario. The towing from Port Delahouette to Hamilton was done by the Joseph L. Russell, owned by John E. Russell, Toronto. It is stated that this means of transportation is cheaper than the rail haul from New York to Hamilton.

Some objection seems to be apparent regarding the new U.S. ship channel in the St. Clair River, opposite Port Huron, Mich., and Sarnia, Ont. It is stated that a representative of several insurance companies visited the neighborhood recently, and inspected the channel, in connection with insurance risks, and is reported to have stated that it was improbable that insurance would be issued to protect ships using the channel. Interested shipping men, who have been watching ships passing from Lake Huron into the river, and on the course they have to take in entering the new channel while southbound, are reported to have stated that it is likely to prove a handicap rather than advantage to shipping.

The Mathews Steamship Co., Toronto, which bought the wrecked s.s. Francis Widia recently, has transferred her from the U.S. register to the Canadian register, and has changed her name to

Bayton. She was wrecked on the Pan-Canada Shoal, Lake Superior, in the autumn of 1920, and was refloated recently by Reid Wrecking Co., Sarnia, Ont., and overhauled and repaired by Port Arthur Shipbuilding Co., Port Arthur, Ont. She was built at Cleveland, Ohio, in 1904, with steel hull, on the channel system, with 3 watertight, and 2 non watertight bulkheads, electric lighting, steam pump wells, and hatches spaced 24 ft. centers. Her dimensions are—length 66 ft., breadth 50 ft., depth 28 ft., tonnage 4,682 gross, 3,368 net. The propelling machinery consists of triple expansion engines with cylinders 22, 35 and 58 in. diam. by 40 in. stroke, 1,460 i.h.p. at 85 r.p.m., supplied with steam by 2 Scotch boilers, each 13 ft. 2 in. diam. by 11½ ft. long, under forced draft.

Manitoba, Saskatchewan, Alberta and Northwest Territories.

The Marine Department has established four red and three black wooden spar buoys, to mark the outer entrance channel leading to Pine Creek, on the west side of Lake Winnipegosis, Man.

The Hudson's Bay Co. is reported to be making arrangements for building of a steamship hull at McMurray, Alta., to be ready for next year's service on the Athabasca River, in conjunction with the s.s. Distributor. It is said that the machinery, rigging, etc., from the company's s.s. Port Simpson are being transferred from Port Simpson, B.C., where that boat is now lying, for installation in the new hull. The engine and boilers were built by Polson Iron Works, Toronto, which built six sets of this type of machinery for the company's boats. The hull, it is said, will be 200 ft. long, and proportionate in width, to obtain as wide a distribution of surface as possible, for operation in shallow waters.

British Columbia and Pacific Coast.

The first direction finding station which is being erected by the Naval Service Department on the British Columbia coast at Tatooch, was completed and opened for service during September.

The Canadian Fishing Co.'s s.s. Celestial Empire ran ashore at Calamity Point, in the First Narrows of Burrard Inlet, Oct. 5, during a fog. She was released without much apparent damage.

The C.P.R.'s s.s. Princess Adelaide has been withdrawn from service on the Gulf route to be converted to an oil burner. The company's s.s. Princess Mary is undergoing a similar conversion.

A. Melville Dollar, Managing Director, Canadian Robert Dollar Co., has bought the U.S. submarine chaser, no. 300, and the fishing tenders from Vancouver shipbuilders for her complete refitting as a pleasure boat.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. Prince George was withdrawn from service at Prince Rupert, Oct. 16, and docked there for her annual overhaul. When this is completed, she will replace the s.s. Prince Rupert, which will also be overhauled at Prince Rupert.

Canadian National Rys. are reported as planning to equip the outer docks at Victoria with improved cranes and other machinery for handling lumber cargoes. It is stated to be the intention to develop the export lumber trade to South Africa,

via the Panama Canal for the Canadian Government Merchant Marine.

The C.P.R.'s s.s. Charnier is being overhauled at Victoria. She has a wooden hull, and was built at San Francisco, Cal., in 1886, being known formerly as Premier. She was placed in service in 1887 between Vancouver and U.S. ports, and has been operated continuously in the coast service ever since. In 1892 she was sunk by the U.S. s.s. Willamette in Puget Sound.

In connection with the loss of the C.P.R. s.s. Princess Sophia on the Vanderbilt Reef, in the Lynn Canal, Alaska, Oct. 15, 1918, a U.S. court at Seattle, Wash., has decided against the C.P.R. appeal to limit its liability to \$8,000, representing the fares and freight charges on the trip, thus opening the way for possible claims of \$3,500,000. Claims for approximately \$2,500,000 are stated to have been filed. It is announced that the company has appealed against the judgment.

The Grand Trunk Pacific Coast Steamship Co.'s autumn schedule was put into force Oct. 9, the s.s. Prince Rupert sailing from Victoria and Seattle on Sundays, from Vancouver on Mondays, arriving at Prince Rupert Wednesdays, and returning to Vancouver on Saturdays, and Seattle and Victoria on Sundays. The s.s. Prince John is running on the Vancouver, Prince Rupert and Queen Charlotte Islands route, sailing from Vancouver on Fridays, and returning on the following Tuesday week. The s.s. Prince Albert is taking the direct freight service between Vancouver, Seattle, Tacoma and coal ports, and Prince Rupert.

Mainly About Marine People.

Hon. C. S. Ballantyne, Minister of Marine and Fisheries, and of the Naval Service, who represented the St. Lawrence-St. George district of Montreal, in the last Dominion Parliament, is again a candidate in that constituency.

T. Barons, who is said to have been the wheelsman on the Michigan Central Rd.'s s.s. Transfer, the first car ferry steamship to cross the Detroit River, between Windsor and Detroit, in 1873, died at Windsor, Ont., Sept. 30, aged 71.

Captain C. Bissett, master of Canadian Government Merchant Marine s.s. Canadian Importer, which was disabled at sea recently while en route to Australia, and which is now at Victoria for overhaul, is a Canadian by birth and has been connected with navigation all his life. His handling of the Canadian Importer throughout the disaster has been favorably commented on. During the war he was engaged in chasing submarines in the Mediterranean Sea.

G. M. Bosworth, Chairman, Canadian Canadian Pacific Steamships, Ltd., and Mrs. Bosworth, are spending a few weeks at Hot Springs, Virginia.

W. F. Bullen, who died at Victoria, B. C., Oct. 2, aged 64, following a paralytic seizure, was one of the pioneers of shipbuilding there. He was born at London, Ont., Jan. 11, 1857, and moved to Victoria in 1878, when he became associated with the Albion Iron Works, and severed his connection with that company in 1893, when he founded the British Columbia Marine Railway Co., at Esquimalt, and built the first Crandall type of marine railway on the Pacific coast. A branch was afterwards formed in Vancouver, and a shipbuilding plant was

added in 1898 to the original plant. Among the ships built at this plant were the British Yukon Navigation Co.'s s.s. Casca; C.P.R. steamships Princess Beatrice, Princess Royal and Princess Maquinn, and the Dominion Marine Department's steamships Lillooet and Madge. The plant was sold to Yarrows Ltd., in Jan. 1914.

Capt. R. F. Carter, who was, for 35 years, master of the steamboat Maid of the Mist, which plies on the Niagara River, immediately below the Horseshoe Falls, died at his home at Niagara Falls, N.Y., Oct. 6, aged 75. He was well known to visitors to the Falls, and had a fund of interesting anecdotes connected with the district. He had taken part in several daring rescues from the river.

A. C. Fellows, Assistant Chief Engineer, Quebec Harbor Commissioners, was presented with a travelling bag by his associates, Oct. 10, on leaving Canada to take a position in East Africa.

Lieut.-Col. F. A. Gascoigne, D.S.O., Secretary-Treasurer, Canadian Pacific Steamships Ltd., was married at Montreal, Oct. 5, to Miss Louise Nellis.

W. I. Gear, Vice President, Robert Reford Co., and Mr. Gear, who have been travelling on the European Continent, are expected to return to Montreal early in December.

F. L. Hawken has been appointed canal overseer, Morrisburg, Ont., under the Railways and Canals and the Marine Departments.

C. A. Lebel, heretofore assistant agent, is reported to have been appointed acting agent, Marine Department, Montreal, vice R. A. Wallard, resigned.

Captain A. Simms, master of the Boston & Yarmouth Steamship Co.'s s.s. Prince Arthur, dropped dead from heart failure on the bridge of his ship, shortly after arrival at Yarmouth, N.S., Sept. 30. He was 58 years old and had been in the company's service for over 40 years.

R. A. Wallard, agent, Marine Department, Montreal, has resigned, effective Nov. 16, and in the meantime he has been granted leave of absence. He entered the civil service about 20 years ago, as private secretary to Hon. L. P. Brodeur, then Minister of Inland Revenue, and went with that Minister to the Marine Department, in 1906. He was appointed agent for the Department at Montreal in 1909. During the war, he served for 4½ years as a private in the French army, and latter portion in the railway transport, and was awarded the British military medal.

Canadian Built Ships Offered in England.—The motor auxiliary ships Cap Finisterre, Cap Horn, Cap Vert and Cap Vincent, built by William Lyall Shipbuilding Co., North Vancouver, B.C., in 1918, for the French Government, were offered for sale by public auction, without reserve, in London, Eng., Oct. 4. The Cap Finisterre and Cap Vincent were then lying at Alexandria, Egypt, and the Cap Vert and Cap Horn at Spezia. They are classed 12 Al at Lloyd's, and have about 1,800 d.w. tons capacity on a 20 ft. draught. The two at Alexandria, each have two oil engines, placed aft, 8 cylinders 14 x 18 in., by Sheffield Car Co., and the other two have, each, two 200 h.p. oil engines, placed aft, 8 cylinders 11½ x 15 in., by Atlas Imperial Engine Co. The ships are of the five masted schooner type, with twin screws.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Keywest-Oliver Mowat Collision.

Held at Montreal, by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capt. C. Lapierre and A. LeFebvre, into the collision between Keystone Transports' s.s. Keywest and the schooner Oliver Mowat, owned by R. G. K. Hepburn and Capt. T. L. VanDusen, Pictou, Ont., in Lake Ontario, about 1½ miles west of Main Dicks, Capt. VanDusen, the master, two of the crew losing their lives, Sept. 1. The schooner was employed in the coal trade between Oswego, N.Y., and Pictou, and was outbound from Pictou, under full sail. The evidence showed that she was on a starboard tack, close hauled, and sailing about 4 miles an hour. The side lights were stated to be in position and burning brightly. A torch light was carried, to meet the requirements of article 9 of the Rules of the Road for the Great Lakes, and which was brought out by the mate, and lighted at a certain stage, but the wheelsman stated that, after it was lighted, he did not see the glare or the reflection of the torch, but that the mate returned carrying a lantern. The court, having had experience of sailing ships, stated that had the torch been in working order, the glare reflection of the torch, supposedly in readiness for use in emergency, as required by the rules, would have been plainly perceived by the wheelsman, and it therefore, unhesitatingly, came to the conclusion that it had been neglected, that the oil for the torch had not been supplied, or had evaporated to such an extent as to render the torch ineffective. The schooner was being navigated properly, and had a perfect right to remain in her course, and maintain her speed against all other ships. A lookout was kept by both mate and wheelsman, as they saw the steamship's lights at some distance. In the course of the hearing, the question of undermanning was not mentioned, but as the schooner was permitted to sail with a crew of four men by existing authorities, the court had no reflection or criticism to launch on the subject. The make of the side lights, though they were not in accordance with adopted makes, did not contribute to the collision, but the court held that the non-effectiveness of the torch light, and the failure to exhibit the flare, indirectly contributed to it. With regard to the loss of life, the Keywest, when properly, remained in the gap for about 10 minutes sufficiently long to permit the crew of the schooner to escape, which the survivors did, and the opinion was expressed that had the boat been lowered, it might have been the means of saving another of the crew at least. The loss of the master was attributed to his chivalry in waiting to offer help to the cook, the only woman of the crew, and had he shown the *saave qui peit* inclination as the survivors did, he would have been present to enlighten the court as to what happened immediately after the impact. It seems peculiar that on the dangerous approach of the Keywest, more preemptory measures were not taken to awaken the master, than to tap at his window, and no evidence was offered as to what, if any, means were taken to rouse the others. The court paid tribute to the late Capt. VanDusen for his un-

selfish conduct, preserving fresh in the minds of the service and the public generally, unalterable devotion to duty, and what it implies. This also was applied to the mate, J. Corby, who, for lack of evidence, the court assumed, stood loyally by his captain, and also lost his life.

So far as the Keywest was concerned, she had all her lights, as required by the regulations, and her speed was justified, in view of the weather. The master, D. W. Whiteley, was on watch, and his second officer, C. F. Gildman, was a man of limited navigation experience, but possessed no certificate. The master, though it was his watch, was resting on a sofa within the wheelhouse, and could not by any means view the exterior surroundings. He was not asleep, but was in such a position that he could not be considered as keeping his watch. The second officer had been engaged in taking bearings of the Main Dicks and the False Dicks, immediately prior to the collision, and had returned to the wheelhouse, and noted the results of his observations in the scrap log. The lookout man, engaged as a watchman, was for some time before, and at the time of, the collision, in the galley lighting a fire in the stove, the second officer, for a minute before the collision, keeping a lookout through the only open window in the wheelhouse. From the evidence, and judging of its own experience, the court came to the conclusion that the lookout kept on the Keywest was not worthy of the name. A proper person should be detailed for the duty and placed in a position where he can have a full range of visibility without hindrance. Before the impact, on the appearance of the red light, the second officer ordered the helm starboard a quarter, then hard a starboard, which were also the master's orders. Under other circumstances, had there been time for reflection, such an order would have been considered improper, but under the circumstances it could be considered proper, as its effect with a sufficient margin of time, would have resulted in a more glancing blow, and in this instance it can be considered as a manoeuvre performed in the agony of collision. After the order hard a starboard was given, the door of the wheelhouse had to be opened to reach the telegraph to give the order, admittedly tardy, of full speed astern. The master's action in remaining in the gap caused in the schooner was proper, and his withdrawing from the gap to clear from the sinking schooner was also timely seamanship. The distance he withdrew was, according to the evidence, vague, and the court considered it nearer a quarter than a half mile, but why, when clear of the schooner's rigging he did not bring his ship to a stop, and promptly lower a boat, is surprising. If this had been done, another life might have been saved. The time taken, when the boat was eventually lowered, was considered by the court to be too long.

It therefore found that the master of the s.s. Keywest, D. W. Whiteley, was in default, and suspended his certificate, 9,011, for one year from Sept. 16, stating that as he is a young man it may serve him as a warning that as master of a ship has responsibilities with regard to the protection of property entrusted to his care, require constant vigilance, attention, presence of mind and alert-

ness. It also found the second officer, C. F. Gildman, in default, but as he does not hold a certificate, he cannot be dealt with other than by a severe reprimand, and a warning that a proper lookout is necessary at all times, and that he should take means to meet that requirement as well as any other in future. The court eulogized chief engineer Horton for the excellent keeping of the scrap and official logs. It considered that the schooner contributed indirectly to the collision, in not meeting the requirements of article 9 of the Rules of the Road for the Great Lakes, and that the loss of life is attributable primarily to the collision, but as prompt help was given by the Keywest, criminal intent or neglect to adopt proper means of rescue cannot be launched against the Keywest.

Stranding of s.s. Innetron.

Held at Quebec, Que., by Capt. L. A. Demers, Dominion Wreck Commissioner, assisted by Capts. C. Lapierre and R. G. Sprague, as nautical assessors, into the stranding of the s.s. Innetron on the east end of Red Island, in the St. Lawrence River, Sept. 12. The evidence showed that a pilot was taken on at Father Point, during a dense fog, and the ship was eventually anchored off Barnaby Island, and later the anchor was lifted and a course was set for the Red Island lightship, the weather becoming clear, with little or no wind, and an ebb tide flowing. The master, A. Harvey, had left orders to be called when the fog cleared, and this was done, but having been on deck several hours, the fog fell as clear, and the ship proceeded. The lightship was first seen about 2½ hours before the accident, on the port bow, and was kept so. The compass showed 2 deg. of deviation, the error having been ascertained by the pilot, Arthur Lachance. The second officer, P. Allan, stated that when he was relieved by the first officer, John Davies, the weather was clear, and the Red Island light was showing the four flashes at regular intervals, while the pilot stated that the weather was misleading, and that he thought the Red Island light was not showing the number of flashes. The second officer also said that the pilot appeared to be awake and was sober, which was also attested to by the other officers. The course was maintained, keeping the lightship on the port side, yet it was the intention to pass it on the starboard side of the ship. Before the pilot realized the blunder, he had altered the course to port a quarter of a point, and shortly after, the ship was on the rocks, and a starboard order was given, and the engines stopped. The first officer had looked at the chart, and saw there was water deep enough to navigate between Red Island and the lightship, likewise to the north, so that the pilot's action did not raise any apprehension in his mind, and as the weather was clear, there was no necessity for the master's presence on the bridge, hence he was not called until the accident occurred. The pilot had no reason or excuse to offer for his conduct in permitting the ship to proceed for such a long time after passing the lightship, but insinuated that the Red Island light did not give the usual flashes, and that the weather was such as to mislead, both of which contentions were absolutely refuted by other witnesses. The court stated that it had ascertained that the pilot's

work had not been very satisfactory in the past, and it failed to find any excuse for placing the ship in such a predicament. It was admitted that he was sober, and it cannot be said that he was non compos mentis. His attempt to cast reflections on the workings of the light was considered as subterfuge, as the second officer, who was bright, intelligent and evidently observant, declared that weather conditions, visibility and aids, were of the best. The only conclusion possible was that the casualty was inexcusable, and the court found that the master and his officers were free from blame, and were therefore exonerated, while the pilot, Arthur Lachance, was found solely in default, and the court, having in mind his previous record, cancelled his license.

Canadian Notices to Mariners.

The Marine Department has issued the following:—

57. Sept. 3.—152. British Columbia, Vancouver Island, west coast, entrance Quatsino Sound, uncharted rock. 153. British Columbia, Kootenay Lake, Rhinoceros Point, light established. 154. British Columbia Upper Arrow Lake, Arrowhead, light established.

58. Sept. 6.—155. Ontario, Lake Huron, Georgian Bay, Shebeshkong Channel, Pike Channel, improvements and additions to aids to navigation. 156. United States, St. Mary River, West Neeshish Channel construction operations, caution. 157. United States, St. Clair River, Port Huron ship channel. (U.S. channel), floating lights established and buoys discontinued or moved.

59. Sept. 7.—158. Nova Scotia, west coast, Yarmouth harbor, buoy established. 159. Nova Scotia, Northumberland Strait, Caribou Channel, Gulf Island and Doctor Island, beacons to be discontinued. 160. New Brunswick, north coast, Northumberland Strait, Richibucto Cape, color of range light.

60. Sept. 12.—161. Ontario, Lake Ontario, between False Ducks and Main Ducks Islands, wreck, buoys to be established. 162. Ontario, Lake Huron, Georgian Bay, new edition of chart. 163. Manitoba, Lake Winnipegosis, entrance to Pine Creek, buoy established.

61. Sept. 15.—164. Canada, soapstone stations established, warning to mariners. 165. Quebec, Gulf of St. Lawrence, Magdalen Islands, Amherst Island, character of light to be changed.

62. Sept. 17.—169. Ontario, Great Lakes and River St. Lawrence, dates to which lights will be kept in operation.

63. Sept. 28.—172. Nova Scotia, Bay of Fundy, Advocate Harbor, color of light to be changed. 173. Nova Scotia, south coast, Liscomb Island, new lighthouse tower, characteristic of light to be changed temporarily. 174. Quebec, River St. Lawrence, between Quebec and Montreal, Berthierville Channel, buoys established.

66. Sept. 29.—175. New Brunswick, Bay of Fundy, Petitcodiac River, McFarlane Point, light extinguished. 176. New Brunswick, east coast, Shippigan Gully, rearrangement of lights at entrance. 177. General, new flags to be flown by German and Austrian merchant ships.

67. Oct. 4.—178. Prince Edward Island, north coast, St. Peter harbor, temporary range lights established. 179. Quebec, Gulf of St. Lawrence, Chaleur

Bay, Paspébiac, new lighthouse tower erected. 180. Quebec, River St. Lawrence, between Quebec and Montreal, Lake St. Peter, Nicolet River, range lights established.

68. Oct. 6.—181. British Columbia, Barkley Sound, entrance to Alberni Canal, off Cherry Point, uncharted reef reported. 182. British Columbia, Vancouver Island, Victoria harbor, chart issued. 183. British Columbia, Seafarth channel, entrance to Raven cove, uncharted rock.

69. Oct. 11.—184. Quebec, River St. Lawrence, Lake St. Louis, Dorval, light to be increased in power. 185. Quebec, River St. Lawrence, Lake St. Louis, Pointe Claire, light to be increased in power. 187. Ontario, Lake Huron, Georgian Bay, entrance to Key Inlet, gas buoy replaced by spar buoy.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:

American Association of Port Authorities. M. P. Fennell, Jr., 57 Common St., Montreal.

Bellevue Railway Men's Educational Club. Tuesday, 7.30 p.m. F. A. Finkston, Belleville, Ont.

Canadian Car Demurrage Bureau—W. J. Collins, 601 St. Nicholas Building, Montreal. Canadian Electric Railway Association—L. E. Moreland, Hall Electric Co., Hull, Que.

Canadian Freight Association (Eastern lines)—G. C. Ransom, 609 Shaftesbury Bldg., Montreal. Canadian Freight Association (Western Lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.

Canadian Navigators Federation, Great Lakes Division.—Capt. R. D. Simpson, Owen Sound, Ont.

Canadian Navigators Federation, Pacific Division.—Andrew Goodlad, 1101 Rogers Building, Vancouver, B.C.

Canadian Railway Board of Adjustment No. 1—R. Chapple, 245 St. James St., Montreal.

Canadian Railway Club—W. A. Booth, 131 Charron St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Ticket Agents' Association, E. de la Hogue, London, Ont. Canadian Traffic League, A. H. Thorpe, 25 Balaam Ave., Toronto.

Dominion Marine Association—F. King, Council, Kingston, Ont.

Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.

Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.

Engineers' Club of Toronto—R. B. Webster, 84 King Street West, Toronto.

Engineering Institute of Canada—F. S. Keith, 115 Mansfield St., Montreal.

Express Traffic Association of Canada—C. N. Hargrave, Montreal.

Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.

Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.

International Water Lines Passenger Association—M. R. Nelson, 89 Chatham Ave., Buffalo, N.Y.

Niagara Frontier Summer Rate Committee—James Morrison, Montreal.

Quebec Transportation Club—A. P. Dion, Harbor Commissioner's Office, Quebec, Que.

Railways Association of Canada—C. F. Riddell, Montreal.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacrament Street, Montreal.

Transportation Club of Toronto—W. A. Gray, 257 Buxton Road, Toronto.

Transportation Club of Vancouver—C. E. Blundell, 1000 Pacific Avenue, Agent, Canadian Pacific Ocean Services Ltd., Vancouver, B.C.

Ship Plate Prices.—A London, Eng., press cablegram of Oct. 17 says that the northeast coast steel manufacturers have made a drastic cut of 70 shillings a ton in the price of ship plates, which are now 10 guineas a ton, compared with 24 10s. at the beginning of this year. The manufacturers declare that they are not merely sacrificing profits but are incurring big losses in order to encourage trade.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, or in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Canadian Brill Co. Ltd., which has been incorporated under the Dominion Companies Act, with an authorized capital of \$300,000 and office at Preston, Ont., has leased the Preston Car & Coach Co.'s plant there, with the option of buying it, and took over the responsibility of its operation, and all contracts held by the P.C. & C. Co. as of Sept. 1. The Canadian Brill Co.'s directors are:—S. W. Curwen, President, J. G. Brill Co., Philadelphia, Pa., President; H. K. Hauck, General Manager, G. C. Kuhlman Car Co., Cleveland, Ohio, First Vice President; A. W. N. Clare, Preston, Second Vice President; H. D. Scully, Preston, General Manager; E. P. Rawle, Treasurer, J. G. Brill Co., Philadelphia; D. B. Dean, Sales Manager, G. C. Kuhlman Car Co., Cleveland, and Robt. Gowns, of the company's solicitors office, Toronto. The J. G. Brill Co., Philadelphia, has subscribed for \$200,000 of the stock and is paying for it as the money is required. H. J. Titman, Superintendent, G.C. Kuhlman Car Co., has been appointed Superintendent at Preston, and will devote his whole time to the plant there for the first year or two. The company has the following orders on hand:—Timiskaming & Northern Ontario Ry., 6 standard cabooses; Toronto Transportation Commission, 50 motor cars; Hydro-Electric Power Commission of Ontario, 25 one-man safety cars, of which 18 are for Hydro Electric Railways, Essex Division, and 7 for Guelph Radial Ry.; Winnipeg Electric Ry., 5 one-man safety cars; and British Columbia Electric Ry., 10 one-man safety cars.

Independent Pneumatic Tool Co., Chicago, has removed its Toronto office, which is in charge of Wm. McCrae, from 32 Front St. West, to 163 Dufferin St., where larger premises have been secured, for carrying pneumatic tool, electric tools, spare parts, and accessories.

Lyman Tube & Supply Co., Montreal. C. P. Lyman, of the Lyman Tube & Supply Co., was killed near Albany, N.Y., Oct. 20, when his automobile overturned in a ditch, as he turned to avoid a collision with another car.

Northern Crane Works, Walkerville, Ont., has issued bulletin 504C, describing and illustrating the Northern standard type E electric crane.

Shipbuilding in the United States.—The U.S. Bureau of Navigation reports that during August, 73 ships with an aggregate of 78,415 gross tons, were built. Of these ships, 9 with a total of 64,120 tons, 3 barges, total 1,053 tons, and 1 motor boat of 29 tons, were of steel. Of the 9 steel steamships, 5, total 41,481 tons, were launched on the Atlantic seaboard, 3, total 21,232 tons, were launched on the Pacific seaboard, and 1 of 1,407 tons was launched on the Great Lakes. In addition to the foregoing, 2 oil tank steamships totalling 11,790 tons, were built on foreign account.

Man-Power Multiplied

If you are looking for a powerful, dependable worker and are seeking lowest production costs, the Brownhoist No. 2 Locomotive Crane will completely satisfy your every desire.

"Man-Power Multiplied" tells in an interesting way how many companies are cutting material handling costs. It also gives the No. 2 Brownhoist Crane capacities. Write for a copy today.

ANOTHER BEAVERDUCT INSTALLATION

BEAVERDUCT has been adopted by the Toronto Transportation Commission for use on their new street cars. Once again, quality has fittingly demonstrated its ability to withstand competition.

Beaverduct is "Made in Canada" in a modern plant under the supervision of the best engineers available. Beaverduct is produced under the underwriters' inspection. Its use on such an installation as the new Toronto Street Cars is a fitting testimonial of its superiority.

Good conduit can only be produced in a plant when the equipment permits only absolutely clean material being used. Electrical apparatus and plating solutions must be kept up to the mark under scientific management. The proper application of the enamel, after the galvanizing of the outside, is of vital importance. And, lastly, rigid inspection.

*Always specify
"Beaverduct"*

Q & C Rolled

Dependable Service—

The tide of buying preference has turned to those products whose trade marks carry the assurance of dependable service.

There is a constancy about the economical and endurance qualities of the Q & C Rolled Steel Step Joint that steadily wins careful joint purchasers. It has been our aim to build the strongest and most economical compromise joint made, putting into its structure the results that only honest metal, devoted workmanship, and design could obtain.

Combined with their feature of strength—which under actual test has been proven many times stronger than cast metal—Q & C Rolled Steel Step Joints embody the factors of safety and economy. By our process of manufacture a rolled steel joint

Steel Step Joints

with the Bonzano and Thomson features is pressed to fit any rail section. This process involves heat treatment which further strengthens the joint and also permits pressing to a perfect fit. On your road you want the Step Joints that are most efficient. A card will bring you any information. Write us today.

We Also Manufacture

Derails, Replacers, Rail Braces, Rail Benders, Rail Saws, Snow Plows, Snow Flangers, Guard Rail Clamps, Guard Rail Braces, Electric Snow Melters, Rolled Steel Step Joints, Bonzano-Thomson Rail Joints.

HIPOWERS

HELP CARRY THE LOAD

MECHANICAL

Hipowers possess high reactive pressures to distribute the force of train blows to all bolts, cushion the heads and nuts and compensate for any wear and stretch of bolt.

OPERATION

Hipowers prevent bolt breakage, eliminate battering of rail ends, reduce breakage of angle bars and minimize the cost of retightening track joints—all of which are expensive items in operating costs.

SAFETY

Hipowers effectively and permanently maintain the bolted security of track jointed parts over which trains must be safely directed to their destination.

Reduce Costs In Three Ways

Item one—*Mileage*: Galena Car, Engine, Coach and Valve Oils give most miles to the pint. Not sometimes, but *always*.

Item two—*Fuel*: The superior lubricating efficiency of Galena Oils reduces the frictional load and conserves power in the prime mover, effecting substantial savings in fuel.

Item three—*Repairs*: The vitality, or lasting *body* of Galena Oils, gives endurance—the ability to protect and preserve equipment, with the consequent reduction of repairs and replacements.

These are three characteristics of Galena Oils that have been demonstrated too often in competitive tests to admit of dispute. Any one of the three provides sufficient saving in operating costs to offset their slight price difference over ordinary oils.

The cost of oils, as compared with other maintenance costs, is a small item. But *lubrication*—not oil—is what the railway uses, and the cost of fuel and repairs is greatly dependent upon the quality of the lubrication secured.

When these factors are considered, the *real* cost of cheap oils shows up as about double the cost of Galena brands.

*"Galena Quality Is Our Bond
and Your Security!"*

Cross-section of a Barrett Specification Roof. Note the uniform distribution of Pitch between the layers of Felt.

Right Construction is *Half* the Roof—

STUDY these illustrations. They graphically show the successive steps in the building-up of a Barrett Specification Roof over a concrete roof-deck. The Barrett Specification describes in detail the manner in which the roof shall be laid, because *right construction is just as important as the use of right materials.*

The Barrett Specification Roof for flat or nearly flat roofed buildings, consists of several alternate layers of Specification Pitch and Specification Felt, with a surface covering of gravel or slag. These materials are used because 60 years' experience has proved—

- that no other bitumen has the weather-resisting properties of this high grade pitch;
- that no other kind of felt has the lasting tensile strength of this carefully selected felt;
- that no other surfacing material renders a roof so highly fire-resistant as gravel or slag which serves the further purpose of holding in place the extra-thick *poured* top coat of Barrett Specification Pitch.

Have your roofing contract call for the 20- or 10-year Surety Bond Guaranty. This is issued free of charge through the Montreal Branch of the U. S. Fidelity and Guaranty Company. Then you will be sure that Barrett Specification materials will be applied, in sufficient quantities and by proper methods. For all Barrett Specification Bonded Roofs are constructed under the watchful eye of an experienced Barrett inspector who is present on the job to see that the Specification is strictly complied with.

Before specifying or closing contract for a Barrett Specification Roof, be sure to read carefully all the stipulations in the Specification.

Full details regarding these Bonded Roofs and copies of The Barrett Specifications sent free on request.

Saving Time on Toronto's Streets

THE tracks on Toronto's streets were deplorable. The Transportation Commission knew this. Their very first job on taking over the Street Railway was a policy to correct these conditions.

People of the community are marvelling at the speed with which new tracks are being completed.

But the efficient Lincoln Carbon Arc Process is a great help. It is the very apex of efficiency. It joins rails with remarkable rapidity. It is being used entirely by the Toronto Transportation Commission as well as by every large Street Railway in the U.S.

The Lincoln Carbon Arc Process is something that every Engineer of Maintenance and Way should know about. We have some very interesting particulars that we will place in the hands of any reader of Canadian Railway and Marine World on request.

Dearborn Service Saves Dollars In Locomotive Operation

It is a case of *real saving*, accomplished on a scale the extent of which it is difficult to compute, when it is remembered that the savings relate to such matters as fuel, lubrication, boiler washing, time of the locomotive in service, life of boiler tubes, and repair outlay, all items that enter into the *daily operating expense*.

With the use of Dearborn Treatment considerable increase in the mileage between boiler washings is accomplished. This, in turn produces a saving in fuel, and boiler washing expense, and reduces the time the locomotive is out of service.

There is also a vast saving in fuel consumption due to keeping the heating surfaces free from scale.

In the prevention of foaming by the use of Dearborn Treatment, the fuel saving is a large item,—as well as water and lubrication,—in addition to which the operating conditions are greatly improved, and engines are enabled to haul full tonnage with no delays because of foaming.

Dearborn methods of Water Treatment are scientific, yet simple, practical, and inexpensive. Send samples of your bad water supplies for analysis, and let us advise regarding treatment. There is no charge for the analytical work.

For
Motors and Generators
not up to par
**MORGANITE
BRUSHES**

OFTENTIMES motor troubles are due to inferior and unsuitable brushes. One sure way to eliminate such troubles is to equip motors with the right grade of *Morganite Brushes*.

The time and thought put into the selection of the most suitable grade of brush for any given set of conditions are amply justified by the results obtained.

Morganite

brushes are made in an infinite variety of shapes and sizes and in the following distinctive classes:

Standard Morganite Brushes
Hard Morganite Brushes
Copper Morganite Brushes
Morganite Carbon Brushes
Morganite Electro-Graphitic Brushes

Our research laboratories have rendered the most valuable help to the electrical profession. We will be glad to know your brush requirements and to recommend the proper *Morganite Brush* for any general or specific use.

Franklin Steam Grate Shakers keep the fires clean on the road and make better steaming engines

Long Runs

By encouraging cleaner fires the Franklin Steam Grate Shaker promotes better combustion—better steaming.

In long runs recently made by Franklin Steam Grate Shaker engines, the value of keeping fires clean on the road was again demonstrated.

When the Steam Grate Shaker engines reached their terminals the fires were of even depth and free from clinkers. Then they doubled the division.

Time and labor in cleaning fires at the ash pit was saved—something hand grate shakers don't do.

Dick's Original Balata Belting for Railway Car Lighting

has proved the ideal transmission. For unfailing service, in winter and summer, it has been installed with absolute confidence for many years, because the special nature of the gum used in its manufacture makes it less susceptible to climatic conditions. Its greater strength, flexibility, gripping power and durability effect big savings in avoiding breakdowns and in reducing maintenance costs.

In securing the right belt for all drives lies the great economy of buying belting from the nearest Fairbanks-Morse Branch House.

Choose

AND

Use

Use mohair—Chase Goat Brand—for it is the logical and most practical of all fabrics. Why? Because it is **DURABLE**—lasting according to quality from eight to twenty-five years. Mohair fibre is two and one-half times stronger than wool—according to Government tests—

Because it has **RICH APPEARANCE**—

Because it is **SANITARY**—tests by Leading Railroads of America have proven it so. Particulars on request—

Because it is **FAST IN COLOR**.

For more than thirty-three years CHASE Goat Brand Mohair Plush has been the standard with America's largest railroads and steamship lines.

Recently there was exhibited a seat covering in excellent condition after a constant service of twenty-four years. It was CHASE Goat Brand Plush.

STAYBOLT TAPS

The Better the Man, the More He Appreciates Them—

Not only good when new, but heat treated and seasoned to maintain this goodness. Can be ground on face of cutting edge without affecting their size. That's why you'll find Pratt & Whitney Stay Bolt Taps on the job long after cheaper, "just as good" tools are buried in the scrap pile.

Threads accurately and cleanly cut, with the least expenditure of time and effort, are other reasons why these better Taps are favorites in the shop.

If you've used them before, you know just how good they are. If you haven't, send us your first order—we know you'll be back for more. They're carried in stock in our sales rooms in all large cities.

Canadian Railway and Marine World

December, 1921

Canadian National Railways' New Locomotive Terminal at Moncton.

The importance of the locomotive terminal in relation to the whole scheme of railway operation is realized more fully now than at any time in the past. While the investment in locomotive terminal facilities is small, as compared to the total investment in road and equipment, yet on the investment in these facilities, and on the manner in which it is expended, depends to a large extent the character of the transportation service rendered, and the return on the total investment. A locomotive terminal should be such that all locomotives working out of, or turning at, the point where it is located, can be handled with the maximum of economy and dispatch, and such that a continuing high degree of locomotive maintenance between shoppings is effected. Experience indicates that the two functions are interdependent, in that at a terminal where the turning and handling facilities are thoroughly adequate,

trains are using this track for the time being, the station and yard connections being shown. The new locomotive facilities are being constructed north of the temporary St. John Subdivision main line, the reason for moving the old main line being to permit of their re-location. The permanent main tracks for the St. John Subdivision will be located to the north of the new locomotive house, as indicated. A westerly extension to the existing yard will be possible, and will be undertaken as business requires, when the present locomotive handling facilities, shown in fig. 1 at A and B are removed, which will be done on completion of the new facilities. Yard capacity will ultimately be extended by constructing a new yard to the south and west of the new locomotive house, when increase in business warrants, so that eventually the terminal will have east and west yards, with adequate track connection between.

to, in connection with each other, in order to show the location of the locomotive handling tracks in relation to the terminal layout as a whole. The facility in movement of locomotives to passenger trains at the station from the new house is evident, no reverse movements being required. The location of the old locomotive houses involved considerable reverse movement to get locomotives to port to that probability. The locations of coaling plant, sandhouse, water columns and ash pit in the new layout indicates that locomotives will be handled with the minimum of lost motion and reverse movement, while the fact of there being two inbound and two outbound tracks to and from the turntable gives further support to that probability. The locations of the machine shop, power house and stores building are also shown in fig. 2. The facilities provided by the locomotive houses which have been used up to the

Fig. 1. General layout, Canadian National Railways Locomotive Terminal, etc., Moncton, N.B.

the running repairs are generally of a high order; conversely, when fire cleaning, coaling, watering and other facilities are inadequate, and locomotives remain bunched on the shop tracks awaiting their turn to get into the house, it will generally be found that the running repairs are made on a "one more trip" basis.

In line with a policy of providing necessary and adequate facilities as business demands, the Canadian National Rys. are constructing new facilities for locomotive handling and running repairs at Moncton, N.B. Fig. 1 is a plan of the terminal layout, showing some of the principal tracks and buildings. As is evident, the location of the new locomotive terminal facilities carries with it the possibility of greatly extending the yard facilities, although it is not contemplated that this latter work will be done in the near future. The present yard tracks extend about east and west, south of the Y at the entrance to the terminal from the north, while the old 12-stall locomotive house, indicated by A on the plan, and a 24-stall house immediately adjoining, indicated by B, are located south of the yard, toward the west end. The old main line of the St. John Subdivision, shown in its original position in fig. 1, has been moved south as also shown. St. John Subdivision

Passenger trains from Montreal, which run into Moncton over the Campbellton Division, have hitherto entered from the north, passing over the east leg of the Y, to the station, and continuing on their way to Truro and Halifax as shown. A cutoff has been built which will bring the Campbellton Division trains in from the west, over the St. John Subdivision main line, the cutoff leaving, the Campbellton Division about 3 miles west of the station and reaching the St. John Subdivision track about 2 miles west of the station. The Moncton railway shops are located as shown by the inset sketch map, fig. 1, the Campbellton Division trains passing near them. This inset also shows the location of the cutoff. The track between the terminal and the point where the cutoff leaves the Campbellton Division will be retained. Originally intercolonial tracks entered from the north and later the National Transcontinental also came in from the north, closely parallel, but the Intercolonial track was taken up, and all movements to and from the terminal in this direction are now made over the N.T.R. rails.

Fig. 2 shows the layout of the new locomotive facilities. The system of tracks leading from the locomotive house as shown in fig. 2, connect the new track, the switches being shown at E, E, E, E, in fig. 1, the two figures being referred

present, as shown in fig. 1 at A and B, are not adequate to handle the locomotives required for the present business. A is a 12-stall house, of wood construction; B, a 24-stall house, of brick, was such that, since its construction, additions had to be built on the stalls to accommodate the larger power now being operated. The freight car repair yard and building, shown in fig. 1, are entirely modern and adequate, and will be retained in their present position in the new terminal scheme.

The new locomotive house will be of brick, on concrete foundations, with tar and gravel roof. There will be 40 stalls altogether, 33 being 100 ft. long, while 7 (nos. 20 to 26 inclusive) will be 120 ft. long. The long stalls are to be equipped with drop pits for driving, engine truck and tender truck wheels. Fig. 3 shows a cross section through one of the long stalls. The locomotive house will be connected by passageways to the machine shop and power house, the passage to the machine shop being between stalls 22 and 23, and that to the power house between stalls 28 and 29. All pits will be of concrete, with slope and drainage facilities so arranged that there will be no possibility of water accumulating in them. The turntable to be used will be the 85 ft. one formerly in use at the old 24-stall house. It will be driven by air

system which heats the locomotive house and machine shop, and will have sufficient window area to ensure adequate natural lighting. The fan room will be at the east end of the building, adjacent to the locomotive house. Air will be drawn in among steam pipes, arranged in coils, and driven through ducts leading to the locomotive house, machine shop, and other portions of the power

indicated by fig. 5. The offices are to be at the west end of the building, and will consist of separate rooms for the locomotive foreman, clerk, timkeeper and storekeeper respectively. A locker room for locomotive crews, equipped with modern lockers for clothes and personal effects, will be a feature of the arrangement, while a separate room for the posting of bulletins, and for crews to regis-

hopper at the south side of the coaling plant, and elevated by a motor driven bucket conveyor system.

The sand house, adjacent to the coaling plant, will be equipped to serve the same tracks. The sand will be dried by special stoves located on the ground floor of the sand house, and elevated to the storage bin by compressed air.

The water tank, of steel construction,

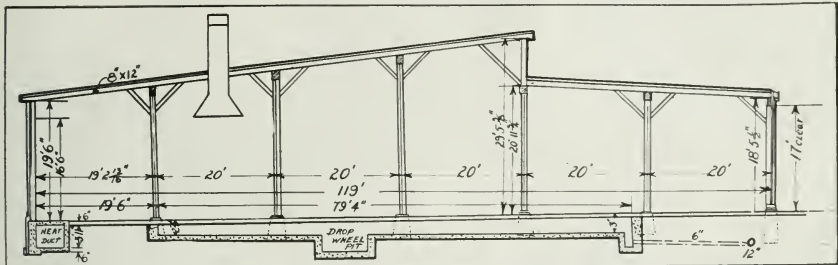

Fig. 3. Cross section through drop wheel pit stall, Canadian National Railways, Locomotive House, Moncton, N.B.

house. Some of the power house equipment will be obtained from the old locomotive terminal power house.

The stores building is located between the new main line of the St. John Subdivision and the tracks leading to the new locomotive house, as shown by fig. 2. Fig. 5 shows the floor plan of this building. It will be 99 ft. 4 in. long by 32

feet in and out, will also be included in the layout. These two latter rooms, and the offices, are to have hardwood floors. The oil room, in the central part of the building, is to be equipped with a set of measuring pumps. The east end of the building will be equipped with eight racks of shelving, each 10 ft. long, 10 ft. high and 4 ft. wide, for storage of miscel-

laneous supplies. The water service equipment will consist, in addition, of 4 standpipes located in a row west of the coaling plant, so as to serve all tracks. The water is obtained from the city mains.

The two ash pits will be located as shown in fig. 2, so that each will serve two tracks. A track between the pits,

Fig. 4. Plan of Machine Shop, Canadian National Railways Locomotive Terminal, Moncton, N.B.

ft. 8 in. wide, of similar construction to the other buildings, and will be served by a track connecting to the most northerly of the locomotive house tracks, and running to the north side of the building. Platforms, the dimensions of which are given in fig. 5, are to be provided at both sides and at the stores end of the building, with ramps on both sides at that end. The interior arrangement is

laneous supplies, leaving a space of about 14 ft. for the storage of heavier supplies and parts. The building will be heated by steam coils, the steam being piped from the boiler room in the power house.

The coaling plant, a 350-ton installation, located as shown in fig. 2, is to be of wood, and arranged to serve three tracks. The coal will be unloaded in the

located so that cars on it will not interfere with movements to and from the turntable, is provided for handling cinder cars. The firebrick lined pits will be much deeper than usual, and with a good slope to the sides. A self propelling small clamshell crane, used in connection with the handling of coal at the terminal, will be used in filling cinder cars from the ash pits, operating on the track

between the pits.

The new locomotive terminal will take care of the locomotives operating between Truro and Moncton, Springhill Subdivision, 124.75 miles; between Point du Chene and Moncton Division, 19.11 miles; between Moncton and St. John, St. John Subdivision, Moncton Division, 89.31 miles; between Moncton and Buctouche, Buctouche Subdivision, Moncton Division, 32.4 miles; between Moncton and Napadogan, the western terminus of Chipman Subdivision, Edmundston Division, 106.67 miles west of Pacific Jet, and 117.49 miles west of Moncton, on the N.T.R., and between Moncton and Campbellton, Harcourt and Bathurst Subdivisions, Campbellton Division, 185.57 miles; a total of 568.63 miles.

found in the Railway Act, 1906, sec. 254, subsec. (4), which reads as follows:—

"254. (4) Wherever the railway passes through any locality in which the lands on either side of the railway are not inclosed and either settled or improved, the company shall not be required to erect and maintain such fences, gates and cattle guards unless the Board otherwise orders or directs."

The acts of 1911, chap. 22, repealed sec. 9, subsec. (4) of sec. 254 and enacted the following in lieu thereof:—

"4. The Board may, upon application made to it by the company, relieve the company, temporarily or otherwise, from erecting and maintaining such fences, gates and cattle guards where the railway passes through any locality in which, in the opinion of the Board, such works

ing an affirmative vote. the proposition as restated was as follows:—"On house cars (other than refrigerator cars) with steel underframes or steel center sills having a center sill area of not less than 24 sq. in., when an end requires repairs consisting of new posts and braces, the ends shall be replaced with ends specified for new cars, this to be done by or under the direction of the car owners."

The total number of memberships represented in the Mechanical Division on car matter is 349, and the cars owned and controlled by these members 2,683, 274. Votes for car standards are on the basis of one vote for each 1,000 cars owned or controlled. The majority requisite for approval is two-thirds of the votes cast. The vote on the foregoing proposition was as follows:—Voting Yes,

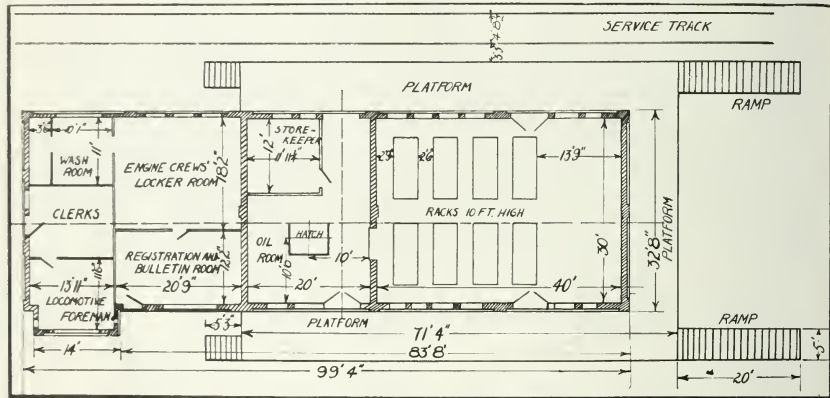

Fig. 5. Floor plan, Stores and Office Building, Canadian National Railways Locomotive Terminal, Moncton, N.B.

The design and construction of the buildings are being carried on under the supervision of A. F. Stewart, Chief Engineer, Canadian Government Rys. and National Transcontinental Ry. east of Armstrong, Ont.; H. J. Crudge, Assistant Engineer of Buildings, and R. G. Gage, Signal and Electrical Engineer, have charge of the buildings and mechanical equipment, respectively. The work in the field is under the direct supervision of S. B. Wass, Construction Engineer, H. L. Currie and E. R. Evans, Assistant Engineers, are in charge, respectively of the buildings and grounds. Work was begun on the new facilities in May, and it is expected that they will be in operation early in the winter.

Railway Companies' Duties as to Fencing.

The Board of Railway Commissioners has issued the following circular: Numerous complaints are being made to the Board as to inefficient fencing by railway companies along their right of way, and it appears to the Board that, in many cases, these complaints are being viewed from the wrong standpoint. For many years prior to 1911, the Railway Act contained a provision that, in some cases, fencing was not required unless specifically so ordered by the Board. This is

and structures are unnecessary."

This is in the present Railway Act as sec. 274, subsec. (4). It will thus be seen that it is the duty of every railway company to fence every portion of its right of way, unless specifically relieved from so doing by an order of the Board, and, in the future, the Board is of opinion that, whenever an application is made for fencing, it should go as a matter of right, unless the railway company can show valid reasons why it should be brought under the provisions of the present act, sec. 274, subsec. (4).

Rule for Replacing Car Ends When Broken Out.

The American Railway Association Mechanical Division committee on car construction's report, submitted at the annual meeting at Atlantic City, N.J., June, 1920, contained a proposed rule, which was submitted to letter ballot, requiring that when ends of cars are broken they should be replaced with ends specified for new cars. This letter ballot failed to receive sufficient votes for adoption. The matter was considered by the general committee, and, owing to the evident misunderstanding of the purport of the recommendation, that committee ordered a special letter ballot to be taken restating the proposition and recommend-

208 memberships, representing 1,935,188 cars owned or controlled, 1,223 votes. Voting No, 103 memberships, representing 700,000 cars owned or controlled, 688 votes. Not voting, 38 memberships, representing 48,085 cars owned or controlled, 51 votes. The foregoing proposition has been approved by the Mechanical Division's general committee, and by the American Railway Association's directors.

Therefore, that the proposition to adopt a rule for replacing ends of cars when broken out, in effect as of the effective date of the Rules of Interchange for 1921, is approved, the word "shall" in the fourth line to be changed to "should."

An Authority on Age.—A Toronto subscriber writes: "I was talking with a friend the other day, who told me of a case in which biographical data published in Canadian Railway and Marine World had been used in proving the age of a person for insurance purposes, so that I can see its value in addition to that of current interest."

Edmonton Track Connections. — The Board of Railway Commissioners passed order 31,693, Oct. 21, authorizing the Canadian Pacific, the Edmonton, Dunvegan & British Columbia, and the Canadian National Railways to operate over connecting tracks at Edmonton, Alta.

The Grouping of Railways in Great Britain.

The Railways Act, which has been passed by the British Parliament, provides for the future of the English, Scotch and Welsh railway systems after their having been under Government control from Aug. 15, 1914. The bill became operative Aug. 15 (four days before it was actually assented to), on which day the railways reverted to the several owning companies for operation. The act provides for the payment to the railways by the Government of the sum of £60,000,000 as completion of compensation arising out of the period of Government control, one half of this amount is to be paid at the end of this year, and the remaining half at the end of 1922.

As introduced by Sir Eric Geddes, Minister of Transport, on May 12, the bill was divided into six parts, and contained over 700 sections. A summary of it was given in Canadian Railway and Marine World for August, pg. 429. In passing through the two houses a number of amendments were made in each part of the bill, but in almost every case they affected matters of detail only, and did not touch the general plan of the measure or alter any of its principles.

The first part of the act provides for the amalgamation of the railway systems into four groups, instead of six as proposed at the outset, the proposed two Scottish groups being merged respectively in the Northwestern-Midland Group, and the Northeastern and Eastern Group. Another change made was to bring the Cambrian Ry. as a constituent company in the Western Group; and some minor changes were made in the subsidiaries of several of the groups. Determined efforts were made up to the end to detach the Hull & Barnsley Ry. from the Northeastern and Eastern Group, and to leave it as an independent line, but without avail.

The act provides for the amalgamation of what are termed the constituent companies, and then upon completion of this process, for the absorption by the four amalgamated companies of the various subsidiary companies situated within the territory. The companies are given until Jan. 1, 1923, to carry out the amalgamations provided for, and in the event of their not being carried out by agreement, a tribunal is provided for the settlement of the plan for their amalgamation. Under the plan laid down the only company which will retain its corporate identity is the Great Western Ry. Co.

Following are particulars of the four groups, the constituent companies of each and the mileages:

(1) Southern Group:—		Mileage	Total
(1) Southern Group:—		Mileage	Total
London & Southwestern	1,035		
London, Brighton & South Coast	487		
London & Southwestern and London, Chatham & Dover	637		
			2,159
Together with 15 subsidiary companies.			
(2) Western Group:—			
Great Western	2,996		
Cambrian	300		
Hereford & Gloucester	135		
Cardiff	135		
Rhymney	61		
Taff Vale	124		
Alexandria Docks & Ry. (Newport)	9		
			3,662
Together with 35 subsidiary companies.			
(3) Northeastern and Midland Group:—			
London & Northwestern	1,015		
Midland	1,520		

Lancashire & Yorkshire	601	
North Staffordshire	218	
Furness	139	
Calanderian	1,118	
Glasgow & Southwestern	493	
Highland	492	6,596
Together with 28 subsidiary companies.		
(4) Northeastern and Eastern Group:—		
Northeastern	1,759	
Great Central	629	
Great Eastern	1,191	
Great Northern	1,053	
Hull & Barnsley	78	
North British	1,399	
Great North of Scotland	334	6,441
Together with 24 subsidiary companies.		

Total mileage of constituent companies...15,858

At the outbreak of the war the 30 principal railways in England, Scotland and Wales were reported to have had a total of 18,463 miles, or 395 miles less than the aggregate mileage of the 25 constituent companies of the four groups mentioned above. Of the remaining principal railways, there are six metropolitan lines in London, having a total length of 126 miles, and the Maryport & Carlisle Ry., 43 miles. The mileages of other independent lines is negligible. The mileages of subsidiary companies in many cases are included in the mileages of the several constituent companies, on account of the fact that they are controlled or operated by the larger companies. The nearest line in Ireland owned, controlled or operated by the Great Western Ry., the London & Northwestern Ry., and the Midland Ry., are apparently not included in the mileages given in the above table.

Each of the four groups has large terminal accommodation in London, the Southern Group having Waterloo, Victoria, Charing Cross and London Bridge; the Western Group, Paddington; the Northwestern and Midland Group, Euston, St. Pancras, Fenchurch St.; and the Northeastern and Eastern Group, Marylebone, Liverpool St., Kings Cross. The Northwestern and Midland Group is particularly well situated for import and export business from the port of London, through the Midland Ry.'s ownership of the old London, Tilbury & Southend Ry., operating from Fenchurch St., along the north shore of the Thames, and past the great new docks at Tilbury. The English Channel ports are served entirely by the London & Southwestern Ry. and the Great Western Ry.; Bristol, Bristol Channel and all Welsh ports, by the Western and Northwestern and Midland Groups; Liverpool and Manchester and Cheshire ports, by the Western, Northwestern and Midland, and Northeastern and Eastern Groups; while the Northeastern and Eastern Group has practically the monopoly of the east coast ports north of London, Goole being the only important port reached by the Lancashire & Yorkshire Ry. of the Northwestern-Midland Group.

On looking at a map with the lines marked off in their separate groups, it will be seen that practically the whole of the mining and industrial areas of England and Scotland are served by the Northwestern and Midland, and the Northeastern and Eastern Groups, each with three terminal stations in London, and each having an east to west connection between the North and the Irish seas, the former by the Lancashire & Yorkshire Ry., and the latter by the old Manchester, Sheffield & Lincolnshire Ry. (now

part of the Great Central Ry.), and the Hull & Barnsley Ry. The Western Group, in addition to covering the south Welsh industrial field, cuts into the west side of central industrial England, with lines into Wolverhampton, the Shropshire and north Welsh coal and iron fields, and Birkenhead, while both the London & Northwestern Ry. and the Midland Ry. cut into the south Wales industrial district, by lines from Craven Arms and Hereford respectively.

The area of England, which is predominantly agricultural, served by the Southern and Western Groups, and by the Great Eastern Ry., of the Northeastern and Eastern Group. The chief military and naval centers of Britain are served by the Southern Group lines, Plymouth and Devonport being served also by the Great Western Ry. The Great Eastern Ry. carries on a continental passenger route via Harwich; the Southern Group lines operate daily steamboats to Belgium and France, by Queenboro, Dover, Folkestone and Newhaven; and the Great Western Ry. operates steamboats to the Channel Isles and France via Weymouth; while the Southern and Western Groups divide most of the overseas mail traffic between them via Southampton and Plymouth.

The amalgamations tribunal will probably be called upon to adjust matters affecting joint lines, particularly those owned jointly by constituent companies of different groups. Three such lines may be referred to in particular. The Somerset & Dorset Ry. extends from Bath to Bournemouth, with branches to three coal ports on the southern shore of the Bristol Channel, and serves the east Somerset coal field. This line is owned jointly by the London & Southwestern Ry. and the Midland Ry., the Midland Ry. controlling the larger share. The territory through which it runs does not appear to belong legitimately to the Northwestern and Midland region, but it gives advantageous connections between central industrial England and the south coast. The second joint line of importance is the Shrewsbury & Hereford Ry., owned jointly by the London & Northwestern Ry. and the Great Western Ry. This is an important link for both companies for their traffic between industrial England and industrial south Wales. The third joint concern is what is known as the Cheshire Lines Committee, which operates a number of small lines in the industrial districts of Cheshire, owned either separately by each of the owning companies or jointly by any two, or by the whole three. The three companies concerned are the Midland Ry., the Great Central Ry., and the Great Northern Ry.

The future of the Irish lines has still to be settled, and whether it will be by the Imperial Government and Parliament, or by any separate legislature for Ireland, is still a matter of doubt. The only reason for mentioning this at present is the fact that constituent companies of two of the British groups are interested in steamships running to Ireland and are owners of railways in Ireland. These are the Great Western Ry., which runs steamboats from Milford Haven and Fishguard to Waterford and Rosslare respectively, and owns jointly with the Great Southern & Western Ry. of Ireland 107 miles of line which con-

Birthdays of Transportation Men in December.

neet Rossiter, via Wexford, with Cork. The London & Northwestern Ry. operates steamboats from Holyhead to Northwall and has about 5 miles of railway thence into Dublin; a line of steamboats from Holyhead to Greengore, operating in connection therewith the Dundalk, Newry & Greengore Ry., about 40 miles; and in conjunction with the Lancashire & Yorkshire Ry., operates steamboats between Fleetwood and Belfast. The Midland Ry. has been operating steamboats to Belfast, first from Morecambe, then from Barrow and latterly from Heysham, and about 20 years ago bought control of the Belfast & Northern Counties Ry., 263 miles. The Glasgow & Southwestern Ry. and the Belfast & Northern Counties Ry. are jointly interested in the mail steamboat line operated between Stranraer, Scotland, and Larne, Ireland.

The first effect of the return of the railways to private operation was shown in the new timetables which in most cases went into operation on Oct. 3. There is a general return to the pre-war service, although in only a few cases have the actual performances of 1914 been restored. On the big lines, the services have, in many cases, been accelerated, and a number of new services have been arranged by combinations of companies. All the old fast trains from London to the great industrial centers of mid and north England, and the trains to Scotland have practically been restored, some changes being made in their routing, and in the stopping points, the former speed being maintained. The Great Western Ry. shows the greatest change, it now having arranged for 13 particular services, on which there are non-stop runs varying in length from 75½ to 225½ miles, with a rate of from 54.6 miles to 61 miles an hour. Some special features of the new trains are the daily Penzance-Aberdeen run, of 785 miles which is the longest through service arranged, although it is not the longest that could be operated, as it would be possible to run to Wick or Thurso, a considerable distance farther north, but in a territory where there is little travel. This train will be operated over the Great Western, Great Central, North Eastern, and North British Railways, each company supplying part of the routing stock. The Great Western Ry. is also associated with the Midland and North Eastern Railways in the operation of a daily train between Plymouth and Newcastle-on-Tyne; and with the London & North Western Ry. in a daily service via Crewe to Liverpool and Manchester. The London & South Western, the Great Western and the Midland Railways are associated in the operation of a daily service between Bournemouth and Sheffield.

In regard to possible future developments of traffic, a deputation recently waited on the Minister of Transportation to obtain approval of the construction of a tunnel under the Thames, from near Tilbury, on the north shore, and connecting line, at an estimated cost of £10,000,000. This tunnel would connect the Midland Ry. with the South Eastern-Chatham Ry., and so afford a through connection outside London for passenger traffic between the midlands and northern England and Dover for the continental trade. The proposal was favorably received, but it is not expected that any construction will be done for a considerable time.

Many happy returns of the day to:—

E. T. Agate, ex-Assistant Superintendent, Lake Superior Division, Canadian Northern Ry., Capreol, Ont., now of Pittsford, N.Y., born there, Dec. 7, 1874.

A. G. Albertsen, General Agent, Passenger Department, C.P.R., Minneapolis, Minn., born at Copenhagen, Denmark, Dec. 31, 1887.

J. H. Barber, Engineer, Toronto Terminals Division, Ontario District, C.P.R., Toronto, born at Cobourg, Ont., Dec. 20, 1856.

W. E. G. Bishop, District Freight and Passenger Agent, Canadian National Ry., Coburn, Ont., born at Central Clarence, N.S., Dec. 4, 1888.

H. E. Bissell, Right of Way Department, Canadian National Ry., Winnipeg, born near Noyan, Que., Dec. 31, 1867.

N. E. Brooks, ex-Engineer, Maintenance of Way, Western Lines, C.P.R., now at Sherbrooke, Que., born there, Dec. 25, 1866.

W. W. Butler, President, Canadian Car & Foundry Co., Montreal, born at Danville, Ohio, Dec. 9, 1862.

J. M. Cameron, General Superintendent, Alberta District, C.P.R., Calgary, born at Lochaber, N.S., Dec. 18, 1867.

W. C. Casey, General Agent, Passenger Department, Ocean Traffic, C.P.R., Winnipeg, born at Moncton, N.B., Dec. 12, 1882.

G. W. Caye, General Purchasing Agent, G.T.R., Montreal, born at Malone, N.Y., Dec. 1, 1865.

R. J. Foreman, Foreign Freight Agent, Canadian National-Grand Trunk Ry., Montreal, born at Toronto, Dec. 31, 1878.

A. H. Foster, Manager, Brantford Municipal Ry., Brantford, Ont., born at Guelph, Ont., Dec. 24, 1888.

W. H. Gardiner, City Freight Agent, C.P.R., and District Freight Agent, Esquimaux & Nanaimo Ry., Victoria, B.C., born there, Dec. 6, 1859.

A. J. Gorrie, ex-Superintendent District 1, Transcontinental Division, Canadian Government Ry., Quebec, now of Toronto, born at Raith, Kirkcaldy, Scotland, Dec. 10, 1868.

W. H. Grant, General Tie Agent, Canadian National-Grand Trunk Pacific Ry., Toronto, born at Acton, Ont., Dec. 8, 1858.

F. P. Gutelius, Vice President and General Manager, Delaware & Hudson Rd., Albany, N.Y., born at Mifflinburg, Pa., Dec. 21, 1864.

adian National Ry., Edmundston, N.B., born at Farnham, Que., Dec. 15, 1888.

J. G. Legrand, Bridge Engineer, Western Lines, Canadian National Ry., and Grand Trunk Pacific Ry., Winnipeg, born at Sompius, France, Dec. 24, 1861.

J. M. MacArthur, Superintendent, Medicine Hat Division, Alberta District, Medicine Hat, Alta., born at Toronto, Dec. 8, 1885.

A. McGowan, Master Car Builder, Canadian National Ry. Western Lines and Grand Trunk Pacific Ry., Winnipeg, born at Perth, Scotland, Dec. 5, 1868.

J. T. McGrath, ex-Superintendent of Motive Power and Equipment, Chicago & Alton Rd., Bloomington, Ill., born at Toronto, Dec. 6, 1869.

A. T. McKean, Division Freight Agent, C.P.R., Calgary, Alta., born at St. John, N.B., Dec. 18, 1886.

Capt. R. McKillop, Superintendent, London Division, Ontario District, C.P.R., London, Ont., born at Perth, Scotland, Dec. 26, 1884.

A. D. MacTier, Vice President, Eastern Lines, C.P.R., Montreal, born at Blairgowrie, Scotland, Dec. 27, 1867.

J. C. O'Donnell, General Superintendent, Maritime District, Eastern Lines, Canadian National Ry., Moncton, N.B., born at Cobden, Ont., Dec. 17, 1879.

Alfred Price, General Manager, Eastern Lines, C.P.R., Montreal, born at Toronto, Dec. 6, 1861.

W. J. Radford, Assistant Manager, Toronto Suburban Ry., Toronto, born at Boldre, Hants, Eng., Dec. 23, 1870.

G. D. Robinson, ex-European Freight Agent, Canadian Pacific Ocean Services Ltd., Montreal, born at St. John, N.B., Dec. 7, 1877.

H. W. Sharpe, Master Mechanic, Quebec District, Canadian National Ry., Quebec, Que., born at Campbellton, N.B., Dec. 6, 1869.

G. E. Smart, Mechanical Assistant (Car Department) to Vice President, Operation and Maintenance, Canadian National Ry., Toronto, born at Edinburgh, Scotland, Dec. 23, 1875.

M. F. Tompkins, General Freight Agent, Eastern Lines, Canadian National Ry., Moncton, N.B., born at Margaree, N.S., Dec. 6, 1878.

H. H. Vaughan, ex-Assistant to Vice President, C.P.R., now consulting engineer, Montreal, born at Forest Hill, Essex, Eng., Dec. 26, 1868.

R. C. Vaughan, Vice President, Purchases, Supplies and Stores, Canadian National Ry., Toronto, born there, Dec. 1, 1883.

A. P. Walker, Assistant Engineer, Ontario District, C.P.R., Toronto, born at West Hartlepool, Eng., Dec. 9, 1860.

E. B. Walker, Electrical Engineer, Canadian National Ry., Toronto, born there, Dec. 15, 1879.

J. B. Way, Freight and Ticket Agent, C.P.R., Sault Ste. Marie, Ont., born at Fort Hope, Ont., Dec. 10, 1865.

N. F. Judah, formerly Auditor, Edmonton, Dunvegan & British Columbia Ry., and now in business as Manufacturer's Agent at Edmonton, Alta., in renewing his subscription writes:—"I am not now engaged in transportation work, but Canadian Railway and Marine World is excellent, and I need it in order to keep in touch with former railway associations and transportation matters in general."

Canadian Pacific Railway September Earnings and Expenses.

The C.P.R.'s figures for September reflect a continuation of the improvement in both railway operating conditions and business conditions throughout the country. The gross earnings, \$19,494,761, were the largest for any month of 1921 up to the end of September, exceeding those of August, the next best month, by \$2,885,496, and being but \$59,526 smaller than those of Sept. 1920.

The last general rate increase took effect Sept. 13, 1920, on which date the new freight and passenger rates were put into actual application. In September of this year, the passenger rates which applied before the increase of Sept. 1920 were again in effect, while, in addition to the 5% reduction in freight rates made Jan. 1 in accordance with the Board of Railway Commissioners' order, many individual freight rate reductions had been put into effect and were applicable to the traffic handled throughout the month. (See Canadian Railway and Marine World for October, pg. 522). It appears, therefore, in view of these rate conditions, that the traffic handled by the C.P.R. in Sept. 1921 was almost, if not quite, as large as that handled in Sept. 1920.

The operating expenses for the month, \$15,174,711, decreased \$925,921 from Sept. 1920, so that while the gross decreased as noted above, the net earnings increased \$411,395, being \$4,320,049 for Sept. 1921. The operating ratio for the month was 77.8, a substantial improvement over August.

For the first nine months of 1921, gross earnings were \$11,049,775 less than in the first nine months of 1920; but operating expenses, being \$13,793,307 smaller than in the first nine months of 1920, the net earnings have been \$2,743,531 greater, the total net earnings to the end of September being \$21,900,671.

The fact of gross earnings for the first nine months of this year being smaller by the amount stated above, than for the first nine months of 1920, while freight and passenger rates were considerably higher, indicates the effect which the period of depression from which the country is just emerging has had on C.P.R. traffic. The September figures, however, show that traffic is rapidly working back toward normal, and present indications are that the company will have a somewhat better year than in 1920, in that net earnings will, in addition to meeting fixed charges and dividend requirements, be sufficient to afford a reasonable surplus, as desirable from the country's viewpoint as from that of the railway itself.

While the improvement in C.P.R. net, as noted in Canadian Railway and Marine World from month to month, has been gratifying from a purely railway viewpoint, the fact of these better net earnings being secured on a much lower volume of traffic has not indicated that the commerce and industry of the country has been on a sound and healthy basis. The September figures, however, are gratifying from both the railway and national viewpoints, in that the better showing made by the C.P.R. has been based upon a larger movement of traffic and increased industrial activity. It is only under such conditions that it is proper to say that the railway situation, which after all is inseparably linked up with the general economic situation, is

showing permanent improvement. If, as present indications show to be probable, the C.P.R. has a surplus remaining after the conclusion of this year's operations, it will be both an effect and a contributing cause in the return to normalcy in both railway and business conditions, and, further, it will be an assurance that Canada's industrial growth, not extraordinarily rapid of late years, will go forward, unhindered by any lack of provision of necessary transportation facilities.

Rules for Operation of Motor, Hand and Push Cars and Velocipedes.

The Railway Association of Canada issued its circular 4, revised, on Nov. 3, as follows:—The following regulations to govern the use and operation of motor cars, hand cars, velocipedes and push cars, have been prepared by the Association at the Board of Railway Commissioners' suggestion, with a view to assisting in the establishment and observance of safe practices in the handling of the vehicles above mentioned. It is recommended that member railways adopt these rules as standard on their respective lines:—

1. No motor car, hand car, or similar vehicle is to be operated on the railway without permission of the proper authority. Each vehicle of this character must be placed under the control of one individual who will be responsible for its operation.

2. No person or persons, except employees in the discharge of their duty, shall be allowed to ride on such cars on the tracks of the railway unless holding special permission from the proper authority.

3. The person in charge of the operation of car must, when practicable, inform himself of the movement of trains.

4. Immediately after starting, brakes must be tested, to ensure that they are in proper working condition.

5. All cars not in actual use must be lifted off track, or otherwise placed clear of passing trains. They must not be left on or near road crossings. When unattended, they must be locked, and the key retained by the person authorized to use the car.

6. When approaching railway, street, and highway crossings and switches, cars must be under full control and prepared to stop immediately. Cars must not be run over crossings protected by gates until the gates are down, or over crossings protected by flagmen until given "Proceed" signal by flagman.

7. Cars loaded with rails, frogs, ties, or similar material, must not go on main track without protection, as set forth in the company's rules.

8. Rails, frogs, or similar material must not be carried on motor or hand cars, except in cases of emergency, water keels, track jacks and other tools likely to derail car if they were to fall off, must be carried on side or rear of same.

9. Motor, hand, or push cars must not be attached to a train.

10. Cars must not be run after sunset, or during foggy or stormy weather, except in cases of actual necessity. In such cases, on single track a red light must be displayed to the front and to the rear, and on double track a white light to the front and a red light to the rear. During fogs and storms, flagmen should be sent out in each direction,

and the car run no faster than these flagmen can walk.

11. A distance of not less than 500 ft. must be maintained between two motor cars and between hand cars or velocipedes following a moving train and of not less than 250 ft. in the case of hand cars and velocipedes moving in the same direction on the same track.

12. Motor, hand and velocipede cars must be run with great caution around blind curves, and must be stopped frequently so that approaching trains may be heard.

13. Hand cars, unloaded push cars, and velocipedes must be passed from one track to another by lifting cars, instead of turning switches. When necessary to use switches, they are to be turned only under supervision of the foreman, who will be held responsible for seeing that they are left set and locked in proper condition.

14. In all cases a lookout must be kept in each direction, whether on single or double track.

Rules 3, 7, 10, 12 and 14 do not apply to motor cars operated by train order.

Blue Signals for Protection of Workmen.

The Board of Railway Commissioners passed general order 347, Nov. 2, as follows:—Re general order 258, Nov. 25, 1918, and rule 26 of the General Train and Interlocking Rules, approved by order 7563, July 12, 1909, providing that a blue flag by day, and a blue light at night, be displayed at one or both ends of an engine, car, or train for the protection of workmen engaged in, under, or around cars on regular repair tracks. Upon the report and recommendation of the Board's Chief Operating Officer, and reading the submissions filed by the Railway Association of Canada, on behalf of the railway companies, the Board orders that general order 258 be amended by striking out the words, "the day signal (flag) to be 22 by 28 in. in size," in the 6th and 7th lines of paragraph 1 of the order, and substituting therefor the words, "the day signal may be of rigid material, 22 x 28 in. in size, with rounded corners, painted royal blue, with a border of white on both sides, 1½ in. in width."

Record Grain Shipments Through Port McNicoll.

The amount of grain handled by the C.P.R. through Port McNicoll, Ont., this year constitutes a record. The following is a comparison of the number of bushels shipped from Sept. 1 to Oct. 31, 1921, and 1920 respectively.

	1921	1920
Bushels shipped	21,670,949	4,471,314
Bushels shipped per day	345,492	73,362
Total cars shipped	11,098	2,366
Cars shipped per day	182	40

The movement this autumn was assisted very materially by the use of the new 60-ton grain cars, which were placed in service a couple of months ago.

A Train Wrecker's Life Sentence.—H. W. Gates, 59 years of age, pleaded guilty, Nov. 3, to loosening a rail on the G.T.R. near Lapeer, Mich., on Oct. 31, thereby derailing a train and causing serious injury to three persons. He was sentenced to imprisonment for life in the Jackson, Mich., penitentiary.

Orders by Board of Railway Commissioners for Canada.

Beginning with June, 1904, Canadian Railway and Marine World has published in each issue summaries of orders passed by the Board of Railway Commissioners, so that subscribers who have the paper have a continuous record of the Board's proceedings. No other paper has done this.

Important traffic orders made by the Board are given in full on another page of this issue.

31,627. Oct. 7.—Dismissing application of Sutherland Innes Co., that commodity rate on lumber should be extended to coeprage stock generally, and requiring C.P.R. to extend the rate of the lumber commodity rate of 17c. per 100 lbs. on shipments of coeprage stock from Smiths Falls, Ont. to Montreal.

31,628. Oct. 6.—Approving proposed modifications to interlocking plant at crossing of G.T.R. and Canadian National Rys. at Cobourg, Ont.

31,629. Oct. 6.—Authorizing Canadian Northern Rys. to build spur for H. & F. Murlach, in s.e. $\frac{1}{4}$ Sec. 17, Tp. 45, Range 8, west 2nd meridian, Sask.

31,628. Oct. 6.—Authorizing Alberta Public Works Department to build highway crossing over C.P.R. between Secs. 10 and 11, Tp. 12, Range 4, west 4th meridian, Alta.

31,629. Oct. 7.—Ordering that speed of C.P.R. trains over private crossing just south of Bath station, N.B., be limited to 10 miles an hour.

31,630. Oct. 7.—Extending order 31,629 to the time within which Canadian Northern Rys. may complete station building at Dropmore, Man.

31,631. Oct. 7.—Authorizing G.T.R. to build spur for Continental Match Co., Whitechurch, Ont.

31,632. Oct. 6.—Declaring that for the present Toronto, Hamilton & Buffalo Rys. crossing west of Mineral Springs, is protected to Board's satisfaction.

31,633. Oct. 6.—Amending order 30,995, May 6, directing C.P.R. and G.T.R. to operate trains at 6 miles an hour at Sunnyside station, Ont., by making out G.T.R. 31,634.

31,634. Oct. 7.—Authorizing Canadian Northern Saskatchewan Rys. to build its Meeting Lake Branch across a number of highways.

31,635. Oct. 7.—Ordering Canadian National Rys. to fence right of way in Burpee Tp., Ont., by June 1, 1922.

31,636. Oct. 8.—Extending for one year time within which C.P.R. may build spur, authorized by order 30,588, Apr. 11, for Merchants Grain Co., near Willard, Ont.

31,637. to 31,640. Oct. 7.—Authorizing Canadian Northern Rys. to fill in bridges over Keskod and 327.6, mile 327.9 and 328.1; 324.6 and 325.0; 327.6 and 327.8, and 330.7 and 331.4.

31,641. Oct. 8.—Declaring that for the present Lake Erie & Northern Rys. crossing at mile 50.93 (McRae's crossing), is protected to Board's satisfaction.

31,642. Oct. 8.—Dismissing C.P.R. application to remove station at Warden station, Que.

31,643. Oct. 8.—Ordering Canadian National Rys. to fence right of way in n.e. $\frac{1}{4}$ Sec. 30, Tp. 28, Range 20, west 1st meridian, Man., by Nov. 15, 1921.

31,644. Oct. 7.—Reconsidering order 30,909, Vanco protective appliances on Great Northern Rys. locomotives and ordering company to file before Apr. 1 of each year, list of divisions, numbers and home terminals of locomotives other than oil burners assigned to service on portions of its Kalispell Division, B.C., and setting out instructions to be followed respecting same.

31,645. Oct. 8.—Ordering that crossing of Bay Canadian Rys. at Belleville, Ont., by C.P.R. and Canadian National Rys., be protected by electric bells and wigwag signals.

31,646. Oct. 7.—Authorizing G.T.R. to install, in place of watchmen, improved automatic bell and wigwag signals at crossing of Bridge St., Windsor Mills, Que.

31,647. Oct. 15.—Authorizing Vancouver Harbour Commissioners to operate trains over Vancouver, Victoria & Eastern Rys. & Navigation Co.'s tracks, from Burrard Inlet pier, to connection with Canadian National Rys., on south side of False Creek, Vancouver, B.C.

31,648. Oct. 11.—Ordering C.P.R. to file tariffs authorized by Dec. 31, showing special class rates from Pacific territory. This order is given in full on another page.

31,649. Oct. 17.—Reconsidering order 28,922, Oct. 19, 1919, authorizing G.T.R. to build spur for U.G.G. Sawmills Ltd., at mile 1,222, 2nd meridian, B.C.

31,650. Oct. 17.—Ordering Great Northern Rys. to fence right of way on west side in s.w. $\frac{1}{4}$ Sec. 18, Range 7, west 1st meridian, Man., by Nov. 1, 1921.

31,651. Oct. 13.—Amending order 12,791, Jan. 2, 1919, re Grand Trunk Pacific Rys. crossing by C.P.R. at mile 118 from Regina, Sask., by providing that watchmen at this crossing be appointed by Canadian National Rys. instead of C.P.R.

31,652. Oct. 14.—Authorizing C.P.R. and G.T.R. to install in lieu of watchmen two automatic bells with wigwag signals at crossing at Reconsolid, Que.

31,653. Oct. 15.—Approving Western Canada Power Co.'s bylaw, authorizing Geo. Kidd, General Manager, W. G. Murrin, Assistant General Manager, and W. D. Power, General Freight and Passenger Agent, British Columbia Electric Rys., to issue tariffs of tolls.

31,654. Oct. 15.—Recommending to Governor in council for approval, Canadian Northern Pacific Rys. plans of temporary lift span at Sumas River bridge, mile 78.8, Port Mann Subdivision, B.C.

31,655. Oct. 11.—Authorizing Canadian National Rys. to connect Canadian Northern Alberta Rys. and Grand Trunk Pacific Rys. in Secs. 25 and 26, Tp. 53, Range 7, west 5th meridian, Alta.

31,656. Oct. 13.—Amending order 12,183, Nov. 5, 1910, re Canadian Northern Rys. crossing by C.P.R. in Sec. 17, Tp. 30, Range 14, west 3rd meridian, Roseworth, Sask., by providing that watchmen be appointed by C.P.R. instead of C.P.R.

31,657. Oct. 18.—Declaring that for the present crossing of Lacroix St., Chatham, Ont., by G.T.R., is protected to Board's satisfaction.

31,658. Oct. 11.—Ordering Canadian National Rys. to erect new station at Endako, B.C., by Sept. 1, 1922.

31,659. Oct. 14.—Amending order 24,017, July 23, 1915, re crossing of Canadian Northern Rys. by C.P.R. at Metvern, Man., by providing that watchman be appointed by C.P.R. instead of C.N.R.

31,660. Oct. 11.—Approving plan of alteration of full interlocker at crossing of Canadian National Rys. and Grand Trunk Pacific Branch Lines Co. at Dana, Sask.

31,661. Oct. 5.—Authorizing Canadian National Railway station agent at Port Hope, Ont., caretaker to be appointed.

31,662. Oct. 13.—Authorizing Estevan rural municipality No. 5, to carry road crossing over C.P.R. in Sec. 25, Tp. 2, Range 9, west 2nd meridian.

31,663. Oct. 18.—Authorizing C.P.R. to build spur for Canadian Lumber Co., Winnipeg.

31,664. Oct. 18.—Extending for one month from Oct. 3, time within which C.P.R. may complete spur for Knechtel Station, Ont., authorized by order 31,077, as required by order 31,027, May 13.

31,665. Oct. 18.—Authorizing Alberta Public Works Department to make highway crossing over C.P.R. between n.e. and n.w. $\frac{1}{4}$ Secs. 33, Tp. 38, Range 21, west 4th meridian, Lacombe Estate, Brantford, Ont.

31,666. Oct. 18.—Authorizing Canadian National Rys. to operate over swing bridge across Trent Canal, just north of Wausago, Ont., when signals are clear, without stopping trains.

31,667. Oct. 18.—Authorizing C.P.R. to build spur for Carbon Gem Mine Co. at mile 59.64, Laneland North Branch, near Carbon, Alta.

31,668. Oct. 17.—Amending order 31,516, Oct. 3, authorizing Toronto, Hamilton & Buffalo Rys. to lower grade of portion of spur for Banwell-Hoyle Wire Fence Co., Hamilton, Ont., earlier than 6.45 a.m.; Vandorf, 7.05 a.m.; and Gormley, 7.25 a.m.; the a.m. at arrival at Toronto, to be taken into Union Station on a passenger train that will arrive there at 7.05 a.m.

31,670. Oct. 19.—Authorizing North Dumfries Township, Ont., to extend Martin Ave. across Grand River Rys.

31,671. Oct. 19.—Authorizing C.P.R. to cross at grade surveyed road in s.w. $\frac{1}{4}$ Sec. 29, Tp. 15, Range 13, west 3rd meridian, mile 0.1 Vanguard Subdivision.

31,672. Oct. 19.—Ordering Canadian National Rys. to provide baggage car on through freight train on its Parry Sound-Toronto Branch, scheduled to leave Parry Sound, Ont., at 8 a.m., earlier than 6.45 a.m.; Vandorf, 7.05 a.m.; and Gormley, 7.25 a.m.; the a.m. at arrival at Toronto, to be taken into Union Station on a passenger train that will arrive there at 7.05 a.m.

31,673. Oct. 15.—Authorizing N. W. Hawkes Agent, New England Freight Association Tariff Commission, to give public consent to take C.R.C. 1, to give effect to proper rates on cotton grain, bales, binder twine and binder cord, effective on one way traffic.

31,674. Oct. 15.—Authorizing C.P.R. to build spur for Carbon Coal Co. in s.e. $\frac{1}{4}$ Sec. 14, Tp. 29, Range 23, west 4th meridian, Alta.

31,675. Oct. 20.—Amending order 31,644, Aug. 14, 1907, re crossing of Qu'Appelle, Longe Lake & Saskatchewan Rys. by C.P.R. at Saskatoon, Sask., by providing that watchman be appointed by Canadian National Rys.

31,676. Oct. 20.—Authorizing Kitchener Municipal District, 582, Alta., to carry highway over Canadian Northern Western Rys. at Mayphertho, Alta.

31,677. Oct. 21.—Authorizing Canadian North-

ern Ontario Rys. to connect with G.T.R. at Wausago, Ont.

31,678. Oct. 20.—Authorizing Fort William Municipal Rys. to operate one-man cars over Grand Trunk Rys. spur to Mount McKay Products Ltd., Fort William, Ont.

31,679. Oct. 20.—Approving G.T.R. plan showing re-construction of overhead bridge at Main St., Toronto.

31,680. Oct. 20.—Ordering Grand Trunk Pacific Rys. to appoint caretaker at Gallivan station, Sask.

31,681, 31,682. Oct. 21.—Authorizing Fort William Municipal Rys. to operate one-man electric cars over Grand Trunk Pacific Rys. at Syndicate and Empire Avenues, and over Canadian National Rys. at Arthur and Franklin Sts., Fort William, Ont.

31,683. Oct. 21.—Authorizing C.P.R. to build spur for Rob Roy Mills Ltd., Durham, Ont.

31,684. Oct. 21.—Authorizing Fort William, Ont., Municipal Rys. to operate one-man electric cars over Canadian National Rys. at Victoria Ave., and Vickers St., Fort William, Ont.

31,685. Oct. 21.—Authorizing use of G.T.R. overhead bridge at implest 251.03, St. Bruno Parish, Que.

31,686. Oct. 21.—Authorizing Fort William Municipal Rys. to operate one-man electric cars over Grand Trunk Pacific Rys. at Sprague St. and Empire Ave., Fort William, Ont.

31,687. Oct. 21.—Ordering the Marquette R.D. to keep all standing cars back 125 ft. from each side of crossing of Murray St., Wallaceburg, Ont., switching movements to be regulated, and declaring that for the present the crossing is sufficiently protected.

31,688. Oct. 21.—Approving location of Canadian National Rys. temporary freight and passenger shelter at Ashmont, Alta.

31,689. Oct. 11.—Amending order 30,348, Nov. 19, requiring C.P.R. to locate new crossing at Barrington, Ont., by striking out provision that 25% of the cost be paid out of railway grade crossing fund.

31,690. Oct. 12.—Authorizing Cameron Municipality, Man., to carry highway over C.P.R. between s.e. and s.w. $\frac{1}{4}$ Sec. 15, Tp. 5, Range 25, west 2nd meridian.

31,691. Oct. 13.—Amending order 15,312, Nov. 10, 1911, re C.P.R. crossing of Grand Trunk Pacific Rys. at Hanover, Ont., by providing that watchman be appointed by C.P.R. instead of G.T.R.

31,692. Oct. 21.—Approving location and details of G.T.R. proposed station at St. Polycarpe, Jct., Que.

31,693. Oct. 21.—Authorizing C.P.R., Edmonton, and Durand & Giesbrecht Rys., and Canadian National Rys. to operate trains over connecting tracks at Edmonton, Alta.

31,694. Oct. 18.—Ordering C.P.R. and Canadian National Rys. to build interchange track at Montfort Jct., Que.

31,695. Oct. 13.—Ordering that cost of building bridge 4 over Y connecting G.T.R. Toronto Branch, with main line from Hamilton to London, at Burlington Heights, Hamilton, Ont., as approved by order 31,331, be paid by G.T.R., surface required to be paid by City of Hamilton.

31,696, 31,697. Oct. 21.—Approving Sydney & Louisburg Rys. Standard Passenger Tariffs, C.R.C. 2, 1921.

31,698. Oct. 21.—Approving Cumberland Railway & Coal Co. Standard Passenger Tariff, C.R.C. 3, 1921.

31,699. Oct. 22.—Authorizing Canadian National Rys. to connect its Duck Lake Subdivision with Grand Trunk Pacific Branch Lines Co.'s Cudworth Subdivision at Holmes, near Prince Albert, Sask.

31,700. Oct. 14.—Authorizing Cape Breton Electric Co. to cross the Canadian National Rys. at Townsend and Georgetown, N.S., and at Sydney, N.S., and at Commercial St., North Sydney, N.S.

31,701. Oct. 31, 1903. Oct. 22.—Authorizing Canadian National Rys. to connect with Grand Trunk Pacific Rys. at Union Jct., Riley, and near Camrose, Alta.

31,702. Oct. 24.—Declaring that for present, C.P.R. crossing at Creighton Ave., Mount Dennis, Ont., is protected to Board's satisfaction.

31,703. Oct. 21.—Authorizing Canadian National Rys. to build bridge over Black River at mile 55.9 from Toronto, near Pefferlaw, Ont.

31,706. Oct. 24.—Ordering Canadian National Rys. to haul lumber to the platform at two car lengths, at Warwick, Ont.; to be completed by Sept. 1, 1922.

31,707. Oct. 24.—Authorizing Canadian National Rys. to build extension to spur for Arctic Ice Co., Winnipeg, Man.

31,708. Oct. 24.—Ordering Canadian National Rys. to haul lumber to the platform at two car lengths, at Devlin station, Ont., to be completed by Sept. 1, 1922.

Railway Mechanical Methods and Devices.

Portable Air Jack for Freight Car Work.

The accompanying illustration shows a portable air operated jack, or hoist, used at the G.T.R. car shops, Point St. Charles,

Portable Air Jack.

for short lifts for one end of freight cars under repair. It is made of 1 in. material, the top and bottom covers being secured to the cylinder by 8 studs, $\frac{5}{8}$ in., with packing at the joints. The cylinder diameter is 20 in. The air inlet is on the right, and the exhaust on the left.

Portable Hydraulic Ram.

For raising one end of a freight car, two of these jacks are wheeled under it, one at each side, and air pressure from the shop line being turned into the cylinder by a hose connection to the valve on the right, the end of the car is raised quickly. The circular steel lift block, at the top of the piston rod, is cross grooved on

top, to produce the maximum friction, while the top of the piston rod, and the bottom of the block, are a little concave and convex respectively, to allow the block a certain amount of play. The cylinder's large diameter, in comparison with the height of the lift, makes these hoists safe, and, on account of being portable, and connected quickly to the air pressure line, the end of a car may be raised quickly by them.

Hydraulic Ram for Putting in Locomotive Cylinder and Valve Bushings.

The illustration shows a portable hydraulic ram, used for forcing in locomotive cylinder and valve chest bushings, at the C.P.R. Angus shops, Montreal, which was designed and assembled at

compressed air at 70-90 lb. pressure. That is, what is ordinarily a steam driven compressor pumping air, becomes an air driven compressor pumping water. The water pressure in cylinder D forces the piston in, starting the bushing into place. On the operation being repeated a few times, the bushing is forced completely into place in the locomotive cylinder. This method of inserting bushings does away with the necessity of heating the locomotive cylinders and valve chests, while the device's portable feature makes it available at any point in the shop.

Device for Tightening Crank Pin Collars.

The accompanying illustration shows a device used at the Quebec Central Ry. shops, at Sherbrooke, Que., in connec-

tion with the securing of locomotive crank pin collars. The top and bottom arms of the portion A, which go over and under the side rod, near the end, are flanged at the ends. The set screw B,

with square head, passing through the threaded hole in the end of portion A of the device, as shown at the left, presses against the outside of the side rod, while the piece C, passing through the threaded hole in the other end of portion A, as shown at the right, has a square head, and a screw driven point, to engage the slot in the head of the crank pin collar bolt, or set screw, which extends through the crank pin, and is secured by a nut on the inside. With the device set up as shown, a wrench is used on the head of the screw driver C, and, on account of no effort being required to keep the end of the driver C in the slot in the head of the crank pin, the crank pin collar can be tightened up very quickly and thoroughly. We are indebted for this information to E. M. Green, Locomotive Foreman, Q.C.R.

continental and various local lines in the Maritime Provinces and Quebec, which have been acquired by the Dominion Government and added to the Canadian National Rys.

The column headed "Canadian Northern," includes the lines operated as the Canadian Northern Ry. System, prior to its acquisition by the Dominion Government.

The column headed "Canadian Pacific, etc.," includes also the Montreal and Atlantic, and Esquimalt & Nanaimo Rys.

The column headed "Grand Trunk" includes its Canadian lines only.

The Railways' Operating Statistics for August.

The improvement in the operating and financial condition of Canadian railways was more pronounced in August than in any preceding month of this year. While the gross operating revenues for the railways as a whole were smaller by 3% than in Aug. 1920, despite the increased rates, they were, however, almost \$4,000,000 greater than in July 1921. Compared with Aug. 1920, the Canadian Northern and the Grand Trunk Pacific Railways had larger gross operating revenues. While the G.T.R. had larger freight revenues than in Aug. 1920, its passenger revenue showed a large decrease.

Total operating expenses show a reduction from Aug. 1920 of \$6,229,688, or 15%. The reduction in maintenance of way and structures expense was 11.5%, in maintenance of equipment expense 17.8%, and in transportation expense 15.9%. Of the total reduction in operating expenses, 83%, or \$5,118,010, is accounted for by a 20% reduction in the total payroll, the July wage cut being responsible for somewhat over half of this decrease, and reduced traffic accounting for the remainder. The cost of materials has also decreased considerably. Steel rails which cost \$70 a ton in Aug. 1920 cost \$60 in 1921; car axles costing \$115 a ton in 1920 cost \$100 and \$95 in 1921. Bar iron and mild steel also show decreases of from 20 to 30%. The official index number of wholesale prices shows, for Aug. 1921, as compared with Aug. 1920, decreases of 28.8% for iron and steel, 46% for fuel, 32% for lumber, and 15% for miscellaneous building materials.

Canadian Government Rys. total operating expense decreased 22%, transportation expense decreased 27%, and the payroll decreased 16%. The Canadian Northern total operating expense decreased 19%, transportation expense decreased 20% and the payroll decreased 21.5%. The C.P.R. total operating expenses decreased 10%, maintenance of way expense increased 8%, maintenance of equipment expense decreased 9% and transportation expense decreased 20%. The C.P.R. payroll decreased 11%, the decrease in the payroll, \$2,075,497, being greater than the decrease in total expenses. G.T.R. maintenance of way expense increased 25%, maintenance of equipment expense decreased 18%, transportation expense decreased 4%, total operating expense decreased 2%, and payroll decreased 13%. The G.T. Pacific shows remarkable reductions in operating expense, the total operating expenses decreasing 47%, maintenance of way 35%, maintenance of equipment 36%, transportation 45%, and payroll 27.5%.

For the railways as a whole, the operating ratio for August was 86.41%, against 98.82% for Aug. 1920, it being evident that the improvement which has taken place is large. A large improvement over July, when the operating ratio was 93.67, and preceding months of the year is also evident. The operating ratio of 102 for Canadian Government Rys. is the best attained this year; the operating deficit of \$795,427 in Aug. 1920 being reduced to \$70,084 in Aug. 1921.

On the Canadian Northern, the net operating revenue of \$217,266 was the first secured this year. Its operating ratio of 96.14 for Aug. 1921, compares with 108.39 for July 1921 and 127.5 for Aug. 1920. The C.P.R. operating ratio of 82.39 in Aug. 1921 compares favorably with 86.84 in Aug. 1920 and 87.1 in July 1921. The G.T.R., with an operating ratio of 81.43, shows an improvement over Aug. 1920, when it was 82.21, and over July 1921, when it was 85.63. The operating ratio of 110.37 on the G.T. Pacific was the best this year to the end of August; the decrease from 272.73 in Aug. 1920 representing a great improvement.

The reduction in gross operating revenues for the railways as a whole is amply accounted for by the traffic figures. As compared with Aug. 1920, there was a decrease in loaded freight car miles of 13%, in revenue freight ton miles of 24%, and in passengers carried one mile of 13%. As between the two months, the average length of freight haul, and the average passenger journey did not vary materially. Freight train miles decreased 17.6%, which is not so great a decrease proportionately as that in revenue freight ton mileage, which was, as just stated, 24%, and while passenger miles decreased 13%, passenger train mileage decreased only 6.6%. It is thus evident that the railways were still handicapped during August by the necessity of turning out more train miles in proportion to revenue traffic offering than would have been the case if traffic had been more nearly equal to their capacity for handling it.

Freight traffic shows a substantial decline on the Canadian Government, Canadian Northern, Canadian Pacific, and Grand Trunk Rys., but, due largely to a working arrangement with the Canadian Northern, freight traffic on the G.T. Pacific shows a remarkable increase over Aug. 1920. Passenger traffic shows a decline on all roads. For all roads, the average freight receipts per ton mile, 1,351c., show an increase of 30% over those of Aug. 1920. While passenger rates were on the same basis as in Aug. 1920, the results show an increase of 2% in the average receipts per passenger mile.

While, as stated above, revenue freight ton mileage for all roads decreased 24%, and revenue passenger mileage 13%, as compared with Aug. 1920, it is worthy of note that in July 1921, revenue freight ton mileage decreased 30%, and revenue passenger mileage 21%, as compared with July 1920. It is evident from this comparison that August saw Canadian railway traffic relatively increasing in volume, and while train mileage was still large in proportion to traffic handled, the ratio was more favorable than in preceding months, and there is no doubt that the improvement in conditions in this respect was a large factor in securing the favorable, relatively speaking, operating results of the month. Taken as a whole, and with due regard to the decrease in traffic and to the decrease in labor and material costs, maintenance

expenditures were such as to indicate that maintenance work was well kept up during the month. It is evident that the wage cut, applying throughout the whole month for the first time, was a large factor in the great decrease in operating expenses recorded.

From the August figures, and from preliminary figures for following months, it is clear that the improvement in the operating and financial positions of Canadian railways has been taking place more rapidly recently than during the early part of the year. While the operating ratio of 86.41 for August was still a long way above what may be considered a satisfactory operating ratio, which should not be over 75, for railways which are strictly commercial enterprises, there is reason to believe that the figure is being steadily reduced, and a satisfactory condition for all concerned, is the improvement which is being secured on the movement of an increased traffic. Having due regard for the future transportation requirements of the country, which will inevitably necessitate the expenditure of a large amount of new capital, it may confidently be stated that it is in the national interest that the railways continue to be favored with improvement in their position. While the recent reduction in rates will of course have a tendency to retard the progress toward greater improvement, it is worthy of note that reductions voluntarily made by the railways previously are included in the 10% freight rate reduction. With traffic increasing, it is reasonable to suppose that the decreasing unit costs of handling the increased traffic will compensate for the effect of the rate reduction. While not at all subscribing to the view that prevailing freight rates have acted to retard the movement of freight, we have no hesitation in saying that the reduction in sleeping car and parlor car charges will tend to increase sleeping car and parlor car traffic, and it is probable that gross revenues from these services will suffer little, if any decrease. Taken on the whole, the prospects for the Canadian railway industry are brighter now than at any time during the past four years.

Mexican Trade Investigation. — F. A. Young, Special Representative, Canadian Government Merchant Marine, Toronto, left there at the end of October, via Vancouver, to make a traffic survey in connection with the establishment of a steamship service from British Columbia. His itinerary includes Encenada, Mazatlan, Manzanillo, Salina Cruz, Mexico City and Mexican Gulf ports. He will probably return to Toronto in December.

E. H. Fitzhugh vs. Central Vermont Ry. et al.—The New Hampshire, U.S. A., Supreme Court, towards the end of October, dismissed the defendants' appeal from the lower court's decision, which overruled demurrers filed by defendants, and the action was to be tried on Nov. 14 at Concord, N.H., but up to the time of writing (Nov. 28), the result has not been announced.

Freight Rate Reductions Ordered by Board of Railway Commissioners.

The following statement was issued at Ottawa, Nov. 22:—"The Board of Railway Commissioners has decided that there shall be a general reduction of 10% in all freight rates, applicable to all steam roads under its jurisdiction in Canada. In any case where reductions have already taken place since Sept. 13, 1920, these shall be considered as a part of the 10% reduction; in cases where the reductions already granted have exceeded 10%, the present rate shall not be increased. There will be no reduction on commodities which were not increased in 1920, such as crushed stone, sand, gravel and milk, and no decrease in services, the charges for which were not increased. The existing rates on coal shall not be disturbed, because they were given special treatment in 1920. There shall be a decrease in all sleeping car, parlor and Pullman car fares of one-half of the increase granted in 1920. The details of decreases will be fully set forth in a general order. The companies shall file tariffs accordingly, effective on Dec. 1."

The Board passed general order 350, Nov. 24, and general order 351, Nov. 26, which are consolidated as follows:—Re increases in freight rates and sleeping and parlor car fares, authorized under the general order 308, Sept. 9, 1920; and re the Board's powers under the Railway Act, 1919, sec. 325. Whereas the Board has decided that there should be a general reduction in the tolls which were increased under its general order 308, it is ordered as follows:—

1. That companies operating steam railways subject to the Board's jurisdiction file tariffs, effective Dec. 1, providing for the following reductions in domestic freight rates within Canada, excepting transcontinental commodity rates (hereinafter mentioned) and rates on coal, crushed stone, sand, and gravel, as follows: (a) In the territory east of and including Westfort, Port William, and Port Arthur, Ont., rates based upon 25% over the rates in effect prior to Sept. 13, 1920. (b) In the territory west of and including Port Arthur, Port William, and Westfort, Ont., rates based upon 20% over the rates in effect prior to Sept. 13, 1920. (c) On through rates between eastern and western territories, the above named percentages shall apply to the eastern and western factors respectively. (d) Recognized differentials in commodity rates to be preserved as far as practicable. (e) Transcontinental commodity rates shall be constructed on the basis of an increase of 23 1/3% over the rates in effect prior to Sept. 13, 1920. (f) That rates on cordwood, slabs, edgings and mill refuse for fuel purposes be restored to the basis in effect prior to Sept. 13, 1920.
2. That sleeping and parlor car fares be reduced to the basis of 25% over the fares in effect prior to Sept. 13, 1920.
3. Provided that no rates at present in effect be increased under the provisions of this general order.
4. That this order shall not apply to the minimum class scale established by order in council 1863, nor to switching rates and charges for special services, such as milling-in-train, stopover, demurrage, and weighing.
5. That, in working out the rates authorized under this order, fractions be disposed of as set out in order in council 1863.

Assistant Chief Commissioner S. J. McLean gave the following judgment:—"Prior to the issuance of my memorandum of Sept. 13, I had expressed, in the Board's preliminary discussions, the opinion that if, on the facts, a rate decrease was found justifiable, it should be a percentage decrease. The increase having been a percentage one, there appeared to be merit in the contention that the decrease should also be a percentage one. My memorandum, above referred to, set out the opinion that the determination of the justifiability of a decrease in rates pivoted on the question of wage reductions, a matter then under consideration before a special tribunal. I was of opinion that until the outcome of this wage investigation was made apparent I was not justified in expressing an opinion as to a rate reduction based on a wage reduction when the latter was still unsettled; that is to say, that until information was available as to the outcome of the pending hearing regarding wage reductions, I was not in a position to express an opinion either as to whether there should be a rate reduction or as to what the extent of a rate reduction might properly be. Owing to the nature and complexity of the agreement between the C.P.R. and its employees, arrived at on Oct. 8, on the eve of the Board's western sittings, in which I participated, I was unable, before leaving for the west, to obtain any information to enable me to measure the amount and effect of what was covered by the agreement in question. Notwithstanding my endeavors, I was unable, until my return from the west, to obtain the necessary information as to the effect and extent of the wage reduction. This information having been obtained, the difficulty of the way of arriving at a conclusion was removed; and I was of opinion that a percentage decrease in rates was justifiable. I am, therefore, in agreement with the Board's decision as communicated in summary form to the public and embodied in a general order making the Board's decision operative."

Commissioners A. C. Boyce and J. G. Rutherford gave the following judgment: "The memorandum of the Assistant Commissioner, relative to the rate reductions now ordered, sets forth very clearly, save in one particular, the position of the two other members of the Board, who did not see their way to concur in the Chief Commissioner's judgment as issued on Sept. 13. During the conferences preceding the issue of that judgment, we were throughout strongly in favor of the policy of requiring from the railway companies substantial reductions in freight rates on basic commodities, such as grain, lumber, pulpwood, coal, ores and other specified raw materials, as being of vastly greater importance than a percentage reduction on all classes of freight, the benefits derived from which will, in many cases, be absorbed before they reach the general public. The principle of the policy advocated by us was illustrated by the substantial reduction in the rates on live stock granted in August last, as also by the special treatment given to the rates on coal, milk and other articles in the Board's preliminary discussions, granting the rate increases in Sept. 1920. It is further illustrated by the substantial rate reductions on basic commodities which will shortly come into effect in the

United States, as a result of the Interstate Commerce Commission's recent orders. As however, we were in a minority, we were prepared to agree in the straight percentage reduction and would have done so, but for the reasons set forth in the Assistant Chief Commissioner's judgment of Sept. 13 (in which we concurred), and in his memorandum of even date on the present situation. We are therefore, in agreement with the Board's decision, as communicated in summary form to the public and embodied in a general order, making the Board's decision operative."

Flood Damages to British Columbia Railways.

During the week preceding Oct. 28, the heaviest rainfall experienced on the southern British Columbia coast was recorded, the fall in Vancouver and vicinity being about 10 in., while along the Coast Range, north of Burrard Inlet, and the Fraser Inlet, the fall was much heavier. There is a record at Lake Bunzton, which is the headwaters of the Coquitlam River, of a rainfall of 14 in. in two days. These conditions resulted in the swelling of all the small rivers and creeks in the Cascade Mountains to flood proportions, with considerable damage to property. The only case where there was loss of life was in the bursting of an industrial railway bank near Squamish, which resulted in the sweeping away of the mining village of Britannia Beach with the loss of over 30 lives.

The most serious damage suffered by the C.P.R. was at Coquitlam, 17 miles east of Vancouver, where two 80 ft. spans across the Coquitlam River were carried away. Coquitlam, which is the freight terminal for Vancouver, was all flooded, making it impossible to use yard or locomotive house facilities. A number of slides and washouts occurred in the Fraser River Canyon. The bridge across Yale Creek had one pier carried out, and a small lake in the mountains, 17 miles east of North Bend, overflowed and sent a stream down the mountain side to the tracks, carrying out the fill for a distance of 200 ft. to a maximum depth of 110 ft. All this damage occurred on Oct. 28 and 29, and while repairs were being made, traffic was diverted via the Great Northern Ry. to Huntington, B.C. Through traffic was resumed on the C.P.R., Nov. 2, and the conditions at Coquitlam became normal two or three days later. On the Kettle Valley Ry., there were a number of slides and washouts on the Coquihalla Pass section, making that line impassable for through traffic from Oct. 28 to Nov. 1.

The Canadian National Ry. appears to have suffered less damage than did the C.P.R. There were a number of small slides and washouts on the Port Mann Subdivision, but these did not cause much delay to traffic. On the Boston Bar Subdivision, however, a large fill was washed out, which necessitated the construction of an 18 bent trestle, and delayed traffic considerably between Oct. 28 and Nov. 1.

Considerable damage was also caused to the Pacific Great Eastern Ry. between Squamish and Clinton. Repairs were, on Nov. 17, reported to be in progress, by the Northern Construction Co., and it was expected to reopen the line for traffic by Nov. 30.

Railway Rolling Stock Orders and Deliveries.

The C.P.R., between Oct. 13 and Nov. 13, received 2 cabooses from its Winnipeg shops.

The G.T.R. has received 600 flat cars, 100,000 lb. capacity, from National Steel Car Corporation, the balance of an order for 1,000 given in 1920.

The C.P.R. bought the private car Cromarty from J. K. L. Ross, one of its directors, recently, and has renamed it Hochelaga.

The C.P.R. is asking prices for the supply of 200 refrigeratar cars for Chicago, New York & Boston Refrigerator Co., one of its subsidiaries.

Montreal Locomotive Works delivered, during October, 3 locomotives, 4-8-2 type, cylinders 22 x 26 in., to South African Rys. They were shipped from Montreal by Elder Dempster & Co.'s s.s. Calgary to Cape Town, and are a portion of an order for 13, details of which were given in our August issue.

The 500 oil tank cars built for the Russian Soviet Government by Canadian Car

National Rys. has been let by the Government to Canadian Car & Foundry Co., Montreal, according to an official of the Brotherhood of Railway Carmen, who was in the city with the intention of bringing it before the Protective Board of the Brotherhood on the National Railways. His information, he intimated, was from a reliable source in Montreal, and he added:—"We are also told that two other companies will receive contracts for car building. Efforts are being made to have the matter kept quiet on account of the election, but we intend to make representations to the Government upon it." Assuming his information to be correct, the brotherhood officials said the Government's action in letting contracts to a private concern was not consistent with a public ownership policy and its professions to relieve unemployment, since the work would be confined to certain cities, instead of being spread over the country, as would be the case if the Government would insist that the work be done in Canadian National Railways shops, which, he stated, were capable of

Reduced Freight Rates for Fodder for Quebec Farmers' Live Stock.

Canadian Railway and Marine World for November stated that the Quebec Minister of Agriculture had announced that owing to the failure of the hay crop he had succeeded in getting the railways to give the following reductions in freight to give the Quebec farmers better rates: 33 1/3% on corn ex elevators forwarded from Quebec or Montreal or any ports of the Great Lakes to any station in the Province of Quebec; 33 1/3% on grain screenings forwarded from Port Arthur, Fort William, Westfort and Armstrong, to any point in the province; 25% on hay, which restores the rate in effect in Sept. 1920. The reductions on hay will only apply to points within the province. Only farmers and agricultural societies may get the benefit of these lower rates. All cars to be loaded to the Quebec Department of Agriculture and to be delivered to buyers upon receipt of an order to the Department.

On Oct. 26 the Montreal Board of Trade's Transportation Bureau wrote the Board of Railway Commissioners as follows:—"I am directed to respectfully ask the Board to disallow, pending a hearing, C.P.R. Tariff C.R.C. E-3891 and C.R.C. E-3892, both effective today and both issued Oct. 21. The first mentioned tariff applies to hay in carloads between C.P.R. stations in the Province of Quebec, and the latter to grain screenings in carloads from Port Arthur, Fort William and Westfort, and to corn in carloads from Montreal and Georgian Bay ports, to stations on the C.P.R. and connections, in the Province of Quebec. The grounds on which disallowance is asked are: 1. Discrimination as between products. There are several kinds of feed manufactured by Canadian millers from Canadian grain entering into direct competition with grain screenings, and also with corn, the latter by the way, being entirely of foreign production. 2. Discrimination as between persons. The railways are in these tariffs favoring those to whom the Quebec Minister of Agriculture will sell the goods, as against all those who would procure their requirements through dealers in the province. 3. The hay, grain screenings and corn to which the tariffs refer are not intended for the Quebec Government's use for its own purposes, nor for free or charitable distribution, but when distributed by sale to certain consumers in the province directly compete with the established grain trade and thereby constitute a special privilege. A similar request for disallowance applies of course to like tariffs of the Canadian Government and Grand Trunk Railways."

The Board of Railway Commissioners passed order 31,821, Nov. 24, dismissing the complaint by the Montreal and Quebec Board of Trade and the Canadian National Millers Association against the tariffs referred to.

Armistice Day Recognized.—The Canadian National, Canadian Pacific, Grand Trunk, and several other Canadian railways, also the Reid Newfoundland Co.'s railway, observed Armistice Day, Nov. 11, by stopping traffic for two minutes.

The Alberta & Great Waterways Ry. put a revised freight tariff in effect Oct. 22, under which stations to Thompson, mile 39, are transferred from the Mountain Class to the Prairie Class basis, which means a reduction of about one third in the rates.

Oil Tank Car for Russian Soviet Government, built by Canadian Car & Foundry Co.

& Foundry Co. have all been shipped from Montreal by Canadian Government Merchant Marine steamships to Novorossisk, a Black Sea port. The s.s. Canadian Seigneur sailed Nov. 10 with 90 of the cars, and was followed by Canadian Ranger, Nov. 13, with 100 cars, and by Canadian Challenger, Nov. 20, with another 100 cars. We were advised Nov. 22 that the balance of the cars were being loaded that week on the Canadian Commander and Canadian Miller, and that the ships were expected to reach Novorossisk in about 30 days from their respective sailing dates. An Associated Press dispatch, dated Riga, Nov. 9, published in daily papers, said:—"Four ships have arrived at Novorossisk, a Black Sea port of Russia, with 500 oil tank cars from Canada, says a dispatch received here today from Moscow." This was evidently a pure invention, passed off as "news," as no shipments were made from Montreal prior to Nov. 11.

The Toronto Globe said on Nov. 19:—"A contract said to amount to \$2,000,000 for building 3,000 cars for the Canadian

handling the contracts which the Government was letting to private concerns." The foregoing is a striking illustration of the utter unreliability of a large amount of the so called "news" given in many of the daily papers, especially during elections. Lie after lie is published broadcast, and in the great majority of cases no corrections are given by the papers circulating the false information. No contract for building 3,000 cars, or any other number, has been given by Canadian National Rys. recently, but contracts have been given for repairing 2,000 C.N.R. and 1,000 Grand Trunk Pacific Ry. cars, the reasons for which, with full particulars, were given in Canadian Railway and Marine World for November, pg. 584.

"The Future of Railroadings is Electrification" was the subject of a paper read before the Canadian Railway Club in Montreal, Nov. 8, by W. R. Stonemetz, Manager, Heavy Traction Department, Westinghouse Electric & Manufacturing Co., East Pittsburgh, Pa.

Railway Freight Rates in the United States.

As stated in Canadian Railway and Marine World for November, pg. 580, the Interstate Commerce Commission ordered decreases in rates on grain and hay in U.S. western territory to equal one half of the increases granted in Aug. 1920 by ex parte case 74, which were 15% in the western territory, 25% in the mountain-Pacific territory, and 33 1/3% inter-territorial. While the Commission did not make a formal order for the reduction it issued a statement accompanying its recommendations, say that it expected the new rates to be put into effect by Nov. 20.

Western carriers, during the hearings preceding the issuance of the Commission's decision, opposed the decreases, on the grounds that the saving to the individual farmer would be so small as to be useless; that the daily fluctuations in the prices of grains on the market were greater than the changes which would result from the proposed reductions; that the railways' financial condition was not such that the reductions should be made, and that elevator companies and others concerned in the handling of the grain crop were deriving unjustly large profits from their operations, and were therefore better able to stand a reduction of revenues than were the railways. It was also pointed out that the order to reduce rates was not in keeping with the terms of the Transportation Act, which prescribed a net return to the railways of 6%, whereas they were receiving even half that rate. The Commission, in its decision, attempted to show that the Transportation Act's rate making provisions were taken into consideration, by stating that it calculated on large reductions in operating expenses.

When the Railroad Labor Board issued its statement to the effect that no further wage reductions would be considered till the cases involving working conditions then before it were disposed of, the railways submitted to the Interstate Commerce Commission that the anticipated decreases in operating expenses were far removed, and applied for a large modification in the reductions ordered in western grain and hay rates. A Washington press report of Nov. 21 states that the Commission has refused this application, and that a formal order has been issued, requiring the railways to put the rate decreases into effect on or before Dec. 27.

As in Canada, so in the U.S., the railways have voluntarily made many rate reductions, and on Nov. 16, following a meeting in New York of all member roads of the Association of Railway Executives, the following statement concerning another large reduction was issued by T. De Witt Cuyler, Chairman of the Association:—"The executives of U.S. railways today determined to make for a period of six months an immediate reduction of 10% in car load freight rates on farm products, any reduction in rates made since Sept. 1, 1920, to be constituted a part of such 10% reduction to be put in effect without waiting for a reduction in wages. This reduction to apply throughout the entire territory of the U.S., except on traffic moving wholly within New England.

"The railways have already reduced freight rates substantially from the level established by the Commission in Aug. 1920. The reductions already made are

estimated as accurately as can be to involve a loss of revenue at the rate of \$175,000,000 to \$200,000,000 annually. These reductions on many roads represent a loss much greater than any corresponding saving realized from reductions in wages already effected. The railways are, furthermore, awaiting decisions of the Labor Board, which it is hoped will relieve the companies from the expense of many onerous and uneconomical working conditions. The railways are not in a financial position to make this sacrifice. Unless there should be some revival in business, the probability of which is purely conjectural, the entire immediate loss involved in this proposed reduction in rates would be taken from the net earnings of the railways. In making this reduction the railways are relying upon the public for effective aid in bringing about the necessary reduction in labor and other costs of transportation, and are hoping for the co-operation of labor itself to that end. They have taken the first step in relieving existing business depression and have given an earnest of their fixed purpose to reduce rates and to relieve at the earliest practicable moment as far as reasonably possible the transportation burden on the public. The resolutions adopted at the meeting today were as follows:—

"1. A reduction, for an experimental period of six months, of 10% in car load rates on wheat, corn, oats, other grain, flour and meal, hay, straw and alfalfa, unmanufactured tobacco, cotton, cottonseed and products, except cottonseed oil and cottonseed meal, citrus fruits, other fresh fruits, potatoes, other fresh vegetables, dried fruits and vegetables, horses and mules, cattle and calves, sheep and goats, hogs, poultry, eggs, butter and cheese, and wool, any reduction in such rates made since Sept. 1, 1920, to constitute a part of this 10%; it being understood that such reduction of 10% shall not apply to traffic moving wholly within New England, and that if the reduction of wages and labor expenses referred to in paragraph 2 hereof is put into effect prior to the expiration of the said experimental period, this limitation of six months shall not apply to the said reduction in rates. It should be noted that the loss of revenue resulting from this reduction would all come out of the net revenue of the carriers.

"2. The necessary steps under the law, including, in case of failure to agree in conference, an application to the U.S. Railroad Labor Board, to be taken as promptly as possible, for a reduction of the wages of employees, with the understanding that, concurrently with such reduction in wages, the benefit of the reduction thus obtained shall, in a manner approved by the Interstate Commerce Commission, be passed on to the public in the reduction of existing railway rates, except in so far as such reductions in rates shall have been made in the meantime.

"3. An application to the Interstate Commerce Commission for a rehearing of the hay and grain case, and meanwhile for a general inquiry by the Commission to ascertain whether, until a substantial reduction can be secured in the labor and other costs of operation, any further reduction in rates could lawfully be required or, with due regard to the transportation industry, is possible."

A Message to G.T.R. Employees.

Howard G. Kelley, President, G.T.R., has issued the following message to all employees:—"I take pleasure in directing your attention to the extracts here presented from the address of Sir Joseph Flavelle, Bart., Chairman of the Board of Directors, G.T.R. System. This message should serve as an inspiration to every man and woman in the service of the railway. Moreover, I would like its full import understood in the home of each G.T.R. worker. It means that at no time in its history has the G.T.R. System been so well equipped to carry on a vast transportation business as it is today.

With its property physically sound, and having the loyal and efficient working force to which Sir Joseph alludes, this railway can attain the highest degree of success. Such a result must affect favorably the community as a whole and the future of everyone in the service. To bring an ever increasing amount of business to the road should, therefore, be the aim of every employee, no matter in what department engaged. Have you realized that, through your family and friends, you can be an active and very valuable soliciting agent for freight and passenger traffic? Are you doing your part? From freight transported and passengers carried come the receipts from which the pay rolls are met. Sir Joseph Flavelle's words of commendation are most encouraging. They should evoke a ready response. Let that response take the form of sustained effort and a striving to develop further that spirit of co-operation upon which success depends."

Sir Joseph Flavelle's remarks, to which Mr. Kelley refers, were given in Canadian Railway and Marine World for November, pg. 589.

Inspector of Railway Appliances.

The Civil Service Commission has established the following eligible list as a result of competition for the position of Inspector of Railway Safety Appliances, at an initial salary of \$1,920 a year:—James Wm. Reid, Vancouver, B.C. (overseas active service); Thos. H. Sands, Regina, Sask. (overseas active service); Wm. R. Follis, Calgary, Alta.; Michael S. Carrigan, Ottawa, Ont. We were advised by the Board of Railway Commissioners, Nov. 25, that J. W. Reid had been appointed as the Board's Inspector of Railway Safety Appliances at Calgary, Alta.

Railway Section, Engineering Institute of Canada.—Railway engineers, who are members of the Engineering Institute of Canada's Montreal branch, formed a railway section, Nov. 18. P. B. Motley, Engineer of Bridges, C.P.R., is chairman; A. S. Going, Engineer of Construction, G.T.R., is vice chairman, and J. L. Busfield is Secretary. Papers on Signalling were read by C. H. Tillett, Signal Engineer, G.T.R., and by C. W. Parker, Signal Engineer, C.P.R.

Locomotive Boiler Explosion.—A Fort William, Ont., press dispatch of Nov. 17, says that a Canadian National Ry. locomotive boiler exploded at Alcona, killing G. C. McNab, the locomotive man, and badly scalding Fireman G. Reid. Alcona is on the Lake Superior Subdivision, 186.2 miles northwest of Mission (Fort William), 3.2 miles southeast of Superior Jct., and 9.5 miles east of Sioux Lookout.

The Lieutenant Governor of Ontario's Views on Business Newspapers.

His Honor Colonel Henry Cockshutt, Lieutenant Governor of Ontario, was the principal guest at a luncheon given by the Canadian National Newspapers and Periodicals Association during its annual meeting in Toronto on Nov. 10. The Association's President, Acton Burrows, Proprietor, Canadian Railway and Marine World, in proposing the Lieutenant Governor's health, said:—"Your Honor, I know that I express the feeling of every member of our Association in saying that we deeply appreciate you honor who have done us by being present today, and in consenting to address us, more especially as I believe that this is almost the first, if not the first, luncheon gathering that you have addressed in Toronto since your appointment. Gentlemen:—It is a matter for congratulation that the position of Lieutenant Governor has again been filled by the appointment of a business man. There was a time—not so very long ago—when the lieutenant-governors of this province, as well as many other provinces, were selected principally from among the politicians, or from the legal fraternity. A departure was made when Lt. Col. Hendrie, who, although a politician to some extent, was also a successful business man, was appointed in 1914. His appointment was followed by that of Mr. Lionel Clarke, another successful business man, who had performed great public services for this city, and whose untimely death is universally regretted. Now we have, as Lieutenant Governor, our guest of today, a thoroughly representative business man, who, starting in 1884, to learn systematically from the bottom, the details of a great manufacturing business, became its Secretary-Treasurer in 1888, its Managing Director in 1893, and its President in 1911, and is also on the directorate of several other manufacturing and financial institutions. He has also served his native city of Brantford as President of its Board of Trade, and as Mayor for two years. When the Great War came, he not only organized, but also financed, the 215th Battalion, of which he was Lieut. Colonel, and is now Honorary Colonel. This is a record of which any man might well be proud, and it is no wonder that his recent appointment to the Lieutenant Governorship has met with the most hearty popular approval. On your behalf, I wish him and his gracious wife, a most happy occupancy of Government House. The Lieutenant Governorship is not, as some may think, by any means a sinecure, and a person accepting it makes great personal sacrifices. Its occupancy means a never ending round of public duties of a more or less exacting nature, for not only the Lieutenant Governor, but the members of his family, and it also necessitates the expenditure by the occupant of a very large amount of money beyond the meagre allowances made by the Dominion and Provincial Governments. Your Honor:—The Canadian National Newspapers and Periodicals Association embraces the agricultural, the business, the educational, the religious, and the technical newspapers, and the magazines of Canada. These are actually national publications, the circulation of the great majority of them extending from the Atlantic to the Pacific. I fell sure, Sir, that you, as a business man, know and

appreciate the value of the publications embraced in our membership, and it is not necessary for me to dwell on them. I may, however, confidently say that they are performing a great national work, and that they will compare favorably with those of any other country, even with those of the great country to the south of us, with its far larger and more intensive population."

The Lieutenant Governor, in replying, said in part:—"I am especially glad to be with you today, because I believe that the influence of the business press will be one of the most important factors in re-establishing business conditions in Canada on a safe and sane basis. I make a distinction between the business newspapers and the daily press, because I believe that your papers—the business newspapers of Canada—exert a greater influence than the daily press, because of the greater confidence your readers have in them. People read the daily newspapers to keep abreast of the general news of the day. They are interested in what is happening around them and they read to satisfy their desire for excitement or interest or entertainment. What they read in the daily newspapers today is forgotten tomorrow. But this is not the case with the business newspaper. Business men need the service of these papers in the conduct of their everyday business life. I have noted that they usually have a business paper or two in their pocket when they get home Saturday night. I do not say that they read them on Sunday, that I do not know, but I know that they study them carefully, and that a great number of your readers will come to their business on Monday morning with some clipping from your paper in their pockets. They will say to their associates, 'This is the situation, I can show it to you in this clipping.' For that reason, gentlemen, I say that yours is the greater obligation, because you are leaders, because you are helping to build up the business fabric of the country. You should be very careful that everything that appears in your columns bears the imprint of the truth. You must be sure that the news you give is correct beyond question, because there are thousands of your readers ready to set their business course by the same and the advice you give them. I am familiar with a good many of your publications, and I can personally attest to their high character. It is of vital importance that this should be maintained, and that no effort should be spared to give in your columns the maximum of service. In these days, when there is disorganization, dissension, disruption in all walks; business, politics and religion, there is a great place for the business paper to bring out more complete information, to assist in making us all realize we must work for a common cause, the upbuilding of our country. The business men of this country need your assistance. They are looking to you for information and advice, and are expecting it. On your shoulders therefore, perhaps more than on the shoulders of any other single agency, rests the obligation to meet the needs of these trying days, with a sane and sound presentation of the case as it exists at present, a presentation free from private bias, or the desire to serve a popular demand. You

can, and I believe will, be one of the largest factors in helping to bring about a satisfactory readjustment of the business conditions of this country."

Aerial Transportation Notes.

Squadron Leader J. L. Gordon, D.F.C., of St. Lambert, Que., has been appointed commandant of the Canadian Air Board's training station at Camp Borden, Ont.

The Canadian Air Board is reported to have decided to buy several new types of machines of the latest designs for testing under Canadian conditions in connection with civil government flying. It is also reported that the Board will proceed with the construction of a Canadian designed and built flying boat.

The following promotions and transfers by the Canada Air Board have been approved by the Civil Service Commission: W. R. Kenny, from Air Substation Superintendent to Air Station Superintendent, Roberval, Que.; A. B. Shearer, from Air Substation Superintendent to Air Station Superintendent, Dartmouth, N.S.; B. D. Hobbs, from Air Certificate Examiner, to Air Station Superintendent, Victoria, B.C.; Mac, W. L. Holland, from Air Pilot Navigator to Air Substation Superintendent, Ottawa.

Sir Ross Smith, who made the London-Australian flight, proposes to make an all round the world flight at an early date. The programme is to start from London, and to reach Canadian territory from Fort Wrangel, which will be the first point touched on the American continent. A combined seaplane and aeroplane route is being arranged for the trip by the Canadian Air Board. It is said that the stopping places in Canada will be Prince George, B.C.; Edmonton, Alta.; Moose Jaw, Sask.; Winnipeg, Man.; Fort William, Sault Ste. Marie, Ont.; Montreal, Que.; Fredericton, N.B., and Sydney, N.S.

The Civil Service Commission invited applications recently for the position of Air Certificate Examiner for its Commercial Aviation Branch, Western Provinces. The initial salary is \$2,940, rising \$180 a year to a maximum of \$3,300. The duties will be, under the direction of the Controller of Civil Aviation, to examine, approve and recommend the issue of licenses to air pilots, navigators and engineers, and to aerodromes; to assist in laying out of air routes; to conduct examinations in the theory and practice of air pilotage and air navigation; and to perform other related work as required. Candidates must have equivalent to university graduate standing; two years experience in flying; commercial air pilot's and air navigator's certificates, and satisfactory knowledge of the various branches of work required.

The Nova Scotia Evaporators Ltd., has shipped 500 cases of evaporated apples from Windsor, N.S., via Montreal, to Antwerp, and it is stated that further shipments are expected to be made via New York.

The Reid Newfoundland Co. has given notice, in accordance with the provisions of the act passed at the Legislative Assembly's last session, that the following branches will be closed from Jan. 8, 1922, until further notice:—Bonavista Branch, Shoal Harbor to Bonavista; Trepassy Branch, Waterford Bridge to Trepassy; Bay de Verde Branch, Carbonear to Bay de Verde and Grate's Cove.

Traffic Orders by Board of Railway Commissioners.

Canadian Traffic League.

General order 348, Nov. 10.—Re general order 271, Sept. 10, 1919, with respect to Canadian Freight Classification and the Express Classification for Canada, and secs. 322 and 360 of the Railway Act, 1919. Upon reading the submissions filed, the Board orders that general order 271 be amended by adding at the end of page 2 of the order the words, "The Canadian Traffic League."

General order 271 requires that any revision of the Canadian Freight Classification, or of the Express Classification for Canada, or any supplement to the issue of either, then in force, shall be submitted in printed proof form for the Board's approval before it is made effective. The order also provides that one copy of the proof, and of the notice for publication in the Canada Gazette, shall be furnished to a number of associations, boards of trade, etc., named therein, with the request that they fully explained objections, if any, to proposed changes, involving increased cost of transportation, be filed by them with the Board within 30 days of the receipt of the proof and notice. General order 348, given above, adds the Canadian Traffic League to the bodies to be furnished with copies of proofs showing changes proposed.

Freight Car Demurrage Rates.

General order 349, Nov. 23, and the judgment on which it was based, are given in full on another page under "Freight Car Demurrage Rates Ordered by Board of Railway Commissioners."

Reduction of Freight Rates.

General order 350, Nov. 24, and general order 351, together with judgments in connection therewith, are given in full on another page, under "Freight Rate Reductions Ordered by Board of Railway Commissioners."

Sydney & Louisburg Railway Passenger Tariffs.

31,696. Oct. 21.—Granting application of Sydney & Louisburg Ry., under section 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff, C.R.C. 3.

31,697. Oct. 21.—Granting application of Sydney & Louisburg Ry., under sec. 334 of the Railway Act, 1919, for approval of the Standard Passenger Tariff, C.R.C. 2.

Cumberland Railway & Coal Co.'s Passenger Tariff.

31,698. Oct. 25.—Granting application of Cumberland Ry. & Coal Co., under sec. 334 of the Railway Act, 1919, for approval of its Standard Passenger Tariff, C.R.C. 7.

Rates on Sugar Beets to Wallaceburg.

31,700. Oct. 25.—Re application of Dominion Sugar Co., for a reduction in rates charged by railways on sugar beets, in carloads, to Wallaceburg, Ont. Upon hearing the application at Chatham, June 28, 1921, the applicant company, the Canadian Pacific, Grand Trunk and Chatham, Wallaceburg & Lake Erie Railways, and the Michigan Central Rd., being represented; and upon the report of the Board's Chief Traffic Clerk, the Board orders that, in lieu of their present rates, the Canadian Pacific, Grand Trunk, Pere Marquette, Chatham, Wallaceburg &

Lake Erie, and Wabash Railways and the Michigan Central Rd. substitute the following mileage rates on sugar beets, in carloads:

Miles	Rate in cents per 100 lb.
Not over 25	4½
Over 25, not over 45	5½
Over 45, not over 60	6½
Over 60, not over 75	7½
Over 75, not over 80	8½
Over 80, not over 85	9½
Over 85, not over 90	10½
Over 90, not over 95	11½
Over 95, not over 100	12½
Over 100, not over 105	13½
Over 105, not over 110	14½
Over 110, not over 115	15½
Over 115, not over 120	16½
Over 120, not over 125	17½
Over 125, not over 130	18½
Over 130, not over 135	19½
Over 135, not over 140	20½
Over 140, not over 145	21½
Over 145, not over 150	22½
Over 150, not over 175	23½
Over 175, not over 200	24½
Over 200, not over 225	25½
Over 225, not over 250	26½
Over 250, not over 275	27½
Over 275, not over 300	28½
Over 300, not over 350	29½

The said substituted rates to become effective not later than Nov. 1, 1921. And the Board further orders that on shipments to or from connecting lines, one half cent per 100 lb. be deducted when the rate is 7½c. per 100 lb. or less, subject to a minimum of 4c. per 100 lb.; and when the rate is over 7½c. per 100 lb. one cent per 100 lb. be deducted.

Rules for Carriage of Electrolyte.

31,749. Nov. 9.—Re application of Express Freight Association of Canada for approval of Supplement 2 to its tariff C.R.C. no. E.T. 694, covering revised rules in connection with carriage of electrolyte. Upon the report and recommendation of the Board's Chief Traffic Clerk, the Board orders that the said supplement be approved.

Supplement to Canadian Freight Classification.

31,784. Nov. 17.—Re application of Canadian Freight Association, on behalf of railway companies subject to the Board's jurisdiction, for approval of proposed Supplement 16 to Canadian Freight Classification 16. Upon it appearing that the said Supplement has been issued to provide for the cancellation of rule 24, as published in Supplement 15 to the said Classification, by agreement with the shippers, the Board orders that the said supplement be approved.

Rule 24, which has been cancelled, read as follows:—"(a) Unless otherwise provided in the separate description of articles, the less than carload ratings shown apply only when each loose piece of freight or each package weighs 20 lb. or more, also on shipments in bales, boxes or crates weighing each less than 20 lb., provided each such package measures 36 united inches or more, length, width and depth added. (b) The less than carload ratings on loose pieces of freight or packages weighing each less than 20 lb. (except shipments in bales, boxes or crates measuring each 24 united inches or more, length, width and depth added), shall be one class higher (greater) than that applicable on shipments complying with section (a) of this rule."

Classification of Hanging Lamp Weights.

31,792. Nov. 19.—Re application of Security Traffic Bureau, St. Paul, Minne-

sota, for a ruling as to the proper classification of iron weights shipped with hanging lamps from Duluth to Winnipeg. Upon hearing the application at Winnipeg, the Canadian Freight Association being represented, and what was alleged, no one appearing for the applicant, the Board orders that the application be refused.

Freight Rate on Lath Material.

31,799. Nov. 21.—Re application of Fessenden Timber Co. of Toronto, for an order directing the railway companies to carry raw wood material for manufacture of lath at rates published for carriage of cordwood. Upon hearing the application at Toronto, Sept. 3, the applicant and the Grand Trunk and Canadian Pacific Railways being represented, and what was alleged; and upon the report and recommendation of the Board's Chief Traffic Clerk, the Board orders that the application be refused.

Proposed Electrification of a Pacific Great Eastern Ry. Section.

The Pacific Great Eastern Ry., owned by the Province of British Columbia, has a piece of line between West Vancouver and Whittlecliff, about 13 miles, which it is proposed at some future time to extend to Squamish to connect with the line to Prince George, now nearly completed. The operation of trains on this short piece of line has frequently been under discussion, and it was proposed, as one of the possible solutions of the difficulties, that it should be electrified and operated by the British Columbia Electric Ry. Nothing came of the plan, but the proposal has again been revived, and the West Vancouver Council passed a resolution, Nov. 14, agreeing to abrogate its agreement with the P.G.E. Ry., provided that the line be electrified before June 1, 1923, be supplied with rolling stock, and be leased to the municipality for 10 years, at a rental sufficient to cover interest and fixed charges on the cost of electrification, which is estimated at \$250,000, the municipality to take care of all ordinary maintenance and repairs, the Government to undertake extraordinary damage due to floods or other uncontrollable cause, and the municipality to discontinue its ferry service. If the arrangement goes into effect power will be bought from the B.C. Electric Ry. Co., which would also be able to give the municipality light and power service.

Mileage of Maritime District, Canadian National Railways. — In the article "Changes in Canadian National Railways' Maritime and Quebec Districts, Divisions and Subdivisions" in Canadian Railway and Marine World for November, pg. 594, the figures given for the old and new mileages of the Maritime District were incomplete, the Island Division, 276.7 miles, and Bridgewater Division, 372.8 miles, having been omitted. The old and new mileages are as follows:—

	Old	New
Island Division	276.7	276.7
New Glasgow Division	368.01	368.01
Halifax Division	295.48	315.94
Bridgewater Division	372.8	372.8
Moncton Division	428.45	398.66
Complutons Division	682.17	682.17
Edmondston Division	616.53

2,828.61 2,671.21

Change in Demurrage Rate on Freight Cars.

Chief Commissioner Carvell, of the Board of Railway Commissioners, gave the following judgment Oct. 10, which was concurred in by Assistant Chief Commissioner McLean, Deputy Chief Commissioner Nantel, and Commissioner Rutherford:—An application was launched some months ago by the Canadian Manufacturers Association, in which they were joined by representatives of many Canadian industries, asking that the Car Demurrage Rules, prescribed by general order 201, Aug. 1, 1917, be amended, practically asking that the rate be \$1 a car per day after the 48 hours free time. At the hearing in Ottawa on June 21, the following appeared for their respective interests:—S. B. Brown, Canadian Manufacturers Association; Thos. Marshall, Toronto Board of Trade and Halifax Board of Trade; G. B. Ruickbie, Canadian Pulp and Paper Association; W. S. Tilston, Montreal Board of Trade; G. B. Watts, Dominion Millers' Association; R. L. Sargent, Canadian Lumbermen's Association; E. P. Flintoft, Canadian Pacific Ry.; J. M. Daly, Canadian Coal Association; W. R. Caldwell, Hamilton Chamber of Commerce; W. C. Chisholm, K.C., Grand Trunk Ry.

Rule 9 of general order 201 reads as follows:—"Rule 9. Demurrage charge.—After the expiration of the free time allowed, the following charges shall be made until the car is released: For the first day, or fraction thereof, of delay, \$1; second day, or fraction thereof, of delay, \$2; third day, or fraction thereof, of delay, \$3; fourth day, or fraction thereof, of delay, \$4; for the fifth and each succeeding day, or fraction of a day, \$5."

It was contended on behalf of most of the applicants, and I think, admitted, that this rule was issued as a war measure, for the purpose of securing the release of equipment in the shortest time possible, rather than as a revenue measure. In other words, a penalty was imposed on the detention of cars above the 48 hours free time, in the hope that it would facilitate their unloading to some extent.

It is now contended that as the war is over, and especially as equipment is very plentiful upon all Canadian roads, the rule should be abolished and there should be a return to pre-war conditions. As the case developed, there seemed to be considerable difference of opinion, but I think I can fairly represent the views of the great majority of the interests represented in stating that they were all in favor of a higher rate than \$1 a day under certain conditions, the difficulty being as to when the higher rate should begin. All agreed, of course, that there should be 48 hours free time. I think all agreed that, for the first day thereafter, there should be a charge of \$1, and many agreed that the ultimate charge should reach \$5 a day. Everybody admitted the necessity of releasing equipment at the earliest possible moment.

If there continued to be the same excess of freight equipment in the future as exists at present, I would have no hesitation in recommending a repeal of rule 9 and going back to the \$1 a day, but we have no guarantee of such a condition. In fact, I think every person can sincerely hope that there will be a change, and when the change comes, then, in my judgment, there should be some inducement to compel shippers to use all due

diligence in loading and unloading freight cars. Perhaps the late Mr. Tilston, representing the Montreal Board of Trade, expressed my views better than I can do myself, when he stated as follows:—"We think very often a man who is honestly endeavoring to unload his car, but is frequently unable to do so the first day, through weather conditions, or in getting cars from different places, should not be penalized, and that is probably the reason the first day the per diem is left at \$1, so that he will not be penalized. If that \$1 a day was allowed to continue without any increase, it would be cheaper for a man to store the great bulk of his goods, such as coal, oats, and material, in cars rather than unload them, and a system such as that, in a very few days, would block up all the terminals and prevent proper movement and delivery on team tracks and sidings of the ordinary commercial traffic. The man who unloads his freight within one, or two, or three days after the free time, is not the man this penalty reaches, or the man they are trying to get at. It is the man who has no facilities, or no proper facilities, and who is holding cars on the market." Mr. Tilston seemed to agree with the suggestion which had previously been made by the Assistant Chief Commissioner that, for the first two days after the 48 hours free time, the charge should be \$1 a day and thereafter \$5 a day. This, in my judgment, would be a reasonable rule to apply. There ought to be no good reason why a car could not be unloaded in 4 days, which would only cost \$2 by way of demurrage. If kept for a longer time, even if through causes over which the shipper has no control, still, in the interest of the general release of equipment, I think a penalty of \$5 could be unreasonable, and, therefore, think order should be amended accordingly.

The Board passed general order 349, Nov. 23, as follows:—Re application of Canadian Manufacturers' Association, Canadian Retail Coal Dealers' Association, Canadian Pulp and Paper Association, Western Retail Lumbermen's Association, Canadian Lumbermen's Association, Retail Merchants' Association of Canada, Premier Potato Co., A. B. Cushman & Co., Steel Company of Canada, Canadian Traffic League, Ontario Retail Lumber Dealers' Association and Toronto, Peterborough, Hamilton, Montreal, Halifax, and Vancouver Boards of Trade, requesting the Board to call upon the railway companies and the Canadian Car Demurrage Bureau to show cause why the charges contained in Canadian Car Demurrage Rule 9 should not now be reduced to the normal rate of \$1 a car per day. Upon hearing the application at Ottawa, June 21, 1921, the applicants, the railway Association of Canada, Canadian Car Demurrage Bureau, and the Canadian Pacific and Grand Trunk Railways being represented, and what was alleged; and upon reading the written submissions filed, the Board orders that Canadian Car Demurrage Rule 9, as prescribed by general order 201, Aug. 1, 1917, be amended by striking out all the words after the word "released," in the second line thereof, and substituting therefor the words "For the first day, or fraction thereof, of delay, \$1; for the second day, or fraction thereof, of delay, \$1; for the third and each succeeding day, or fraction of a day, \$5." Effective Dec. 5.

Canadian National Railways' Net Earnings for August, September and October.

Canadian Railway and Marine World for November contained an announcement by President D. B. Hanna, of operating results of the Prince Edward Island, Intercolonial, National Transcontinental, and Canadian National Railways, which showed a surplus of earnings over operating expenses, for the first time, in August, followed by a better showing in September. On Nov. 28, Mr. Hanna announced the October figures, showing a very large increase in net. Following are the figures for the three months:—

	Gross earnings	Operating expenses	Net earnings
Aug.	\$10,500,264.74	\$16,609,250.39	\$7,231.44
Sept.	11,500,126.24	16,995,951.37	504,174.87
Oct.	12,996,138.97	11,870,003.63	1,036,130.34

In connection with the announcement of the October figures, Mr. Hanna issued the following statement:—"That first little net of \$47,000 for August put new life into the organization, and what's more, it helped with a big section of the public. We find that there is, all over Canada, a better feeling towards the National System. The fine service given by the C.N.R. in handling the grain this fall has also had something to do with it. The net of a little over \$500,000, announced for September, is helping us now; and the net of \$1,036,130.34 in October means more business for us in December and succeeding months. It is the best advertising we can get. Many business men, too busy to follow the ins and outs of the railway question, could not understand the deficit, they did not like the idea that money they paid us for freight would go into a deficit. Now, when they see we are out of red figures, they are giving us more of their business. We need long haul traffic, and if we can get enough of it, we will pull out even in December, unless the weather is very bad, notwithstanding the forthcoming reduction in rates. January and February are bad months to face, but we are not at all despondent about the future, and, if the lower rates prove any help to business, the railways will certainly be pleased to handle it. Greater volume of business is what the National Railways want for Christmas, and our socks are hanging up all along the line from the Atlantic to the Pacific."

DEPARTMENT OF THE NAVAL SERVICE.

SALE OF PACKING.

Sealed tenders addressed to the undersigned and endorsed on the envelope "Tender for Packing," will be received up to noon of Tuesday the 27th day of December, 1921, for the purchase of the whole or any portion of approximately 25,000 pounds Packing of various sorts, at Halifax Dockyard.

Tender forms and samples, together with particulars as to terms and quantities, may be obtained on application to the undersigned, or to the Naval Store Officer, H.M.C. Dockyard, Halifax, N.S.

G. J. DESBARATS,
Deputy Minister of the
Naval Service.

Ottawa, Ont., November 25, 1921.

Canadian Pacific Railway Construction, Betterments, Etc.

St. John River Bridge.—In our November issue C. E. Fitzpatrick was stated to be Superintendent in charge of erection of the superstructure for the Dominion Bridge Co. It should have read C. E. Fitzsimmons.

The bridge was inspected by G. A. Mountain, Chief Engineer, Board of Railway Commissioners, Nov. 23, and approved for operation of traffic.

The New Brunswick Government is reported to have instituted a chancery suit to determine whether the control of the erection of bridges over navigable waters rests with the Dominion Government, or with the province. It is said that the C. P.R. will be represented by counsel, as the question has been raised mainly through the construction of the St. John bridge. A press report of Nov. 16 stated that H. W. Jones, Woodstock, N.B., counsel for N.B. Government, had forwarded to the Minister of Justice, Ottawa, a statement of claim, with a view to add the Attorney General as a party defendant in the action. Mr. Jones is reported to have said: "The province claims that the railway bridges are obstructions to the navigation of the river. The court will be asked to order that these bridges be removed or raised. The claim will be made that the province has exclusive jurisdiction over the regulation of navigation on the River St. John, owing to the Webster-Ashburn Treaty, made in 1842 by Great Britain and the United States, whereby regulations were provided to be made by the State of Maine and the Province of New Brunswick."

St. John Trestles.—A memorandum of a joint arrangement regarding the C.P.R. trestles at Sand Point, St. John, N.B., taken over by the City Council recently, is reported to have been prepared by the C.P.R. District Engineer, and the City Engineer to be submitted to the C.P.R. and the city council. The matter in dispute had to do with the method by which the city would provide funds for the upkeep of the trestles.

Forsyth St. Tunnel, Montreal.—The Board of Railway Commissioners is reported to have made an order directing the Montreal City Council to reconstruct the Forsyth St. tunnel at a cost of about \$20,000.

Interprovincial & James Bay Ry.—We are officially advised that a contract has been let to Angus & Taylor, North Bay, Ont., for clearing, grading and culvert work on the extension of this railway from the present end of track, 10 miles north of Kipawa, Que., to the Quinze River, with an 8 mile spur from mile 48 to Ville Marie. A description of the route was given in our last issue. (Nov. pg. 593.)

London Division track relaying.—A press report states that the plans for work on the London Division for 1922 include the laying of about 80 miles of track with 100 lb. rails to replace 85 lb. ones.

Schreiber Station.—A press report states that plans for a new station to be built at Schreiber, Ont., at a cost of about \$80,000, are under consideration, and that it is expected to start construction next spring. Schreiber station was burned last winter, since when business has been carried on in a temporary frame structure.

Russell Branch.—We are officially advised that the branch line from Russell,

Man., northerly, as projected to the Shell River, will be approximately 12 miles long. Grading was completed in 1920 on the first section of 6 miles by the Northern Construction Co. During this year track laying, surfacing and ballasting has been completed thereon, and traffic is now being handled over it.

Langin Branch.—We are officially advised that the branch northerly from Langin, Sask., is intended to run to Melford and thence to the northerly limits of Tp. 48. Grading and track laying on the first 50 miles were completed in 1920, and during this year surfacing and ballasting were finished. Freight and passenger train service is being given.

Rosestow Southeastly.—The Board of Railway Commissioners has approved of the revised location plans of the branch southerly from Rosestow, Sask., from mile 44.37 to 63.47. (Nov. pg. 593.)

Railway Earnings.

Canadian National Railways.

Following are approximate monthly gross earnings for the Canadian Northern Ry. System and Canadian Government Ry., the latter including the Intercolonial Ry., Prince Edward Island Ry., National Transcontinental Ry., and various local lines which have been acquired by the Dominion Government in the Maritime Provinces and in Quebec, enroute.

	1921	1920
January	\$8,781,839	\$7,267,662
February	8,150,841	6,510,609
March	9,497,740	7,761,326
April	8,164,965	7,937,478
May	7,865,899	6,290,859
June	7,885,458	7,776,639
July	8,337,354	9,063,674
August	8,850,699	8,585,681
September	10,475,589	9,985,681
October	11,691,881	12,351,167

\$90,243,744 \$86,458,235
Approximate earnings for three weeks ended Nov. 21, \$7,691,340, against \$8,591,477 for same period 1920.

Canadian Government Railways.

Following are total operating revenues, total operating expenses, and net operating deficits, for the Intercolonial, Prince Edward Island, National Transcontinental, and local lines in the Maritime Provinces and Quebec which have been acquired by the Dominion Government and added to the Canadian Government Ry., as far as they are available to date.

	Revenue	Expenses	Net deficits
	1921	1921	1920
Jan.	\$3,527,304	\$4,347,728	\$820,423 \$ 688,178
Feb.	3,526,658	4,367,491	840,833 1,206,925
Mar.	3,595,144	4,538,994	943,761 1,235,265
Apr.	3,563,972	3,915,995	652,023 1,191,191
May	2,914,973	3,728,949	813,976 618,809
June	2,859,896	8,111,205	951,309 608,456
July	2,968,552	3,647,871	658,317 608,669
Aug.	3,366,931	3,436,475	70,544 795,423

\$26,141,990 \$31,694,126 \$5,552,136 \$5,659,521
Decr. \$5,557 \$72,942 107,885

Although statements of revenue, expenses, etc., for the Canadian Northern Ry. System, and for the Canadian Government Ry., have been received, and are given elsewhere on this page, the figures for Canadian Government Ry. System, and for the Canadian Government Ry. System, have not been received in Toronto up to Nov. 26, and therefore could not be included in the table above.

Canadian Northern Railway System.

	Revenue	Expenses	Net deficits
	1921	1921	1920
January	\$5,094,190	\$4,200,700	\$ 893,490
February	4,849,000	3,960,500	888,500
March	6,119,700	4,587,700	1,532,000
April	4,978,800	4,732,623	246,177
May	4,345,800	4,358,000	12,200
June	4,606,800	4,427,600	179,200
July	5,066,900	5,168,600	101,700
August	5,066,900	5,639,700	572,800
September	7,067,400	6,144,000	923,400
October	7,988,900	7,620,000	368,900

\$56,642,639 \$51,500,123
Approximate earnings for three weeks ended Nov. 21, \$5,069,500, against \$5,224,600, for same period 1920.

Following are total operating revenues, total operating expenses, and net operating deficits, for 1921 and 1920, as far as they are available, to date:

	Revenue	Expenses	Net deficits

Incr. \$1,619,619

Decr. \$13,760,784 \$15,514,980
Approximate earnings for three weeks ended Nov. 21, \$15,611,000, against \$16,630,000 for same period 1920.

The discrepancies between the above figures and those issued by the Dominion Bureau of Statistics are owing to the fact that the Bureau is, at its request, furnished with figures by the C.P.R., including the Esquimaux & Nanaimo Ry., and the Montreal & Atlantic Ry. earnings, as well as the C.P.R. own figures supplied to the Bureau, for exclusive of certain income items which are included in figures supplied Canadian Railway and Marine World.

Grand Trunk Railway.

Following are total operating revenue and total operating expenses for lines in Canada for 1921, also total net operating revenue for 1921, compared with 1920, with increases or decreases in 1921, as compared with those for 1920, as far as they are available to date:

	Gross	Expenses	Net revenue or deficit
	1921	1921	1920
Jan.	\$6,217,539	\$6,836,390	\$699,851* \$624,310
Feb.	6,465,732	7,000,000	534,268 909,574
Mar.	6,271,192	6,584,721	687,200 398,859
Apr.	6,509,813	6,241,107	418,706 651,789
May	6,957,719	5,586,194	361,585 605,510
June	6,876,766	6,910,683	73,912 456,747
July	6,563,693	6,620,730	94,263 863,642
Aug.	7,472,694	6,084,883	1,387,811 1,245,926

\$50,254,937 \$46,376,367 \$3,882,269 \$3,007,106
*Deficit.

Approximate gross earnings for Sept. \$7,729,347, against \$13,213,815 for Sept. 1920; for Oct., \$9,072,323, against \$10,906,579 for Oct. 1920; and for two weeks ended Nov. 14, \$4,262,869, against \$4,909,967.

Grand Trunk Pacific Railway.

Following are total operating revenues, total operating expenses, and net operating deficits, for 1921 and 1920, as far as they are available to date:—

	Revenue	Expenses	Net deficits
	1921	1921	1920
Jan.	\$4,441,226	\$1,813,982	\$3,727,577 \$737,357
Feb.	1,013,712	1,872,946	859,234 707,817

Sept.	1,585,284	1,601,959	15,775 1,082,596

\$10,164,934 \$14,372,370 \$3,907,419 \$9,451,757
Incr. \$1,519,242

Decr. \$4,025,096 \$5,544,338

G.T.R. Shareholders Appeal.—A London, Eng., cablegram of Nov. 22 states that application will be made early in December on behalf of G.T.R. shareholders or leave to appeal from the decision of the arbitrators as to the value of the G.T.R. stock taken over by the Dominion Government.

Mainly About Railway People Throughout Canada.

F. K. Anstie, chief clerk to Master Car Builder, Ontario Lines, G.T.R., London, Ont., was presented with some silver plate by the local staff, Oct. 26, on his marriage.

J. G. Bowles, Assistant to Manager, Montreal Board of Trade's Transportation Bureau, was presented with a cabinet of silver Nov. 18, on his marriage to Miss E. E. Tees.

Sir George McLaren Brown, European General Manager, C.P.R., unveiled, Nov. 6, a large memorial cross, 14½ ft. high, erected by the Ontario Government, in the Orpington parish churchyard, Kent, Eng., in memory of Canadian soldiers who died during the war, and were buried there.

Geo. E. Bunting, Australasian Manager, Canadian Government Merchant Marine, Auckland, New Zealand, who has also been appointed General Traffic Agent, Canadian National Ry., there, was born at Toronto, Feb. 8, 1873, and entered transportation service Sept. 1, 1889, since when he has been, to May 1, 1891, clerk, Division Freight Agent's office, G.T.R., Toronto; May 1, 1891 to Oct. 1, 1898, clerk, General Office, Lehigh Valley Rd., Buffalo, N.Y.; Oct. 1, 1898 to May 15, 1905, chief claim clerk, Canada Atlantic Ry., Ottawa, Ont.; May 15, 1905 to June 15, 1913, Travelling Agent, Allan Line Steamship Co., Toronto; July 1, 1913 to 1918, Manager, Allan & Co., Agents, Allan Line Steamship Co., Chicago, Ill. On the Allan Line passing under C.P.R. control, he transferred to the Export Department, Canadian National Ry., and on the organization of Canadian Government Merchant Marine, he was appointed Ontario Freight Agent, Toronto, and in Dec. 1919, was sent to Australia and New Zealand to look over the shipping situation there, for the C.G.M.M., and was afterwards appointed Representative for Australasia, with office at Auckland, New Zealand.

D. C. Coleman, Vice President, Western Lines, C.P.R., Winnipeg, has been appointed to the North of Scotland Canadian Mortgage Co.'s Canadian advisory board, among the other members of which are Sir Edmund Osler and Sir Augustus Nanton, both of whom are C. P.R. directors.

Jas. Dunsnuir, a former C.P.R. director, and also Lieutenant Governor of British Columbia, who died some time ago, left personal estate in the United Kingdom valued at \$326,000.

Hon. Francis Egerton Grosvenor, who succeeded to the peerage as Baron Ebury, on the death of his brother, Nov. 5, was born in 1883, and studied mining, engineering and chemistry. He worked for some time as a laborer and pitman in Isle of Man mines, and came to Canada in 1903, when he became a licensed assayer in British Columbia, and was for nearly three years a metallurgical chemist for the C.P.R., and later, chief chemist for the Hall mines. At the outbreak of war, he was Managing Director in B. C. for Norton Griffiths Ltd., general contractor. He immediately joined the 29th (Vancouver) Battalion, Canadian Expeditionary Force, and became Brigade Major. During the war, he was wounded, mentioned in dispatches four times, received the Distinguished Service Order and bar, the Military Cross and bar, and the French Croix de Guerre with palms.

Joseph Guertin, special service officer, Canadian National Ry., Winnipeg, was killed, Nov. 12, when his track motor car collided head on with a freight train at a curve, as he was proceeding to investigate a train wreck.

G. H. Ham, of the C.P.R. headquarters staff, addressed the Engineering Institute of Canada's Montreal branch, Nov. 24, on "The Canadian Engineer and his Literature."

Michael A. Hargadon, Assistant Editor, Press Bureau, C.P.R., Montreal, has issued a book of Irish and Canadian poems, for which Geo. H. Ham, of the C.P.R. headquarters staff, wrote an introduction.

Mrs. Hill, widow of J. J. Hill, formerly President of the Great Northern Ry., and one of the first C.P.R. directors, died at St. Paul, Minn., Nov. 22, after a long illness. A press report says that she

Calvin Lawrence.
Member, Board of Railway Commissioners for Canada.

received \$16,500,000 from her husband's estate, and that despite numerous charitable gifts she made, her estate will approximate \$15,000,000.

Sir John Kennedy, C.E., who died at Montreal, Oct. 25, left \$200 each to the Montreal Association for the Blind, and the Olivet Baptist Church, Montreal, the residue going to his daughters, Lady Ames and Mrs. H. C. Kennedy.

Calvin Lawrence, who has been appointed a member of the Board of Railway Commissioners, was born in Windham Tp., Norfolk County, Ont., Jan. 30, 1857. He entered railway service in October 1879 as brakeman, Canada Southern Ry. (Michigan Central Rd.), St. Thomas, Ont. He was appointed locomotive fireman in Jan. 1882 and promoted to locomotive man in 1888. In 1894 he was a delegate from the St. Thomas Division to the Brotherhood of Locomotive Engineers' convention at St.

Paul, Minn., and was elected Grand Assistant Engineer, which position he held for two years. In 1896 he attended the Brotherhood's international convention at Ottawa and in 1902 was appointed a delegate to the convention at Norfolk, Va. He was an alderman in St. Thomas, Ont., City Council in 1903, 1904 and 1905, was elected Mayor of the city in 1906, and re-elected in 1907 and was an alderman again in 1908. Once as Mayor of St. Thomas and again in 1910 he acted as locomotive man on a Michigan Central Rd. locomotive pulling a train of freight and passenger cars, loaded with mechanics working at their trades, and with city officials, over the St. Thomas Street Ry. on Labor Day celebrations. He was elected chairman of the Brotherhood's Dominion legislative board on its formation at Ottawa in 1908, and also legislative representative of the Brotherhood for the Dominion. He was also elected Chairman of the Brotherhood's Ontario legislative board in 1910, and has been re-elected legislative representative and chairman of the Dominion legislative board at each triennial election, since 1910, devoting his whole time to the Brotherhood's interests before the Dominion Government and the Board of Railway Commissioners. During the war he was a member of the Soldiers' Aid Commission at Ottawa, attended the Industrial Conference at Ottawa in 1919 and served on the Dominion Government's reconstruction committee's labor committee from its inception, and represented labor at a number of conferences with the Dominion Government. He is actively interested in a number of fraternal societies and a well known advocate of social and labor reform, and concerned with matters tending to the amelioration of working class conditions.

Mrs. Marpole, widow of Richard Marpole, formerly Executive Agent, C.P.R., at Vancouver, B.C., is announced as being engaged to Geo. Horrocks, of Bolton, Lancashire, Eng.

Alfred Erwin McMaster, heretofore Treasurer, Whalen Pulp & Paper Mills, Vancouver, B.C., who has resigned that position, and has been appointed Resident Manager, Powell River Co., Powell River, B.C., was born at Perth, Ont., Oct. 22, 1885. He entered transportation service in 1902, since when he has been, to May, 1903, clerk in Freight Department, C.P.R., Keewatin, Ont.; May, 1903 to 1905, clerk, C.P.R., Port Arthur, Ont.; 1905 to Aug. 1907, chief clerk, C.P.R., Port Arthur, Ont.; Aug. 1907 to Aug. 1908, agent and chief clerk to Superintendent, Grand Trunk Pacific Ry., Fort William, Ont.; Aug. 1908 to July 15, 1913, agent and General Agent, G.T.R., G.T.P.R., and G.T.P. Coast Steamship Co., Prince Rupert, B.C.; July 15, 1913, to Sept. 30, 1916, Commercial Agent, G.T.P.R., Regina, Sask.; Sept. 30 to Dec. 21, 1916, Division Freight Agent, G.T.P.R., Edmonton, Alta.; on Dec. 21, 1916, he was appointed Assistant Secretary for British Columbia, Canadian Manufacturers' Association, with office at Vancouver. In Sept. 1917, he was appointed Secretary-Treasurer, Port Arthur Shipbuilding Co., Port Arthur, Ont., and in Dec. 1918 he became Treasurer, Whalen Pulp & Paper Mills, Vancouver.

Geo. T. Merwin, formerly of the Canadian Cai & Foundry Co.'s staff in Mont-

real, is low with Robt. L. Merwin & Co., Inc., general importing merchants, insurance and steamship agents, etc., Fredricksted, St. Croix, Virgin Islands. The head of the firm, R. L. Merwin, is Chairman of the Colonial Council, and British Vice Consul.

Richard Charles Morgan, who has been appointed Chairman of the Railway Management Committee, Reid Newfoundland Co., St. John's, Nfld., was born Nov. 20, 1864, and served in various capacities in the U.S. with the Northern Pacific Ry., Great Northern Ry., and El Paso & Southwestern Ry. He entered C.P.R. service July 1, 1912, as Superintendent at Fort William, Ont., and continued in that position until Feb. 14, 1917, when he was appointed Superintendent, Winnipeg Terminals, and from July 26, 1917, to June 24, 1918, acted as General Superintendent, Manitoba Division, Winnipeg, resuming duty as Superintendent, Winnipeg Terminals, on the latter date. Mr. P.R. has given him six months' leave of absence to do some work for the Newfoundland Ry., which it is expected will be only temporary.

Baron Mount Stephen, G.C.V.O., who died at his home, Brackett Hall, Hatfield, Hertfordshire, Eng., Nov. 29, was born at Dufftown, Banffshire, Scotland, June 5, 1829, and came to Canada in 1850. He was engaged in private business for some years, and eventually became a director, Vice President and President of the Bank of Montreal. He also became President, St. Paul & Manitoba Ry., and was associated with the late Lord Strathcona, the late J. J. Hill and others in the formation and organization of the C.P.R. Co., of which he was the first President, holding that position until 1888. He retired into private life several years ago, and distributed the bulk of his wealth, consisting of railway and other securities, among relatives, friends and charities. The title is now extinct.

Hon. W. B. Nantel, Deputy Chief Commissioner, Board of Railway Commissioners, must pay income tax in Ottawa, the Second Divisional Court having confirmed the lower court's decision in favor of the municipality.

H. T. Rawlings, formerly Lake forwarding Agent, Canadian National Ry., Cleveland, Ohio, and for some time past Vice President and director, A. F. Haier Coal Co., Cleveland, has also been appointed President and Treasurer, Victor Sales Co., Third Vice President, Secretary and director, Buckeye Savings & Loan Co., and Treasurer and director, Shreve Investment Co., all of Cleveland.

H. D. Reid, President, Reid Newfoundland Co., St. John's, Nfld., was a guest at a dinner of the Newfoundland Club, at the British Empire Club, London, Eng., Nov. 10.

R. F. Richardson, General Agent, C. P.R., Juneau, Alaska, died in Vancouver, B.C., Oct. 26.

Frederick A. Rutherford, who has been appointed Passenger Trainmaster, Ontario Lines, G.T.R., Toronto, was announced in our last issue, was born at Parkhill, Ont., Sept. 16, 1877, and entered G.T.R. service Jan. 18, 1894, since when he has been, to July, 1894, assistant to agent, Aylmer, Ont.; July, 1894 to July 1900, telegraph operator, at various points; July 1900 to Jan. 1908, dispatcher, London, Ont.; Jan. 1908 to Mar. 1914, Chief Dispatcher, London and Stratford, Ont.; Mar. 1914 to June 1917, Trainmaster, Battle Creek, Mich.; June 1917 to

Feb. 1, 1918, Trainmaster, Durand, Mich.; Feb. 1, 1918 to Jan. 31, 1919, Inspector of Transportation, G.T.R., Montreal; Jan. 31, 1919 to Nov. 15, 1921, Trainmaster, London Division, Ontario Lines, London, Ont.

Frederick Lloyd Seaton, whose appointment as acting Assistant Auditor of Traffic, Canadian Government Ry., Moncton, N.B., was announced in our last issue, was born there Jan. 29, 1878. He entered Intercolonial Ry. service Apr. 21, 1898, and was, to Sept. 15, 1898, clerk, General Passenger Agent's office, Moncton, when he resigned to enter private business. He re-entered Intercolonial Ry. service Jan. 1, 1905, and was, to May 1, 1916, Travelling Auditor, Moncton, N.B., and from May 1, 1916 to Oct. 1, 1921, Travelling Auditor, Canadian Government Ry., Winnipeg.

Angus Sinclair, railway contractor, Toronto, who died Aug. 24, left an estate valued at \$298,369. The will provides a trust fund of \$12,000, the interest on which is to be paid to his sister for her life, then to her husband if he survives her, and \$2,000 of which is to be paid to

Lord Mount Stephen.

From photograph of marble bust in C.P.R. Windsor St. Station, Montreal.

their daughter after they are both dead, the balance reverting to the estate. The residue of the estate is to be equally divided among Mr. Sinclair's three sons and three daughters.

Hon. V. W. Smith, Minister of Railways for Alberta, has been elected a director of the Edmonton, Dunvegan & British Columbia Ry. Co., and its associated company, the Central Canada Ry. Co.

Edgar M. Snell, whose appointment as General Agent, Erie Rd., Toronto, was announced in recent issue, was born at Wingham, Ont., Feb. 16, 1872, and entered railway service Nov. 14, 1894, since when he has been, to July 1896, clerk, Erie Rd., Cleveland, Ohio; July 1896 to Dec. 1898, department head, same road, Cleveland, Ohio; Dec. 1898 to July 1900, department head, same road, New York; July 1900 to Nov. 1904, Travelling Freight Agent, same road, Toledo, Ohio; Nov. 1904 to June 1908, State Agent, Pere Marquette-Erie Line, Saginaw, Mich.; June 1908 to July 1910, agent, Erie Despatch, Erie Rd., Saginaw, Mich.; July 1910 to March 1921, agent, same road, Detroit, Mich.; March 1921 to May

1913, General Travelling Agent, Erie Rd., Chicago, Ill.; May 1913 to Jan. 1918, Import Agent, same road, Chicago, Ill.; Jan. 1918 to March 1920, engaged on special duties, same road, New York; March 1920 to Sept. 15, 1921, Export and Import Agent, same road, New York.

E. B. Walker, Electrical Engineer, Canadian National Ry., Toronto, left Toronto, Oct. 2, on a business trip to western and Pacific coast points, accompanied by Mrs. Walker. While on the way west, he made an inspection and study of the electrified sections of the Chicago, Milwaukee & St. Paul Ry., and of the Butte, Anaconda & Pacific Ry. The locomotives in use on the latter are identical with those used by the Canadian National Ry. in the Montreal tunnel. Mr. and Mrs. Walker visited Vancouver, Seattle, Prince Rupert, Edmonton, Saskatoon, Winnipeg and other western points, and returned to Toronto Oct. 29.

George H. Webb, Chief Engineer, Michigan Central Rd., Detroit, Mich., died at Newton, Mass., Nov. 3, aged 61. He was educated at the Pennsylvania Military Academy, graduating in 1880, when he entered railway service as rodman, Baltimore & Ohio Rd., and was, later, level man and transit man. In 1883 he was appointed City Engineer, Johnstown, Pa., and later, Engineer of Johnson Steel Rail Co. From 1885 to 1888, he was Assistant Engineer and Locating Engineer, Chicago, Burlington & Quincy Rd., and during 1888 located and built portions of the Seattle, Lake Shore & Eastern Rd. and Puget Sound, Skagit & Eastern Rd. In 1889 he went to China in charge of construction of Government railways, and was in 1891 appointed Division Engineer and Superintendent of Construction, Summit Division, Central Ry. of Peru. He returned to the U.S. in 1893, and was engaged in private practice for four years, after which he was appointed Chief Engineer, Cincinnati, Georgetown & Portsmouth Rd. From 1899 to 1901 he was Roadmaster, Cleveland, Cincinnati, Chicago & St. Louis Rd., and Chicago & Alton Rd., consecutively; 1901 to 1902, engineer in charge of construction, Baring Cross shops, St. Louis, Iron Mountain & Southern Rd.; 1903, in charge of location work, Michigan Central Rd.; Apr. to Nov. 1903, Engineer, Middle Division, same road; Nov. 1903 to June 16, 1905, Assistant Chief Engineer, in charge of surveys, construction and maintenance of way, same road; June 16, 1905, until his death, Chief Engineer, same road. In June 1907 he was appointed Chief Engineer, Detroit River Tunnel Co. In June 1917 he was commissioned as Lieutenant-Colonel, 16th (Railway) Engineers, and promoted to Colonel in the following year. He served in France for about two years, for which he obtained the Distinguished Service Medal, the French Order of the Black Star, and the Legion of Honor. He resumed his duties as Chief Engineer, M.C.R., in May 1919.

F. A. Young, Special Representative, Canadian Government Merchant Marine, Toronto, was married there at the end of October, and left the same day with his bride for Vancouver, en route for Los Angeles, California, where she is remaining while he is making a traffic survey in Mexico.

The Canadian National Ry. put in operation the winter car ferry service between Tormentine, N.B., and Port Borden, P.E.I., on Oct. 31. One round trip a day is made except on Sundays.

Branch Railways Operation.

Canadian Railway AND Marine World

ESTABLISHED 1898

Devised to Steam and Electric Railway, Marine, Shipbuilding, and Railway, Harbor and Canal Contractors' Interests.

Official Organ of various Canadian Transportation Associations.

Published on the first of each month at 70 Bond Street, Toronto, Canada.

ACTON BURROWS, Proprietor and Editor.

AUBREY ACTON BURROWS, Business Manager

Assistant Editors, John Keir, Donald F. Keir and Edwin Winfield

United States Business Representative,
A. Fenton Walker, 143 Liberty St., New York.

Member of
Associated Business Papers, Audit Bureau of Circulations, Canadian National Newspapers and Periodicals Association, Canadian Press Association.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

SUBSCRIPTION PRICE, including postage, Canada, United Kingdom, most other British Possessions (except Australia), and to Mexico, \$2 a year. Extra postage to United States, 50c. a year. To other foreign countries, except Mexico, \$1.50 a year.

SINGLE COPIES, 25 cents each.

The best method of remitting is by express or post office money order. If remittance is made by cheque, 15 cents should be added to cover cost of collection, unless cheque is payable at par in Toronto or Montreal.

ADVERTISING RATES furnished on application. **ADVERTISING COPY** must reach the publishers by the 10th of the month preceding the date of the issue in which it is to appear.

TORONTO, CANADA, DECEMBER, 1921.

The question of passenger train service on branch lines is important, for the reason that in the majority of cases the branch does not yield sufficient business to make steam train operation thereon pay. In many cases the branch is a money maker for the railway, on account of the long haul traffic originated on it, despite the fact that operation of the branch itself results in a loss, in which case it may be felt that the loss incidental to steam train operation on the branch is amply compensated for. However that may be, it is certain that the aggregate of the losses from steam train operation of branches is large on most railways, and if these losses could be prevented, the total saving would be large.

Passenger service for the average branch line operated by steam generally requires at least a train daily in each direction, and it may be assumed that two cars will be hauled by the locomotive, the first carrying mails, baggage and express, and the second carrying passengers. The service does not pay, for the simple reason that the business offering will not compensate for the wages of a complete crew, and the locomotive terminal expenses, in addition to the maintenance of way and other expenses which are incurred under any system of operation. A feature of the operation is that the two cars generally provide capacity greatly in excess of that demanded by the traffic, and a growing feature is that motor trucks and automobiles are diverting a great deal of traffic from the railways.

For some unexplainable reason, the public generally believe that railways could make branch lines pay by electrifying them. It is evident, however, that if the traffic on a branch line is so limited that the operation of a daily two-car train cannot be made to pay, the overhead expense incidental to electrification would also result in an operating loss. It would seem that if electric operation is to be adopted anywhere in this country, it should be on lines of heavy traffic, where the volume of traffic is such that the cost of electrification could be absorbed without loss.

Attempted solutions of the branch line operating problem have included self propelled cars operated by steam, compressed air, storage batteries and gasoline, the latter with either mechanical or electrical drive. Steam and compressed air were soon found unsuitable. Storage battery cars and gasoline driven motor cars give promise of being more successful. During the past few months Canadian Railway and Marine World has given accounts of tests being made by the Canadian National Ry., with equipment for branch line service, including the storage battery car which was operated for a month between Belleville and Trenton, on the Ontario District, and is now operating between Bathurst and Campbellton, on the Maritime District, and the gasoline motor car now operating between Brockville and Westport, on the Ontario District. In this issue, mention is made of a gasoline driven car which operated during the past summer on the Stanley Branch, Maritime District. The storage battery car is showing a saving, over steam train operation, of \$2,500 a month; the gasoline motor car between Brockville and Westport is show-

ing an operating profit, and while the motor car on the Stanley Branch made, during the summer, a saving over steam operation of \$1,300 a month. Such results are encouraging, and give rise to hopes that equipment and operating methods are being developed which will make branch line operation profitable. In this connection it must be pointed out that winter will present difficult operating problems; but these will doubtless be overcome, and large progress will be made in a field of railway operation which presents large opportunity for the development, perfection and standardization of equipment and operating methods, which will make possible the profitable operation of branch lines all the year round.

The Greater Winnipeg Water District commissioners, faced with heavy deficits in operating its railway by steam, have invited tenders for a gasoline propelled passenger car, particulars in connection with which are given in an article, "The Greater Winnipeg Water District Railway's Future," on another page of this issue.

Locomotive Design and Operation.

The paper by James Partington, Estimating Engineer, American Locomotive Co., on locomotive design as affecting operation, published on another page of this issue, presents the ever present problem of locomotive improvement in an instructive way, and is worthy of study by any railway operating man. While efficiency and economy in locomotive operation depend on a great many things, among which may be mentioned the character of locomotive terminal facilities, the degree of skill displayed by firemen and locomotive men, the character of train operation and train dispatching, the system of tonnage rating, the degree of co-operation between the mechanical and operating departments, the manner in which timetable schedules are adapted to the division, etc., it is nevertheless evident that with design unfavorable in relation to prevailing conditions, the maximum efficiency and economy in operation is impossible. As Mr. Partington so clearly sums the matter up, the aim in design should be such that, in operation, a drawbar horse power will be obtained for the minimum amount of weight, of fuel, and of maintenance cost. A study of the paper shows that the natural tendency of securing the desired standard in the detail is to make for a disadvantage in another; for example, a boiler giving the maximum in steam making ability and permitting the greatest economy in combustion produces a tendency to too great size and weight, or the attempt to keep certain parts within what may be considered a desirable weight limit may possibly involve a sacrifice in resistance to wear, and therefore in maintenance cost. To the necessity of making correct adjustments as between these major factors of design, add numerous special conditions of grade, curve, clearances, weather conditions, and so on, and the nature of the designer's problem is indicated. The effect of various external conditions present when a locomotive is actually in operation are evident, and therefore appreciated by operating men, but the effect of the thought and study given to the locomotive before it was

brought into being is not so evident in its application. The connection between design and operating efficiency is clearly established by Mr. Partington, however, and for that reason his paper is well deserving of study and thought by everyone whose work is in any way connected with locomotive operation.

Partyism Run Mad.

A Portland, Me., paper said recently: "The G.T.R. docks were never in better shape for handling the winter steamer business than at present. For several months the company's carpenters have been busily engaged in making repairs at all the wharves, which are now greatly strengthened, hundreds of new piles having been driven in place of others that had decayed, together with a lot of new planking, while the plank roadway running in front of all the sheds has been practically rebuilt."

The Toronto Globe republished the above, under a heading "More Americanization," and attacked the Dominion Government for what had been done. Does the Globe think that the portion of the G.T.R. Montreal-Portland line from the International Boundary to Portland should be abandoned, or ordinary repairs neglected?

Presentation to Acton Burrows.—At the opening of the Canadian National Newspapers and Periodicals Association's annual meeting in Toronto, Nov. 10, the President, Acton Burrows, Proprietor, Canadian Railway and Marine World, announced that he was not a candidate for re-election, and that, on account of other duties, he could not continue in the position under any circumstances. He was, however, re-elected a director, and a member of the executive committee. On the following day, Lt. Col. J. B. MacLean, President, MacLean Publishing Co., on behalf of members of the Association, presented him with a complete set of the Encyclopedia Britannica's latest library edition, in recognition of his services as Chairman of the Canadian Press Association's Trade and Class Papers Section for four years, and as President of the Canadian National Newspapers and Periodicals Association for two years.

G.T.R. Efficiency Propaganda.—A joint meeting of the G.T.R. Montreal and Ottawa Division staffs to promote efficiency was held at Valleyfield, Que., Nov. 8, J. J. Connelly, Superintendent, Montreal Division, presiding. Dr. Hodgkett, Director General, St. John Ambulance Association, Ottawa, spoke on first aid and nursing; and a demonstration of first aid was given under G. A. Kell, Safety Engineer, Montreal. A. H. McMullen, of the Bureau of Explosives, Ottawa, explained a series of lantern slides, demonstrating the results of the careless handling of dangerous commodities, and R. Surgeon, of the lost freight department, gave an illustrated talk on the handling of freight.

The Reid Newfoundland Co. made considerable reductions recently in its freight rate between North Sydney, N.S., and Newfoundland points reach by its system, the approximate reductions on different commodities being as follows:—Apples, 25%; beans, 45%; barley, 10%; flour, grain and grain products, 45%; hay, straw, etc., 17%; matches, 18%; pickled meats, 40%; onions, 6%; potatoes, 5%; salt, 17%.

Canadian National Railways Construction, Betterments, Etc.

St. John, N.B., Shipping Facilities.—C. A. Hayes, Vice President in charge of traffic, C.N.R.; D. O. Wood, General Foreign Freight Agent, C.N.R. and G.T.R., and R. B. Teakle, Manager, Canadian Government Merchant Marine, visited St. John recently and looked over the facilities for handling live stock for the export trade, which will probably be improved as a result.

Little Buctouche River Bridge.—We are officially advised that contracts for a new bridge across the Little Buctouche River, between Irishtown and Tankville, N.B., at mile 26.1 Buctouche Subdivision, formerly the Moncton & Buctouche Ry., have been let as follows: Substructure, Gorman & Peckham, Halifax, N.S.; superstructure, Dominion Bridge Co., Montreal.

The new bridge will be slightly up stream from the present one. The pedestal supporting the towers will be of 70 ft. timber Howe truss spans will be replaced by a steel viaduct, consisting of four 60 ft. deck plate girder spans, taken from the main line and rebuilt, and three new 30 ft. towers, together with one tucker bent. It is expected to complete the work by the end of February.

St. Genevieve Station.—The Board of Railway Commissioners has, on the application of St. Genevieve, Que., municipal council, ordered the erection of a standard 5th class station at the crossing of the St. Genevieve Road and the railway.

Contracts for Buildings.—We are officially advised that contracts have been let as follows:—Ice house extension at Chaudiere Jet, Que., A. J. Morin, Garthby, Que.; station buildings at Barrute, Que., and Hervey Jet, N.B., J. A. Bonlay, Sayabec, Que.; ten double dwellings at Parent, Que., Emory Sicard, Amos, Que.

Black River Bridge.—The Board of Railway Commissioners has authorized the building of a bridge over the Black River, near Pefferlaw, Ont., mile 55.9 from Toronto, Muskoka Subdivision.

Washago Connection.—The Board of Railway Commissioners has authorized the building of a connection between the Canadian Northern Ontario and Grand Trunk Railways at Washago, Ont., on the Muskoka Subdivision, 89 miles from Toronto.

Hornepayne Station.—A large new station at Hornepayne, the division point on the Canadian Northern Ry., 721 miles west of Montreal, was opened Oct. 22. It is a brick building, 134 x 34 ft., with a platform about 1,000 ft. long and from 12 to 25 ft. wide. On the ground floor are general and women's waiting rooms, baggage and express rooms, ticket and telegraph offices. The divisional offices are on the first floor.

Dauphin Station.—We are officially advised that a contract has been let to G. M. McLeod, 497 Raglan Road, Winnipeg, for building a pedestrian subway under the tracks at Dauphin, Man.

Holmes Track Connection.—The Board of Railway Commissioners has authorized the building of a connection between the Canadian Northern Ry., from a point on the Duck Lake Subdivision, with the Grand Trunk Pacific Branch Lines Sudworth Subdivision, at Holmes, 10 miles south of Prince Albert, Sask.

Alberta Track Connections.—The Board of Railway Commissioners has authorized the building of track connections as follows:—Between the Edmonton & Slave Lake Ry., and the Grand Trunk Pacific Ry. at Union Junction, Alta.; between the Battle River Subdivision, and the G.T.P. Ry. Viking Subdivision at Ridley, Alta.; between its Strathcona-Camrose Branch and the G.T.P. Ry. Bashaw Subdivision near Camrose, Alta.; between the Canadian Northern Alberta Ry. and the G.T.P. P.R. in Sections 25, 26, Tp. 53, Range 7, west 5th meridian; also between the Edmonton, Yukon & Pacific Ry. and the Grand Trunk Pacific Ry. at Stoney Plains, Alta.

Sumas River Bridge.—The Board of Railway Commissioners has recommended the Dominion Government to approve plans of a temporary lift span for the Sumas River bridge, Port Mann Subdivision, B.C.

Prince Rupert Warehouse and Station. We are officially advised that a contract has been let to J. H. Simmons, Winnipeg, for building a frame warehouse on the dock at Prince Rupert, B.C.

A press report states that P. W. Graham, A. Mather and S. Schofield, contractors, arrived in Prince Rupert, Nov. 9, to start work on the erection of the new station, a description of which was given in Canadian Railway and Marine World for October, pg. 559. (Nov., pg. 595.)

Transportation Appointments Throughout Canada.

The information under this head, which is gathered almost entirely from official sources, is compiled with the greatest care, so as to ensure absolute accuracy. Anyone who may notice any error in our announcements will confer a favor by advising us.

Board of Railway Commissioners.—CALVIN LAWRENCE, of Ottawa, heretofore legislative representative, Brotherhood of Locomotive Engineers, has been appointed a member of the Board of Railway Commissioners for Canada.

JAS. W. REID has been appointed Inspector of Railway Safety Appliances, at Calgary, Alta.

Canadian National Rys.—G. E. BUNTING, Australasian Manager, Canadian Government Merchant Marine, has also been appointed General Traffic Manager, C.N.R., with general supervision, in New Zealand and Australia, of freight and passenger traffic. Office, Auckland, N.Z.

R. J. McEWAN, who was appointed District Agent, Canadian National-Grand Trunk Rys., and Canadian National Express Co., at Manchester, Eng., recently has opened his office there, at 14 Atlantic Chambers, 7 Brazenose St.

Canadian Pacific Ry.—B. E. CHACE has been appointed City Ticket Agent, Nelson, B.C., vice F. V. Henderson, resigned.

G. M. CORDINGLY, heretofore dispatcher, has been appointed Chief Dispatcher, Saskatoon, Sask., vice A. B. Harshaw.

R. A. GAMBLE, Terminal Trainmaster, Winnipeg Terminal Division, has been appointed acting Superintendent, Winnipeg Terminal Division, temporarily, during the absence on leave of R. C. Morgan, who is now with the Reid New-

foundland Co., at St. John's, Nfld. Office, Winnipeg.

J. L. McCLOSKEY is acting as agent at Juneau, Alaska, the General Agent, R. F. Richardson, having died Oct. 26.

N. McMILLAN has been appointed Assistant Superintendent, Trenton Division, Ontario District, vice W. J. Stinson, transferred. Office, Havelock, Ont.

T. McNEIL, heretofore agent, Liverpool, Eng., has been appointed General Agent, Office, Royal Liver Building.

W. H. NOYES has been appointed Roadmaster, Belleville Subdivision, Ontario District, Belleville, Ont., vice J. Telford, transferred to New Brunswick District.

W. J. STINSON, heretofore Assistant Superintendent, Trenton Division, Ontario District, Havelock, Ont., has been appointed Assistant Superintendent, London Division, Ontario District, vice R. G. Edwards. Office, London, Ont.

F. W. STONE has been appointed acting Terminal Trainmaster, Winnipeg Terminal Division, temporarily, while R. A. Gamble is acting Superintendent of the Division. Office, Winnipeg.

R. E. SWAIN has been appointed Liverpool Passenger Agent, Office, Royal Liver Building, Liverpool, Eng.

Grand Trunk Ry.—W. M. DOHERTY, heretofore dispatcher, has been appointed Chief Dispatcher, London, Ont., vice A. F. Sharpe, appointed Trainmaster.

F. A. RUTHERFORD, heretofore Trainmaster, London Division, Ontario Lines, London, Ont., has been appointed Passenger Trainmaster, Ontario Lines. Office, London, Ont.

A. F. SHARPE, heretofore Chief Dispatcher, London, Ont., has been appointed Trainmaster, District 17, Sarnia Tunnel to Hamilton, including Petrolia Subdivision, District 18, Komoka to Glencoe, District 19, Glencoe to Kingscourt Jct. and District 24, vice F. A. Rutherford, appointed Passenger Trainmaster, Ontario Lines. Office, London, Ont.

Michigan Central Rd.—F. W. COWLEY, heretofore passenger conductor, has been appointed Assistant Trainmaster, London, Ont.

T. EVANS, Freight Agent, London, Ont., was, it was stated recently, about to be superannuated. We are officially advised that it has been decided not to do this for the present.

Minneapolis, St. Paul & Sault Ste. Marie Ry.—J. C. PETERSON, heretofore General Agent, Winnipeg, has been appointed General Agent, Freight Department, Minneapolis, Minn.

C. F. RONNAN, heretofore Commercial Agent, Minneapolis, Minn., has been appointed General Agent, Winnipeg, vice J. C. Peterson, transferred.

Reid Newfoundland Co.—R. C. MORGAN, Superintendent, Winnipeg Terminals, C.P.R., who, as stated in Canadian Railway and Marine World for November, has been granted six months leave of absence, has been appointed by the Reid Newfoundland Co.'s directors, from Nov. 1 as Chairman of its Railway Management Committee, the other members on the committee being R. G. Reid, Vice President of the company, and J. M. Forbes, C.E., director, who is in charge of its Natural Resources Department. This is in accord with the Newfoundland Government's stipulation, in extending aid to enable the company to continue operating the railway for a year, that a General Manager should be secured, either from Canada or the United States, and

that the appointment should be subject to the Government's approval. We are informed that Mr. Morgan is acting practically in an advisory capacity, and that his service will probably be only a temporary one. The committee is charged with the present operation of the railway, and the formulation of some general scheme for its future operation, which it is expected to have prepared within the next two or three months and to be formulated before the end of March, 1922.

Canadian Traffic League's Annual Meeting, Etc.

The Canadian Traffic League, which is composed of over 100 traffic directors, managers, commissioners, and other officials in charge of traffic for industrial and commercial organizations, has for its objects, as stated in its constitution, to promote a better understanding by the public, provincial and Dominion governments, of the needs of the traffic world. To secure modification of present laws,

A. H. Thorpe,
Traffic Manager, William Davies Co., Ltd., and
President, Canadian Traffic League.

regulations and rulings where they are harmful to the free interchange of commerce. To advance fair dealing. To promote, conserve and protect commercial and transportation interests. To co-operate with the Board of Railway Commissioners for Canada, other organizations, and the transportation companies, thus bringing about better conditions.

The annual meeting was held in Toronto, Nov. 15, the President, F. W. Dean, Traffic Manager, Steel Company of Canada, being in the chair. Reports from the various committees and a number of other important matters were dealt with. The following officers, etc., were elected:—President, A. H. Thorpe, Traffic Manager, Wm. Davies Co., Toronto; Vice President, W. R. Caldwell, Traffic Manager, Dominion Canners Ltd., Hamilton; Secretary-Treasurer, R. J. Fitzgerald, Traffic Manager, F. W. Woolworth Co., Toronto. Executive Commit-

tee:—F. W. Dean, Traffic Manager, Steel Co. of Canada, Hamilton; Jas. Mayor, Sheet Metal Products Co. of Canada, Toronto; S. B. Brown, Assistant Manager, Transportation Department, Canadian Manufacturers Association, Toronto; W. S. Campbell, Manager, Transportation Department, Canadian General Electric Co., Toronto; J. J. Sinnott, Traffic Manager, F. F. Dalley Co., Hamilton; W. N. Nuttycombe, Traffic Manager, McClary's Limited, Toronto.

In the evening the League held its annual dinner in the Toronto Board of Trade restaurant, the retiring President, F. W. Dean, in the chair. The principal speaker was Hon. Mr. Justice W. R. Kiddell, of the High Court of Ontario, who delivered a masterly address on Canada, which was most enthusiastically received. Other speakers were A. W. Bell, Traffic Manager, General Motors Co.; A. H. Thorpe, the President elect; C. A. Hayes, Vice President in charge of traffic, Canadian National Rys.; Wm. C. Muir, Vice President and General Manager, Canadian National Express Co.; S. B. Brown, Assistant Manager, Transportation Department, Canadian Manufacturers Association; C. S. Morse, District Freight Agent, C.P.R.; and Acton Burrows, Proprietor, Canadian Railway and Marine World. The latter congratulated the League on its recognition by the Board of Railway Commissioners, in being added to the bodies which are to receive notice of applications to the Board for changes in rates, and referred feelingly to the loss which the traffic world in general had sustained during the year by the death of Jas. Hardwell, Chief Traffic Officer, Board of Railway Commissioners.

Railway Accidents Throughout Canada. The total number of accidents reported to the Board of Railway Commissioners in September was 185, resulting in 30 persons being killed and 197 injured. Of those killed, 13 were employees, and 17 were others, while of those injured 23 were passengers, 131 were employees and 43 were others. Under others are included 27 highway crossing accidents, in which 9 persons were killed and 30 were injured. In 18 of these accidents the crossings were unprotected, in 4 there were gates, in 4 there were bells and in one there was a speed limitation. In 17 cases automobiles were concerned, in 4 cases pedestrians, in 5 cases wagons and in 1 case a vehicle.

The Board of Railway Commissioners has granted the Vancouver, B.C., Harbor Commissioners' application for running rights over a section of the Vancouver, Victoria & Eastern Ry. & Navigation Co.'s lines in Vancouver, from the point where the Commissioner's proposed railway connects with the V.V. & E.R. to the connecting point between the latter and the Canadian National Rys. at False Creek.

The Nova Scotia apple crop for 1921, reported as having been estimated by G. E. Graham, General Manager, Dominion Atlantic Ry., at 1,750,000 barrels, valued at \$5,000,000. The bulk of the crop is shipped out by the company's railway and steamships.

The Canadian National Rys. will run a special train leaving Winnipeg Dec. 7 for Halifax, N.S., for the Christmas trans-Atlantic sailings. Special sleeping cars will be provided for passengers from Calgary, Edmonton, Regina and Saskatoon.

Railway Development, Projected Lines, Surveys, Construction Betterments, Etc.

Alaska.—The U.S. Senate on Nov. 14 passed a bill authorizing an additional \$4,000,000 for completing the Government railway between Seward and Fairbank, Alaska.

\$52,000,000 had previously been appropriated for the construction of the line, which will be 530 miles long when completed. Work is in progress on the final link of 61 miles. The \$4,000,000 last voted will be mainly expended upon the erection of a 1,340 ft. bridge over the Tanana River, a 600 ft. bridge across the Menana River, and other bridge work.

Alberta & Great Waterways Ry.—A press report of Nov. 10 stated that track had been laid into the new townsite of Waterways near the Clearwater River, and about 8 miles short of McMurray, Alta., that grading on the spur line to the water front was about done, that a portable station and other buildings were being put up, and that a sleigh road was being built to connect the old road with the railway. Construction on the line between Waterways and McMurray has been suspended for the season.

The Premier of Alberta is reported to have informed a delegation of McMurray people that the question of the extension of the railway into McMurray will have to be determined by developments in the north. The terminal at Waterways is claimed to be the best possible one in the interests of the railway, the steamship companies, and the district as a whole, until such time as the traffic requirements justify an extension. (Nov., pg. 583.)

Canadian Light Railways Construction Co. is reported to be the title of a re-constructed company, which purposes taking over the assets and liabilities of a company with a similar title, formed to build narrow gauge railways in Northern Ontario mining district. (Oct., pg. 519.)

Canadian Transit Co.—In connection with the project to build a bridge across the Detroit River, with the Canadian end at Windsor, Ont., the President of the United States has written C. E. Fowler, the engineer, as follows:—"The construction of great bridges across boundary waters between the U.S. and Canada is particularly interesting and deserving of public interest, because they invariably are calculated to bring into yet more intimate relations two countries between which more than a century of unbroken peace has been recorded." (Aug., pg. 419.)

Edmonton, Dunvegan & British Columbia Ry.—Good progress is reported to have been made in the construction of the 25 mile extension from the Peace River into the Waterhole country. Three bridges remain to be completed. Ties and rails have been delivered, and it is expected to have the line ready for operation at an early date. (Nov., pg. 583.)

Esquimalt & Nanaimo Ry.—It is expected that the formation work for the bridge to carry the railway over the harbor works at Johnson St., Victoria, will be completed at an early date. The steel for the superstructure manufactured by Canadian Bridge Co., Walkerville, Ont., is being delivered. (Oct., pg. 528.)

Grand Trunk Ry.—The Board of Railway Commissioners has authorized the

rebuilding of bridge 93 over the Cold-water River, old Midland Ry., mile 146.85 from Belleville, Ont.

The Board of Railway Commissioners has approved of plans for the reconstruction of the bridge over the G.T.R. at Main St., East Toronto, work on which has been in progress for some time.

A press report states that during this year 89 miles of track on the London Division have been relaid with 100 lb. rails. This work was done on the westbound track, the eastbound track having been relaid in 1920.

Greater Winnipeg Water District Ry. The Board of Administration's sub-committee reported Nov. 11 that ballasting on portions of the railway between St. Boniface and Deacon, 6.5 miles, was being completed. The estimated cost of the work was \$22,500, and there had been expended to that date \$14,826.24. It was estimated that about \$4,000 more would complete the work.

Pacific Great Eastern Ry.—Replying to questions in the British Columbia Legislative Assembly Nov. 2, the Premier stated that the trestle work on the line west of Lonsdale Ave., North Vancouver, was in first class condition for operation, with the exception of the east portion of trestle no. 1, which had been reinforced to make it safe for traffic until it could be train filled, for which instructions had been given and the work would be gone on with as soon as steam shovel and cars could be delivered from Squamish. (Nov., pg. 583.)

Timiskaming & Northern Ontario Ry. The first sod in connection with the extension for about 70 miles north from Cochrane, to the present terminus, was turned by Premier Drury, Oct. 28. Tenders for the grading of the line will be invited at an early date. (Nov., pg. 583.)

Toronto, Hamilton & Buffalo Ry.—In connection with the reconstruction of the Robinson St. bridge, Hamilton, Ont., the company has asked the city council to pay a portion of the cost, and to put in the earth approaches. (Oct., pg. 529.)

Railway Finance, Meetings, Etc.

Algoma Central & Hudson Bay Ry.—Gross receipts for year ended June 30, \$2,802,237, against \$2,030,202 for previous year. Receipts for August, \$223,823, against \$272,051 for Aug. 1920; receipts for two months to Aug. 31, \$407,508, against \$519,133 for same period 1920.

Canadian Pacific Ry.—At a directors' meeting at Montreal Nov. 14, a dividend of 2½% on the common stock for the quarter ended Sept. 30, was declared, being at the rate of 7½% per annum from revenue and 3½% per annum from special income account, payable Dec. 31 to shareholders of record Dec. 1.

St. John & Quebec Ry.—The New Brunswick Government was reported on Nov. 6 to have sold \$165,000 of provincial 6½% 20 years term bonds to refund St. J. & Q.R. Co.'s registered stock in London, Eng.

W. R. Kenny, O.A.S., has been appointed Air Sub-station Superintendent at Roberval, Que., by the Canadian Air Board.

Freight and Passenger Traffic Notes.

The Canadian National Rys., according to a press report, handled 80,000,000 bush. of wheat from western points between Sept. 1 and Nov. 19.

The G.T.R. was sued in the Quebec Superior Court recently by E. Poupart to recover damages for loss sustain on a shipment of potatoes from St. Isidore to Montreal in Jan. 1920. Plaintiff claimed that he ordered heated cars for the shipment, but on arrival at Montreal one carload was found to be entirely spoiled by frost, and half of the contents of a second car had to be thrown away. Judgment was given for plaintiff for \$443.15.

The Canadian National and the Canadian Pacific Rys. have announced the following conditions for home visitors from the western provinces:—Tickets will be issued from Dec. 1 1921 to Jan. 15, 1922, to all points in Eastern Canada, East and south of and including Sudbury and Cochrane, Ont., for first class one way fare and one third for the round trip, the tickets being available for the return trip for three months from the date of issue.

C. A. Cooke, Secretary, Regina, Sask., Board of Trade, in addressing the Regina Business Men's Association, Nov. 4, laid down four factors as principles to observe in packing freight shipments with a view of protecting the shipper, the consignee and the carrying companies. He claimed that by using the cheapest type of package that would ensure safe arrival, the proper form of package in accordance with the classification, and the use of a package which would reduce dead weight to a minimum, freight charges could be materially reduced.

✓ The London Railway Commission has applied to the Board of Railway Commissioners to fix rates to be charged for the conveyance of Michigane Central Rd. freight over the London & Port Stanley Ry. The agreement between the two lines provides for the revision of the rates every five years, and one of these periods expired Dec. 23, 1920. Negotiations have been going on since as to the rates to be charged, and as the parties cannot agree, the Board of Railway Commissioners is asked to fix the rates. Members of the London City Council endeavored to intervene, as being the owners of the L. & P.S. Ry., but it was pointed out that they had nothing to do with the operation of the line, that having been placed in the hands of the London Railway Commission.

An Edmonton, Alta., subscriber writes Canadian Railway and Marine World in reference to an item in the Freight and Passenger Traffic Notes in the November issue, in regard to a record trip reported to have been made by a Canadian National Rys.' special train, to convey a doctor from Vancouver to Edmonton. He says:—"The train, which consisted of a locomotive and two cars, left New Westminster at 9 p.m. Pacific time, and arrived at Edmonton the following day at 8.40 p.m. Mountain time, the distance being 750.3 miles, and the regular running time 35 hours and 55 minutes. The Alberta & Great Waterways Ry.'s running time from Edmonton, with its Friday train, to Lac la Biche, 131 miles, is 6½ hours, half an hour of which is occupied in making the first 4 miles, which is not bad for a new road."

Repairing of Canadian National and Grand Trunk Pacific Box Cars.

As stated in Canadian Railway and Marine World for November, the Canadian National Rys. management has given orders for the repair of 2,000 C.N. R. box cars, as follows: Canadian Car & Foundry Co., 500 at Amherst, N.S., and 500 at Montreal; Eastern Car Co., 500 at New Glasgow, N.S.; National Steel Car Co., 500 at Hamilton, Ont., and also for the repair of 1,000 Grand Trunk Pacific Ry. box cars by Canadian Car & Foundry Co. at Fort William, Ont.

The repairs will be in the nature of a general overhauling. On all cars not so equipped, the door fixtures will be made to conform to the C.N.R. standard; all cars with defective roofs will be equipped with inside metal roof and outside board roof, in compliance with the railways' standard. All cars not so equipped will be fitted with metal draft arms, either of the cast steel type, built to A.R.A. specifications, or of the built up type of plates and shapes, similarly meet-

tergal with body bolster, metal draft arms extending to metal body bolster, and securely riveted to same or transom draft gear.

The C.N.R. standard brake rigging arrangement for freight cars is shown in the accompanying plan. The parts are numbered as are follows: 1, push rod; 2, live cylinder lever; 3, dead cylinder lever; 4, dead truck lever (2 per car); 5, live truck lever (2 per car); 6, top connecting rod (2 per car); 7, center connecting rod; 8, bottom connecting rod (2 per car); 9, adjusting fulcrum; 10, adjusting fulcrum support; 11, dead lever fulcrum connecting rod (2 per car). The distance A and B on the live and dead cylinder levers as shown on the drawing are as follows: with 8 in. diam. cylinders on cars of from 20,000 to 22,000 lb. tare weight, A is 11½ in. and B 22½ in.; tare weight 22,000 to 24,000 lb. A is 12 in. and B 22 in.; tare weight 24,000 to 26,000 lb. A is 12½ in. and B 21¼ in.;

Arrangement of Brake Rigging, Box Cars, Canadian National Railways.

ing A.R.A. specifications. On all cars where it is necessary, the foundation brake gear will be made to conform to the C.N.R. standard. Beyond this standardization as to doors, roofs, metal draft arms and foundation brake gear, the repairs will not differ from the ordinary general repair as given in the railways shops.

The application of long metal draft arms to freight cars in main line service has now become a necessity on Canadian and U.S. railways. With the locomotives of high tractive effort now used, and with correspondingly long and heavy trains, the use of short wooded draft arms is no longer satisfactory. The M. C.B. Code of Rules provides in rule 3, subsection 2, as follows:—"After Oct. 1, 1918, when cars equipped with short draft arms receive general repairs, long metal draft arms extending beyond the body bolster, steel draft members extending full length of car, transom draft gear, steel center sills, or steel underframes, must be applied." Subsection (i) of the same rule reads: "After Oct. 1, 1922, no car with trucks of less than 60,000 lb. capacity will be accepted in interchange, unless equipped with wooden or metal draft arms extending beyond the body bolster, metal draft arms in-

tare 26,000 to 28,000 lb., A is 13¾ in. and B 20½ in.; tare 28,000 to 30,000 lb., A is 14 in. and B 20 in.; tare 30,000 to 32,000 lb., A is 14½ in. and B 19½ in.; tare 32,000 to 34,000 lb., A is 15 in. and B 19 in.; tare 34,000 to 36,000 lb., A is 15½ in. and B 18½ in.; tare 36,000 to 38,000 lb., A is 16 in. and B 18 in.; tare 38,000 to 40,000 lb., A is 16½ in. and B 17½ in. With 10 in. diam. cylinder on cars of from 40,000 to 42,000 lb. tare weight, A is 13 in. and B 21 in.; tare 42,000 to 44,000 lb., A is 13½ in. and B 20½ in.; tare 44,000 to 46,000 lb., A is 14 in., B 20 in.; tare 46,000 to 48,000 lb., A is 14½ in. and B 19½ in.; tare 48,000 to 50,000 lb., A is 15 in. and B 19 in.

Notable features of this brake rigging are, first, that all adjustments are made at the adjusting fulcrum (no. 9), which precludes the necessity of removing and replacing pins in the rigging around the trucks, saving a lot of labor in awkward positions and removing the hidden cause of many derailments; second, the bottom connecting rods (nos. 8) are carried through the bolster, instead of under it, adding to safety in case of broken connections or lost or broken pins. As is shown in the illustration, the brake beams are inside hung.

The Greater Winnipeg Water District Railway's Future.

The Greater Winnipeg Water District Administration Board had under consideration recently a sub-committee's report dealing with the future of the railway, and passed several resolutions in connection therewith. The payment of \$4,576.67 on capital account, and \$6,445.92 on operating account, and \$77,590.30 on interest account, was authorized.

The sub-committee reported that the loss on operating for 1920 was \$54,490, and for the eight months ended Aug. 30, \$64,000, due to the high cost of operating a steam service with a small revenue from passenger and freight traffic. The sub-committee pointed out that the line cannot be successfully operated on a large scale, and recommended a gasoline car as the only means of keeping the line open for traffic. Tenders for the supply of one had been received, ranging from \$20,000 to \$30,000. It was recommended that the line be operated as a patrol road for the aqueduct, and that freight and passenger service be given as re-

quired, provided that the cost of the same be earned. It was suggested that car load freight be moved by work trains, and that the use of rolling stock of other lines be eliminated as far as possible. It was stated by W. M. Scott, Chairman of the Commission, that the gasoline car will run on a regular schedule, but that the work train will be run only as required, but doing a train crew's full day's work. It is estimated that by carrying out these suggestions, which were approved of, a saving of about \$60,000 will be made in operating the line during 1922.

Railway Thief Punished.—Bertram Hale, a negro, was sentenced recently to a month imprisonment for stealing blankets and other bedding from the C.P.R., and to one month imprisonment for loitering on the C.P.R. Glen yards, Montreal. He stole property worth \$800, and towels and blankets worth \$500 were found at his house.

Disturbing Passenger Punished.—Geo. Garant was fined \$3.50, and in default eight days imprisonment, by the Quebec Court of Sessions, Nov. 10, for causing a disturbance on a Canadian National Ry. train, and took the imprisonment.

The Railway Wages Situation in Canada and the United States.

Grand Trunk Ry.—As stated in Canada Railway and Marine World for November, pg. 579, the Grand Trunk Ry. entered into an agreement with its employees, members of Canadian Brotherhood of Railway Employees, International Brotherhood of Railroad Stationmen, International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and Brotherhood of Stationary Firemen and Oilers, by which wage reductions taking effect July 16 were accepted. Immediately after, however, the C.B.R.E. leaders, through J. E. McGuire, general chairman of the G.T.R. employees' branch of the organization, stated that the two representatives who signed the agreement on behalf of the C.B.R.E. had exceeded their authority in doing so, that he was the only man who had authority to sign the agreement on behalf of the C.B.R.E., and that even before he could sign it, he would have to submit it to the general committee. The board of arbitration in the case, composed of J. M. Godfrey, K.C., Toronto, Chairman; H. H. Vaughan, Consulting Engineer, Montreal, for the G.T.R., and Peter Bercovitch, K.C., Montreal, for the employees, met in Ottawa on Nov. 1 to discuss the re-opening of negotiations on account of the C.B.R.E. attitude. G.T.R. representatives stated that they considered the agreement binding, as it was signed by officers of all the organizations involved. Mr. McGuire declared that he could do nothing further until the agreement had been placed before the general committee of his organization, and the meeting had no result of importance. On Nov. 2 the C.B.R.E.'s general committee met in Toronto and decided to reject the agreement as unsatisfactory, stating that it had not been entered into, as the C.B.R.E. representatives who signed it had not authority to do so. On Nov. 3 the board of arbitration met the members of the general committee in Toronto. C. F. Vedham, Assistant to General Superintendent, Motive Power and Car Department, G.T.R., also being present. After hearing the argument, the board of arbitration declared the case closed, stating that it would report its findings to the Minister of Labor. A majority report, signed by J. M. Godfrey, chairman, and H. H. Vaughan, for the G.T.R., made public Nov. 23, upheld the general decrease made by the G.T.R., but the opinion that the method adopted in distributing the reduction resulted in the lower paid employees suffering greater decreases than those receiving higher pay. The report recommends that an effort should be made by further negotiations to adjust these inequalities. At the time of writing (Nov. 24) the minority report of Peter Bercovitch, K.C., representing the C.B.R.E., had not been presented.

The other three organizations concerned, viz., International Brotherhood of Railroad Stationmen, International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and Brotherhood of Stationary Firemen and Oilers, ratified the agreement and their members have declared that they will stand by the agreement and not join the C.B.R.E. in the effort to have the wage cut modified. On Nov. 9 and 10, the International Brotherhood of Railroad Stationmen's gen-

eral committee met in Toronto, when the agreement was formally ratified, and provision was made for taking up with the G.T.R. the adjustment of some inequalities due to the wage reductions. It was stated that arrangements had been completed to meet the G.T.R. officials in the latter part of November for this purpose.

Canadian National Ry.—In connection with the dispute between the C.N.R. and the C.B.R.E., the article in our November number referred to above, outlined the replacement of the board of conciliation, granted under the Act respecting Conciliation and Labor, by a board of arbitration, with Rev. Byron Stauffer, of Toronto, as chairman, Geo. D. Kelley, harrister, Ottawa, representing the C.N.R., and ex-mayor Harold Fisher, of Ottawa, representing the C.B.R.E. Hearings were held at Ottawa on Oct. 27 and 28, at which the railway was represented by F. P. Brady, Assistant to Executive, and the C.B.R.E. by A. R. Mosher and R. Dykes. On Oct. 28, Geo. Hodge, Assistant to Vice President, Eastern Lines, C.P.R., gave evidence concerning the wages of the lower paid C.P.R. employees. The hearings were concluded Oct. 28, and the majority report of the board, signed by Rev. Byron Stauffer and Harold Fisher, was presented to the Minister of Labor Nov. 8. It reviews the history of the case, and, while pointing out that a general reduction of wages was justified, it emphasizes that the lower paid men felt the reduction to a greater extent than those higher paid, and that in some cases the reductions made in the pay of the lower paid men were excessive. The recommendations in the majority report are as follows:—1. As we understand that the management has made no reduction in the rates of wages of apprentices, we make no recommendations concerning them. 2. The reductions as to stenographers are sustained. 3. The reductions pertaining to wages of sleeping, dining and parlor car employees are sustained. In this connection we desire to add, in the case of sleeping car porters, and dining car waiters, that if the management and the employees will seriously undertake the pioneer reform of abolishing gratuities, this board will be glad to offer a supplementary report dealing with the wages of employees referred to. 4. Reductions made in salaries of employees getting more than \$125 a month are, generally speaking, sustained. 5. Except in the cases of stenographers and sleeping, dining and parlor car employees, we recommend that the reductions of all monthly paid employees getting \$125 or less be in accordance with the schedule applied in the Toronto accounting department. 6. In so far as transient labor is before this board, we think the rates fixed are in keeping with present wages in the open market. 7. In the case of all hourly paid men, other than transient laborers, such as loaders in stores, freight truckers or porters, locomotive cleaners, asphaltmen, firebuilders or coalmen, we recommend that the maximum decrease be not greater than 10% of the wages paid before the reduction. Decreases less than 10%, if any, should stand. 8. In the matter of additional classes brought before the board late in its session, we do not consider that it is necessary to make any specific recommendation, the board's recommendation logically applying to all those before it and the classes

of a similar character as well. The schedule applied in the Toronto Accounting office, as mentioned in section 5 above, is as follows: salary \$80 per month or less, decrease 5%; salary \$81 to \$85, decrease \$7.50; salary \$85 to \$125, decrease \$10; salary \$125 to \$150, decrease \$12.50; salary over \$150, decrease \$15.

The minority report, signed by G. D. Kelley, the arbitrator representing the C.N.R., presented to the Minister of Labor, Nov. 11, upholds generally the C.N.R.'s action in cutting wages, and reviews the trend of railway operating costs and living costs. Mr. Kelley quotes a U.S. Railroad Labor Board report to show that even after the July reduction, the following wage increases as compared with Dec. 1917 are still in force, corresponding closely to the Canadian rates; supervisory forces, 63.4%; clerical and station forces, 64.6%; maintenance of way and unskilled labor, 55.7%; shop employees, 54%; telegraphers, 82.8%; locomotive service employees, 59.9%; train service employees, 64.5%; stationary engineers and firemen, 92.3%; signal department, 66.6%; marine department, 33.3%. The C.N.R. management had up to the time of writing (Nov. 23) advised the Minister of Labor as to its contemplated action in connection with the board's reports.

General.—There have been no further developments in the wage relations between the Canadian railways and the locomotive men, firemen, conductors, telegraphers and trainmen who signed the tentative agreement providing for the reduction of wages effective July 16 last.

United States.—As stated in our November issue, the strike threatened in the U.S. by the locomotive men, firemen, conductors, trainmen and switchmen was called off. At the meeting called by the Railroad Labor Board in Chicago on Oct. 30, one of the public representatives on the Board, B. W. Hooper, questioned many of the labor and railway executives who had been summoned, and brought out the fact that the only legal ground for a strike was the wage reduction ordered by the Board and placed in effect July 1. W. G. Lee, President of the trainmen, stated that this was the sole cause of the strike, but the other labor leaders admitted that the proposals of the railway executive to cut wages further were contributing causes. It was pointed out by the Board that a strike based on applications made to the Board by railway executives for further reductions in wages, before the Board indicated what action would be taken on such applications, would be in defiance of the Transportation Act. T. De Witt Cuyler, Chairman of the Association of Railway Executives, pointed out that the railways had complied with the law in placing the wage reductions in effect, and would be complying with the law in making applications to the Board for further reductions, and that therefore the proposed strike would be against the Labor Board and the law, and not against the railways, and that it would get but little if any public support. The Board gave out a memorandum stating that it is its purpose that the submissions of carriers and employees on rules and working conditions shall be completely disposed of as to any particular class of employees before a hearing is had on any question of wages affecting such class of employees

on any railway subject to decision 147. It had been stated by the labor leaders that the strike would not be called off till a settlement had been arrived at, but in the end the above statement of the Board was accepted as forming the basis for a satisfactory settlement, and the strike was called off. Since the strike was called off, the executives of 52 railways in the eastern states and of 75 railways in the central and western territory have notified their employees that conferences with a view to a further wage reduction are desired. It is evident that the result of such conference will be but to place the whole matter of wages back in the Labor Board's hands. It would seem, therefore that the avoidance of the strike which was threatened does not constitute a final settlement of the railway wage question in the U.S., but that it will again assume large importance when the board comes to deal with the disputes which will undoubtedly arise from the railway executives' further wage reduction proposals.

The strike on the International & Great Northern, which started before the time set for the main strike, was soon abandoned. By an order of the U.S. District Court at Houston, Tex., the management of the road was authorized to take back the strikers on probation for 30 days, former seniority and full reinstatement being dependent on satisfactory behavior during that period. The court left it to the management's discretion as to whether the committeemen who caused the strike would be re-employed.

The Transportation Act directs the Railroad Labor Board to take into consideration, in coming to its decisions, the following: 1, the scales of wages paid for similar kinds of work in other industries; 2, the relation between wages and the cost of living; 3, the hazards of the employment; 4, the training and skill required; 5, the degree of responsibility; 6, the character and regulation of the employment; 7, inequalities of increase in wages or of treatment, the result of previous wage orders or adjustments. The Board is also to consider "other relevant circumstances." At the beginning of this year, when the railways were applying to the Board for wage reductions for unskilled labor, it refused to take into consideration the railways' financial position, saying that that was in the hands of the Interstate Commerce Commission. However, in a recent decision, involving a dispute on the New Orleans Great Northern, the Board's majority decision states that the financial position of the carrier is entitled to "secondary consideration," which would make it appear that railway earnings and financial position will henceforth be considered as being among the "other relevant circumstances" in coming to decisions.

From this distance, it appears that the lack of relationship between the Railroad Labor Board and the Interstate Commerce Commission, in the adjustment of railway wages and rates, constitutes a serious defect in the regulatory system introduced by the Transportation Act. In the recent western grain rates judgment, Interstate Commerce Commissioner McChord took the stand that the Labor Board should set wages in accordance with the rate scales prescribed by the Interstate Commerce Commission. B. W. Hooper, a public member of the Board, in a recent address, took the position that the fixing of wages could not be made to depend on rates, but he did not specify as to whether he thought that

the Interstate Commerce Commission should make rates on the basis of the wages prescribed by the Railroad Labor Board. The situation apparently resembles one which would be created if one member of a family earned the family income while another member controlled the spending of it, with no agreement or recognition between the two as to the amounts of the earnings or to the expenditures. It is almost obvious that there is need for the introduction, and recognition by all concerned, of a proper relationship in this connection if the legislation introduced by the Transportation Act is to be permanent and beneficial.

New Type of Shop Blower, Canadian Pacific Railway.

The C.P.R. is now using, in its locomotive houses, a shop blower the design and dimensions of which are shown in the accompanying sketch. A length of $\frac{3}{4}$ in. pipe, fitted at one end with a hose connection, is bent as shown at A, while the other end is bent into a circle, the plane of which is at right angles to the portion B of the pipe. The circular end

New Type of Shop Blower.

of the pipe is threaded to receive a plug, as at C. The outside diameter of the ring thus formed is 11 in., and at intervals of $\frac{1}{16}$ in., holes of $\frac{1}{16}$ in. diameter are drilled through the top of the pipe, around the circumference of the circle.

In operation, the straight end of the pipe, equipped with the hose connection, is connected to the steam line in the house. The portion B of the pipe is placed inside the stack of the locomotive on which steam is to be raised, which brings the horizontal ring down below the base of the stack in the locomotive front end. The device is held in position by the bend A of the pipe hanging over the edge of the stack. Steam being turned on at the valve in the steam line in the house, small jets escape through the $\frac{1}{16}$ in. holes in the top of the ring, completely filling the stack. With this device, the deafening noise incidental to the operation of an ordinary shop blower is diminished considerably, while a good decrease in the amount of steam used in getting a locomotive hot and in the amount of time necessary for the job is shown. A further advantage is that if the stationary boilers in a locomotive are for any reason not under steam, suitable apparatus is furnished for using com-

pressed air instead of steam. If there is enough steam on the locomotive on which the blower is working to operate the air compressor, it may be used; if not, the air supply can be obtained by utilizing the air compressor of a locomotive on an adjoining track.

Such a blower is also adaptable for use with stationary boilers, and yard and road locomotives are also being equipped with it. In this case, a ring, with small holes drilled as described above, is installed, clipped in place in the front end around the top of the exhaust casting, and connected to the blower pipe, the jet being controlled by a valve in the cab in the usual manner.

Freight Rates Lower in Canada Than in United States.

The Railway Association of Canada issued a statement on Nov. 1, showing that notwithstanding the recent 16% reduction by U.S. lines on grain and grain products in western territory, which has since become effective on Nov. 20, the U.S. rates remain substantially higher than Canadian rates. Following are the figures:

Haul	Miles	Rate
Winnipeg to Fort William	420	18
Sterling, N.D., to Duluth	420	23 1/2
Portage to Prairie du Rocher	475	21
Riga, N.D., to Duluth	476	23

Gasper, Mont., to Duluth	1264	49
Edmonton, Alta., to Fort William	1243	39
Turnh, Mont., to Duluth	1242	48

Self Propelled Cars on Canadian National Railways.

The gasoline driven railway passenger motor car placed in operation by the Canadian National Rys. between Westport and Brockville, 44.4 miles, on the Brockville Subdivision, Ottawa Division, Ontario District, described in Canadian Railway and Marine World for November is being continued in operation between those points as trains 78, 80, 82 and 84 from Westport to Brockville, and as trains 77, 79, 81 and 83 from Brockville to Westport, the running time in each direction being 1½ hours. The schedule has been maintained consistently by the car, and the service has proved to be popular, as is evidenced by the fact that the car is loaded to capacity on every trip in each direction. The car is also proving most successful financially, the loss entailed by steam train operation being wiped out, and a good profit being shown after allowing for interest and depreciation. During November, adjustments were made to the engine (a Reo 4 cyl., identical with that used in the Reo "speed wagon," and rat-

ed. The C.N.R. will buy the car now in service from the builders, the Ledoux, Jennings Co., Montreal, which furnished it to the railway for a month on trial.

The electric storage battery car, in operation between Campbellton and Bathurst, 62.96 miles, on the Bathurst Subdivision, Campbellton Division, Maritime District, has continued to provide a satisfactory service and is still showing a favorable cost of operation. We are informed that the saving made by this car over the cost of steam train operation is \$2,500 a month. The car was in the Moncton shops from Nov. 14 to 19, undergoing alterations to fit it for winter operation. The interior was fitted with additional lining, and storm sash and double flooring were applied. The battery containers were lined; as although the batteries are kept at a high temperature, by electrical action, when the car is in operation, they rapidly become cool when the car is standing, resulting in lowered efficiency. In addition to lining the battery containers, two

Gasoline Driven Motor Passenger Car and Baggage Trailer, on Canadian National Railways, Stanley Subdivision, New Brunswick.

ed at 35 h.p.), which has increased the mileage per gallon of gasoline from 12 to 16. The gear ratio has been changed to give slightly less engine speed, the ratio now being such that an engine speed of 1920 r.p.m. gives a speed of 40 m.p.h.

The car is well equipped with brakes. Those on the rear wheels are operated by two foot levers, and each wheel of the four-wheel leading truck is braked by an arrangement wherein what would ordinarily be the steering wheel is used as a brake mast wheel, the wheel being turned to apply the brakes, through an arrangement of rods and levers. The heating system is unique, the exhaust from the engine being piped through coils arranged under the seats.

We are advised that the C.N.R. intends acquiring another gasoline motor car to be placed in service between Westport and Brockville, in addition to the present one. The mileage being made by the car now in service is over 355 daily, and the fact of no trouble or delay being experienced to date indicates that the mileage made day after day is excessive for a gasoline propelled car, but with two cars covering the service the mileage demanded will be within a reasonable limit. It is probable that the new car will be somewhat larger than the one now in service, and that it will be equipped with a 6 cylinder engine. A seating capacity of 30 is being consid-

ered. The heating ducts were led into the containers, from the car heating system. Snow brushes, to remove the snow from the rails, were attached, and in addition a flanger, or rather a small plough, was fitted to the front of the car.

In addition to the cars mentioned above, the C.N.R. operating during the past summer another gasoline motor car, between Cross Creek and Stanley, 5.74 miles, on the Nashwaak and Cross Creek Subdivisions, Edmundston Division, Maritime District. This car and the trailer operated in connection with it are shown in the accompanying illustration. The chassis of the motor car was that of a Winton omnibus, and the body was built at the C.N.R.'s Moncton shops. The body is 15 ft. 3½ in. long, and 7 ft. wide, and is provided with seats for 18 passengers, in addition to the operator. The trailer is simply a push car fitted with sides as shown, and is used for baggage, etc.

The running time for the 5.74 miles was 30 minutes, the car making two round trips a day, leaving Stanley at 9:15 a.m. and 6:35 p.m., as trains 272 and 274, and leaving Cross Creek at 10:05 a.m. and 7:50 p.m., as trains 271 and 273. Freight service was provided, as necessary, as a switching movement from Stanley Jct. to Stanley by Nahwaak Subdivision trains. The car was put in service in the latter part of April, and run on schedule until Aug. 16, when repairs

were necessary and it was out of service until about the end of that month, when it was put back on the run, continuing until early in November, when it was withdrawn for the winter, and steam train service was resumed. We are officially advised that the car effected a saving, from the cost of steam train operation, of \$1,319 a month, for May, June and July.

Steel Rail Orders.

In September, Canadian Railway and Marine World was officially advised that the C.P.R. had ordered 25,000 tons of 100 lb. steel rails from Algoma Steel Corporation. Through one of those unfortunate errors that it is impossible to ascertain the cause of, and which no amount of care will always prevent, as long as the human element remains fallible, it was stated in our October issue that the order was for 250,000 tons, an obvious mistake. This error was not noticed until early in November, when a subscriber called attention to it, but it had been inadvertently corrected by another item which appeared in our November issue, and which stated that the C.P.R. had ordered 32,000 tons of 100 lb. rails from Algoma Steel Corporation, the manufacture of which would be gone on with immediately after completion of the 25,000 tons ordered previously. The C.P.R. orders for this season to date are for 57,000 tons.

It was stated in Canadian Railway and Marine World for November that the Dominion Government had passed an order in council, Oct. 6, authorizing the purchase of 75,000 tons of steel rails and their accessories, for the Canadian National Rys. and the Grand Trunk Ry.; that the Canadian National Rys. had ordered 20,000 tons of 85 lb. rails from Algoma Steel Corporation, and was negotiating for 20,000 tons of 85 lb. rails from Dominion Iron & Steel Corporation. The latter order was given early in November, so that the Canadian National Rys. have now ordered 40,000 tons, which are to be rolled this winter, and to be delivered next spring.

Out of the 75,000 tons, the buying of which has been authorized by order in council, 29,000 tons of 100 lb. rails are for the G.T.R.

We were officially advised Nov. 17, that the G.T.R. had ordered 15,243 gross tons of 100 lb. steel rails, A.R.A. type A section, from Dominion Iron & Steel Co.

Interchange Rules. — The American Railway Association Mechanical Division's general committee, has decided to reprint the Interchange Rules revised this year, including a recent interpretation, and to issue them about Dec. 10, to be effective Jan. 1, 1922, until when the 1920 Rules, with supplement 1, will continue in effect.

J. D. McDonald, General Passenger Agent, Western Lines, G.T.R., Chicago, in remitting his renewal subscription to Canadian Railway and Marine World, writes: "I look forward with pleasure to each issue of your valuable paper, which keeps one in touch particularly with Canadian conditions, and I would not be without it."

The second wheat producing country in the world is now Canada, according to the International Institute of Agriculture's figures.

The United States Railways' Financial Position.

The six months guarantee period, following the routing of U.S. railways to their owners, after the period of Federal control, terminated Aug. 31, 1920. The Transportation Act of 1920 provided that the railways should be allowed to charge rates which would enable them to earn a net return of 5½% on the value of their properties, or, at the discretion of the Interstate Commerce Commission, 6%. Statistics for the year beginning with the end of the guarantee period, and ended Aug. 31, 1921, now available, show that, despite the Transportation Act's provisions, the railways have not earned a net operating income nearly as large as that prescribed by the law as reasonable and just. It will be remembered that before the termination of the six months guarantee period, the Chicago wage award had gone into effect, and that at the end of Aug. 1920 a rate increase was allowed by the Interstate Commerce Commission, which was calculated to compensate for the wage increases, and enable the railways to earn the amount prescribed. However, in Sept., Oct., and Nov. 1920, the class 1 railways earned a net return averaging at the rate of about 4% a year, and in December this fell off, and they earned at the rate of but 1% a year. No net income was earned in Jan. and Feb. 1921; in January there was a deficit of \$1,000,000 and in February of \$7,000,000. In March, April, May and June, the class 1 roads earned at the rate of about 2% a year, and the fact of them having any net earnings at all during those months may be put down to the restriction in maintenance, which was most pronounced. With the wage cut taking effect July 1, the July earnings showed an improvement, the net operating income earned being at the rate of 4.5% a year, and the showing in August was even better, the net operating income being at the rate of 5% a year.

The net result of the year's operation was that the net operating income earned represented a percentage on the valuation of the properties of only 2.9, and was \$570,000,000 short of the net operating income the roads would have had had they earned the 6% return. In September, the showing made by the class 1 roads was not so good as in August, the net operating income being a little over \$87,000,000, or at the rate of 4.6% a year. Operating revenues decreased about 20% from those of Sept. 1920, but operating expenses decreased 26%, accounting for a better showing than in Sept. 1920, when the net operating income earned was at the rate of 4.1% a year.

The Transportation Act of 1920 increased the powers and duties of the Interstate Commerce Commission largely, and consequent on the rate increase of last August, the Commission undertook to increase intrastate rates, particularly passenger rates, which were out of line with the interstate rates, as increased by the Commission's order, and therefore discriminatory. The state regulating commissions have consistently taken the stand that the Transportation Act did not give the Interstate Commerce Commission power to interfere with intrastate rates, and the delay from this cause in applying the increased rates to a part of the railways' business caused them the loss of a large amount of revenue in the year ended Aug. 31. The Wisconsin State Commission, like the other

state commissions, took the position that the Interstate Commerce Commission had exceeded its authority in prescribing increases in intrastate rates, and a case to determine the I.C.C.'s powers in the matter is now before the U.S. Supreme Court. The division of authority as between the Federal and state regulating commissions has always been a cause of controversy in U.S. railway circles, and it is evident that the Transportation Act of 1920 has not served to establish a definite dividing line as between the powers of the Interstate Commerce Commission and the various state commissions. In order to definitely remove the Interstate Commerce Commission's power to interfere in intrastate rates, Senator Capper, of Kansas, has introduced a bill in the Senate, which is meeting with strong opposition from railway managements, the Railway Security Owners' Association, and from other bodies.

Canadian Railway and Marine World has given, in preceding issues, details of the proposed legislation to provide for the funding of the railways' debts to the Government to the extent of \$500,000,000, for selling of railways' securities by the Railroad Administration through the War Finance Corporation, and for the Railroad Administration using the funds so secured, in addition to those which it may have, in paying the railways what the Government owes them. This bill passed the House of Representatives, but has not yet passed the Senate. It was, however, reported favorably by the Senate Committee on Interstate Commerce, and was discussed on the floor of the Senate in the middle of November. An amendment was adopted, enabling the Railroad Administration to sell the securities given by the railways through agencies other than the War Finance Corporation, if necessary. At present, the accounts between the Railroad Administration, representing the Government, and the railways as a whole, are such that if all of the railways' debts to the Government, which are at present unfunded, were offset against the Government's debts to the railways, the Government would still owe the railways \$279,000,000. In the discussion in the Senate, Senator Cummins, of the Senate Committee on Interstate Commerce, expressed the advisability of the bill being passed, and pointed out that only the railways which were badly in need of funds would be allowed to fund their debts to the Government, instead of having them offset against what the Government owed them. Bills have been introduced in the Senate by members opposed to the proposed legislation, dealing with portions of the Transportation Act, and therefore intimately connected with the subject matter of the funding legislation, which have had the effect of delaying its passage by the Senate. From present indications it would appear that an early passage of the bill is not probable.

W. E. Norman, General Superintendent, Central District, Canadian National Express Co., Toronto, writes: "I recall the Canadian Railway and Marine World regularly, and always read it from cover to cover, with much pleasure and profit."

Important Decision in Farm Crossing Case.

A. Sagala, a farmer in St. Michel Parish, Valdreuil County, Que., sued the Ontario & Quebec Ry. Co. recently for \$399.99 damages he alleged he had suffered through the company's failure to fulfill an agreement entered into by it to "maintain the approaches" to a level crossing. Plaintiff acquired from the company two pieces of land on opposite sides of the right of way. Under an agreement between the parties, the company, he said, undertook to maintain the approaches to this crossing. In his action he pretended that this agreement extended to an obligation to remove snow as it accumulated at the crossing in winter. Because the company did not clear away the snow, he said access to his land was blocked and in consequence he suffered damages.

The Quebec Court of Review in maintaining a judgment of the Superior Court dismissing plaintiff's action, held that he constructed the approaches, and that he was left free to make them with such contour and grade as he in his uncontrolled discretion deemed fit and proper, and to put them in such a condition as best suited him; that no proof had been made or offered to show the condition in which the approaches were when he completed them, and they were taken over by the company; that the clause in the deed setting forth the obligation of the company to maintain the approaches in the same condition as they were when handed over to them by the plaintiff could not be construed literally. "That would oblige the company to keep the approaches dry or wet, or free from snow or covered with snow, according as the weather conditions chanced to be when the company took the approaches over from them as such." The court held, This would be absurd. The clause must be construed with a view to ordinary weather conditions in the vicinity, and the reasonable and proper construction thereof, having regard to all the circumstances of the case, is that the company must see to it that these approaches shall continue to exist as such in relation to the crossing to which they lead, and that the company shall neither do nor permit anything that will change their character nor prevent the plaintiff from making use of them as such. But it does not mean that the company is bound to protect the approaches and crossing from the ordinary vicissitudes of weather. The appeal accordingly was dismissed with costs.

Remarkable C.P.R. Locomotive Performance.—Some idea of the tonnage which can be handled by locomotives of average tractive power on certain C.P.R. western lines is furnished by the performance of its locomotive 995, a 155½ engine, which, we are officially advised, handled on Nov. 2 106 cars of grain, 4 cars of coal, a water car and a van from Stoughton to Arolo, on the Kisbey Subdivision, Regina Division, Saskatchewan District, 24.9 miles. Tare was 2,073 tons, and contents 4,795, gross tonnage being 6,868. This performance constitutes a good example of efficient and economical transportation. Incidentally, when compared with a tonnage rating of 1,390 tons for a 2100 locomotive on the same division with heavy grades, for example, it furnishes a good idea of how large is the dissimilarity in conditions as between divisions.

Avoidable Waste in Locomotive Operation as Affected by Design.

By James Partington, Estimating Engineer, American Locomotive Co.

It seems advisable to consider this subject from the constructive standpoint of indicating what constitutes good design as demonstrated by locomotives in actual service, rather than to attempt to point out the defects in locomotives which do not show maximum efficiency. If any power plant or engine is not properly proportioned for the work it has to do, the most expert skill in operation can reduce only in part the waste resulting from having such equipment in service.

First, considering the design of steam locomotives from the standpoint of new equipment, when a railway company is in the market for new locomotives, its requirements may be met sometimes by

Fuel Economy.—As standard practice in modern locomotives, a sectional brick arch in the firebox, and a fire tube superheater, should be applied as a means of saving fuel in any class of service. A sectional brick arch is low in first cost, easily applied and easily renewed. It usually accomplishes a fuel saving of from 10 to 12% in coal burning locomotives, and about 5% in oil burning locomotives. The very general use of superheaters has gradually brought about improved conditions of cylinder lubrication which now make it possible and desirable for the greatest economy to use a high degree of superheat, 250 to 300 deg. now being considered the best practice.

mit. Based on 100% boiler, the grate area should be sufficient to prevent the maximum coal consumption per sq. ft. of grate per hr. from exceeding, for bituminous coal, 120 lb., and for anthracite coal, 55 to 70 lb., depending on size.

When the total coal consumption exceeds 6,000 lb. an hr., it is generally necessary to apply an automatic stoker. These have now been so adapted to locomotive requirements that a properly designed stoker will show economy over hand firing, aside from the necessity of its use on account of the coal consumption being greater than the physical capacity of one fireman if the boiler were hand fired.

Pacific Type Locomotive 50,000, American Locomotive Co.

duplicating locomotives in service on its road, but adding newly developed attachments which make for increased efficiency and economy. More frequently, however, it will be found that increased traffic, change from wooden to steel cars, improvement in track, roadbed and bridges, etc., will justify and make advisable the adoption of locomotives of a larger and more powerful type. Then careful consideration must be given to service requirements, maximum loads to be hauled, capacity of cars, approximate

A saving of 25 to 30% can be obtained.

The use of feedwater heaters will further conserve fuel, and these are now in general use in continental Europe and are gradually being applied to locomotives in America. The saving that can be realized is as much as 12%. The initial cost is considerable, but the effect of the feedwater heater in operation, aside from fuel economy, will be to help reduce other boiler maintenance charges.

The general proportions of the boiler should receive careful consideration. For

The arrangement of deflector plates and netting in the smoke box should be carefully adapted to the fuel and combustion conditions, to provide minimum fuel waste and minimum back pressure in the cylinder-exhaust passages, with proper provision against fire hazards which might obtain by the throwing of sparks.

The boiler being designed to produce steam at a minimum cost, it is now necessary to design the locomotive to use this steam with maximum economy. The

Decapod Locomotive, Pennsylvania Railroad.

proportion of loaded to empty cars per train, grades, curves, running time over divisions, maximum allowable load per axle, location of coal chutes and water tanks, clearances, conditions under which trains must be started, and any other special requirements of the service.

Having determined the drawbar pull necessary, it remains to design a locomotive that will have the following efficiency requirements: 1. A drawbar horsepower for the minimum amount of fuel. 2. A drawbar horsepower for the minimum amount of weight of locomotive and tender. 3. A drawbar horsepower for the minimum cost of repairs.

the best results with bituminous coal, the length of the boiler tubes should be approximately within the following limits:

Size of tube	Distance over tube sheet
2 in.	18 ft. to 19½ ft.
2½ in.	22½ ft. to 24½ ft.
2½ in.	28 ft. to 30 ft.

For many designs of locomotives, a combustion chamber can be provided, and this will help further in the economical production of steam. A generous steam space should be provided, and the throttle designed and located to secure dry steam. The evaporative capacity of the boiler should be as nearly 100% of the maximum steam requirements of the cylinders as the type of locomotive will per-

cylinder proportions and diameter of the drivers should be such as will develop maximum horsepower at the ruling speeds for train movements. The greatest horsepower of locomotive cylinders will usually be developed within a piston speed ranging from 700 to 1,000 ft. per min. Therefore, if other traffic conditions will permit, the operation of trains within these limits should show the greatest operating economy.

Minimum Weight of Motive Power Equipment.—The weight on the locomotive drivers gives an engine friction, independent of other factors, of 22 lb. a ton. The desirability of avoiding excess

weight on the drivers from this standpoint alone is therefore readily apparent. When the type of engine will permit, this weight should not exceed what is necessary to give a satisfactory factor of adhesion; this is usually $4\frac{1}{4}$ times the maximum tractive power. All weight in excess of this, and all excess weight and excess tender weight, should be eliminated, as far as this can be done without detriment to the design of engine and tender. This applies with particular force to the machinery parts of the engine, especially those parts which affect the counterbalance. All saving in weight in these parts usually produces a similar saving in counterbalance weights and a reduction in the dynamic augment, which is very desirable from the standpoint of track and roadbed maintenance. The use of special materials to keep down weight is often amply justified if repair parts can be obtained promptly when required. This, in the past, has often been the cause of delay, but it can be guarded against by carrying a few spare parts in stock ready for renewals. High tensile alloy steel can frequently be used to advantage for driving axles, crank pins, main and side rods, piston rods, etc.

Occasional steep grades, or hard starting conditions, at stations may cut down

out that locomotives and tenders should be designed to produce the required drawbar horsepower with as little excess weight as possible. In this connection, however, due consideration must be given to the question of repairs. The design of boilers from the standpoint of weight is practically fixed by existing boiler regulations, which provide that locomotive boilers must be operated with a factor of safety of not less than four. Practically all boilers at the present time are designed with a factor of safety of $4\frac{1}{4}$, which leaves a comfortable margin between this and the minimum allowable operating factor.

The maximum stresses in other parts of the locomotive must also be carefully considered, and the parts must be designed to keep these stresses within limits which will eliminate costly failures in service. Aside from the consideration of stresses, much repair cost can be avoided by adopting designs which reduce the number of parts, as far as reasonably may be, especially where these parts must have bolted connections. Here, however, care must be taken to avoid construction which cannot readily be removed for repairs or renewals or repaired in place with reasonable facility. Many roads today are giving a great deal of thought to locomotive design along

be avoided by making a careful survey of present motive power equipment which is not giving as economical or efficient service as could be obtained if the engines were modernized. This applies particularly to locomotives where the service conditions demand more power than the present equipment can economically produce. All the suggestions made in regard to the design of new equipment are applicable to a greater or less degree to the old equipment, providing the old equipment is not meeting the demands of the service from a power standpoint, or is not furnishing this power economically. In making a survey of this character care should be taken to determine accurately whether the old equipment will warrant the additional cost of changes and betterments necessary to convert it into up to date power. This can be decided by taking the number of years the locomotives will be retained in service and the increased net return or saving for this period as against the cost involved for changes, interest on the additional investment, increased maintenance, etc.

A comparison should also be made with the results that could be realized by the purchase of new equipment best adapted for the service, as against the cost of contemplated changes in the old equip-

2-10-10-2 Mallet Locomotive, Virginian Railway.

the hauling capacity of locomotives over a division to a serious extent. In such cases, the utilization of the weight on trailer trucks for additional tractive power in starting and at slow speeds may increase the capacity of the locomotive from 10 to 25%, depending on the number of driving wheels and working pressure. It has been demonstrated that a separate steam engine, or booster, geared to the trailing axle, will give this additional traction, and that it can be cut in or cut out very satisfactorily as occasion may require. This is an item in economical operation worthy of consideration where hauling capacity is restricted by such limitations, and the use of an independent booster may often permit the satisfactory operation of considerably lighter locomotives for service of this character.

Within the limits of this paper, only the major features of design can be outlined briefly, and only such devices as have been carefully tried out and are in successful operation are cited. The writer believes the savings mentioned are well within what may be obtained in practice. Many other improvements promising further economy in the generation and use of power in the steam locomotive are contemplated and in the experimental stage, but these do not properly come under the scope of our subject as here treated.

Cost of Repairs.—It has been pointed

these lines, having especially in mind the desirability of making the engine parts accessible for oiling and inspection; easily removable with proper shop facilities; of the minimum number of pieces; and interchangeable with equipment now in service.

The repair shop facilities must, of course, be kept abreast of the requirements; i.e., as new and larger locomotives are put in service, turntables, cranes, machine tools, etc., must be of sufficient capacity to handle the larger equipment economically.

The repairs of locomotives can often be facilitated and the necessary shop equipment kept down to the minimum by securing from the locomotive builder many parts which he is able to turn out more accurately and more economically than the average railroad shop would be equipped to do. Such parts include:—Flanged sheets for boiler repairs; flexible and ordinary staybolts; finished bolts and nuts; drop forgings; packing rings for pistons and piston valves; special equipment which requires special tools for its production.

Without attempting to pursue further the design of new locomotives, it may be remarked that a study of the special conditions of individual railways is necessary to secure equipment best suited to the needs of each.

Old Motive Power Equipment.—Much waste in locomotive operation can

ment. If these comparisons show a saving in favor of modernizing the old equipment, every month that the locomotives are kept in service without doing this will result in a loss that is not recoverable.

The above is the first portion of a paper to be read by Mr. Partington before the American Society of Mechanical Engineers, Railroad Division on Dec. 9. The rest of the paper deals with a few concrete examples of what has been accomplished in service by locomotives designed to yield maximum efficiency, the first being locomotive 50,000, a Pacific built by the American Locomotive Co. in 1910, solely to determine the maximum tractive power, with adequate boiler capacity, that could be obtained while keeping the adhesive weight below 60,000 lb. per driving axle. The company, unrestricted by the requirements of any individual railway, was able to embody in the design its ideas of the best engineering practice. Every pound of weight not necessary for strength or durability was eliminated, so that a large boiler could be provided. An average of all the important Pacific type locomotives now operating shows 1,000 lb. less tractive power, 17,400 lb. greater weight, and only $1\frac{1}{4}\%$ increased boiler capacity. Locomotive 50,000 delivers one cylinder horsepower for every 110.8 lb. of weight, and one boiler h.p. for every 120.3 lb. of weight. In actual test it

showed a minimum coal consumption of 2.12 lb. per i.h.p. hour, the average being 2.21 lb., and it showed a minimum steam consumption of 16.5 lb. per i.h.p. hour, with an average of 16.85. This locomotive was sold to the Erie R.R., and to March 1, 1920, had made 351,800 miles. About the only changes made since it was put in service have been reinforcing the guide yoke, on account of working making the guide yoke blocks solid on the guide yokes, and changing the trailing spring sliding block to the Erie standard for Pacific type.

The second example of outstanding efficiency in locomotive design quoted by Mr. Partington is the decapod class used by the Pennsylvania R.R. in freight service. These embody a radical departure in cylinder proportions. The accepted practice in designing cylinders is to arrange for a cutoff of about 90% of stroke, so that starting torque may be as uniform as possible. As the adhesive weight limits the cylinder diameter, if excessive slipping is to be avoided, it is obvious that on long grades, where the maximum tractive effort is required, the cutoff must be increased to a most uneconomical degree. The design of these decapods involved a limitation of cutoff to about 50% and an increase in cylinder diameter to give sufficient torque at this cutoff to fully utilize the adhesive weight. The expected increase in economy in coal and water, due to the shorter cutoff, has been fully realized. Tests showed a water rate of 15.4 lb. per i.h.p. hour,

with a total i.h.p. of 3080 at 40% cutoff, the coal consumption being 2.9 lb. per i.h.p. hour. The lowest coal consumption obtained was 2 lb. per i.h.p. hour, obtained at an output of 1777 i.h.p., and a cutoff of 30%. The highest drawbar pull recorded by a locomotive of this class in a test was 76,211 lb., but in road service a drawbar pull of 80,640 was obtained at 7.2 m.p.h. The indicated tractive effort plotted from a card taken at 7.4 m.p.h. at 55% cutoff was slightly over 90,000 lb. During the tests mentioned, an indicated h.p. of 3486 was developed, showing one h.p. for every 106.2 lb. of weight. The amount of weight per boiler h.p. does not compare as favorably, however, being 145.4 lb. The Bel-paire firebox contributes materially to this excess.

The third example is the Virginian Ry.'s 2-10-10-2 Mallet locomotives, which have handled trains of 16,000 tons, on 0.2% grades, with the lowest consumption of coal ever recorded. On May 25, a train of 15,725 tons behind the tender was hauled with the coal consumption of 26.9 lb. of coal per 1,000 ton miles. One of these locomotives recently handled a train of 110 cars, weighing 17,250 tons, over a division with ruling grades of 0.2%, which about constitutes a record for train handling.

The principal dimensions of the three locomotives referred to, and a comparison of the horsepower characteristics, as calculated by the American Locomotive Co.'s method, are as follows:—

Boiler Type	Erie 4-6-2	Virginian 2-10-10-2	Pennsylvania 2-10-0
Boiler diameter	76 1/2 in.	103 1/2—118 1/2 in.	87—90 1/2 in.
Weight on drivers	172,500	617,000	342,050
Weight on truck	49,000	32,000	29,750
Weight on trailer	7,000	35,000	
Weight, total	269,000	684,000	371,800
Driving wheel diameter	79 in.	56 in.	62 in.
Cylinders	27 at 24 in.	30 at 32 in.	30 1/2 x 32 in.
Boiler pressure	185	215	250
Tractive power	106,000	147,200	90,000
Factor of adhesion	4.25	4.06	4.30
Cylinder horsepower	2,327	5,049	4,182
Graze length and width	114 x 73 1/2 in.	144 x 108 1/2 in.	126 x 80 in.
Graze area, sq. ft.	59.7	108.7	76.01
Tubes, number	207	25	244
Tubes, length	22 ft.	7 1/2 in.	19 ft. 1 in.
Tubes, spacing	5 1/2 in.	3 1/2 in.	5 1/2 in.
Tubes, thickness	11 B.W.G.	21 in.	2 1/2 in.
Tubes, diameter	2 1/2 in.	9 B.W.G.	5 1/2 in.
Flues, number	38	7	48
Flues, thickness	5 1/2 in.	3 1/2 in.	5 1/2 in.
Combustion chamber, length	None	36 in.	42 in.
Heating surface, firebox	2,218	532	290
Heating surface, tubes, water side	2,672	2,511	2,731
Heating surface, flues, water side	1,136	865	1,313
Heating surface, total	4,056	2,909	4,334
Boiler horsepower	20.8	20.8	20.8
Steam rate, lb. per h.p. hr.	3.25	3.7	3.25
Coal rate, per h.p. hr.	3.25	70	42
Superheater, no. of units	36	19 1/2 in.	1 1/2 in.
Superheater, diameter	1 1/2 in.	2120	1418
Superheater, heating surface	879	214,300	182,000
Tender, weight in running order	161,500	12	17 1/2
Tender, capacity, coal, tons	8,000	13,500	9,000
Tender, water, gallons	8,000	135.7	88.9
Weight of locomotive in lb. per cylinder h.p.	110.6	142.5	145.4
Weight of locomotive in lb. per boiler h.p.	119.6		

Chairman for Canadian National Railways.—John Elliott, President, Ontario Associated Boards of Trade and Chambers of Commerce, in reviewing the Association's work at the annual meeting at Brantford, Nov. 17, said that one of the most important matters the executive had had to consider was the appointment of a permanent chairman for the Canadian National Ry. Sir Joseph Flavelle's name had been mentioned, and a strong representation had been made to him to induce him to reconsider his decision declining the offer made to him by the Government some time ago.

Railway Lands Patented.—Letters patent were issued during October for Dominion railway lands in Manitoba, Saskatchewan, Alberta and British Columbia as follows:—

Canadian Pacific Ry.	Acres.
Canadian Northern Western Ry.	60,22
Central Canada Ry.	24,66
Total.	102,90

J. H. Martin, a pilot of Canadian Aerial Services Ltd., is reported to have made a flight recently from St. Lazare, near Montreal, to Quebec, covering the 190 miles in 2 h. 20 min.

Standard Inside Dimensions for Box Cars.

The American Railway Association Mechanical Division committee on car construction in its report for 1920, included in its recommendations for standard fundamentals for future design, the following inside dimensions for box cars: Length, 40 1/2 ft.; width, 8 1/2 ft.; height, 8 1/2 ft. These propositions were included in the letter ballot for 1920, the vote as announced Dec. 10, 1920, being:—

Length, 40 1/2 ft. Voting Yes, 264 memberships, represent 2,355,786 cars owned or controlled, 2,309 votes. Voting No, 8 memberships, represent 67,334 cars owned or controlled, 66 votes. Not voting, 77 memberships, represent 280,154 cars owned or controlled, 287 votes.

Width, 8 1/2 ft. Voting Yes, 270 memberships, represent 2,381,360 cars owned or controlled, 2,353 votes. Voting No, 0 memberships, represent 0 cars owned or controlled, 0 votes. Not voting, 79 memberships, represent 301,887 cars owned or controlled, 309 votes.

Height, 8 1/2 ft. Voting Yes, 255 memberships, represent 2,222,175 cars owned or controlled, 2,194 votes. Voting No, 13 memberships, represent 134,647 cars owned or controlled, 135 votes. Not voting, 81 memberships, represent 326,452 cars owned or controlled, 333 votes.

These propositions have now been approved by the Mechanical Division's General Committee, and the American Railway Association's directors, to be standard of the Division for future design, the inside height of 8 1/2 ft. to be indicated as a minimum dimension. Therefore, the proposition to adopt as standard inside dimensions for box cars for future design as follows, is approved: Length, 40 1/2 ft.; width, 8 1/2 ft.; height (minimum), 8 1/2 ft.

Guy Tombs Ltd. has been incorporated under the Dominion Companies Act with authorized capital of \$50,000 and office in Montreal, to buy, sell, manufacture, import, export, transport, forward, cart, carry and deal in all kinds of goods, wares and merchandise, including more particularly pulpwood, paper, pulp and lumber, and to deal in real estate, lumber limits, etc., also to carry on, among other business, that of freight traffic manager, shipping agent, ticket agent, tourist agent, warehouseman, stevedores and lighterman, and to own and operate steam and electric railways, ships, trucks, barges, wharves, slips, docks and piers, and all other structures necessary for handling of freight. The President and Manager is Guy Tombs, who has been in the transportation service for nearly 30 years. He was with the Canadian Northern Ry. Co. and its predecessors for 18 1/2 years, and for the past 2 1/2 years has been Traffic Manager, Canadian Export Paper Co., Montreal, the personnel and duties of which department he is taking with him to the new company's offices at 285 Beaver Hall Hill, Montreal. Among the directors are N. P. Dalziel, a member of the Edinburgh financial family of that name, formerly Assistant Comptroller, MacKenzie, Mann & Co., Toronto, and now Secretary, Canadian Export Paper Co., Montreal. P. Daniels, late of the C.N.R., is Secretary, and Capt. W. H. Carling, M.C., late of the Bank of Montreal, London, Ont., is Treasurer. The company will undertake any transportation work and especially the handling of overseas business through Canadian ports.

J. H. Walsh Entertained at Quebec.

In connection with the operation of Quebec Central Ry. trains into the City of Quebec, which has been rendered possible by the completion of the line from Scotts Jct. to a junction with a Canadian National Rys. line, and the arrangement for running right over the C.N.R. and the C.P.R. into the Palais station, the Quebec Board of Trade gave a dinner to J. H. Walsh, General Manager, Q.C.R., on Nov. 3. J. H. Fortier, President, Board of Trade, was chairman, and about 150 were present. The toast to the guest of the evening was spoken to by the chairman, by the Lieutenant Governor, Sir Charles Fitzpatrick, and by J. G. Scott, who has been actively associated with the development of transportation facilities in the Quebec district for many years. Mr. Walsh, in replying, stated that Quebec business men now have the opportunity to trade economically with the territory served by the Q.C.R. and promised that the company will as far as possible meet Quebec in the development of her import and export trade.

Other speakers were the Mayor of Quebec, Hon. J. E. Caron, Minister of Agriculture for Quebec; Sir George Garneau, Brigadier General Tremblay, and Grant Hall, Vice President, C.P.R., and President Q.C.R. Co.

A New British Type of Light Railway.

A new type of light railway for agricultural districts is being discussed in Great Britain. The idea is to remove the weight of the engine from the rails, to fix solid rubber tires on the driving wheels, which will run on the ground beside the tracks, two wheels on the front of the engine, carrying practically no weight, being run on the rails to guide the engine. It is claimed that the flat wheels running on the ground will give a better grip, and that consequently an engine of a lighter type could be used. It is also claimed that lighter track could be used, with the weight of the engine not having to be carried.

Among the Express Companies.

The Express Traffic Association of Canada's Supplement 2 to Tariff C.R.C. no. E.T. 694, covering revised rules in connection with the carriage of electrolyte, was approved by the Board of Railway Commissioners' order 31,749, Nov. 9.

The Marine and Fisheries Department has announced that a special express service will be inaugurated in the spring between Gaspe and Montreal, to develop the fresh fish trade. Special express cars will be run, twice or three times a week, picking up shipments at all points along the Gaspe-Metapedia lines.

The National Dairy Council of Canada applied to the Board of Railway Commissioners recently for cancellation of the 20% increase in express rates on cream, allowed by general order 327, Feb. 2, and for the re-establishment of the special commodity rates on cream in existence prior to that order. The application was refused Nov. 15.

Canadian National Express Co.

Chepstowe, Ont., office was closed Nov.

8. T. C. Leger, messenger, Moncton, N. B., was presented with a purse of money

by the local staff, recently, on his marriage.

R. J. McEwan, who was appointed District Agent, Canadian National-Grand Trunk Rys. and Canadian National Express Co., at Manchester, Eng. recently, has opened his office there, at 14 Atlantic Chambers, 7 Brazenose St.

William George Burrell, Stationery Agent, G.T.R., who has also been appointed Supply Agent, Canadian National Ex. Co., Montreal, was born there, March 18, 1868, and entered transportation service in July 1883, since when he has been, to Jan. 1886, apprentice, Audit Office, G.T.R.; Jan. 1886 to Feb. 1894, in Stationery Department, G.T.R.; Feb. 1894 to Sept. 1, 1891, Stationery Agent, G.T.R., and from Feb. 1913, also Supply Agent, Canadian Ex. Co., all at Montreal.

Dominion Express Co.

G. W. Liddle, formerly Superintendent, Toronto, who died there Sept. 2, left a life interest to his widow in an estate valued at \$29,967, with remainder to one daughter and two sons equally.

Express Companies' Operations for 1920.

Statistics of express companies' operations in Canada for the calendar year 1920, with comparisons for 1919, have been issued by the Dominion Bureau of Statistics—Transportation Branch. Following are extracts:—

Gross earnings for 1920, \$30,512,504; for 1919, \$24,933,219; increase, 22%.

Express privileges, i.e., the portion of earnings paid railways for carrying express matter, for 1920, \$16,009,460; for 1919, \$12,936,615; increase, over 23%.

Gross earnings, less express privileges, for 1920, \$14,503,044; for 1919, \$11,996,604.

Operating expenses, for 1920, \$16,120,880; for 1919, \$13,327,652; increase about 22%, so that the net operating revenue showed a greater deficit than for 1919, viz., for 1920, \$1,231,048; for 1919, \$1,617,836. The greater portion of the increased operating expenses was in salaries and wages, which were, for 1920, \$11,772,206; for 1919, \$9,344,285, an increase of about 26%.

Material orders, etc., issued, for 1920, \$92,589,175; for 1919, \$76,698,693, increase of about 20%.

Offices, 5,895 for 1920; and 3,694 for 1919.

Telegraph, Telephone and Cable Matters.

Concurrent with the completion of the Canadian National Rys. new station building at Hornepayne, Ont., a division point north of Lake Superior, 572.4 miles north-west of Toronto, Canadian National Telegraphs has established a repeater station there. The equipment is the latest in use on high speed automatic circuits, consisting of separately mounted fireproof base Wheatstone relay and other special features. Each repeater unit is equipped with a signalling device, operating on a 220 volt local, arranged so that the terminals can call in repeater attendants when required. These repeaters are in use on the Toronto-Winnipeg and the Montreal-Winnipeg multiplex circuits, also on the Toronto-Port Arthur Morse duplex. The combination switchboard and operating table, specially designed for the C.N.T., consists of the new type

pin jacks and voltmeter, mounted on solid plate panels. A 3-bank chloride accumulator, consisting of 110 cells in each bank, serves as power supply, charged by a 350 volt generator at the railway shops, where an electrical plant is maintained. Geo. L. Thompson, formerly Assistant Plant Chief, and Chas. C. Hamilton, formerly Automatic Supervisor, at Toronto, are looking after the repeater and wire service at Hornepayne.

The Canadian National Telegraphs' Commercial Department has held twodivisional conferences recently, at Montreal and Toronto. The Montreal conference was called by District Commercial Superintendent Humes and was conducted by W. G. Barber, General Commercial Superintendent, with the following in attendance: R. W. Ball, Commercial Supervisor; J. E. McCann, Manager, Montreal; P. D. Boomer, Manager, Ottawa; D. McWilliams, Manager, Quebec; C. H. Goddu, Assistant Manager, Montreal; F. M. Sheppard, Commercial Agent, Montreal; E. Goddu, Commercial Agent, Montreal; G. A. J. Wilkes, Relieving Manager, Eastern Division, and with the following branch office managers: E. A. Morin, P. Hale, J. N. Morris, E. Goyer, J. W. Baker, A. Mayer, L. Leger, S. S. Scott, D. Methot, Miss M. McCann, R. Couture and H. A. Singer. The information given at the conference showed that indications point to a gradual improvement in business conditions in Canada as reflected by the telegraph, which is considered a safe barometer. The obligation of the Canadian National Telegraphs during the adjustment period was reviewed by the General Commercial Superintendent with the attending managers, and great stress was laid upon the personal responsibility each employee bears at this important time when the telegraph is playing so large a part as first aid in business reconstruction. The Toronto conference was attended by G. D. Perry, Vice President and General Manager; W. G. Barber, General Commercial Superintendent; J. G. Davies, District Commercial Superintendent; R. W. Ball, Commercial Supervisor; G. Hogarth, Commercial Agent, Toronto, and the following Managers: C. W. Dawzy, Toronto; J. Jamieson, Hamilton; R. J. Foster, London; A. C. Hanley, Kingston; A. G. Boomer, Peterborough; and H. C. Coutts, Brantford. In view of the enthusiasm displayed, it was decided to hold similar meetings of the commercial forces at certain strategic points, once a month in future.

The Canadian National Telegraphs audit office staff entertained the head office staff and other friends at a masquerade party on Nov. 4, when over 100 were present, nearly all in fancy dress. Vice President and General Manager Perry, in domino costume, was present with Mrs. Perry. Mr. Perry complimented the audit staff on the success of the event, the first of the kind to be held in the company's offices, and expressed the hope that it was merely a forerunner of many other similar gatherings. A. C. McConnell, who was master of ceremonies, was dressed as Simon Legree from Uncle Tom's Cabin, and W. G. Barber appeared in oriental costume as Chu Chin Chow. R. A. Taylor, dressed as a C.N.R. colored porter, won the men's first prize, and Miss G. M. Wilton, as an Indian Maid, won the women's first prize, for the best costumes. C. G. Gardner, sister won the lucky number dance. The audit office staff's female members supplied a buffet repast.

Electric Railway Department

Track Construction and Rehabilitation by Toronto Transportation Commission.

The work undertaken by the Toronto Transportation Commission in connection with the construction and rehabilitation of street railway tracks was described in Canadian Railway and Marine World for November, pp. 589, so far as the location, nature and magnitude of each portion of the work was concerned. Following is a description of the standards of construction employed and the methods used in doing the work.

Three standard types of track construction have been adopted by the Commission, specified as 122-C-G, 122-C-A, and 122-S-G. Type 122-C-G is so called because it includes 122 lb. grooved girder rail, used in connection with a concrete track foundation and granite block wearing surface. Type 122-C-A is the same, with the exception of the wearing surface, which is asphalt. Type 122-S-G is

slabs 9 in. thick, the concrete proportions being 1 part of cement to 2½ of clean sharp sand, and 5 of crushed trap rock. The cushion consists of ¾ in. crushed limestone, mixed with limestone dust. The concrete for the paving base is 1 part of cement to 3 of clean sharp sand and 6 of crushed limestone or gravel. In double track construction the tracks are laid at 10 ft. 2½ in. centers; ties are spaced at 2 ft. centers, except at joints, where the tie under the receiving rail is placed so that the edge is 2 in. from the joint. Rails are laid with opposite joints, with no variation of more than 2 in., and, wherever possible, all four rails of double track are laid with opposite joints. In making the joints, the joint plates are set up tight with all 4 bolts, and then welded by the Lincoln carbon arc process top and bot-

tom. The joint bolts are concerned, with the exception that the ties are spaced 20 in. instead of 24 in. The drainage system is the same, and the excavation depth is 24 in. The foundation, however, consists of a layer of run of crusher to 2 in. stone, spread 9½ in. thick on the subgrade, and rolled to 15 in. below grade of top of rail, thus allowing about 1 in. for tamping to surface. The tamping material is ¾ in. crushed limestone, mixed with limestone dust, and the concrete of the paving base is of the same proportions as that used for the paving base in the 122-C-G and 122-C-A construction. The paving base is brought to the same height as in the 122-C-G construction, and the granite paving blocks are laid and grouted in the same manner.

122-C-G construction was used in the rehabilitation of the tracks on Yonge St., the principal north and south street of the city, from Front St. to Bloor St., and from Seall St. to Pryce St. The first section done was from Front St. to Carlton St., 4,396 ft. Traffic was diverted from this section of the street, and work was commenced with the breaking of the old pavement along the tracks.

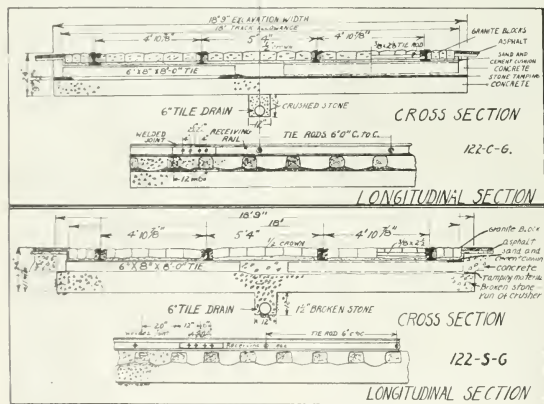

Fig. 1. Types of Track Construction, Toronto Transportation Commission.

so called because the 122 lb. rail is used in connection with a stone foundation and granite block wearing surface. Fig. 1 shows sections of types 122-C-G and 122-S-G.

122-C-G and 122-C-A construction call for grooved girder rail 7 in. high, of U.S. Steel Products Co. section 122-491, or Bethlehem Steel Co. section 122-407-A; either softwood ties, 6 in. thick by 8 in. wide by 8 ft. long, with tie plates, or white oak ties of the same dimensions without tie plates; 5½ x 9/16 in. spikes; tie rods 5 ft. 3 in. long by ¾ in. by 2½ in. flat, with 1 in. round terminal; joint plates welded top and base, and joint bolts 1 in. diam. The total depth of excavation is 2 ft. below the finished grade of top of rail, the width of the excavation being sufficient to lay a slab of concrete 8½ ft. wide for each tie. Drainage is ordinarily by 6 in. tile drain, laid between tracks, in a trench 12 x 12 in., filled to subgrade with clean 1½ in. stone. The foundation is of concrete slab, or

tom. Two of the bolts are then taken out. O-B bonds are used in making the joints.

In 122-C-G construction, the paving base is brought to the top of the base of rail, as shown in fig. 2, and is firmly tamped around and under the rail. A paving cushion of sand and cement is then applied over the paving base. Before the granite blocks for the wearing surface are laid, a stiff cement grout is plastered against the web of the rail against which the blocks will lie, and, after the blocks are laid, they are grouted with cement grout. In the 122-C-A construction, the paving base is brought to within ¾ in. of the top of rail, thoroughly tamped around and under the rail, and the surface roughened to take the asphalt wearing surface. In both types of construction, the wearing surface is at least ¾ in. below the top of rail.

122-S-G construction is similar to the types described above as far as rails, ties, tie plates, spikes, tie rods, joints and

Fig. 2. Level of Paving Base, Toronto Transportation Commission.

Drills, such as used in mining operations, driven by air, compressed by internal combustion engine, and mounted on a compressor car, were used in this work. On the old concrete being broken up, the steel was jacked up without the joints having been broken, and cut with the acetylene flame into convenient sections for handling. The old concrete was loaded by steam shovel and taken away to be used for filling. Upon the ties and steel being removed, excavation for the new track foundation was completed with the steam shovels, and trimmed to grade and line by hand, the trench for the 6 in. tile drain was excavated and the drain laid. The concrete slab was then poured, and after from 36 to 48 hours required for hardening the concrete, the tamping material was placed, ties laid, rails laid, spiked and jointed, the track lined and surfaced and the joints welded. The concrete paving base was then poured; and after 24 hours, the sand cushion was laid, and the granite paving blocks for the wearing surface were laid and grouted. The street was opened to traffic eight days after the completion of paving.

A typical section of 122-C-A construction was involved in the rehabilitation of the Bathurst St. tracks from Dundas St. to College St., 1,450 ft. The old road

material between, and adjacent to, tracks, was loosened and removed in the manner described above, and operations were carried on in the same manner as on Yonge St., up to the point of pouring the concrete paving base. In this case the top surface of the concrete was brought to within 3 1/4 in. of top of rail, in accordance with the specifications noted above. It was necessary to let the paving base harden during a longer period than on the Yonge St. job, 10 days being given it, after which the asphalt wearing surface was laid and rolled.

A typical section of 122-S-G construction was that on Dundas St., between Howard Park and Ritchie Avenues. The concrete and old steel being removed as described above, and the drainage trench excavated and pipe laid, the foundation of stone was then put in. Run of crusher limestone, conveyed in motor trucks, was

construction was used in the work on Church St. between Queen and Dundas Sts.; on Dundas St. between Howard Park Ave. and Ritchie Ave.; on Yonge St. between Bloor St. and Scollard St.; on Avenue Road between Davenport Road and Dupont St., and between McMaster Ave. and Alcorn Ave. On Coxwell Ave. between Gerrard St. and Danforth Ave. type 100-C-G construction was used, this being the same as 122-C-G, with the exception that 100 lb. steel was used instead of 122 lb. The connecting link between the Toronto Ry. Co. and Toronto Civic Ry. lines on Danforth Ave. near Broadview Ave. is 90-C-A construction and the connection on Gerrard St., near Greenwood Ave., is of 100-C-G construction.

The sand, stone and other loose material were taken to the different sections of the work by motor truck. A feature

steam road rollers, suitable for rolling the stone foundation in the 122-S-G construction, and the asphalt wearing surface of the 122-C-A construction, inside and between tracks, have been used. Two Brownhoist electric cranes have been used continuously in the work, for all heavy lifting, and have proved particularly useful in the installation of new special work and intersections.

The new intersections, about 70 in all, installed or being installed, are assembled by the manufacturer prior to shipment, when they are inspected by a Commission representative. They are then taken apart and shipped. For installation, the sections are loaded on a crane car, and accompanying flat car, and taken to their locations. The work of changing is done at night, so as to cause a minimum of delay to traffic. All preparations having been previously made, the old intersec-

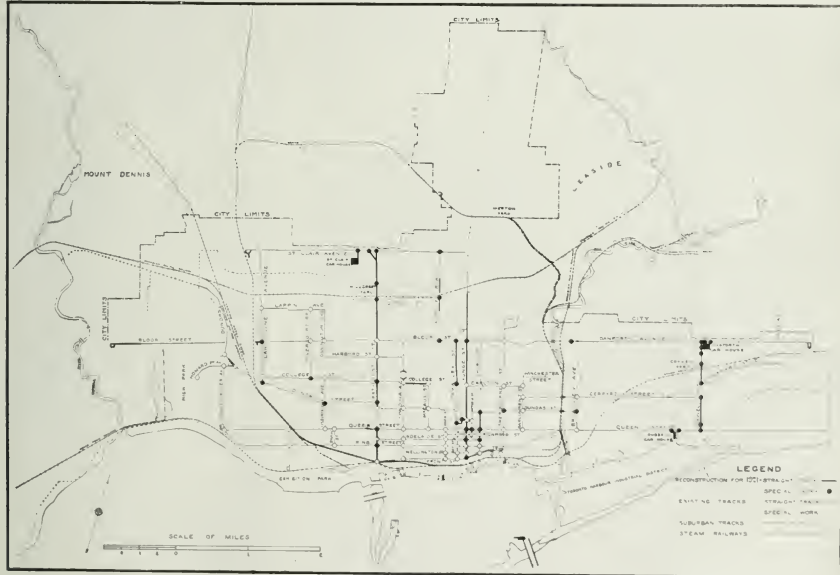

Fig. 3. Toronto Transportation Commission's Electric Railways.

dumped in to a depth of 9 1/4 in. There being no concrete in the foundation to harden, no waiting was necessary, and the job was completed under service by the use of methods substantially similar to those employed on Yonge St.

122-C-G construction was used in the following important sections of the work: on Yonge St., Front St. to Carlton St., Carlton St. to Bloor St., and Scollard St. to Pryce St.; on Bathurst St. between Front St. and Queen St., and between Bloor St. and Dupont St. 122-C-A construction was used in the work on Albert and James Sts.; on College St. between Spadina Ave. and McCall St.; on Bathurst St. between Dupont St. and St. Clair Ave.; on Bathurst St. between Dundas and College Sts.; on Teraulay St. between College St. and Bloor St. Type 122-S-G

of the concrete work was the securing of proportions in the materials at the central yards; large square containers were each filled with the mixture of cement, sand and stone, and hauled by truck, two in a load, to the concrete mixers at the work. Ties were distributed mainly by motor truck. The old track and road materials were removed by truck, and rails were handled by truck and work cars running on the street railway lines.

In addition to the steam shovels, concrete mixers, etc., common to work of this nature, the Commission used the drills above mentioned, and also a concrete breaker built on the steam hammer principle, the hammer having a chisel point. This device proved very efficient in breaking up the old road material between and adjacent to tracks. Small

tion is lifted out by the crane, by sections, and the new intersection is lifted into place by sections in quick time.

The intersection installation work has been highly systematized. Instead of having one gang of men do the excavating, laying of steel and ties, lining and bolting up, tamping, and paving, this work is divided up among smaller gangs, each one of which performs one part of the work on each job. For example, the first gang does the excavating, breaking up the old paving material around and under the rails, and removing it. It is followed, on the night of the installation of the intersection, by the steel gang, and the foundation and tie gang, the first removing the old steel and track structure, the second following up with the laying of the new foundation and special

ties, the steel gang starting in again with the laying of new steel. Following these, a lining and bolting up gang goes on the job, to be followed in turn by the tamperers. On completion of the tamping, the foundation gang returns and lays the paving base, while the paving gang finishes the job with the laying of the wearing surface. It can be readily seen that by having gangs experienced in one branch of the work go from one job to another throughout the city in this way, the maximum efficiency is obtained, and it is evident that if this organization and method were not employed, it would be necessary to have a large gang on each job, perhaps not as skilled in the department of the work as in another, and equipped with all the tools necessary for each separate operation as outlined above.

The yard located on the site of the old Hillcrest race track alongside the C.P.R. North Toronto line has been used throughout as a material receiving, storage and distributing center. Two tracks were laid the length of the yard, together with a crossover and connection with the C.P.R. The railway cars being switched into the yard for unloading. Sand, stone and other loose materials were handled by clamshell crane. Ties were received at this point and distributed to the various sections of the work in the western part of the city, and for the same sections the cement, sand and stone for concrete were mixed and hauled dry to the work as above described. It is the intention to make this a permanent material yard, and additional tracks will be added. The material yard established on Coxwell Ave. served the work in the eastern part of the city, and another material yard has been established at Merton St.

Fig. 3 shows the magnitude of the street railway system now being administered by the Commission, and the work of addition to trackage and rehabilitation of existing tracks carried out since the Commission assumed control. The article in Canadian Railway and Marine World for November described fully the location and nature of each section of the work, and by reference to fig. 3 given herewith the location in the city of each section will be clearly seen.

The following provisions cover the division of the cost of the work as between the Transportation Commission and the city:—

1. Cost of roadway widenings, reconstruction of sidewalks and other works necessitated by such widenings: (a) Where a street on which a new line is to be laid is unpaved, the work to be charged as far as possible as a local improvement in the ordinary way. The Commission to pay the capital cost of the tracks, foundations and paving within the track allowance, less a sum, to be defrayed by the city, equal to the cost of a pavement, and foundation thereon, on the track allowance of the same type and construction as to be laid on the roadway outside the track allowance. (b) Where a street on which a new line is to be laid is already paved, the capital cost of the above work necessary to be carried out, to be defrayed by the city. The Commission in this case to defray the whole of the capital cost of the work of laying the tracks, foundations, and paving within the track allowance.

2. Division of the capital cost of paving the track allowance as between the city and the Commission. In the case of new line on existing streets, other

than those defined in clause 1, or in the case of rehabilitation of existing lines, including the widening of the devil strip or the widening of curves, the Commission is to pay the capital cost of the tracks, foundations and paving within the track allowance, less a sum, to be defrayed by the city, equal to the cost of a pavement (and foundations for the same) on the track allowance, of the same type and construction as that laid on the portion of the roadway outside the track allowance.

3. The cost of maintenance of the existing pavements on the track allowance, pending rehabilitation, to be divided on the basis of the Commission defraying the whole cost of repairs arising out of repair or inspection of the rails or bonds by the Commission. The Commission to defray 25% of the maintenance cost, the balance to be defrayed by the city.

At the time of writing (Nov. 10) the extra men employed by the Transportation Commission number about 2,000. The sections of work spoken of in our November article as being well advanced are now largely completed. While it is

Canadian Electric Railway Association.

expected that the amount of work being carried on will be reduced considerably by the end of November, it is evident from fig. 3 and from the facts stated in this article that great progress has already been made in the rehabilitation of the street railway system.

Manitoba Power Co.'s Hydro Electric Development on the Winnipeg River.

The Winnipeg Electric Ry. shareholders met in Winnipeg, Oct. 10, to authorize the directors to guarantee the Manitoba Power Co.'s bonds for \$7,500,000 in connection with the latter company's plans for the development of 160,000 h. p. at the Great Falls of the Winnipeg River. The bonds guaranteed are to bear interest at 7%, and are redeemable in 1941. The issue has been purchased by Nesbitt, Thomson & Co., Montreal, the final arrangements being reported completed Oct. 15.

The shareholders were also asked to approve of a contract between the W.E. Ry. Co. and the M.P. Co., under which

the power company will deliver to the railway company all the power it may require from time to time to meet its requirements for electric light, power and transportation purposes.

The first section of the works to be put in hand will provide for the development of 60,000 h.p. A contract for this plant is reported to have been let to Fraser, Brace Co., Montreal. G. G. Brace, a member of the firm, is reported to have been in Winnipeg for some time, looking over the ground, and to have returned east Oct. 6 to complete the necessary preparations for starting work. Another report states that the Dominion Bridge Co., Montreal, is associated with the Fraser, Brace Co. in the contract. It is expected that about 200 men will be employed immediately, and that this number will be increased to probably 2,500 when the work is well in hand.

The work contemplates a dam 3,000 ft. long and a power house ultimately to produce 160,000 h.p. The initial installation will comprise a dam and power house with superstructure complete, with a power house superstructure for three units of 28,000 h.p. each and an installation of two turbine and generator units of 28,000 h.p. each. About 70,000 cu. yd. of rock excavation and 176,000 cu. yd. of concrete are involved in the construction of dam and power house. A rock cut of 240,000 cu. yd. two and a half miles below the power house for lowering the water level in tailrace, an earth dike of 105,000 cu. yd. for confining the river at its new level above the power house and a steel tower transmission line to the company's old power house eighteen miles up the river for ma part of the scheme.

The power which will be developed by this plant will be utilized in Winnipeg and vicinity by the Winnipeg Electric Ry. and local industries, the old plant of the Winnipeg River Power Co. being inadequate for the present demand. It is expected that by the time the initial development of 50,000 h.p. has been completed the market for power in the Winnipeg district will justify the installation of other units. The first installation contemplates an expenditure of about \$7,000,000 and will require 2 years to complete.

The prospectus offering for sale \$7,500,000 of the company's first mortgage 7% sinking fund, gold series A bonds, was issued in Montreal, Nov. 15, by Nesbitt, Thomson & Co. The bonds, which are guaranteed as to principal and interest by Winnipeg Electric Ry. Co., were offered at par and interest, each \$1,000 bond carrying with it the right to buy two shares of common stock at \$10 a share between Jan. 1, 1922, and Jan. 1, 1923, or at \$20 a share between Jan. 1, 1923, and Jan. 1, 1924. About \$3,000,000 of the issue, which was offered in the U.S., is reported to have been oversubscribed in New York.

The Ottawa Electric Ry. appealed against the assessment of certain machinery by the city at \$488,000 for municipal taxation. Under the company's agreement with the city, machinery used in connection with the operation of the railway is exempt from taxation for 30 years. The present assessment covers dynamos, turbines and steam plant machinery, and the city argues that they are not exempt under the agreement. The appeal was heard by Judge Gunn, Nov. 11, and judgment was reserved.

Ottawa Electric Railway Valuation and Franchise.

The Ottawa City Council some months ago arranged for the Hydro Electric Power Commission of Ontario to make a valuation of the Ottawa Electric Ry. Co.'s property and effects, necessary to the operation of the electric railway in the city, in connection with the expiry of the company's franchise in Aug., 1923, and the Commission designated T. U. Fairlie, of its engineering staff, to make the valuation. The work was done by engineers and accountants working under his direction, but without the assistance of the Ottawa Electric Ry. Co., which declined to have anything to do with the matter. The report on the investigations, received by the Mayor Nov. 12, comprises some 240 pages. It deals with the matter along two lines, viz., reproduction cost of the lines and their equipment and present value, and deals with the lines within the city, outside the city but within Ontario, and the line in Quebec. The following figures are given:

Ottario—		Reproduction	Present
		Cost	Value
Ways and structures.....	\$2,676,295	\$2,153,186	
Equipment	1,468,632	910,041	
Power	1,077,720	724,718	
General and miscellaneous	491,444	322,977	
	\$5,624,091	\$4,110,922	

Quebec—			
Ways and structures	\$56,805	\$49,287	

The report states that the city's physical assets within the railway track allowance are \$1,311,438 on the basis of reproduction cost, and that the value of property owned by the company, and not necessary to the railway's operation, is \$557,638, on a reproduction basis.

Major F. D. Burpee, the company's Manager, has given out the following:—"Mr. Fairlie's report given in this morning's papers can only be considered as his opinion of the value of the Ottawa Electric Ry. property based on what he and his staff could observe on the street without access to the company's premises or inventories. His report values all the assets, without the water power, at \$4,580,445. The condition percentage of rolling stock in his report is much too low. This, together with the many items that must have been missed in a valuation made from the sidewalk, would bring his total approximately to that arrived at by Dr. Herit and his staff in 1919. Dr. Herit's figures were \$5,211,000, without the water power. His valuation took nine months to complete, and employed a large staff of technical experts. He is prepared to substantiate it under oath at any time. I notice Mr. Fairlie does not consider the Britannia Park property as a necessary asset. I do not think that this view will be concurred in by the many citizens who have enjoyed this beautiful playground during the past 20 years."

The report will be considered by the city board of control, and will probably come up for discussion at the next meeting of the city council. Alderman Pinard has given notice that he will move for the preparation of a bylaw to be submitted to the ratepayers at the municipal elections on Jan. 2, 1922, favoring the extension of the company's franchise for a further period of 30 years.

The company's publication, O.E.R. News, said in a recent issue:—"While a great deal of attention is being given in the press to the valuation, it is well to remember that not only the quality of the service, but also the cost of it, depends almost entirely on the application

of efficiency and economy to the management of the business. The valuation of the company's assets necessary for the operation of the railway is only of secondary importance in the cost of the service. A variation of even a million dollars in the valuation would not mean a difference of as much as one-fifth of a cent in the rate of fare. Except in the case of a purchase by the city, its function is to determine what should be a fair return to the company for the use of its property. Unless this factor is kept in mind funds cannot be readily obtained when required for extensions and improvements. This company, in justice to its shareholders, did not feel that it could concur in Mr. Fairlie's valuation because it was not in accordance with its franchise agreement. This view was expressed to the city council before Mr. Fairlie was engaged. The company's plant and equipment have an actual value which can be determined to the satisfaction of all concerned by the method specified by the city in our franchise and approved by sound business principles, arbitration. Whether Mr. Fairlie's appraisal may or may not be of value to guide our citizens at the next municipal elections, this company cannot accept it as a basis on which its property can be acquired by the city or for the execution of a new contract."

The city board of control on Nov. 15 unanimously decided to instruct the City Solicitor to prepare bylaws to submit the following questions to the ratepayers in January:—"1. Are you in favor of the city giving the Ottawa Electric Ry. the required notice to take over the street railway at a price to be fixed by arbitration, as provided by the agreement between the city and the company? 2. Are you in favor of the present franchise of the Ottawa Electric Ry. being extended for a further period of 30 years? 3. Are you in favor of the city entering into an arrangement with the Ottawa Electric Ry. for service at cost?"

The board also decided to ask the City Solicitor to advise the council as to whether it is legally possible to have the vote taken on the single transferrable vote system.

Referring to the board's decision, Major F. D. Burpee, the company's Manager, said on Nov. 16:—"The company is pleased to see that the Board of Control is taking definite steps to settle the electric railway question at the municipal elections in January. It is the company's earnest desire that the vote shall leave no doubt in anyone's mind as to just what the people want done, and the company hopes that as soon as the vote is counted council will make use of the short time still available before the expiration of the present contract, to put the matter in such shape that a definite programme of action can be laid down, and the future provided for. The newspaper report states that the transferrable vote plan will be adopted, so that one of the three propositions will have a clear majority over the other two, an essential provision. The street railway people want to make it clear that in the event of the majority of the citizens expressing their desire for a new agreement with the company, they could not agree to an extension of the present contract for a further term of years exactly as it stands today. That contract was entered into many years

ago, when no one had any practical knowledge of the operation of an electric railway in Canada. They suggest that the second section of the ballot be worded so as to call for a new agreement with the company along the lines of the present franchise, but that the city be free to adopt such modifications as present day conditions require. The vote as proposed by the board of control calls for a renewal of the present franchise in every detail. To accept the contract without any change would mean confirming by legislation all the anomalies of the present agreement, and lumbering it up with many provisions that either have become dead letters or tend to restrict good service."

Arbitration of Value of Toronto Railway Co.'s Property.

Particulars of the proceedings up to Oct. 25, before the arbiters, Messrs. Hume Cronyn, of London, Ont., chairman; Sir Thos. White, nominated by the company; and Sir Adam Beck, nominated by the City of Toronto, were given in Canadian Railway and Marine World for November, pg. 606. At the Oct. 26 sitting the chairman gave the following decision on the city's application to inspect the company's books:—"In this case, the proper course appears to be that the city should first outline with particularity and in detail the information it may desire to secure from the books. If this appears to be relevant to the matters at issue, the company should permit inspection of its books and records in so far as the same bear upon the information desired. The company should, however, be at liberty to seal up and otherwise cover items dealing with other matters; such action to be verified by an affidavit; in the usual form, of the officer charged with or responsible for the sealing up or covering. So far as the uncovered items are concerned, the fullest inspection should be allowed, nor can there be any serious objection to this being done by a firm of accountants."

The witnesses examined between Oct. 26 and Nov. 24 included F. L. Hubbard, Assistant to Manager, Toronto Ry. Co.; W. G. Lambert, of Anglin-Norcross Co., contractors; D. E. Blair, Superintendent of Rolling Stock, Montreal Tramways Co.; and N. E. Cooley, Dean of Michigan University Engineering College, all of whom were called by the company's counsel.

A large amount of time was occupied by counsels' arguments as to whether evidence of original costs should be admitted and it was finally decided by the city's counsel to present a stated case to the Appellate Court.

Robt. McKay, K.C., one of the company's leading counsel, died Nov. 6, after a few days illness.

The Hydro Electric Power Commission of Ontario, which operates the Hydro Electric Railways, Essex Division, the Peterboro Radial Ry. and the Guelph Radial Ry., is collecting information on the various types of trackless trolley buses that are in operation in the United States and in Europe and expects to decide on the most suitable one for Canadian conditions and to ask for tenders in the near future.

The Toronto Transportation Commission is offering for sale 351 coal stoves, which were used by the Toronto Ry. for heating cars.

Electric Railway Projects, Construction, Betterments, Etc.

Brantford Municipal Ry. has completed the following extensions:—On South Market, Ontario and Port Sts., 2200 ft. of track. This extension was to improve service, and allow cars to move under closer headway as previously the single track on Erie Ave. did not permit that. The type of construction was ballast base 80 lb. 60 ft. A.S.C.E. rails, continuous joints, oil treated high tensile strength bolts, cedar ties, double bonding with type U.P.-03 pin driven terminal bonds, and 40 trolley wire supported by cedar poles.

On St. Pauls Ave., Burwell and Morrel Sts., 7785 ft. of track to connect the Terrace Hill and the Holmedale lines, making a loop of about 5½ miles. St. Pauls Ave was double tracked between Palmerston Ave. and Margaret St. 2500 ft. The type of construction was the same as that mentioned above. Solid manganese special work was used throughout.

On Morrel St. it is necessary to cross the Lake Erie & Northern Ry. where a half interlocking plant has been ordered by the Board of Railway Commissioners, at the Brantford Municipal Ry.'s expense. On West Mill St., 5000 ft. of single track without turnouts, was built. This was necessary owing to the paving of this street and as the old rail was not suitable, the following type of construction was used. Concrete sub-base and top, international steel ties, Lorain 82-505-7 in. T rail in 62 ft. lengths, double bonded with type C.P.C.-4 pin driven terminal bonds. The steel ties were chosen on account of the permanency of the construction and the material saving in the cost of concrete and excavation, and the saving of over \$7,000, over the use of wood ties. No difficulty was experienced with these ties on any of the curves, some of which are of 125 ft. radius and less, even although standard punching was used.

The Board of Railway Commissioners has authorized the opening for traffic of the following extensions:—from corner of St. Paul St. along that street to Burwell St., along Burwell St. to Morrel, and along Morrel St. to a connection with the line of West Mill St. from corner of Market St. to Ontario St., along Ontario St. to Port St., and along Port St. to a connection with the line on Erie Ave. (Oct., pg. 548).

British Columbia Electric Ry.—A good deal of work is reported to have been done on the company's lines in preparation for the change necessary for putting in operation the new rule of the road. The work involves the changing over of switches and rearrangements of the overhead wiring. (Nov., pg. 681.)

The **Cape Breton Electric Co.'s** railway crosses the Intercolonial Ry. tracks on Townsend and George Sts., and Victoria Road, Sydney, N.S., and on Commercial St., North Sydney. As the company desires to use the one-man cars, it applied recently to the Railways Department at Ottawa, which referred the application to the Board of Railway Commissioners. On Oct. 14, the Board passed order 31,700, rescinding an order made by the Privy Council's Railway Committee Jan. 10, 1916, and authorizing the company to build its electric railway across the I.R.C. tracks at the four points named, and directing that substantial diamond crossings, with derailing devices, to be oper-

ated by a spring or lever, be provided by the company at each crossing, the device to be worked by the conductor, or operator, of each car going forward and throwing the lever. The company is also to provide and maintain the diamond crossings, derailing devices, etc., their description and position to be approved by the Board's Chief Engineer. We are officially advised that it is not expected that the new order will involve much additional expense, as derails were installed under the original order.

Hamilton St. Ry.—In connection with the city council's application to the Ontario Railway and Municipal Board for an order to compel the company to relay the tracks on certain streets, H. W. Middlemist, the Board's Consulting Engineer, made an inspection of the lines in question on Nov. 16, being accompanied by the City Engineer and G. E. Waller, General Superintendent of Railways, Dominion Power & Transmission Co. (Nov., pg. 681.)

A press report states that a copy of Mr. Middlemist's report was received by the Hamilton City Solicitor, Nov. 19, and that it contained a detailed description of the condition of the track on the streets affected, with the general report that no section of the track can be deemed dangerous, and that it would be inadvisable to undertake the laying of new rails at present. (Nov., pg. 601.)

Moncton Tramways Electricity and Gas Co., has let contract for the erection of a new bridge 60 x 45 ft. on Mechanic St., Moncton, N.B., at an estimated cost of \$3,000, exclusive of plant. (May 1920, pg. 257.)

Ontario Hydro Electric Ry., Essex Division.—We are officially advised that contracts have been let to Merlo, Merlo & Ray, Windsor, Ont., for double tracking 4,000 ft. on Wyandotte St., and to the Caldwell Sand & Gravel Co. for double tracking about 4,000 ft. on Ouellette Ave., both in Windsor, Ont. The rails will be 80 lb. A.S.C.E., 60 ft. lengths, laid on steel ties. The special work at the intersections will be L.S. Co. 7 in. 114 lb. section 480. (Nov., pg. 601.)

Winnipeg Electric Ry.—The city council has completed the erection of the new Maryland bridge, including the fill and its temporary surfacing, and it was expected that the railway would lay a temporary double track across it by Nov. 30. It is expected that it will take about a year for the fill to settle, when the permanent surfacing will be done and the permanent street railway tracks laid. The linking up of the tracks on each side of the bridge will enable an improvement to be made in the car service.

A press report states that the company's construction programme for 1922 includes the following:—Extension of Academy-Godfrey Ave. line to Assiniboine Park; extension of Notre Dame West line; connecting of St. Boniface line with Winnipeg via Provencher bridge; a line through the northwest section of the city and also one to serve the St. John St. district. The Talbot Avenue extension in Elmwood and the double track subway at St. James will also, it is said, be done.

A new switch has been installed at Frederick and Hawthorne Sts., rendering it possible to operate an increased service on the St. Marys Road line. The

new service was put in operation Nov. 16. (Nov., pg. 681.)

Windsor, Essex & Lake Shore Rapid Ry.—A press report states that a site has been bought on Oak St., Leamington, Ont., for the erection of a freight terminal building, and that a track will be laid on Oak St. to reach the same. (Oct., pg. 545.)

Electric Railway Finance, Meetings, Etc.

Calgary Municipal Ry.—A press report gives the following particulars of operations for the 10 months ended Oct. 30, compared with the corresponding 10 months of 1920:—

	1921	1920
Revenue	\$77,866.78	\$755,201.47
Expenditures	77,765.83	782,940.68
Surplus	\$ 100.95	\$ 28,739.11
Deficit		12,955,684.14
Passengers carried	2,520,159	2,569,230
Car miles	99.88%	108.8%
Fixed charges to revenue		

Cape Breton Electric Co.—

	12 mos. to 12 mos. to	1921	1920
Gross	Sept. 1921	Sept. 1920	Sept. 30, 1920
Operating expenses and taxes	\$62,332	\$59,478	\$700,278
Net	11,682	9,787	122,877
Interest	5,772	5,711	68,338
Balance	5,960	4,076	63,940

Edmonton Radial Ry.—A press report states that the operation for September showed a profit of \$5,851, compared with \$17,168 for Sept., 1920, and for nine months ended Sept. 30, a deficit of \$47,729, compared with a deficit of \$141,279 for the same period of 1920.

Montreal Tramways Co.—It was announced in Montreal, Nov. 23, that the company had sold to Harris, Forbes & Co. \$1,750,000 5% first refunding bonds to cover capital expenditures already made.

Port Arthur Civic Ry.—A press report gives the following figures:—

	1921	1920
Revenue for October	\$15,106.77	\$16,226.13
Passengers carried	761,000	

Regina Municipal Ry.—The Regina, Sask., City Auditor's report on the Regina Municipal Ry. for the 10 months ended Oct. 31, is stated to show a deficit of \$223,332.12, while a deficit of only \$12,467 was placed in the estimates for the year. Commissioner Thornton expects that this deficit may be reduced to \$17,500 by Dec. 31. The use of one-man cars is stated to have resulted in a saving in operation of \$20,000. The whole of the cost of altering the cars for one-man service has been charged to operating account.

Regina Municipal Ry.—A press report gives the following figures for October:

	1921	1920
Passenger receipts	\$27,002.30	\$26,962.50
Passengers carried	448,811	434,280

Regina, Sask., City Council adopted a policy recently of granting a general use of transfers at any point on the municipal railway. Superintendent Houston interpreted the resolution to mean that transfers would be honored only beyond the last possible transfer points, and some complaints were made. As a result the council decided Oct. 28 that it was intended that the privilege was to be available between transfer points also, and that the policy of general transfers be tested for a further period.

Trackless Trolley Omnibusses for Toronto Transportation Commission.

The Toronto Transportation Commission has ordered, for January delivery, four trackless trolley busses, for operation on Mount Pleasant Road, in the northeast portion of the city. A trackless trolley bus which was tried recently in Detroit, Mich., is shown in accompanying illustration, two trolley poles having been used for the collection of current from the two overhead wires. The busses for Toronto will be substantially similar to the one shown in the illustration, but an important difference will be that but one trolley pole will be used, equipped with swivel harp and 4 in. wheels, although the two overhead wires will of course be necessary. In the bus tried in Detroit, the motive power was furnished by two 25 h.p. 37 amp. 600 volt motors, mounted in tandem through

vice for the outskirts of the city can be given with these busses without the necessity of laying expensive tracks, about the only overhead cost, so far as construction is concerned, being that of the two overhead wires. The Commission has experienced a great degree of success with the gasoline motor busses, which were described fully in Canadian Railway and Marine World for October, pg. 551, and there seems to be no reason why a similar degree of success should not be experienced with the trackless trolley busses. The cheaper power costs for the electric busses, and the absence of the stand-by and other power losses common to gasoline operation, should amply compensate for the smaller degree of flexibility enjoyed by the electric busses as compared with the gasoline

Trackless Trolley Omnibus tried in Detroit, Mich.

a universal joint, and connected by a second universal joint to the automobile type of differential drive in the rear axle. It is claimed that the test showed that simplicity of control and operation was highly perfected, both the application of power and the braking being accomplished through foot control. It is also said that the bus showed a remarkable degree of flexibility in operation, in so far as deviation from a course directly below the trolley wires was concerned. The bus body is of the single deck type, and is equipped with special springs, exhaust heaters, ventilators, electric lights, push buttons and illuminated route signs. The bodies of the busses for Toronto will be very similar to that of the bus used in the Detroit tests. The seating capacity will be 29. The busses have been ordered from Packard Ontario Motor Co. The bodies will be built by Canadian Brill Co., and the electrical equipment will be supplied by Westinghouse Electrical & Manufacturing Co.

In ordering these busses, the Commission is exhibiting a spirit of progressiveness, and of willingness to thoroughly test any equipment which promises to introduce increased efficiency and economy into urban transportation. A ser-

vice. While the operation of this equipment must be at first largely in the nature of experiment, there is no doubt that the proper field for its operation, wherein it can show better efficiency and economy than other forms of transportation, will be discovered and its limits defined. From present indications it would appear that the field for trackless electric equipment lies in the outskirts of large cities, where it can be employed as constituting extensions of existing street car lines, thus postponing the construction of new trackage until the traffic has grown sufficiently to compensate for the cost.

T. A. Hunt, K.C., formerly City Solicitor, addressed the Winnipeg Kiwanis Club recently on "Civic Problems of Today." He advocated the operation of Winnipeg Electric Ry. by the city and is reported to have said the vital question is not fares, or even a street railway, but the preservation of the civic hydro electric utility in which \$11,000,000 has been invested. If the city would be willing to pay for the brains to administer, and the people would keep their hands off the administration, the street railway could be successfully operated by the city.

Equipment for Ontario Hydro Electric Railways Cars.

The 25 safety cars ordered by the Hydro Electric Power Commission of Ontario, 18 of which are for the Hydro Electric Railways, Essex Division (formerly Sandwich, Windsor & Amherstburg Ry.), and seven for Guelph Radial Ry., were described fully in Canadian Railway and Marine World for November, with the exception of the electrical and air brake equipment, which had not then been definitely decided upon. As stated in that article, motors somewhat larger than the 25 h.p. motors used commonly in the past with cars only slightly lighter than those ordered by the Commission are considered more suitable to meet the climatic and other conditions under which the cars will operate, and that this view has been given effect to in placing the order for the electrical equipment is shown by the fact that the motors ordered are to be of 40 h.p. The electrical equipment has been ordered from the English Electric Co., the order including 2 D.K. 84, 40 h.p. ventilated type motors, 2 D.B. 1-form K4 controllers, and English Electric Co. circuit breakers for each car. The air brake equipment, to be supplied by Canadian Westinghouse Co., includes one compressor, with a capacity of 15 cu. ft. of free air a minute compressed to 90 lb. per sq. in. when operating at 600 volts, two brake valves and other parts, for each car. The safety devices to be applied to the cars will also be supplied by Canadian Westinghouse Co. under the same contract as that covering the air brake equipment.

Toronto Transportation Commission's Orders for Rails, Etc.

Following are particulars of orders given by the Toronto Transportation Commission up to date, for rails and special work.

Rails.		
22 tons L.S. 88'425 girder.		
20 tons 60 lb. A.R.A. Type A.		
70 tons 60 lb. A.S.C.E. Type A.		
40 tons 60 lb. A.R.A. Type A.		
4,000 tons 122 lb. A.E.R.E.A. G.G.		
200 tons 140 lb. A.E.R.E.A. G.G.		
300 tons 100 lb. A.R.A. Type A. Tee.		
250 tons 100 lb. A.S.C.E.		
Special Work.		
Classification	No.	Weight lb.
Curves S.L.	7	125,705
Wyes S.L.	1	212,221
2 Part wyes d.t.	10	863,550
Branch off d.t.	3	188,130
Branch off d.t. and wye	5	269,960
1 Grand unions	1	111,640
1 Grand unions	1	111,289
1 Grand unions and wye	3	870,740
1 Grand unions and 2 curves	3	290,500
1 Grand unions and 1 curve.	1	136,920
Loops	3	139,325
Diminished	3	39,000
S.L. branch off	2	34,090
S.L.L. for car house	26	816,500
Special L.L. for car house	4	144,300
Loops with branch off	2	111,250
Cross overs, car house	5	74,640
Wyes, car house	1	30,000

The above were bought from Canadian Steel Foundries, Consolidated Steel Corporation, U.S. Steel Products Co., and Wm. Wharton, Jr., & Co., at an aggregate cost of about \$540,000.

Winnipeg Electric Railway Better Service Campaign.

The Winnipeg Electric Ry. Co. operates the street cars and gas plant in the city, and also sells electric light and power in competition with the municipal plant. A. W. McLimont, the Vice President, decided recently to impress upon the heads of the company's departments the company's wish that the best possible service should be rendered to the public by all departments of the organization, to have the heads of departments in turn impress this fact on the employees under their jurisdiction, and to satisfy the company's patrons.

The campaign was opened on Oct. 18, with an article, "Why we are out to give service," in the company's little publication, *Winnipeg Electric Public Service News*, of which 40,000 are printed fortnightly and distributed through the "Take one" boxes in the street cars. Copies are also mailed to approximately 1,000 citizens. Immediately after this was done, Mr. McLimont issued a circular letter to all the company's department heads, with a view to interesting them in the campaign. On Nov. 1 the W.E.P.S.N. published extracts from some of the circulars issued by heads of departments in pursuance of Mr. McLimont's suggestion and the same date each employee of the company received in his pay envelope a circular entitled "Stop, Look and Listen." During November the company's customers received with their electric light and gas bills, cards headed "We are on our Toes to Serve you."

The management feels that this better service campaign has already had good results and that employees are co-operating with it in trying to please the company's patrons.

Electric Railway Notes.

The British Columbia Electric Ry. has been asked by the Vancouver City Council to provide improved service on the Broadway west lines.

Winnipeg Electric Ry. Co., according to a press report, proposes to put one-man cars on its Sutherland Ave., Pembina Highway and Kelvin lines.

Regina, Sask., City Council is reported to have accepted a local tender for the supply of 50 overcoats for Regina Municipal Ry. employees at \$26.70 each.

The Canadian Electric Railway Association has asked its member companies to supply it with copies of pamphlets, etc., describing their service, amusement parks, etc.

The Independent Federation of Street Carmen, organized recently in Winnipeg, is reported to have decided that strikes shall only be resorted to as a last measure, and only then on a 75% majority vote.

The Winnipeg Electric Ry. Co.'s application to the Board of Railway Commissioners for permission to operate one-man cars along the Grand Trunk Pacific Ry. on Pembina Ave., and across the C.P.R. on Sutherland Ave., Winnipeg, was heard in Winnipeg, Nov. 7.

A tablet subscribed for by members of the Toronto Street Railwaymen's Union, in memory of 97 of its members who fell in action, or died on active service during the war, was unveiled at the

Labor Temple, Nov. 8, by R. J. Fleming, General Manager, Toronto Ry. Co. It is to be placed in the City Hall.

Hamilton Street Ry. is, according to a press report, prepared to use the Hydro Electric Power Commission of Ontario's power for its street cars, in place of its own power, which is generated, partly at Decew Falls, and partly at an auxiliary steam plant in Hamilton, if a service at cost plan should be agreed upon, and the city council should desire it to do so.

The Winnipeg Electric Ry. has received 4 one-man safety cars from Canadian Brill Co., and another one, completing an order for 5, was expected to be delivered by the end of November. These cars are of the same design as those being built for the Hydro Electric Power Commission of Ontario, which were fully described and illustrated in *Canadian Railway and Marine World* for November.

A. Bileaud and E. Lapierre, Montreal, pleaded guilty in the Hull, Que., Police Court, Nov. 9, to stealing copper wire valued at \$375 on Oct. 8, and 1,500 lbs. of copper binding wire and trolley wire on Oct. 31, from the Hull Electric Co. The second lot was taken from the overhead wires, and resulted in bringing up the service during the night. The men were sentenced to three years and two years respectively on each charge, the sentences to run concurrently.

The British Columbia Electric Ry. is carrying on an advertising campaign in connection with its application to the Victoria City Council for permission to operate one-man cars in that city. One advertisement gave a list of cities in which such cars are operated, those named in Canada being Calgary and Edmonton, Alta.; Regina, Saskatoon and Moose Jaw, Sask.; Toronto, Port Arthur, Port Huron, St. Thomas and Peterborough, Ont.; Levis, Quebec, Sherbrooke and Three Rivers, Que.; St. John, N.B.

The New Brunswick Power Co. has applied to the New Brunswick Supreme Court for an injunction to prevent the Union Bus Co. operating a motor bus service in St. John. The N. B. P. Co.'s conductors and motormen have been on strike for some time and have gone into the jitney and motor bus business, in competition with the electric cars. The N. B. P. Co. claims an exclusive franchise on the streets. The Union Bus Co. was on Nov. 1 fined \$10 each for separate breaches of the jitney regulations passed recently by the St. John City Council. The company claims that the bylaw is ultra vires, and it is reported that the matter will go to the Supreme Court.

Motor Busses for Vancouver.—The British Columbia Electric Ry. has proposed to the Vancouver City Council to run motor busses as feeders to outlying lines. The city proposed recently to try and obtain a provincial charter to operate motor busses. The company's counter proposal is to operate busses, provided the city paves the street where necessary, and withdraws its application for a charter. Particular reference was made to the Broadway West district, which is now without transportation service. New pavement for one mile would be required. The city recently refused a proposal to pave the street on account of lack of funds. The company, on the other hand, has refused to extend its street car tracks that distance.

Mainly About Electric Railway People.

H. Cameron, who was Manager of the old North West Electric Co. at Winnipeg, and who was subsequently Manager, Winnipeg Electric Ry. for a time, has left Winnipeg to live at Victoria, B.C.

R. J. Fleming, General Manager, Toronto Ry. Co., was presented with a cabinet of silver by the members of the Toronto Ry. Employees Union, at their annual dinner, Oct. 29. The presentation was made by the Secretary, W. D. Robbins, who spoke of the pleasant relations which had prevailed between the General Manager and the employees. The Toronto Transportation Commission was represented by P. W. Ellis, Chairman, F. Miller, Commissioner, and H. H. Couzens, General Manager; the Toronto Ry. Co., by F. L. Hubbard, Assistant to General Manager; and the Toronto & York Radial Ry. by C. L. Wilson, Assistant Manager.

G. Gordon Gale, Vice President and General Manager, Hull Electric Co., and President, Canadian Electric Railway Association, is chairman of the transportation committee for the Canadian National Winter Carnival to be held in Ottawa during the last week of January and beginning of February.

A. W. McLimont, Vice President and General Manager, Winnipeg Electric Ry., visited Montreal, Toronto and some other eastern points in November.

I. P. McNab, of the Nova Scotia Tramways & Power Co., addressed the Engineering Society Nov. 18 on the history of street railways, with special reference to the Halifax lines.

J. E. Ung, heretofore Supervisor of Traffic, Winnipeg Electric Ry., has been appointed Divisional Superintendent, vice J. S. Beckwith, whose appointment as Traffic Superintendent was announced in our last issue.

Toronto Transportation Commission:—The following five divisional superintendents of the Toronto Ry. have been appointed to similar positions under the Commission, viz.: A. Edmunds, with jurisdiction over cars operating from Lansdowne car house; R. Grimshaw, with jurisdiction over cars operating from King, Russell and Beach car houses; J. J. McWilliam, with jurisdiction over cars operating from Dundas car house; C. Steele, with jurisdiction over cars operating from Yorkville car house; and L. Wheeler, with jurisdiction over cars operating from Roncesvalles car house. C. H. Batchelor, heretofore with the Toronto Civic Ry., has been appointed acting Division Superintendent, with jurisdiction over cars operating from St. Clair car house.

New York Car Fares.—Those who talk glibly about a fare increase in New York City do not explain that it is not good for transfer on the various systems. The Interborough, which operates the subways and elevated, reports, for the year ended June 30, a deficit of \$4,464,828, exclusive of deficit accruals payable out of future earnings to the extent of \$11,016,654.—Toronto Star.

The Winnipeg Electric Ry. is reported to have applied to the city council for permission to operate one-man cars on certain routes. It is said that the men operating them will be paid 5c. an hour extra.

Electric Railway Employes' Wages, Working Conditions, Etc.

British Columbia Electric Ry.—A conciliation board, consisting of W. C. Dittmars, chairman; A. G. McCandless, representing the company, and R. P. Pettipiece, representing the men, began hearing evidence at Vancouver, Nov. 8, re the proposed 15% reduction of wages which the company gave notice of recently. The company also desires to have the working conditions altered in a number of details. Evidence given by W. G. Murrin, Assistant General Manager, showed that the maximum rate of wages for motormen and conductors in July 1918 was 51c. an hour; that this was increased in 1919 to 56c. an hour; in April 1920 to 60c., and in Oct. 1920 to 65c. Following is the scale of wages as offered by the company and accepted by the employes in Oct. 1920:—City motormen and conductors, 65c.; interurban motormen and conductors, 67c.; car repairers, 70c.; mechanics' helpers, 55c.; car cleaners, 58c.; carpenters, 77c.; blacksmiths and machinists, 80c.; trackmen, 60c.

Hull Electric Co.—G. Gordon Gale, Vice President and General Manager, issued the following notice to employes Nov. 1:—"The question of wages, which was under consideration last spring, was left in abeyance in the hope that a continuation of the present schedule might be possible. The company's earnings have, however, been seriously affected by the continued industrial depression, and it is no longer possible to carry on. From the beginning of 1918 to the middle of 1920, the cost of living increased 36%, and during the same period your wages increased nearly 100%. During the past year the cost of living has dropped 20%, bringing the figures down to the 1919 level, when senior motormen and conductors were paid 36c. an hour. Other companies have already made substantial reductions in wage schedules, but action has been withheld in your case, until conditions have made this step absolutely necessary. In asking you, therefore, to accept a reduction of 10%, with overtime at 10c. an hour over the regular rate, effective Dec. 1, 1921, I feel that you will find this necessary reduction both moderate and reasonable, for the new schedule will be 7c. higher than that of 1919, although the cost of living is approximately the same as in 1919."

Under the new schedule, conductors and motormen would receive after Dec. 1, for the first six months, 37c. an hour instead of 41c.; for the second six months, 39c. instead of 44c.; for the second year, 41c. instead of 46c., and for the third year and thereafter, 43c. instead of 48c.

It was stated Nov. 15 that the employes had, in a letter to the press, announced that they will refuse to accept any reduction or change in working conditions, and asserting that they will press their demand for an increase of 7c. an hour originally made last July at the expiry of their year's agreement.

Montreal Tramways Co.—We are advised that at the meeting of employes held recently to consider the board of conciliation's majority report, referred to in Canadian Railway and Marine World for November, pg. 602, that a resolution was passed to the effect that while the award was not acceptable, the matter be left in abeyance for further consideration. We are further advised that nothing has been done in the matter since.

One-man Cars on Fort William Municipal Railway.

Canadian Railway and Marine World for November mentioned that the Ontario Railway and Municipal Board had approved of the operation of one-man cars on the Fort William, Ont., Municipal Ry., subject to the filing with the Board of a statement showing the routes upon which it was proposed to operate them. This was done, and the Board issued an order Oct. 31, authorizing the operation of the one-man cars on the following routes, main line, from boundary between Fort William and Port Arthur, to Westfort, belt line and Mission extension, but providing that the Board may at any time rescind or amend the order, upon its own motion, or at the request of the city or on the complaint of any person. The Board of Railway Commissioners has passed a number of orders, authorizing the Fort William Municipal Ry. to operate one-man cars across the Grand Trunk Pacific Ry.'s spur to Mount McKay Products Ltd., across the G.T.P.R., at Syndicate and Empire Avenues; across the Canadian National Ry., at Arthur and Franklin Sts., at Victoria Ave. and Vickers St.; and across the G.T.P.R. at Sprague St. and Empire Ave.

We are advised that nothing will be done until an arrangement is made with Port Arthur to operate the one-man cars there also, which it is hoped will be arranged at the next meeting of the Fort William and Port Arthur public utilities authorities.

Electric Railway Freight and Passenger Rates.

Cape Breton Electric Co.—There has been some agitation in Sydney and Glace Bay, N.S., recently, for special fares for workmen travelling on the interurban line between those places. The movement was initiated by Thos. Gladwin, a pensioned returned soldier, a watchman on Dominion Government property at Sydney, but living at Glace Bay. He wrote the company that his travelling to and from work cost him \$21 a month, and claimed that he should be granted a rebate, or that a special workmen's rate should be given between certain hours, and he also complained of overcrowding on the cars. C. C. Curtis, Manager, in reply promised to do anything possible to prevent overcrowding, and pointed out that it was not possible to grant any personal concessions as to fares, which are under the Nova Scotia Public Utilities Commission's control. Other correspondence followed, Gladwin insisting that as a returned soldier, a pensioner, and a workman, he was personally entitled to a concession or rebate. He subsequently obtained some signatures to a petition to the N.S. Public Utilities Commission, asking for workmen's tickets.

J. T. Ross, chairman of the Commission, was in Sydney at the end of October on other business, and was prepared to look into the matter, but while C. C. Curtis, Manager, and W. Crowe, K.C., Solicitor of the company, attended, no one appeared in support of the petition. As Gladwin had in the meantime been removed to an asylum for the mentally afflicted, and as the petition was not largely signed, no action was taken by the Commission.

Hamilton St. Ry.—We are advised that considerable progress has been made in

educating the Hamilton public up to the advantages of the service at cost plan. The company is negotiating with a city council committee, and it is expected that some definite action will be taken at an early date.

Montreal Tramways Co.—The Montreal Tramways Commission has been asked to extend the hours during which school children's tickets may be used on the Montreal Tramways Co.'s lines.

Oshawa Ry.—We are officially advised that owing to the revenue from passenger business not being sufficient to meet operating expenses, an increase of fares was put in operation Nov. 1. Following is a comparison of the new and old fares:

	New	Old
Cash	4c.	5c.
Tickets	4 for 25c.	5 for 25c.
After midnight	10c.	15c.
Children, 5 to 12 years	5c.	3c.
Scholars, attending school, or children 5 to 12 years	6 for 25c.	32 for \$1

One-man Cars for British Columbia Electric Railway.

In preparation for putting one-man cars on a number of the British Columbia Electric Ry. lines, W. G. Murrin, Assistant General Manager, has recently addressed several meetings in Vancouver and New Westminster, and A. T. Goward, Local Manager at Victoria, has been carrying on negotiations with the Victoria City Council. Mr. Goward is reported to have advised the council that a definite date had been set for starting operating one-man cars and that demonstrations of them would be given, and the change would be introduced gradually. The council passed a resolution recently expressing opposition to the use of one-man cars until their efficiency had been proved, which shows that the councillors do not keep up to date with current events.

The B.C. Premier, in replying to questions from the Legislative Assembly recently, said the Government has been advised of the company's intention to use one-man cars, but no formal application had been made for their use, and no approval had been given. The Government had no information as to whether the cities and municipalities concerned had been consulted regarding the use of such cars. It had been suggested that some unemployment might result from the introduction of the cars. An order in council was passed Oct. 6 repealing the rule in force since Jan. 1, 1913, that "All city street cars must be equipped with double trucks," and substituting thereof the following:—"Street railway companies must make application to the Minister of Railways before changing from two-man to one-man operated cars and must submit routes upon which change is proposed. One-man operated cars must be equipped with safety control devices, the motorman's brake valve and brake equipment, safety controller and door and step devices." He considered that the chance was necessary in the public interest. The Government was contributing to one-half of the cost of the alteration of street cars necessitated through the change in the rule of the road, and the costs of this work was being checked by the Government's Superintendent of Electric Energy, and its Inspector of Railway Equipment, but the Government was not contributing anything toward the expense required in the change of two-man cars to one-man cars.

Marine Department

General Shipbuilding Matters Throughout Canada.

David Shipbuilding & Repairing Co., Lauzon, Que.—The steam barge *Thunder Bay*, owned formerly by Montreal Transportation Co. and Collingwood Shipbuilding Co., jointly, has been shortened 60 ft. at Lauzon, to bring her within the limits of Welland Canal locks. New machinery and boilers have been installed. The barge *Hamilton*, owned formerly by Montreal Transportation Co., is undergoing a similar change at the plant.

Nova Scotia Steel & Coal Co., New Glasgow, N.S., delivered the motor yacht *Sea King*, which is illustrated herewith, to the owner, Baron Bliss, Bahamas, British West Indies, Nov. 10, and she sailed immediately for Nassau. She has been built for exploratory purposes, to the owner's designs, and has the following dimensions,—length b.p. 137 ft., breadth 42½ ft., depth molded 28½ ft. Her gross tonnage is 1,866.31, and she has an estimated deadweight carrying capacity of 3,000 tons. She has two large bilge keels for steadying purposes, and is equipped with two 250 h.p. Vickers-Peters semi-Diesel oil engines. All the auxiliary equipment is electrically driven, the same motive power being used for the anchor. The owner's apartments occupy the center of the upper and lower decks, and are connected by an elevator. The accommodation for officers and crew is forward.

Prince Rupert Drydock & Shipbuilding Plant.—As announced in Canadian Railway and Marine World for November, this plant has reverted to the owning company, the Grand Trunk Pacific Ry. Co., on account of the bankruptcy of the lessee, the Prince Rupert Drydock & Engineering Co. It is now being operated by the Canadian National Ry. management on behalf of the Minister of Railways, receiver of the G.T.P.R. Co., and is in charge of J. H. Pillsbury, formerly Manager, Prince Rupert Drydock & Engineering Co., who reports to A. E. Warren, General Manager, Western Lines, Canadian National Ry. Satisfactory orders for shipbuilding and ship repairing will be handled, and the plant will be utilized, as far as possible, for repairing the C.N.R. rolling stock, bridge equipment, etc. The plant consists of a floating drydock, power house, boiler and blacksmith shop, and machine shop.

The floating drydock is in three units, with a total lifting capacity of 20,000 tons, and all the units are interchangeable, and each is complete in itself, with pumps and air compressors. The two end sections are each of 5,000 tons capacity, and the middle section is of 10,000 tons capacity. When all three units are joined together, the dock is capable of raising a ship 600 ft. long, of 20,000 tons. The dock is 603¼ ft. long on the keel blocks, and has a clear width of 100 ft., with an overall width of 130 ft. The lifting power is the aggregate of 12 pontoons of timber construction, each 130 ft. long, which is the overall width of the dock, 44 ft. wide and 15 ft. deep. These pontoons are united by steel side walls or wings 38 ft. high, 15 ft. wide at the bottom, and 10 ft. wide at the top, the walls being divided so that the whole structure may be used under ordinary

conditions as three separate docks, one of 6 pontoons, with an overall length of 269 ft., and 2 of 3 pontoons each, with an overall length of 164 ft. each. The centrifugal pumps are operated by electric motors, the capacity of the equipment being sufficient to pump the entire lifting power of the dock in two hours. The whole is secured to the shore by clamps on the dock, with a vertical truss secured to the pile platform, so that it is free to rise and fall with the tide, or when being raised or lowered with the ship. The pumping machinery consists of 24 12 in. centrifugal pumps, one being placed at each end of each pontoon, and they are driven by a vertical shaft at approximately 275 r.p.m. All pumps on each side are driven through horizontal shafting by electric motors. Thus for the two smaller sections of three pontoons each, there are 4 100 h.p. motors,

operating at 150 r.p.m. It is designed for a steam pressure of 175 lb. a sq. in. and an air pressure of 100 lb. The compressed air is distributed by underground piping.

The boiler and blacksmith shop, 76 x 150 ft., with the central part 33 ft. wide, is of steel frame construction, covered with wood, with flooring of concrete, and heavy foundations for the larger tools. The equipment includes heavy punch and shears, rolls, plate planer, flanging clamps, heavy steam hammer and complete blacksmith equipment, and a 15 ton travelling crane.

The machine shop is of similar size and type to the boiler and blacksmith shop, and is completely equipped with tools, the larger ones being driven by individual motors, and the smaller ones being arranged for group driving.

Motor Yacht *Sea King*, 1,866.31 gross tons, built by Nova Scotia Steel & Coal Co.

and for the larger section of 6 pontoons, there are 2 200 h.p. motors, all alternating current, 3 phase, 25 cycle, 550 volt, with wound rotors and slip rings for variable speed control. The armature shaft is extended at both ends and operates the distribution shafts through reduction gearing at approximately 275 r.p.m.

The power house, 104 x 148 ft., with a covered area of 15,392 sq. ft., is of steel frame construction, with walls and roof of reinforced concrete. There are six 400 h.p. water tube boilers, equipped with automatic stokers of the chain grate type, and provision is made for receiving coal by rail or water, into a coal pocket of 1,000 tons capacity. There are two main engines of 900 h.p. each. The electric generators have a capacity of 600 k.w., 3 phase, 550 volt, with 2 steam driven exciters, of 50 k.w., and 1 of 25 k.w. capacity, direct current, 250 volts, and 1 motor driven exciter of 25 k.w. capacity, the motor being 35 h.p., 3 phase, 25 cycle, 550 volt, alternating current, squirrel cage type. The equipment also includes air compressor plant, with capacity of 1,580 cu. ft. of free air per minute when

The shipbuilding shed and woodworking shop are under one roof, and divided into two sections, the shed being 86 x 300 ft. with a clear height under cranes of 50 ft. and under girders of 56 ft. The shop section is 80 x 300 ft., the ground floor being used for machinery, and the upper floor for laying out.

The plant was completed and ready for operation in Aug. 1915, and the first ship to use the dock was the s.s. *Delhi*, which was wrecked on the Alaska coast about the end of 1914, and which was towed to Prince Rupert and docked in Sept. 1915. While, owing to the war, and conditions in general, the plant was not fully organized and operated, considerable ship overhauling and repair work was carried out by the G.T.P.R. Co., under J. H. Pillsbury, the local engineer in charge, during 1916 and 1917, and included work on several British warships, the G.T.P. Coast Steamship Co.'s steamships *Prince Rupert*, *Prince George* and *Prince John*, and a number of fishing ships. During 1918 it was decided that the G.T.P.R. Co. should cease operating the plant, negotiations were undertaken for leasing it,

and in Aug. 1918 a lease was given to the John L. Mullen Construction Co., Pittsburgh, Pa., covering the entire premises, and a sufficient area adjoining the drydock for laying down five shipbuilding ways. The Prince Rupert Drydock & Engineering Co. was incorporated Dec. 23, 1918, with authorized capital of \$500,000, and office at Prince Rupert, B.C., to take over the lease and operate the property, and the following officers were elected: Chairman of the Board, Newman Erb, New York; President, John L. Mullen, Pittsburgh, Pa.; Vice President, E. F. Schellenberg, Prince Rupert, B.C.; Treasurer, W. M. Wadden, New York; Secretary, H. Blanchard, New York; Superintendent of Plant, J. H. Pillsbury, Prince Rupert, B.C., and the Vice President, and Superintendent of Plant were placed in active charge of shipbuilding. A contract was obtained Feb. 21, 1919, from the Dominion Government for building of steel cargo steamships approximately 8,390 d.w. tons each, for Canadian Government Merchant Marine, to be named Canadian Reaper and Canadian Thrasher, changed later to Canadian Scottish and Canadian Britisher. In the meantime considerable differences had arisen among the directors, and litigation followed to determine the rights of the Erb and Mullen interests respectively, the former alleging fraudulent conspiracy to obtain control of the company. The litigation resulted in Newman Erb acquiring the Mullen interests for \$75,000, through the Empire Ship & Dry Dock Corporation. He then claimed that the company had spent \$550,000 on fixed assets. Officers of the company were elected as follows:—Chairman and Managing Director, Newman Erb; Treasurer, W. M. Wadden; Secretary, H. Blanchard; acting General Manager, J. H. Pillsbury. Work on the two steamships for Canadian Government Merchant Marine, the keels of which were laid Nov. 27 and Oct. 20, 1919, proceeded during 1920, and early in November, the company suspended operations, owing to financial difficulties, which culminated in bankruptcy. Since then, the two steamships referred to were proceeded with, under special contract, by the Wallace Shipbuilding & Drydock Co., North Vancouver, B.C. The Canadian Scottish was delivered to Canadian Government Merchant Marine for operation, Sept. 1, and the Canadian Britisher on Nov. 15.

Three Rivers Shipyards Ltd., Three Rivers, Que.—The oil tank steamship Capitaine Damiani, which was under construction at this yard at the time of the company's bankruptcy, and which was afterwards completed by the owners, La Société Naphtes Transports, Marseilles, France, sailed from Three Rivers, during November, for Beaumont, Texas, for a cargo of oil for France. She was in charge of Capt. Queudrue, who has to hand the ship over to Capt. Pillaud, to take to France, and who returned to Three Rivers, to continue his duties as representative of French interests there. The s.s. Capitaine Damiani is considered a unique ship of her class, and is stated to be the first oil tank steamship of that class to be built in Canada, and the first steamship built in eastern Canada on the Isherwood system. She has been built to carry benzine, and is equipped with oil burning furnaces, and designed for a speed of $1\frac{1}{2}$ knots on a draft of 22½ ft. Her dimensions are,—length b.p. 380 ft., beam 52 ft., depth to deck moulded 28½ ft., capacity 6,500 d.w. tons. The

machinery consists of triple expansion engines with cylinders 27, 43 and 72 in. diam. by 48 in. stroke, a modified type of the British standard engine, the crank shaft being in three interchangeable pieces. There are three Scotch marine boilers, each 15½ x 12 ft., and one donkey boiler 11½ x 10 ft., all supplied by Canadian Allis-Chalmers, Toronto. The windlass and other deck machinery were built by McNab & Vickers Ltd., Montreal. The design and construction of the ship were supervised by A. J. Murray, naval architect, and the work was carried out, since the litigation which resulted in the owners obtaining possession of the unfinished ship, under the direction of Capt. Queudrue, representing the owners and the French Government, which is financially interested.

It is reported that two other oil tank steamships, of approximately 10,000 d.w. tons, which had been commenced before the bankruptcy of the Three Rivers Shipyards Ltd., and on which some work has been done by the owners since, may

Dominion Marine Association.

President, A. A. Wright, President, Tide-water Shipbuilders, and Vice President and Managing Director, David Shipbuilding & Repairing Co., Montreal.

be removed to Quebec for completion during the winter. It is stated that it was the intention to break up the partially built ships, but that owing to the success in completing the s.s. Capitaine Damiani, the other two may be finished, and possibly sold.

Victoria (B.C.) Shipowners Ltd., Victoria, B.C.—The Marine Department invited tenders recently for the completion of the second of the four barquentines which were to have been built under a special agreement between the Dominion Government and this company, and which, owing to financial difficulties, the company is unable to proceed with.

The company's directors are pressing the Government for a statement of the position it proposes to adopt toward the shareholders, to explain the company's status and what provision is being made for the protection of the shareholders' interests. The directors' statement describes the situation as follows:—Under the original estimate the four wooden barquentines were to cost \$250,000 each, or a total of \$1,000,000. The Government was to advance \$700,000 of this,

and the balance of \$300,000 was to be raised by subscription in Victoria. It was provided in the contract that 60% of those employed on the work were to be returned soldiers. The directors endeavored to make it a condition of employment that those engaged should take stock for \$82,000, but the Government took exception to this, and declined to advance money if the workmen were required to participate in a co-operative scheme. The first ship was proceeded with, and was launched Dec. 28, 1920, and in the meantime two other keels had been laid. Before authority was given for the laying of the fourth keel, the directors were assured that the total extra cost of the four ships would be approximately \$35,000, and with further assurances that it would be possible to operate them for four or five years at a considerable profit, they believed they were justified in laying the fourth keel. It was, however, shown that the first ship, Simon F. Tolinie, had already exceeded the original estimate by some \$45,000, but it was considered that in view of the prospective high freight rates, the ship would make a profit of from \$40,000 to \$50,000 each trip. They complained that they had to employ 60% returned soldiers, all willing, but not skilled, and that the remaining 40% had to be engaged through the labor bureau, and that they were not in a position to select the most suitable men. Bad weather and non-delivery of lumber also caused trouble. At the time the Simon F. Tolinie was launched, the company had in cash \$17,000, unpaid shares \$44,000, of which \$30,000 was considered good, and \$32,000 due from the Government. In view of the extra cost of building, and the generally unsatisfactory situation, the directors did not feel justified in proceeding with the programme. It was decided to close the yard and lay the position before the Government. Government auditors went to go through the accounts and, it is claimed, left the impression that everything was satisfactory, and that there would be no difficulty in clearing up the situation favorably to the company. On June 20, the Government gave notice that under the provisions of the agreement, it would take over the ships and all materials on hand intended for them at the Cholberg Shipyards. This action, the directors, in a telegram to the Finance Minister, declared to be "inimical to the interests of the Government and shareholders, being unjust and high handed in the extreme and further believe not in accord with ministerial policy." They also complained of the Marine Department "dispossessing company of its assets, without explanation as to its precipitate action, leaving them in the dark as to status of company, contractors and subcontractors" and declared it to be unbusinesslike and discourteous.

In reply to the message, the Marine Department stated that any suggestion the directors had to make in the direction of reaching a satisfactory settlement would be cordially welcomed, and pointed out that the Department only took action after having been advised that the company was unable to proceed further to carry out the contract with the Finance Minister.

We were officially advised, Nov. 14, that the second ship, to be named Henry L. Drayton, was practically 50% completed, and the third ship, possibly 20% completed, the keel having been laid and

some preliminary work done on construction. Some of the material had been assembled for the fourth ship, but the keel had not been laid, and practically no work had been done.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.—In addition to completing the C.P.R. s.s. Princess Louise, this company has recently carried out the following work: s.s. Chemainue, 153 tons, Kingcome Navigation Co., repairs; s.s. Chilco, 309 tons, Union Steamship Co. of British Columbia, cleaned and painted; steam tug Esdud, 114 tons, repairs; and the yacht Rio Bonito, A. Melville Dollar, rebuilding and refitting.

Yarrows Ltd., Victoria, B.C., did the following work during October: s.s. Algerine, 592 tons, Pacific Salvage Co., new hawse pipes and sundry repairs; s.s. Arizonan, 8,723 tons, American-Hawaiian Steamship Co., docked, oil pumped out, survey and temporary repairs; s.s. Canadian Importer, 5,465 tons, Canadian Government Merchant Marine, drydocked for survey; s.s. City of Victoria, 5,698 tons, British Canadian Steamships Ltd., docked, cleaned, painted and minor repairs; s.s. Leebro, 323 tons, Crescent Shipping Co., docked, cleaned, painted and sundry repairs; s.s. Princess Maquima, 1,777 tons, C.P.R. British Columbia Coast Service, new propeller blades and minor engine room repairs; s.s. Toyohashi Maru, 7,031 tons, Nippon Yusen Kaisha, engine room repairs. Five of the large crabs which are being built at this yard, for the Dominion Government drydock landing wharf at Esquimalt, are nearing completion. Three have been launched, and the other two are to be launched shortly.

Trade Extension.—Hon. H. H. Stevens, M.P. for Vancouver Center, B.C., who was appointed Minister of Trade and Commerce recently, is reported to have stated in the west that his plans for trade development include negotiations for a preferential tariff arrangement with Australia, and the extension of shipping facilities between Canada and Mexico, by means of the Canadian Government Merchant Marine, two things which will doubtless be especially popular in British Columbia. Other announcements as to what he proposes to do for Canadian trade generally would also be acceptable.

Wreck Commissioners' and Nautical Assessors' Status and Jurisdiction.

The judgment of Mr. Justice Morrison, of the British Columbia Supreme Court, quashing the suspension of the certificate of the master of Canadian Government Merchant Marine's s.s. Canadian Explorer, lost on the Pacific coast, Aug. 11, which is given fully on another page of this issue, raises the questions as to the appointment of nautical assessors, the status of wreck commissioners, and the conduct of enquiries into marine casualties generally.

The procedure provided by the Canada Shipping Act, relates first to a preliminary enquiry, and for this purpose the Minister may appoint a principal officer of Customs, any officer of the Dominion Government, or any person, and on the conclusion of such enquiry, such person shall send to the Minister a report containing a full statement of the case, with his opinion. Then the Minister may appoint any officer of the Government, a judge of the Superior Court of Quebec, a county court judge, a local judge in Admiralty, or a stipendiary magistrate, to be a commissioner, to hold a formal enquiry, and such commissioner shall, for such purpose, be a court. The Minister may also at any time appoint one, or more, assessors, of nautical, engineering, or other special skill or knowledge, to assist such court, the appointments shall be in force for three years, the assessors shall be eligible for reappointment, and the appointments may be cancelled by the Minister at any time. A court holding a formal investigation into a shipping casualty shall have one, or more, assessors, to be selected for that purpose by the Minister, and where such investigation appears likely to involve any question as to the cancelling or suspension of the certificate of a master, mate, pilot, or engineer, there must not be less than two assessors having experience in the merchant service, and any such master, mate, pilot, or engineer, shall be furnished with a copy of the report of the case on which the formal investigation has been ordered, and every formal investigation shall be conducted in such a manner that if a charge

is made against any person, he shall have an opportunity of making a defence, and a certificate shall not be cancelled or suspended unless a copy of the report upon which the formal investigation has been ordered, has been furnished to the holder of the certificate, and he has had an opportunity of making a defence.

From the foregoing, it appears that the appointment of a wreck commissioner can only be made from certain named classes, that nautical assessors may be appointed by the Minister of Marine, and such appointments are good for three years unless cancelled. Any number of nautical assessors may be appointed, and the selection of nautical assessors for the purposes of any formal investigation must be made by the Minister. As Mr. Justice Morrison pointed out, a practice has grown up, whereby local master mariners have been selected, apparently by the wreck commissioners, for one enquiry only, and also, apparently, without formal appointment by the Minister, and without his cognizance.

In the Canadian Exporter's case, the wreck commissioner notified the master of the hearing and sent him a series of questions. The master, who, with counsel, was present at the hearing, and gave evidence, claimed to be unaware that the formal investigation would be likely to involve any question as to the cancelling or suspension of his certificate, and that he had no opportunity to make any defence.

Howell Forwarding Co. Ltd. has been incorporated under the Ontario Companies Act with \$40,000 authorized capital, and office at Toronto, to carry on a general forwarding and transportation business by land and water, and to own and operate vehicles and ships. The provisional directors are: T. H. Barton, C. B. Henderson and L. C. Boles.

Great Lakes Levels.—The U.S. Lake Survey reports the stages of the Great Lakes in feet above mean sea level for October as follows:—Superior, 602.53; Michigan and Huron, 579.86; St. Clair, 574.65; Erie, 571.79; Ontario, 245.11. Compared with the average October levels for the past 10 years, Superior was 0.16 ft. below; Michigan and Huron, 0.65 ft. below; Erie 0.38 ft. below; Ontario, 0.71 ft. below.

Ships Registered in Canada During August, 1921.

In compiling the following lists of ships registered, steamboats and motorboats, operated by engines of less than 10 n.h.p., are eliminated, as also are sailing ships of less than 100 tons register.

Canadian Government Merchant Marine Ltd., Shipbuilding, Operation, Etc.

Deliveries of Steamships.—In addition to the steel cargo steamships mentioned in Canadian Railway and Marine World previously, the following have been delivered to Canadian Government Merchant Marine for operation.

Oct. 22, s.s. Canadian Cruiser, Marine Department contract 38, builder's yard no. 3, approximately 10,500 d.w. tons., Halifax Shipyards Ltd., Halifax, N.S.

Oct. 27, s.s. Canadian Challenger, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons., Davie Shipbuilding & Repairing Co., Lauzon, Que.

Nov. 15, s.s. Canadian Britisher, Marine Department contract 43, builder's yard no. 2, approximately 8,390 d.w. tons. This ship, and the Canadian Scottish, of the same tonnage, were under construction by the Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C., when it became bankrupt, and they were finished at Prince Rupert, cost plus basis, by Wallace Shipbuilding & Drydock Co., North Vancouver, B.C.

Officers of Ships.—The following officers have been appointed to the various ships, in addition to those mentioned in previous issues:—Canadian Adventurer, Capt. J. E. Mann, vice Capt. A. J. Gilbert, transferred to Canadian Navigator; chief engineer, W. McNicol; Canadian Aviator, chief engineer, E. Sutherland; Canadian Britisher, Capt. W. Larmour; chief officer, Capt. R. P. Roberts, formerly master Canadian Engineer; Canadian Challenger, chief engineer, W. Harrison; Canadian Contractor, chief engineer, F. Evans; Canadian Engineer, Capt. A. Bouvier, vice Capt. R. P. Roberts, transferred to Canadian Britisher, as chief officer; Canadian Freighter, Capt. C. R. Bissett, transferred from Canadian Importer; Canadian Gunner, Capt. G. W. McIlroy, transferred from Canadian Trader, vice Capt. J. B. Millnes; Canadian Harvester, Capt. E. E. Manning, transferred from Canadian Sower; Canadian Importer, Capt. W. G. McConnechy, transferred from Canadian Navigator, vice Capt. C. R. Bissett, transferred to Canadian Freighter; Canadian Mariner, Capt. G. B. Leonard, transferred from Canadian Squatter; Canadian Navigator, Capt. A. J. Gilbert, transferred from Canadian Adventurer, vice Capt. W. G. McConnechy, transferred to Canadian Importer; chief engineer, F. W. Cunningham; Canadian Otter, chief engineer, C. Robertson; Canadian Pathfinder, chief engineer, R. G. R. Fairweather; Canadian Rancher, Capt. D. H. MacLean, vice Capt. D. M. Dickson, on leave; Canadian Ranger, chief engineer, P. C. Bennett; Canadian Sailor, Capt. D. P. McCarthy, vice Capt. W. E. Baker, transferred to Canadian Warrior; Canadian Sapper, chief engineer, F. Stanley; Canadian Scottish, Capt. N. P. Hocking; Canadian Seigneur, chief engineer, J. Borland; Canadian Signaller, Capt. R. A. Goudey, vice Capt. F. W. Boulton, transferred to Canadian Squatter; Canadian Sower, Capt. O. Peterson, vice Capt. E. E. Manning, transferred to Canadian Harvester; Canadian Squatter, Capt. F. W. Boulton, transferred from Canadian Signaller, vice Capt. G. B. Leonard, transferred to Canadian Mariner; Canadian Trader, Capt. W. H. Anderson, vice Capt. G. W. McIlroy, transferred to Canadian Gunner; Canadian Trapper, Capt. W. H. Millar, transferred from Canadian Volunteer, vice Capt. G.

W. Larmour, transferred to Canadian Britisher; Canadian Trooper, chief engineer, A. Cunningham; Canadian Volunteer, Capt. W. B. Armit, vice Capt. W. H. Millar, transferred to Canadian Trapper; Canadian Warrior, Capt. W. E. Baker, transferred from Canadian Sailor.

S.s. Canadian Exporter.—The overhauling of this ship, after her disaster on the Pacific Ocean, was completed by B.C. Marine Engineers and Shipbuilders Ltd., at Vancouver during November. The damage was found to be slight, the main work consisting of general cleaning up, and overhauling the interior, which had become more or less damaged by oil and the action of the sea and was confined almost solely to the engine room and the engines. On completion she was sent to Victoria to take on her original cargo for Australian ports.

S.s. Canadian Importer.—A Vancouver press dispatch of Nov. 24 said that Capt. J. D. McPherson, Dominion Wreck Commissioner for British Columbia, and nautical assessors, were holding an enquiry into the cause of the accident to the Canadian Government Merchant Marine s.s. Canadian Importer while en route from Vancouver to Australia, which caused her to drift in a helpless condition 600 miles off the Oregon coast for two weeks. A recent investigation on behalf of the underwriters is said to have shown the cause of the accident to have been a broken scudger pipe.

S.s. Canadian Recruit.—The work of salvaging this ship, which was sunk in collision with the Dominion Coal Co.'s s.s. Maskinonge, near The Pillars, in the St. Lawrence River, Aug. 18, was abandoned by the contractors, Nov. 16, the crew and outfit, consisting of two cofferdams, two large air tanks, derricks, barges, etc., all being returned to Sorel. Gales and bad weather generally interfered with the work. The contract was let to Lachance Ltd., Quebec, and two attempts were made to float her without success. It is stated that the pumps were not sufficiently powerful, but new pumps were installed and a rearrangement of the work was made, but the severe weather intervening prevented what was expected to be a successful operation.

Salvage by s.s. Canadian Trooper.—The Norwegian s.s. Otta was libelled at Halifax, N.S., at the end of October, by Canadian Government Merchant Marine, for \$50,000, and costs, for salvage. The surety to release the ship was provided by the National Surety Co., New York. The Canadian Trooper picked up the Otta, in distress, about 500 miles from St. John's, Nfld., Oct. 8, and towed her to St. John's. By arrangement, the case is to be dealt with by the Admiralty Court at Montreal.

The s.s. Canadian Volunteer. bound from Montreal to New York and Philadelphia, grounded near Point Tupper, N.S., Nov. 6, during a blizzard. She refloated under her own power, after about three hours, without apparent damage.

St. John, N.B., Sailings.—Liverpool service—Canadian Explorer, Dec. 14; Canadian Leader, Dec. 28.

London service—Canadian Raider, Dec. 7; Canadian Trapper, Dec. 21; Canadian Rancher, Jan. 4.

Glasgow service—Canadian Aviator, Dec. 17; Canadian Otter, Jan. 7.

Cardiff and Swansea service—Canadian Navigator, Dec. 13; Canadian Squatter, Jan. 3.

Halifax, N.S., Sailings.—

Australia and New Zealand service—Canadian Spinner, Dec. 28.

Liquor Cargoes for West Indies and Mexico.—Montreal press dispatch, Nov. 18.—"Hon. C. C. Balfour states that the Government will place two boats of the Canadian Government Merchant Marine between Canada and the West Indies and Mexico, which will carry liquor cargoes, at rates which will compete with lines from New York. This is the sequel to the embargo on liquor going in bond through the United States." We are advised by Canadian Government Merchant Marine management that it knows nothing about this reported statement, that it is at present operating steamships from Montreal to Barbados, Trinidad, Demerara, Bahamas, Jamaica, and British Honduras, and when cargo offers, to some of the Windward Islands, but that it is not putting on any new West Indian service.

Rumoured Purchase of German Steamships.—A Montreal paper said recently that it had been stated unofficially in local circles that the Canadian Government Merchant Marine had decided to buy four ex-German passenger steamships, and run them between Canada and the British West Indies. Enquiries at C.G.M.M. headquarters in Toronto has elicited the statement that there was no foundation for the rumor.

J. Coughlan & Sons, Vancouver, B.C. In the report of the launching of the steel cargo steamship Canadian Freighter, Marine Department contract no. 63, builder's yard no. 21, 8,390 d.w. tons, for Canadian Government Merchant Marine, on Oct. 12, in our last issue, it was stated that the christening was performed by Mrs. C. Wallace, wife of the President, Wallace Shipbuilding & Drydock Co., North Vancouver. This was an error, the sponsor being Mrs. W. A. Wallace, wife of the local representative of the British Corporation for Survey of Shipping, who is also acting as surveyor for the Marine Department.

Davie Shipbuilding & Repairing Co., Lauzon, Que. delivered the steel cargo steamship Canadian Challenger, Marine Department contract 60, builder's yard no. 476, approximately 8,390 d.w. tons, to the Marine Department, Oct. 27. She was transferred to Canadian Government Merchant Marine for operation.

Prince Rupert Drydock & Engineering Co., Prince Rupert, B.C.—The steel cargo s.s. Canadian Britischer, Marine Department contract 43, builder's yard no. 2, approximately 8,390 d.w. tons, one of the two ships which this company was building when it became bankrupt, and for the completion of which a contract was given Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., cost plus basis, was delivered to the Marine Department at Prince Rupert Nov. 15, and transferred to Canadian Government Merchant Marine for operation. She proceeded to Vancouver, to load a general cargo for New Zealand and Australia, and we were advised, Nov. 16, that she would sail from Vancouver about Nov. 30.

Wallace Shipbuilding & Drydock Co., North Vancouver, B.C. See Prince Rupert Drydock & Engineering Co.

Tidal Research Work in Eastern Canada.

Has the reader ever had occasion to refer to a tide table? Did it ever occur to him how this advance information is compiled? The general public is unacquainted with the method of obtaining information concerning tides. The system of reducing the tidal observations is complicated and technical. The usefulness of the survey can, therefore, best be judged from the published results as shown in the annual tide tables issued by the Naval Service Department, which give the time of the rise and fall of the tide, or the turn of currents, along the Canadian coasts, for periods of one year in advance; i.e., the time of the tide tables issued in the autumn of 1921. The tide tables also give, for various regions, the height of the tide and the depth over certain areas at high and low water. The information is valuable to shipping interests, as they are enabled to know the depth of water over bars and shoals at the entrances of our harbors at any stated period. The information compiled by this Survey is also useful with regard to them, and which is used by land surveys as the basis of their levelling operations.

The record of tides is obtained by the use of an ingenious instrument actuated by clockwork. This instrument gives a continuous curve, which shows the height of the tide at every moment throughout the day and night, and thus records more accurate information than could be obtained by three men set to observe the tide at four-hour shifts during the 24 hours of each day. These instruments, to give correct results, must be carefully installed and must also be kept accurately set.

The tidal records compiled by the Naval Service Department's Naval Survey Branch have reached a high standard of perfection, and Canada is well in the lead in recognizing the importance of tidal information, not only for navigation purposes, but also as a basis for carrying out levelling operations and survey work on land.

Extensive tidal research work was carried on by the Tidal Survey Branch during last summer. This work was performed in order to obtain additional tidal data over that compiled in previous years for our harbors and various other areas for which tidal information is required. Observations of the tide were made at Campbellton and Dalhousie at the head of Chaleurs Bay and other harbors in

eastern New Brunswick, where the tide is of special importance, because of bars at their entrances. At these harbors, considerable dredging has been done, or is in prospect. Tidal data are essential in relation to low water levels, and the amount of rise of tide, where the depth of water available for navigation is limited. The tidal data will facilitate the determination of what amount of dredging is necessary.

Three new tidal stations were put in operation at the entrance to the St. Lawrence, viz., at Gaspe, Fox River and Seven Islands. Tidal data were also obtained for the east coast of Hudson Bay and for James Bay. In addition to the special work undertaken in the six permanent tide stations on the east coast have been continued and from the reduction of the records obtained will be compiled tide tables for future years.

C.P.R. Atlantic and Pacific Steamships.

In order to clear up some misunderstandings relating to the additional steamships of the Empress class, which the C.P.R. is putting into service under Canadian Pacific Steamships Ltd., Sir Thomas Fisher, General Manager of the latter company, wrote recently, as follows:—"In May, 1921, the C.P.R. Co. purchased the two German steamships Kaiserin Auguste Victoria, 24,581 tons, and Prinz Friedrich Wilhelm, 17,099 tons gross. These ships were re-named Empress of Scotland and Empress of China respectively, the company's intention being to employ the former on its Atlantic service and the latter on the Pacific. On the completion of the company's new s.s. Empress of Canada, now building at Fairfield, this will give the company a fortnightly first class service across the Pacific and practically a weekly first class service across the Atlantic throughout the St. Lawrence season. Subsequently an opportunity offered to purchase the German steamship Tirpitz. This steamship is fitted with Föttinger transformers, and represents the last word in German ship construction as applied to a vessel intended for service in tropical waters. The Tirpitz is in the hands of her builders, being converted for burning oil fuel, and is expected to be in service early in April next; her new name has not yet been selected. As, under these arrangements, the Empress of China is no longer required for service on the Pacific, her name has been changed from Empress of China to Empress of India. At the present moment this ship is running under charter to the

Cunard Line, temporarily replacing the Mauretania, damaged by fire at Southampton recently."

The s.s. Empress of China, formerly the German s.s. Prinz Friedrich Wilhelm, has been placed on the Canadian register, with her home port at Vancouver, B.C. She was built at Geestemünde, Germany, in 1908, and is screw driven, by engines of 1,416 h.p. Her dimensions are,—length 589.9 ft., breadth 68.3 ft., depth 38.6 ft.; tonnage, 17,099 gross, 9,849 net. She is equipped with wireless.

Panama Canal Operating Results.

The report for the year ended June 30, shows that for the fourth consecutive year, the canal earned an excess of revenue over operation and maintenance, the excess for the past year being sufficient to wipe out the last of the deficits resulting from the slides in the Gaillard Cut in the earlier years of operation. For the last fiscal year, the surplus over operation and maintenance was \$2,711,918.56, and for the entire period of operation, approximately \$420,000, less approximately \$60,967.60 due to steamship operators as refunds. The expenses for the year, including civil government and sanitation, were \$9,328,500.14, compared with \$6,548,272.43 for the previous year. There was an increase of \$2,780,027.71 in the actual cost of operation and maintenance, resulting from a number of causes culminating during the year. Wages reached their highest point and all material used was purchased at the top of the market. Considerable necessary repair work was done on equipment, which had been postponed on account of congestion, and the reduction in forces, and the reorganization necessary on account of the reduction in commercial work, due to a general depression, could not be brought about simultaneously with the reduction of the work. The revenue exceeded that of the previous year by \$3,104,245.63, due principally to an increase of traffic, and also to an increase in profits on business operations, such as the sale of fuel and supplies. The revenue consisted of: tolls on ships passing through the canal, \$11,261,919.31; licenses and taxes, cost fees and fines, \$188,986.19; interest on balances in banks, \$25,000; profits on business operations, \$564,211.20; total, \$12,040,116.70. The expenses for operation and maintenance do not, with minor exceptions, include any allowance for depreciation of plant and equipment, nor interest charges on capital investment.

The cost of the canal to June 30, 1921, was \$368,432,271.95, including docks, coaling plants, shops, piers, barges, etc.

Dominion Marine Association's Activities.

The Dominion Marine Association's executive committee met in Montreal recently and dealt with a number of important matters.

Montreal Port Congestion.—The whole question of the movement of grain through Canadian channels was discussed and various recommendations have been made. In the first place it is recommended that the facilities and equipment in the Montreal harbor have proved inadequate and that elevator space there should be increased by 10,000,000 bush, construction to be commenced as quickly as possible, in order that part of this space be available in 1922; and that, inasmuch as lake fleet ships have been subjected to serious delays in unloading at the port, the facilities for this operation should be increased in readiness for the 1922 season, and that additional berths, at which ocean steamers can load grain cargoes should be provided at the G.T.R. elevator, where grain congestion has occurred due to the elevator being equipped with only two loading berths. The Harbor Commission has already recommended the additional elevator capacity mentioned above, and also additional railway car unloading equipment and the G.T.R. is also seeking additional elevator capacity and ocean loading berths and facilities. In the second place, as conditions this year have been extraordinary and the congestion much increased by reason of foreign grain coming through from the west, and as it does not seem desirable to place a direct embargo upon grain from the U.S., it is recommended by the Association that the shipment of grain from the west through Canadian terminals should be regulated by a system of permits, as such a system would prevent an undue quantity from coming forward. In the third place the Association is desirous of some arrangement which will provide for some definite, certain and uniform control of this movement of grain from the west to the seaboard on the Canadian route, with all the various facilities co-ordinated and working together under some common direction, instead of as at present working quite independently of each other. The Association has, therefore, recommended that the movement of Canadian grain should be brought under some one Government department.

In the fourth place the Association strongly approves of the arrangement initiated in the port of Montreal recently, whereby a committee, representing the various interests, has endeavored to solve the various difficulties, and has greatly facilitated the movement of cargoes and relieved congestion; but the Association believes this committee should be clothed with some authority, instead of being entirely voluntary, and dependent upon the good will of the parties, and it recommends that such a committee should be established permanently.

Windsor-Detroit Bridge.—The Association will not raise objections to the proposed bridge across the Detroit River between Windsor, Ont., and Detroit, Mich., provided no pier is allowed to encroach beyond the wharf or harbor lines on each side and that there is a clear span of 1,800 ft. and a minimum clearance above high water level of 110 ft. at all seasons.

St. Lawrence River Development Proposals. The Association's President and Counsel attended before the International Joint Commission at Ottawa on Nov. 14 to consider final statements from all parties with reference to the plans of the engineers as filed. The Association maintains its position, already defined, in favor of the development which will properly recognize navigation as the prime interest, while at the same time satisfying the demand for power, and will effectually stop the granting of independent and uncontrolled concessions on the river. The initial development at Morrisburg, by a lock and dam, as the first step in a larger scheme would not meet with objection from the Association.

Nautical Assessors.—The Association has submitted to the Dominion Wreck Commissioner a list of names of masters experienced in lake and upper river traffic and capable of acting as assessors in wreck investigations on waters above Montreal.

Shipping Act.—The Association's President and Counsel have taken up at Ottawa the pending questions with reference to amendment to the Canada Shipping Act in respect of: definition of inland waters; compulsory payment of pilotage dues; relief from sick mariners' dues, or at least relief for U.S. ships entering Quebec Province, so as to earn relief from U.S. tonnage tax for ships from that province entering U.S. ports; and reinstatement of provisions as to inspection fees procured by the Association in 1903 and repealed at the Dominion Parliament's last session.

Grain Shovelling and Elevator Charges. The Association is continuing its work in connection with charges made for shovelling and elevation at the various eastern terminals, including Georgian Bay ports, Port Colborne and Montreal and instructions have been given for further proceedings and correspondence.

Shipowners' Liability.—Consideration was given to the movement for amendment of the Harter Act. in the U.S. to cancel some of the exemptions from liability now enjoyed by shipowners, in connection with the water carriage of goods, and in this connection attention is called to the Imperial Shipping Committee's report on the limitation of shipowner's liability by clauses in bills of lading, made after evidence from shippers, carriers and underwriters, the recommendations in paragraphs 31 and 32 of that report being as follows:—

"31. As the result of the considerations outlined above under the three several heads, we have come unanimously to the following conclusion:—That there should be uniform legislation throughout the Empire, on the lines of the existing acts dealing with shipowners' liability, but based more precisely on the Canadian Water Carriage of Goods Act, 1910, subject to certain further provisions in regard to exceptional cases in which goods should be allowed to be carried by shipowners at owner's risk; the precise definition of the physical limits to the shipowner's liability; the fixing of maximum values for packages up to which shipowners should be liable to pay.

"32. We make the Canadian Water Carriage of Goods Act, and not the Harter Act which it closely resembles, the basis of our recommendation, because it embodies the latest experience. It was

passed in 1910, whereas the Australian Sea Carriage of Goods Act was passed in 1904 and the New Zealand Shipping and Seamen Act, certain sections of which deal with shipowners' liability, was passed in 1903. The Harter Act was passed in 1893."

Aids to Navigation.—The Association has dealt with a large number of suggestions with regard to aids to navigation and its President has been present at all the meetings of the Lighthouse Board as an ex officio member. Permanent improvements of any substantial cost have, however, been found impossible under present financial conditions and work has been confined largely to alterations and matters of minor character.

Welland Canal Lock Gate Accident.

The s.s. Robert R. Rhodes, owned by R. E. Lawlor, Hawkesbury, Ont., and operated by the Great Hall Coal Co. of Canada, while upon and light, struck the outer gates of lock 3, Welland Canal, Oct. 24, and carried out both gates. The rear slope of the heel path bank, at the head of lock 2, was washed out somewhat by the water released from the reach above lock 3. A wooden derrick scow, owned by the Railways and Canals Department, which was lying below lock 3, was floated up on some piling, and when the water receded, the scow was left in a sunken condition, with a hole in her hull. The 10 in. water pipe of the Port Dalhousie Waterworks Commission, which crosses the canal at the upper end of lock 3, was washed out, completely interrupting Port Dalhousie's water supply. The Interwaterway Line's new steel barge 104, engaged in the Erie barge canal service and operated by two semi-Diesel oil engines, downbound with 62,000 bush. of grain from Buffalo to Montreal, was left in the bottom of lock 4, in 5 ft. of water, but suffered no apparent damage. Two spare gates were placed in position at lock 3, and navigation resumed on the same day within 12 hours. The scow was also released, floated and drydocked at old lock 1 for repairs. The s.s. Robert R. Rhodes, which is an old ship, suffered considerable damage, and it is said was abandoned to the underwriter. The estimated cost of repairs to government property, and the water main, is \$10,000.

New Marine Flags for Germany and Austria.—The Marine Department has issued descriptions of the new German and Austrian marine flags as follows:—German,—a rectangular flag, divided horizontally into three equal stripes, black, white and red; in the black stripe, next to the staff, are inserted the national colors, black, red and yellow, divided from the black stripe by an outer insertion of white; the length of the black stripe is equal to the depth of the black stripe. Merchant ships commanded by retired naval officers used the merchant flag, superimposed with an iron cross. According to existing regulations, it is permissible for German merchant ships to fly the old, or the new, flag at will, up to Jan. 1, 1922. Austrian,—an oblong flag, divided horizontally into three equal stripes, red, white and red; the relation of the breadth to the length, is as two to three.

Icebreaking Steamship for St. Lawrence River.

When Prime Minister Meighen was in Montreal Nov. 4, a deputation from the Canadian Workers Federation of Returned Soldiers and Sailors called on him and the Minister of Marine, Hon. C. C. Ballantyne, and asked if it would be possible to do anything for the shipwrights who have for some time been engaged at the Canadian Vickers yard at Maisonneuve, mostly men who had served their time as shipwrights in the Old Country, and also served during the war either in the army or navy. The men were anxious to know if anything was being done in the matter of letting contracts for the construction of the new Government icebreaker which was authorized during the last parliamentary session. The men's representative said that they resented in the strongest possible way the attacks made upon the Government in respect to the shipbuilding policy which was conceived and carried out by Mr. Ballantyne. That programme had helped at a difficult period to furnish employment to men who most deserved help, those who had returned from overseas service. So far from blaming the Government, these men felt that they would like to see the programme of the ships duplicated. In any case, they wished to assure the Premier of their appreciation of the great work carried out by Mr. Ballantyne, and they wished as citizens to express disapproval of the conspiracy among certain individuals to create among the public evident misrepresentations as to the real object of the construction of the merchant marine.

Mr. Ballantyne, who replied for the Premier, said he sympathized with the men in the present unemployment situation. The Government was glad to have this expression of appreciation of its shipbuilding programme and to learn that it had been of material assistance to the workers, as well as to the country at large. Only the previous week he had instructed the Deputy Minister to call for tenders for an icebreaking steamship, and while he was not prepared to say that the Government would let the contract this autumn, he was going to Ottawa the following week, and if the Government could see its way clear to let the contract shortly it would be done. He regretted that it was impossible to offer more encouragement than that; but he urged "Trust the Government."

Shortly afterwards the Marine Department issued an advertisement inviting tenders up to Nov. 15, which date was extended subsequently to Nov. 21, for furnishing materials and labor of all kinds, for the construction, equipment and delivery of a steel twin screw icebreaking steamship for service in the St. Lawrence River. She is to be built largely on the lines of the icebreaking steamship J. D. Hazen, which was built by Canadian Vickers Ltd. for the Department in 1914, and transferred to the Russian Government early in the war, at the request of the British Government, for icebreaking service in the White Sea. The principal dimensions are,—length overall 292 ft.; length b.p. 275 ft.; breadth moulded at l.w.l., 57 ft.; depth moulded, 32 ft.; draft, mean, 19½ ft.; i.h.p., 8,000. She is to be classed 100 A1 at Lloyd's.

The plans and specifications provide that the stem shall be a massive steel casting, raked aft, and the stern of the cruiser type, which will allow of easy

propulsion when going astern among ice. There will be seven main transverse watertight bulkheads, extending to the upper deck; the side bunker walls will also be watertight to the upper deck, and an inner skin will be provided between the fore peak and forward bunker, the bulkheads thus forming, in conjunction with the double bottom, which will extend the full length of the ship, a double skin extending from the engine and boiler room bulkheads right forward. Access from below to these watertight compartments will be provided by watertight doors. Large trimming tanks will be placed forward and aft, connected with special pumping arrangements, so that the ship may be trimmed quickly. The framing will be composed of heavy channels spaced 15 in. apart at the bow, the spacing being increased midships and aft, and intermediate frames introduced in the way of the ice belt for a certain distance about midships. These ordinary frames will be strengthened by heavy web frames and side stringers, placed so as to resist as efficiently as possible the heavy stress due to ice pressure. The plating forward will be 1½ in. thick, and the ice belt, over 1 in. thick, and 15 ft. deep, will run right round the ship; all ice plating will be worked flush on the outside.

Accommodation will be provided on the main deck for the engineers, stewards, etc., the crew and petty officers being located forward on the same deck. On the upper deck, at the forward end of the casing, will be the office, quarters and mess room. The two galleys will be on this deck in the casing, and will communicate with all messing quarters by dumb-waiters. In the forecabin will be two houses for cold storage, with cook's day stores alongside, and on the forecabin deck will be the official accommodation, consisting of two official cabins, pantry, lavatory and combined dining saloon and chart room. The wireless cabin and operator's room will be on the boat deck aft, and the captain's cabin and wheel house will be on the navigating bridge. Complete hot and cold fresh water, sanitary and steam heating systems will be fitted throughout, and the ship will be electrically lighted and fitted with a searchlight of 25,000 c.p., situated on the fore side of the fore mast. Current will be supplied by two direct current compound dynamos, direct driven by high speed enclosed compound engines. The life saving appliances will be in accordance with the Canadian Steamboat Inspection Act's latest rules and will include four lifeboats and one cutter. The deck machinery will consist of a powerful steam steering gear aft, controlled from the bridge by telemotor, and fitted with hand gear at the engines, one windlass, two capstans and boat and coal hoists.

The main propelling machinery will be of the twin screw, triple expansion, surface condensing type, capable of developing 8,000 i.h.p., in ordinary working. Independent air feed and bilge pumps of extra large capacity will be provided, and the engine room auxiliary equipment otherwise will be very complete. The six boilers will be of the marine return tube type, two double ended and four single ended, built for a working pressure of 180 lb. a sq. in.; and arranged to work under forced draft.

All boilers will supply steam to the main engines, and connection for the auxiliary steam mains will also be led from three of the single ended boilers. Ash ejectors and steam ash hoists will be provided in the various stockholds. The piping, valves, mountings, etc., will be of the highest class materials.

The Marine Department estimates for 1920-21 included \$2,000,000 for building an icebreaking steamship, and tenders were invited to Aug. 13, 1920, but the prices quoted at that time were considered to be too high, the lowest received being reported to have approximated \$2,500,000. The estimates for the year ending March 31, 1922, passed at the Dominion Parliament's last session, contain a revote of the \$2,000,000.

A Montreal press dispatch of Nov. 25 said that the Minister of Marine had announced that the contract for building the icebreaking steamship had been given to Canadian Vickers Ltd., the price being \$1,580,000, and that by delaying the order 18 months, \$700,000 was saved.

Canadian Notices to Mariners.

The Marine Department has issued the following:

70. Oct. 14.—187. Nova Scotia, south coast, Halifax harbor entrance, Sambro outer bank, lightship to be replaced. 188. Prince Edward Island, south coast, Bedouque harbor, Summerside, change in character of buoy. 189. Newfoundland, south coast, Fortune Bay, English harbor wharf, light established.

71. Oct. 15.—190. Quebec, Montreal, change in position of radiotelegraph station. 191. Newfoundland, east coast, Bonavista Bay, Puffin Island, light established. 192. Newfoundland, south coast, La Poile Bay, Little Bay, light established.

72. Oct. 16.—193. Nova Scotia, Bay of Fundy, Lurcher shoal, lightship replaced on her station. 194. New Brunswick, east coast, North Tracadie gully, lighting of channel.

73. Oct. 18.—195. British Columbia, Vancouver Island, west coast, entrance to Quatsino Sound, anchorage. 196. British Columbia, entrance to Vancouver harbor, error in notice, re seaplane station in English Bay.

74. Oct. 21.—197. Ontario, Lake Huron, North Channel, Boyd Island, fog horn established. 198. United States, St. Mary River, West Neebish channel, west side upper light 25 established temporarily. 199. United States, St. Mary River, St. Mary Falls canal approach, Bayfield rock range, dredging, buoy discontinued.

75. Oct. 28.—200. Ontario, Lake Ontario, Kingston harbor, Barriefield common range lights, intensity to be increased. 201. Ontario, Detroit River, wreck south of Woodtick Island, temporary buoy established. 202. United States, Detroit River, Lake Huron, Lake Superior and connecting waters, aids to navigation to be discontinued for winter of 1921-22. 203. United States, Lake St. Clair, St. Clair Flats canal, buoy discontinued.

76. Nov. 9.—204. British Columbia, Vancouver Island, West Coast, Quatsino Sound, Ildstad Island, light established. 205. British Columbia, Vancouver Island, West Coast, Quatsino Sound, southeast arm, Dog Island, light established. 206. Alaska, Lynn Canal, Vanderbilt Reef, light established.

Mainly About Marine People.

H. Bjorklund, of the White Star-Dominion Line's staff, Montreal, is reported to have been appointed travelling passenger representative, White Star Line, Chicago, Ill., and to have left Montreal for Chicago, Nov. 19. He has been with the company at Montreal since 1906.

H. C. Blackiston, a director and General Manager, Furness, Withy & Co., New York, was presented with a silver platter, by the British Ambassador, Sir Auckland Geddes, recently, on behalf of the British Government, as an appreciation of valuable services rendered by him during the war, and as a testimonial to the work accomplished by the company's staff throughout eastern Canada, Newfoundland and along the U.S. seaboard.

T. Bourassa, Harbor Master, Montreal, was presented with a cane by the harbor employes, Nov. 1, on his 70th birthday.

W. E. Burke, Director of Transportation, Canada Steamship Lines, Montreal, was in England during November on business.

James Cant, Superintendent, Wallace Shipbuilding & Drydock Co., North Vancouver, B.C., died in the General Hospital there, Oct. 24, aged 54. He was born in Dundee, Scotland, and was connected with shipbuilding all his life. He came to Canada in 1912, as Superintendent, Wallace Shipbuilding & Drydock Co., but returned to Great Britain, and also made break of war as a munition worker and came back to Canada in 1917 to resume his duties.

Capt. J. E. Christie, of the White Star Dominion Line's s.s. Cornishman, which sailed from Montreal, Nov. 4, stated that he would retire from the service on the arrival of his ship in England, after about 47 years of seafaring life. His first service was on a windjammer in 1875, and in 1877 he helped to transport part of the British army from India to the Dardanelles, in the Russian war. His first service on steamships was on the U. S. s.s. Keystone, which was taken over by the Dominion Line in 1896. He assisted in transporting troops to South Africa during the Boer war of 1899 to 1901. His first service on the St. Lawrence route was with the s.s. Canada, of which he was first officer, and he was subsequently master of the s.s. Manxman, which he commanded at the outbreak of the Great War, during which he served on the s.s. Irishman, which acted as a convoy to merchant ships. He holds the South African war medal, and also medal for service during the Great War, and was presented, in 1914, with a silver cup by the British Government for rescuing the crew of the schooner Banshee, for which he also received the Royal Humane Society's silver medal and the Emile Robin award, which was founded in perpetuity by a French merchant for the ship master who effects the most gallant rescue in any one year.

Joseph F. Dolan, formerly General Agent, Passenger Department, Canada Steamship Lines, Boston, Mass., died suddenly, Oct. 23, at Montreal, from heart failure. He was born at Kingston, Ont., in 1867, and entered steamship service in 1893, as City Passenger and Ticket Agent, Richelieu & Ontario Navigation Co., Toronto, and in 1901 was appointed Passenger and Stock Transfer Agent, same company, Montreal. From 1913

to 1914, he was District Passenger Agent, same company, Boston, Mass., and on the taking over of that company by Canada Steamship Lines, was appointed General Agent, Passenger Department there. He retired from the service in May 1916, to enter private business at Montreal, and was presented with a silver tea set by a number of transportation representatives in Boston.

Capt. E. English, harbor master, St. John's, Nfld., and formerly master of the s.s. Ethie, which was wrecked at Cow Head, Nfld., in Dec. 1919, was presented recently with a silver cup by the Newfoundland Government, in recognition of his gallant conduct and able seamanship, which resulted in the saving of the lives of all the passengers and crew.

Sir Frederick Orr-Lewis, Bart., President, Canadian Vickers Ltd., and also of Lewis Bros., Ltd., wholesale hardware, Montreal, died at Villa Valetta, Cannes, France, Nov. 18. He was born at Kingston, Ont., his father being a native of Wales. He was, for many years, in hardware business in Montreal, and was President of the Dominion Wholesale Hardware Merchants Association in 1903. He was Canadian representative of the English firm, Vickers, Son & Maxin, now Vickers Ltd., shipbuilders, and on the formation of Canadian Vickers Ltd., became its President. He was also a director of the Merchants Bank of Canada. He had resided for the greater part of each year at Whitewebbs Park, Enfield, Eng., but was a frequent visitor to Canada.

John J. Phelan, shore superintendent, Furness Withy & Co., Montreal, at one time Assistant to Mechanical Superintendent, Richelieu & Ontario Navigation Co., and later, Purchasing Agent, Canada Steamship Lines, Montreal, died there suddenly, Nov. 6, from acute indigestion.

Stanley Phillips, elder son of William Phillips, European Manager, Canadian National Ry., and Canadian Government Merchant Marine, London, Eng., sailed from England recently for Shanghai, China, via the Suez Canal. He has been engaged for some time on the staff of John Swire & Sons, steamship agents, London, Eng., and has been transferred to their Shanghai agency, where as Butterfield & Swire they act as agents for Blue Funnel Line and also represent Canadian Government Merchant Marine.

W. G. Ross, President, Montreal Harbor Commissioners, has resigned after nine years service, in consequence of being the Government candidate for the representation of St. Antoine, Montreal, in the House of Commons.

Capt. P. Williams, for the last 25 years master of one of the Detroit & Windsor Ferry Co.'s steamships, died at Windsor, Ont., Nov. 7, aged 74.

Longshoremen's Wages at St. John, N.B.—The schedule of wages for longshoremen, etc., at St. John, N.B., for this winter shows considerable decrease from last year. Following are the rates effective Nov. 30, compared with those paid last winter: General cargo handling, day or night, 50c. an hr., against 70c.; grain, day or night, 60c. an hr., against 70c.; day and 80c. night; ship carpenters, 45c. an hr., day, and 62½c. an hr. night, against 60c. an hr. day and 90c. an hr. night; coal handlers, 50c. an hr. day or night, against 80c. day and \$1 night.

Atlantic and Pacific Oceans.

The International Mercantile Marine Co. has announced a reduction of 20% in its third class steamship fares between New York and European ports.

The Newfoundland schooner Nevis, bound from Labrador to Genoa, Italy, with a cargo of fish, is reported a total wreck on the Island of Majorca in the Mediterranean Sea.

Canadian Pacific Steamships Ltd. has announced that its new service between St. John, N.B., Boston, Mass., and Havana, Cuba, will be inaugurated Dec. 5, with the s.s. Sicilian.

Steamships of constituent companies of the International Mercantile Marine Co. will make 22 calls westbound, and 18 calls eastbound, at Halifax, N.S., between Dec. 1 and April 30.

Experimental shipments of Canadian wheat to be made to Japan, about 1,200 tons having been booked. Extensive shipments are probable, as Japan seems to be leaning toward Canadian hard wheat instead of the U.S. soft grain as heretofore.

The Ellerman-Wilson Line is including Vancouver as a port of call in its sailings from the Pacific coast to Havre, Hull, Leith, Hamburg, Antwerp, Rotterdam, etc. The first ship to call at Vancouver was the s.s. City of Naples on Nov. 20. B. W. Greer & Co. are local agents.

The Cairn Line's s.s. Cairngowan, bound from Leith, Scotland, for Montreal, in ballast, ran ashore near Deal, Eng., during a heavy fog, Nov. 17. She was towed off without apparent damage, and taken to Deal, where large quantities of sand were washed aboard by heavy seas were removed.

Recent ocean charters by the Vancouver Merchants' Exchange, for shipments of lumber and grain from Pacific coast ports, include 9 British, 7 Japanese, 3 U. S. and 11 Spanish, French, Dutch, Norwegian and Swedish steamships. Lumber will be shipped in 9, mixed grain and lumber in 1, and grain in the balance.

The C.P.R.'s s.s. Empress of Britain has been equipped with a direction finding equipment, which, it is said, will obviate the necessity of asking the direction finding stations on shore for a bearing, which, under certain conditions, causes delay. The equipment is fitted up in a box about 4 ft. square, and does not require the rigging of special aerials.

The s.s. Seistady, sister ship of the s.s. Seistady, which collided with and sank the C.P.R.'s s.s. Empress of Ireland in 1914, was libelled at Montreal, Oct. 28, on a claim of \$2,204, for repairs and materials supplied for grain fittings. Pending a judgment in the action, the ship was released on depositing a sufficient sum to cover the claim and costs.

The Red Star Line announces the inauguration of a regular weekly service between Halifax, N.S., England and the continent in January, with its steamships Finland, Kronland, Lapland and Zealand. The ships will run from Halifax direct to Plymouth, Eng., thence to Cherbourg, France, and Antwerp, Belgium, and on the return journey will make Southampton instead of Plymouth the English port of call.

The s.s. General Turner, owned by Eastern Shipping Co., Toronto, which struck a mine and sank, while bound from the Danube to Rotterdam, July 21, has been removed from the Canadian

register. She was built by the Dominion Shipbuilding & Repair Co., Toronto, in 1919, and was screw driven by engine of 146 h.p. Her dimensions were,—length 251 ft., breadth 43½ ft., depth 21.2 ft.; tonnage, 2,490 gross, 1,519 net..

Canadian Pacific Steamships Ltd. is reported to have announced that on the re-opening of St. Lawrence navigation, in 1922, its Empress steamships will make Southampton their English port instead of Liverpool, as hitherto. It is stated that docking accommodation has been arranged for at Southampton. The company's other passenger steamships, which already run out of Liverpool, will continue to do so, and the three new steamships, now approaching completion for the St. Lawrence route, will also operate from that port. We were officially advised, Nov. 22, that the matter was under consideration, but at that date, nothing definite had been decided.

Following an experiment on the C.P.R. s.s. Minnedosa with the use of moving pictures during a voyage across the Atlantic, the company inaugurated a definite plan on the s.s. Melita for making moving pictures one of the regular features on its transatlantic steamships. About 8,000 ft. of film are carried on the trip, and are shown at various times in the cabin and third class dining rooms. The films are of Canadian manufacture and show among other things agricultural and travel scenes in Canada. They are nonflammable, thus eliminating any possible danger from fire, without which assurance the company would not have considered adopting them. Three performances are given on each trip in each class, each exhibition lasting about an hour.

The Cunard Line's s.s. Andania, 14,000 tons, was launched at Hebburn-on-Tyne, N.S., being the seventh steamship launched for that company since the conclusion of the war. She is for the St. Lawrence route, on which the company has not operated since the war, during which all its steamships operated previously on that route were sunk by enemy ships. The s.s. Andania is 538 ft. long, 65 ft. broad, 43 ft. deep. She will have accommodation for 1,700 cabin and third class passengers, and is the third of six similar ships which the company is having built for this class of service, two of which, Ausonia and Antonia, have been launched, and another three, Alaudia, Aurania and Ascania, are to be built. The accommodation of these ships includes large dining rooms, reading rooms, drawing room, lounge, smoking rooms, and verandah cafe. She will use oil as fuel and thus provide increased space for passenger accommodation. The propelling machinery will consist of the Parson type of double reduction geared turbines, for a speed of 15 knots.

Martime Provinces and Newfoundland.

During a hurricane along the Newfoundland coast, Nov. 4, thirteen sailing ships were wrecked and three lives lost.

The Public Works Department received tenders to Nov. 29, for floating, towing, docking, repairing and painting steel timber scow 157, which was wrecked near Port Hawkesbury, N.S., recently.

The New York & Cayenne Steamship Co., Ltd., it is reported, establish a steamship service between Boston, Mass., Hal-

ifax, N.S., and St. John's, Nfld., with the s.s. Bourneholm. The Boston agent for the line is F. H. Chipman.

The steam trawler Baleine, owned by Leonard Fisheries Ltd., Montreal, which was wrecked recently, has been abandoned by both owners and underwriters. It is said that the company will purchase another trawler in the near future.

The Newfoundland schooner Linda Purdy, 69 tons, became a total loss at Mira Gut, near Sydney, N.S., Oct. 31. She was trying to make North Sydney, but anchored, on account of high wind. The anchors dragged, and she was driven ashore.

The Boston & Yarmouth Steamship Co.'s s.s. Prince Arthur, which went ashore on Bakers reef, near Yarmouth, N.S., Oct. 25, was refloated on the following day, and proceeded toward Boston, but when about 10 miles out, she was found to be taking considerable water, and returned to Yarmouth.

The three masted schooner Jennie V. Merriam, owned in Parrsboro, N.B., outward bound from Hillsboro, N.B., with plaster, was destroyed by fire, Nov. 7, and sank in the Petitcodiac River. She was built at Port Greville, N.S., in 1919, her dimensions being,—length 156.4 ft., breadth 35 ft., depth 12.8 ft.; tonnage, 454 register.

The U.S. schooner Mary Manson Gruener, which went ashore near Port Hastings, N.S., recently, and which was refloated, has been libelled by the owners of the Halifax steam trawler Ynostia, for \$25,000 for salvage services. The ship is valued at \$85,000. She has a full cargo of lumber and laths loaded at Bathurst, N.B., for Philadelphia.

The Wabana Steamship Co., Halifax, N.S., has acquired the s.s. Wabana, owned formerly by the British and Chilean Steamship Co., Liverpool, Eng., and has transferred her to the Canadian register. She was built at Sunderland, Eng., in 1911, and is screw driven, by engines of 480 h.p. Her dimensions are,—length 375 ft., breadth 52 ft., depth 28.3 ft.; tonnage, 4,804 gross, 2,676 net.

The steam tug Lord Beatty, owned by Nacle & Wigmore, St. John, N.B., was destroyed by fire there, Nov. 5. The loss is estimated at \$30,000, with \$15,000 insurance. She was built at Port Hawkesbury, N.S., in 1902, was formerly named Fred. L. M. Paint and was screw driven,

by engine of 24 h.p. Her dimensions were,—length 68 ft., breadth 17.9 ft., depth 8.9 ft.; tonnage, 88 gross, 39 net.

The Lurcher shoal lightship, which has been off her station temporarily for repairs, has been replaced on the shoal in the Bay of Fundy, and Lightship 15, which has been at the Heath Point station, Gulf of St. Lawrence, will be withdrawn Dec. 1, and after overhaul will be placed on the Sambro outer bank station, at Halifax harbor entrance, for the winter. On the reopening of St. Lawrence navigation she will be replaced on the Heath Point station.

The s.s. Weymouth, owned by Bras D'Or Steamboat Co., North Sydney, N.S., is being dismantled at Sydney. It is stated to be the intention to remove the machinery and convert the hull into a barge. She was built at Weymouth Bridge, N.S., in 1890, and was screw driven, by engine of 26 h.p. Her dimensions are,—length 102.7 ft., breadth 19 ft., depth 7.6 ft., tonnage 154 gross, 106 net.

The Bridgetown Steamboat Co.'s s.s. Valinda was reported to have sunk in the Annapolis River, Nov. 12, after striking one of the piers of the bridge near Annapolis, N.S. She was built at Liverpool, N.S., in 1911, and was screw driven, by engine of 19 h.p. Her dimensions were, length 95 ft., breadth 21.5 ft., depth 7.3 ft., tonnage 117 gross, 60 net. She was operated between ports along the Bay of Fundy.

The s.s. Pelican, owned by the Hudson's Bay Co., was offered for sale by auction, at St. John's, Nfld., Nov. 1, the purchaser to undertake that she be either broken up, or used for a bulk only, and that she be not used for seagoing purposes. She was formerly H.M.S. Pelican, and was built at Devonport, Eng., in 1877, with a composite hull of the following dimensions,—length 180 ft., breadth 26.1 ft., depth 16.8 ft.; tonnage, 638 gross, 294 net, and she is screw driven by engine of 120 h.p. We were officially advised, Nov. 18, that she had not been sold.

The s.s. Lady of Gaspe, which was wrecked on Thrup Cap shoal, near the entrance to Halifax harbor, N.S., Aug. 8, broke up during a gale, Nov. 10. She was owned by Nova Scotia Steamships Ltd., Halifax, and was operated on the Halifax-St. John's, Nfld.-Boston route. In

Sault Ste. Marie Canals Traffic.

The following commerce passed through the Sault Ste. Marie Canals during October, 1921:

Articles	Canadian Canal	U.S. Canal	Total
Lumber	6,018	22,717	28,735
Flour	961,470	861,810	1,823,280
Wheat	4,380,165	3,447,621	11,827,286
Grain, other than wheat	2,678,554	67,450,291	9,119,245
Copper	1,242	3,252	4,494

Total Freight	475,385	6,177,010	6,652,395

connection with the loss of the ship, the master's certificate was suspended for 12 months from Aug. 11. The s.s. *Lady of Gaspe* was built at Glasgow, Scotland, in 1877, and has borne the names, *Restigouche* and *Rathlin*. She was screw driven, by engine of 180 h.p., and her dimensions were,—length 229.7 ft., breadth 31 ft., depth 16.1 ft.; tonnage, 1,237 gross, 774 net.

Province of Quebec.

The cause of the explosion and fire at Montreal Harbor Commissioner's grain elevator no. 1 at Montreal in October is given by the Fire Commissioner, after an enquiry, as spontaneous combustion caused by dust in one of the elevator legs. The damage is estimated at \$11,000 to the building and \$2,000 to grain.

The s.s. *John S. Thom*, stated to be owned by Canada Transport Co., ran ashore near Carleton Island, opposite Cape Vincent, N.Y., Nov. 13, while bound to Montreal with coal. She was owned formerly by the Quebec and Louis Ferry Co., and towards the end of 1918, was sold to La Societe Maritime et Commerciale, France, for \$240,000, with the object of using her in transporting troops between England and France. On the signing of the armistice, the purchaser claimed that she was unsafe for navigation, and sued for a return of the purchase money, but was unsuccessful.

Ontario and the Great Lakes.

The s.s. *Aragon*, bound from Chicago to Kingston, with coal, went ashore on Salmon Point about 60 miles west of Kingston, Nov. 17.

The Welland Canal's Superintending Engineer issued a notice at the end of October that no ship would be allowed to enter in or pass through the canal drawing more than 14 ft. of water.

Keystone Transportation Ltd. has not, we are officially advised, bought the U.S. s.s. *Needing*, engaged recently in the U.S. coasting trade, for service between Montreal and Lake Erie ports, a report of which was mentioned in our last issue.

The Great Lakes Transportation Co.'s s.s. *Glennivert* collided with the U.S. barge *Thomas Quayle*, in tow of the s.s. *King*, near Toledo, Nov. 1, sinking the barge, the *Glennivert* being forced aground against the rib lights, by the force of the collision.

The Great Lakes Transportation Co.'s s.s. *Glencairn* ran aground near Point aux Pins, in the St. Mary River, Oct. 31, while downbound. She was released shortly after, practically undamaged.

Trouble was experienced during the early part of November, in the Welland Canal, owing to low water. Several ships were held at both ends, and the s.s. *Senator Derbyshire* grounded, Nov. 9. The chief cause for the delays, which have occurred four times during this year, is given as strong winds, especially on Lake Erie.

The Canadian Towing & Wrecking Co.'s steam tug *Sarnia* was destroyed by fire, at Port Arthur, Nov. 11. The loss is estimated at \$50,000, covered by insurance. She was built at Sarnia, in 1901, and was screw driven, by engine of 26 h.p., her dimensions being,—length 66.8 ft., breadth 21 ft., depth 11 ft.; tonnage, 85 gross, 58 net.

The 3 masted schooner *Scotia*, owned formerly by Kolbe Fish Co., was offered for sale, Nov. 15, under order of the Exchequer Court of Canada, Toronto Admiralty District, as she lay on bottom, in shallow water, in Goderich harbor. Her dimensions are,—length 210.9 ft., breadth 34.5 ft., depth 13.4 ft., capacity under tonnage deck 839 tons, gross 903 tons, net 858 tons.

The U.S. s.s. *W. H. Wolf*, which was wrecked in the Detroit River recently, is sunk about 250 ft. from the Canadian shore, and 2,400 ft. south of the south end of Woodtick Island. She extends out into the channel, and is a menace to ships using the channel east of Woodtick Island. The wreck has been marked by a float with a mast 6 ft. high, and at night a lantern, showing a red light, is hung on the mast.

British Columbia and Pacific Coast.

The name of the s.s. *Santa Cruz*, owned by A. Berquist, Victoria, B.C., has been changed to *Trebla*.

The Alaska Steamship Co. has taken over the agency for the Williams Steamship Co.'s intercoastal service for Puget Sound, Grays Harbor and British Columbia.

The British Yukon Navigation Co. has bought the gasoline ship *Kestrel* from U.S. owners, and has placed her on the Canadian register under the name of *Neecheah*.

The Kingsley Navigation Co., Vancouver, has chartered the s.s. *Chilkoot* from the Union Steamship Co. of British Columbia, to run on the California route, in conjunction with its s.s. *E. D. Kingsley*.

The s.s. *Princess May*, owned formerly by the C.P.R., and operated in its British Columbia Coast Service, and sold to the Di Giorgio Co., New York, in 1917, for its fruit service, was reported ashore at Cuba during November.

The Grand Trunk Pacific Coast Steamship Co.'s s.s. *Prince Albert* was substituted for the s.s. *Prince John* on the Vancouver, Queen Charlotte, Prince Rupert and Stewart service, Nov. 4, and the s.s. *Prince John* was taken out of service until further notice.

The Kingston Navigation Co., operating the steamships *Brookville* and *St. Lawrence* on river and lake routes, has plans for considerable improvements in its service for next season. J. M. Campbell, President, is reported to have announced that the s.s. *St. Lawrence* will be thoroughly overhauled during the winter, to increase her efficiency as a passenger ship.

The Hudson's Bay Co.'s auxiliary powered schooner *Lady Kindersley* arrived at Vancouver, Oct. 24, having completed the round trip to Herschel Island and back within the short season, the first time this has been accomplished. Very rough weather was reported in the north, gales and ice being plentiful, and it was, at one time, feared that the ship would have to winter there.

The Dominion Public Works Department is reported to have awarded the contract for the construction of a light tower, at Carmanah Point, to Hodgson, King & Marble, Vancouver, for \$30,000. Tenders for carrying out this construction were called for last year, but were rejected, as it was considered too late in the season to proceed with the work. The tenders on which the contract has now

been awarded were called for early this year.

The hydroglider, *Tortoise*, owned and run by Norman A. Yarrow, Managing Director, Yarrow's Ltd., Victoria, B.C., which was described and illustrated in Canadian Railway and Marine World for October, was tested on a long distance run toward the end of October, between Esquimalt, Cadboro Bay, Sidney Island, Albert Head, and back to Esquimalt, about 50 miles, and for a considerable portion of the trip was run at her limit of 50 miles an hour. This is the first of long distance run undertaken with the boat and the owner expressed his pleasure at the result, and stated that he would probably run her from Victoria to Vancouver for a trip.

Canal Statistics for October.

The Dominion Bureau of Statistics has issued the following figures for October: **Sault Ste. Marie.**—The total traffic through the Canadian and United States locks was 6,650,811 tons, against 12,991,121 for 1921, a decrease of 6,340,310 tons. The decrease in iron shipments accounted for 5,466,937 tons, the total increased from \$28,435,517 bush. in 1920 to 752,341 in 1921. The increase of 58% in traffic through the Canadian lock was largely due to diversion of traffic from the U.S. locks, on account of an accident to the bascule bridge, which, while not closing the locks, affected the passages somewhat.

Welland Canal.—Grain shipments were considerably heavier than in 1920. The U.S. wheat amounted to 21,597 tons, or 719,900 bush., and U.S. corn amounted to 95,406 tons, or 340,700 bush. Soft coal decreased 95,245 tons for October and 575,877 for the season. The total traffic for October was 386,052 tons, against 336,164 tons for 1920.

St. Lawrence Canal.—The total traffic was 479,033 tons, against 455,369 for 1920. Grain shipments were heavy and show large increases over last year. Corn shipments were 102,043 tons, 96,133 tons of which were U.S. Wheat shipments were 99,689 tons, 21,660 tons being U.S. Pulpwood decreased 25,496 tons, and soft coal decreased 111,270 tons. For the season the total decreases in pulpwood and soft coal were 88,735 and 571,562 tons respectively.

Imperial Oil Tank Steamships.

Imperial Oil Ltd., Toronto, has placed two new oil tank steamships on the Canadian register, and the International Petroleum Co., Toronto, one. Following are the chief details:—

Albertolite, Imperial Oil Ltd., built at Vancouver, Wash., 1921; screw driven, 334 h.p.; length 463.2 ft., breadth 60.2 ft., depth 20.2 ft.; tonnage, 8,461 gross, 5,960 net.

Vancolite, Imperial Oil Ltd., built at Kearney, N.J., 1921, screw driven, 350 h.p.; length 500.3 ft., breadth 68 ft., depth 30.5 ft.; tonnage, 10,831 gross, 7,530 net.

G. Harrison Smith, International Petroleum Co., built at Sparrows Point, Md., 1921; screw driven, 462 h.p.; length 550.6 ft., breadth 72.3 ft., depth 44.1 ft.; tonnage, 15,871 gross, 12,326 net.

All the ships are of the latest type, with the most modern equipment for the work for which they are intended, and are equipped with wireless.

Wreck Commissioners' Enquiries and Judgments.

Enquiries have been held and judgments delivered in connection with the following casualties:—

Loss of s.s. Canadian Exporter.

The enquiry into the cause of the loss of Canadian Government Merchant Marine s.s. Canadian Exporter, which was held at Vancouver, B.C., Aug. 11, by Capt. J. D. Macpherson, Wreck Commissioner for British Columbia, assisted by Commanders F. W. Evans and J. E. Radcliffe, as nautical assessors, was held in Canadian Radio and Marine World for October. As then stated, Capt. Wm. Bradley, and the first mate, Newton Campbell, were both found in default, and their certificates suspended for six months and four months, respectively. Commander Evans dissented, and while agreeing with the necessity for suspending both certificates, he considered that, as regards the master, the suspension was too severe, and felt that three months would have been sufficient. The master applied to the British Columbia Supreme Court to have the suspension quashed, on the ground that he was not told that he was being tried and had been given no opportunity to defend himself. Judgment was given at Vancouver, Oct. 25, quashing the suspension, and restoring his certificate.

Mr. Justice Morrison gave the following reasons for judgment:—There was a formal investigation pursuant to the Canada Shipping Act into the loss of the s.s. Canadian Exporter, which was stranded July 31, directed by the Minister of Marine, who delegated the power of selecting the assessors to the local wreck commission at Victoria. The Commissioner selected his assessors and served Capt. Bradley with notice of the hearing, accompanying which were set out a number of questions for the opinion of the court, which he termed "the court" as follows: 1. What number of compasses had the vessel, were they in good order and sufficient for the safe navigation of the vessel, and when and by whom were they last adjusted? 2. Did the master ascertain the deviation of his compasses by observation from time to time; were the errors correctly ascertained and the corrections to the courses properly applied? 3. Was the vessel supplied with proper and sufficient charts and sailing directions? 4. Was the vessel navigated at too great a rate of speed for the six hours immediately preceding the stranding, having in view the conditions of the weather? 5. Was the lead used at any time during the six hours immediately preceding the stranding? If not, should it have been used? 6. What was the cause of the stranding and loss of the vessel? 7. Was the vessel navigated with proper and seamanlike care? 8. Was the stranding of the Canadian Exporter, and/or, subsequent loss, caused by the wrongful act or default of the master, first, second or third officers, or any one or more of them, and if so, which of them?

The captain appeared with counsel and gave evidence, along with many other witnesses, after which the court handed down their findings, suspending the captain's certificate for six months. He now applies for a rule absolute to quash this finding. His counsel, Donald McTaggart, submits at the outset that the Minister may not delegate to the Commissioner the power to select the assessors, and relies upon sec. 783 of the Shipping Act,

which provides for the appointment by the Minister of assessors to hold office for three years, and also upon sec. 784, as amended in 1908, which enacts that the court shall hold the investigation with two or more assessors to be selected for that purpose by the Minister. As to this submission I am of opinion that the above sections embody a special statutory power and must be strictly construed. It is a power with which the responsible head of a great department of state is invested. To delegate such a power to a remote subordinate is not in consonance with the intention of Parliament. The Minister is thus clothed by Parliament with the power to select.

Express power to delegate is withheld. It may be that a practice, now more or less inveterate, has grown up to the contrary, but it is only after all a practice, doubtless a convenient one, but yet not sanctioned by the statute, which, if persisted in, may result in serious consequences, amounting in some cases to a miscarriage of justice. In this case principle is more important than practice. In re Bepari Lal, 13 B.C. Rep. 415. Burrells v. Queen, 20 S.C. Can. 428. Richards v. Wood, 12 B.C. Rep. 182. Abraham v. Queen, 24 Lower Can. Jurist 332; on appeal, 6 S.C. Can. 10.

It is further submitted that there was no opportunity given Capt. Bradley to make an effective defence. Sec. 801, subsec. 3, as amended in 1908, enacts that "A certificate shall not be cancelled unless the holder has had an opportunity of making a defence," and by sec. 787, "Every formal investigation shall be conducted in such manner that, if a charge is made against any person, such person shall have an opportunity of making a defence." The effect of these sections is that, at some time during the proceedings, definite charges shall be formulated, and that, after notice of them, an opportunity to meet them shall be afforded. In this case certain general questions were prepared, but they cannot be said to be definite charges, and are not of such a character as to enable Capt. Bradley to controvert the matters in respect of which he was afterwards found to be in default. See The Chelston 1920, p. 400, per the President: "There must be a hearing and there must be a charge preferred before a penalty can be inflicted."

I give effect to both these submissions and quash the decision of the court of enquiry and direct that the certificate of Capt. Bradley be restored free from any suspension.

Canadian Recruit-Maskinonge Collision.

Held at Montreal, Aug. 25, and at Quebec, Oct. 21, before Capt. L. A. Demers, Dominion Wreck Commission, and Capts. C. Lapierre and G. M. Morsburgh, as nautical assessors, in the first part of the hearing, and Capts. C. Lapierre and F. Nash, as nautical assessors, in the second part of the hearing, into the collision, and subsequent sinking, of Canadian Government Merchant Marine s.s. Canadian Recruit, between the Traverse and the Pillars, bell buoy 65, St. Lawrence River, during fog, Aug. 18, while the Canadian Recruit was at anchor. The evidence showed that when the Canadian Recruit was anchored, proper lights were at once placed in position and the bell rung every minute, as required by the Board of Trade regula-

tions and International Rules of the Road. While there are no regulations prohibiting the anchoring of ships in that vicinity, and the exact distance of bearing from the bell buoy not having been determined, the court deemed it always more prudent and thoughtful to anchor at some distance from aids to navigation, but no blame could be attached to the master of the Canadian Recruit for anchoring where he thought he was. The court also expressed the opinion that had a cast of the lead been taken before anchoring, it would have helped to clear the uncertainty as to the ship's position at the time of the collision. This observation did not, however, imply blame against the master.

The court held that when the fog came on, the master of the Maskinonge should have reduced his speed, and sounded the usual fog signal, called for by article 15, which no doubt would have induced the Canadian Recruit to sound its bell violently and more frequently than is called for by article 15. The full speed ahead, and hard to port helm, were done in the agony of collision, which was caused about by the immediate contact of the Maskinonge. The master of the Maskinonge told a straightforward story and impressed the court favorably. He heard the bell, and saw a small light, and assumed that it was the bell buoy and the light of a small ship.

The pilot's evidence, through his illness, was much delayed. He stated that he saw the Canadian Recruit's green light, and was the only witness who mentioned that. If the green light was seen ahead, or nearly so, or if seen at all, the pilot's order to port, and the master's hard to port were wrong, but as it appeared that at that moment the ships were so close to one another, perhaps the countermanning of the first order could not be executed. The court did not attach much significance to the order, the principal action which brought about the collision being the immoderate speed of the Maskinonge, which was maintained after the bell was heard. The pilot stated that he did not know whether it was the bell buoy or the ship's bell. The ship's engines at that moment should have been stopped, and the ship navigated with caution, as required by article 16. The bell was heard at 10.15 and the collision occurred 5 minutes later. There was, therefore, ample time in which to act cautiously. It was the intention of the Maskinonge to come to an anchor. Counsel for the Maskinonge, basing on the pilot's evidence, urged that the pilot had seen the green light, meaning that the Canadian Recruit was stopped, but not yet anchored, and considered by the rules under weigh, and should have sounded signals required by such circumstances. The court did not imply that it viewed the pilot's statement with suspicion, but owing to the excitement which in cases of this kind must prevail, and in the absence of corroboration, it could not seriously entertain, but supposing such had been the case, that the green light was being taken away, the evidence from the Canadian Recruit was undisputed, that the bell was being rung, indicating therefore that the ship was at anchor and not under weigh.

The court therefore found that the master of the Maskinonge, B. R. Griffiths, certificate 018,906, was in default for

violating articles 15, 16, 27 and 29, but bearing in mind his long and successful career, and his frank admission and clear evidence, the court exercised leniency and suspended his certificate for 6 months from Oct. 21, and recommended that, master's certificate be issued to him during the suspension of his master's certificate. Other officers of the Maskinonge were exonerated. The court found that the pilot, S. Rioux, in acquiescing complacently in the maintenance of an immoderate speed, and not volunteering a suggestion to have the whistle sounded, was remiss in his duties, but as in the court's view, a question of seamanship was involved which rested chiefly with the master in this instance, and taking into consideration the pilot's illness, due to a fall while in the execution of his duties, the court suspended his license for the remainder of the season only.

Canada Steamship Lines Bond Issue. The Canada Steamship Lines, Ltd., issued recently \$6,000,000 ten-year serial 7% 1st mortgage collateral bonds. A circular issued to shareholders by J. W. Norcross, Oct. 28, stated that the directors and their friends had subscribed for approximately \$2,500,000 of the issue, and offered to allow other shareholders to subscribe for \$100 of bonds for each share of stock held, at 97. The Municipal Debenture Corporation issued a prospectus, Nov. 3, offering \$3,609,200 of the bonds to the public, at par, and interest from Sept. 1. The bonds are issued in denominations of \$100, \$500, \$1,000, and \$5,000, their maturities running from Sept. 1, 1924 to Sept. 1, 1931, interest coupons being payable half-yearly March 1 and Sept. 1.

The Canadian Deep Waterways and Power Association held its annual meeting at Hamilton, Nov. 2, when the proposition to deepen the various waterways between the head of the lakes and the seaboard was discussed. It was decided to hold the next annual meeting at Welland, Ont. The officers for the current year are:—Honorary President, W. M. German, Welland; Honorary Vice Presidents, Sir Adam Beck, London, and T. L. Church, Toronto; Hon. Treasurer, F. M. Schlender, Windsor; President, O. E. Fleming, Windsor; Vice Presidents, E. L. Cousins, Toronto, G. J. Guy, Hamilton, G. G. Gorman, Port William, T. R. Deacon, Winnipeg; Secretary-Treasurer, A. C. Lewis, Toronto.

Wreck Statistics for 1920.—A summary of ships totally lost, broken up, condemned, etc., for 1920, shows a reduction in the world's effective mercantile marine of 585 ships, totalling 657,554 tons. These figures exclude all ships lost, or broken up, of less than 100 tons each. Of the total, 370, totalling 518,595 tons, were steamships, and 215, totalling 138,959 tons, were sailing ships. Strandings and similar casualties accounted for 45.1% of the sailing ship losses, and for 45.1% of the sailing ship losses. Ships reported missing, abandoned and foundered, accounted for 29% of the steamship losses, and for 38.5% of the sailing ship losses. Ships broken up, dismantled, etc., not in consequence of casualty, during the year, totalled 11,951 tons.

Low Prices of Sailing Ships.—At a recent sale of German sailing ships in London, Eng., six, aggregating 11,724 tons, were sold for £7,350, an average of approximately \$3 a ton. The prices for individual ships varied from approximately \$1.92 to \$4.62 a ton.

The Playfair Interests add to the Great Lakes Fleets.

James Playfair, of Midland, Ont., President, Great Lakes Transportation Co., when in France last winter, came across some cargo steamships which he considered admirably adapted for Great Lakes service, and subsequently bought six of them for a syndicate headed by himself, and of which Jas. Richardson & Sons, of Kingston, Ont., and A. E. Mathews, President and General Manager, Mathews Steamship Co., Toronto, are the other members.

The ships were built in the United States and formed part of the Great Lakes & St. Lawrence Transportation Co.'s fleet, managed by D. Sullivan, of Chicago, nine of which were bought by the French Government about 1916, two being lost subsequently, one being sold to the Geo. Hall Coal Co. Up to the time of their purchase by Mr. Playfair, they were carrying coal for French Government railways.

The six ships, which average about 2,200 gross tons each, are on the British Register, their names having been changed to the following:—Glenarm, Glencair, Glendochart, Glendowan, Glenfarm, Gengarmock.

The Glenarm and Glendowan have reached Montreal, and the others are en route, it being hoped that before the close of navigation they will all be got to Midland, where they will be overhauled and fitted for the lake trade. Three of them came out in ballast to New Carlisle, Que., where they loaded pulpwood for Oswego, N.Y.

It is said that a company will be organized to own them, and that they will probably be managed by A. E. Mathews, as the Glen Transportation Co.'s steamships Glenafton, Glencadam, Glenclava and Cicca are.

Training Canadian Marine Engineers. Steps are being taken for training apprentices who have served their time in Canadian engineering shops and shipyards, in marine engineering, classes having been started by J. O. Twinbrow, of Babcock & Wilcox Ltd., Montreal. The Engineering Institute of Canada has started a marine branch, and papers on marine topics will be read at intervals by marine engineers. It is said to be the intention to establish a chair in marine engineering at McGill University.

Montreal Grain & Shipping Corporation Ltd. has been incorporated under the Dominion Companies Act, with \$100,000 authorized capital, and office at Montreal, to carry on a general transportation and forwarding business, and to own and operate ships, wharves, docks, marine railways, coaling apparatus, telegraph and telephone lines, terminals, etc. The incorporators are H. H. Chauvin, J. J. Meagher, H. E. Walker, H. Crepeau and H. Wylie, Montreal.

Export Steamships Ltd., the incorporation of which was announced in a recent issue, with authorized capital of \$200,000, owns the s.s. Trivisa, engaged in the coal trade between Erie, Pa., and Montreal. The President is A. B. Taylor, who is in the coal trade at Erie, Pa.; A. G. Schendemann, President, Pittsburgh & Erie Coal Co., Erie, Pa., is Secretary-Treasurer, and John Waller, of the Montreal Light, Heat & Power Co., is a director.

Telegraph, Telephone and Cable Matters.

A. E. Dymont has been elected President, Marconi Wireless Telegraph Co. of Canada, vice Senator Frederic Nichols, deceased, and Sir William Mackenzie has been elected Vice President, succeeding A. E. Dymont.

M. J. O'Reilly, a telegrapher for over 50 years, died at Quebec, Que., Nov. 14. He entered telegraph service as a messenger with the Montreal Telegraph Co., and remained with that Great Northwestern Telegraph Co. when it issued the first named company's lines, and also with Canadian National Telegraphs on its assumption of control.

The proposal to establish a chain of radiotelegraph stations throughout the British Empire is reported from England to have collapsed, the failure, it is said, being due to the aloofness of the overseas Dominions and India. Stations have been erected at Leamfield and Oxford, Eng., and were formally opened Sept. 18. Another station is approaching completion at Cairo, Egypt, and is expected to be ready for operation by the end of the year.

The Naval Service Department will, it is reported, erect a radiotelegraph station on the west shore of Lulu Island, B.C., in the near future. G. J. Desbarats, C.M.G., Deputy Minister of Naval Service, while in British Columbia during the summer, inspected available lands on Lulu Island, and it is stated that a site is being acquired by the Government. The station is intended to take care of the commercial needs of Vancouver, leaving the station at Point Grey free to handle shipping matters.

The motorboat Nokomis, which was offered for sale by tender recently, by the Dominion Public Works Department, will not be sold for the present, the question of disposal remaining in abeyance until next year.

Lumber shipments through the Panama Canal from Pacific to Atlantic ports during the first six months of 1921 were 93,843,494 ft., compared with 1,564,505 ft. for the same period in 1920, an increase of approximately 5,890%.

Moving Pictures on C.P.R. Steamships. The Canadian Pacific Steamships Ltd. is reported to have completed arrangements for placing moving picture outfits on its steamships, for the entertainment of passengers. The present arrangements cover the trans-Atlantic steamers, on which three exhibitions will be given on each trip. Educational and scenic pictures will form the main class of films exhibited.

United States Grain Rates to Europe. The United States Shipping Board has it is stated in a New York press dispatch, announced a new schedule of grain rates for the North Atlantic service as a result of a conference of shipping companies. Rates on wheat and corn, per 100 lb., are fixed at 17c. to the United Kingdom, 16½c. to Antwerp and 18c. to Hamburg. Wheat flour comes under the same rates, with the usual differential of 5c.

Capt. W. E. Shields, acting Substation Superintendent, Dominion Air Patrol, High River, Alta., was killed, and C. H. Harding, a wireless operator, was slightly injured recently as the result of the sideslipping of an aeroplane, when only 50 ft. in the air.

Trade and Supply Notes.

The matter which appears under this heading is compiled, in most cases, from information supplied by the manufacturers of, or dealers in, the articles referred to, and in publishing the same we accept no responsibility. At the same time we wish our readers distinctly to understand that we are not paid for the publication of any of this matter, and that we will not consider any proposition to insert reading matter in our columns for pay or its equivalent. Advertising contracts will not be taken with any condition that accepting them will oblige us to publish reading notices. In other words, our reading columns are not for sale, either to advertisers or others.

Orton & Steinbrenner Co., material handling machinery, Chicago, Ill.—B. L. Whitney, formerly with the Byers Co., has opened offices at 528 Detroit Savings Bank Building, Detroit, Mich., and represents Orton & Steinbrenner Co. in that territory.

Transportation Conventions in 1922.

Jan. 24 to 26, American Wood Preservative Association, Chicago, Ill.; C. M. Hunt, Forest Products Laboratory, Madison, Wis.
Jan. 26, 27—National Association of Railway Tie Producers, Chicago, Ill.; W. C. Nixon, 905 Syndicate Trust Bldg., St. Louis, Mo.
March 14 to 16, American Railway Engineering Association, Chicago, Ill.; E. H. Fritch, 431 South Dearborn St., Chicago, Ill.
May, International Railway Fuel Association, Chicago, Ill.; J. G. Crawford, 702 East 51st St., Chicago, Ill.
May 17 to 19—Association of Railway Claim Agents, Montreal; H. D. Morris, Northern Pacific Ry., St. Paul, Minn.
May 23 to 26—Master Boiler Makers Association, Chicago, Ill.; H. D. Vought, 26 Cortland St., New York.
June 1, 2—Canadian Electric Railway Association, Quebec, Que.; L. E. Moreland, Hull, Que.
September, Roadmasters and Maintenance of Way Association, Cleveland, Ohio; P. J. McDrews, Chicago & Northwestern Ry., Sterling, Ill.

Transportation Associations, Clubs, Etc.

The names of persons given below are those of the secretaries unless otherwise stated:
American Association of Port Authorities, M. P. Fennell, Jr., 57 Common St., Montreal.
Belleville Railway Men's Educational Club, Meets each Tuesday, 7.30 p.m., F. A. Pinkston, Belleville, Ont.
Canadian Car Demurrage Bureau—W. J. Collins, Manager, 401 St. Nicholas Building, Montreal.
Canadian Electric Railway Association—L. E. Moreland, Hull Electric Co., Hull, Que.
Canadian Freight Association (Eastern lines)—C. C. Ransom, 905 Shaughnessy Bldg., Montreal.
Canadian Freight Association (Western lines)—W. E. Campbell, 805 Boyd Block, Winnipeg.
Canadian Navigators' Federation, Great Lakes Division—Capt. R. D. Simpson, Owen Sound, Ont.
Canadian Navigators' Federation, Pacific Division—Andrew Goodlad, 1101 Rogers Building, Vancouver, B.C.
Canadian Railway Board of Adjustment No.1 R. Chapple, 263 St. James Street, Montreal.
Canadian Railway Club—W. A. Booth, 53 Rushbrooke St., Montreal. Meetings at Montreal 2nd Tuesday, each month, 8.30 p.m., except June, July and August.

Canadian Ticket Agents' Association, E. de la Houcke, London, Ont.
Canadian Traffic League—R. J. Fitzgerald, 4 Queen St. West, Toronto.
Dominion Marine Association—F. King, Connel, Kinselon, Ont.
Eastern Canadian Passenger Association—G. H. Webster, 54 Beaver Hall Hill, Montreal.
Engineers' Club of Montreal—C. M. Strange, 9 Beaver Hall Square, Montreal.
Engineers' Club of Toronto—R. B. Wolsey, 84 King Street West, Toronto.
Engineering Institute of Canada—F. S. Keith, 176 Mansfield St., Montreal.
Express Traffic Association of Canada—C. N. Ham, Montreal.
Great Lakes and St. Lawrence River Rate Committee—A. E. Storey, 310 G.T.R. General Office, Montreal.
Hydro-Electric Railway Association of Ontario—T. J. Hannigan, Guelph, Ont.
International Water Lines Passenger Association—M. R. Nelson, 89 Chatham Ave., Buffalo, N.Y.
Niagara Frontier Summer Rate Committee—James Morrison, Montreal.
Quebec Transportation Club—A. F. Dion, Harbor Commissioner's Office, Quebec, Que.
Railway Association of Canada—C. P. Riddell, Montreal.

Shipping Federation of Canada—Thos. Robb, Manager, 42 St. Sacramento Street, Montreal.
Transportation Club of Toronto—W. A. Gray, 257 Roston Road, Toronto.
Transportation Club of Vancouver—C. E. Blancy, Travelling Passenger Agent, Canadian Pacific Steamships Ltd., Vancouver, B.C.

Reduced Draft on Great Lakes.—The Lake Carriers Association issued a notice recently that bulk freighters intending to pass through the St. Mary River and Lake St. Clair must limit their draft to 19½ ft. for the balance of the season. This is 6 in. less than the previous limit.

THE VICTORIA ROLLING STOCK & REALTY CO. OF ONTARIO, LIMITED.

Notice is hereby given that a dividend of four per cent. on the paid-up capital stock of the Company for the half-year ended Nov. 30, 1921, has been declared payable Dec. 1st, 1921, to the shareholders on record as of 30th of Nov. 1921.

G. T. CHISHOLM, Secretary.
Toronto, Nov. 22nd, 1921.

The British Government

(Department of Overseas Trade)

announces that the eighth annual

British Industries Fair

will be held at

London and Birmingham

from

27th February to 10th March, 1922

All Canadian buyers are cordially invited to attend

A particularly fine and comprehensive range of Railway and Marine Equipment, Lighting Plant and Small Tools

will be shown, in addition to many other lines of manufactured goods. Goods can be examined, values compared and contracts concluded at the Fair with the minimum of trouble and the greatest saving of time.

Full information and complimentary admission cards are obtainable from—

H. M. Senior Trade Commissioner, 248 St. James Street, Montreal.
H. M. Trade Commissioner, 260 Confederation Life Building, Toronto.
H. M. Trade Commissioner, 610 Electric Railway Chambers, Winnipeg.

STREET CARS FOR SALE

The Toronto Transportation Commission will receive tenders for the following 340 single-end city service street cars:

Group	Number	Description			
A	4	18'	Single Truck	Closed	Motor Cars
B	2	20'	"	"	"
C	15	21'	"	"	"
D	117	22'	"	"	"
E	30	23'	"	"	Convertible Motor Cars
H	1	27'	Double	"	"
J	1	30'	"	"	"
K	12	25'	"	Closed	"
L	34	30'	"	"	"
Q	3	36'	"	"	"
T	2	16'	Single	"	Trailer
U	33	19'	"	Convertible	"
V	69	22'	"	Closed	"
W	17	18'	"	"	"

340

The single truck motor cars are mounted on Blackwell, Curtis and Peckham trucks and are equipped with G.E. 67 and G.E. 1000 motors, K-10 controllers and hand brakes. The trailers are mounted on special trailer gear.

The double truck motor cars are mounted on Curtis and Brill trucks and are equipped with G.E. 80, G.E. 67 and G.E. 1000 motors, K-6 and K-10 controllers and Magann storage air brakes.

A stock of spare equipment is carried for the above cars and will be disposed of to parties purchasing the cars. The wheel gauge of the cars is 4' 10 $\frac{7}{8}$ ".

These cars are now in Toronto and can be inspected upon application to the Head Office of the Commission, Ryrie Building, Toronto, Ontario. Tenders will be based on the cars being loaded by the Commission on their siding in Toronto.

Tenders addressed to the Chairman, sealed and endorsed "Tenders for Street Cars," to be delivered at the Commission's Office, Room 219 Ryrie Building.

The highest or any tender will not necessarily be accepted.

TORONTO TRANSPORTATION COMMISSION

For Sale and Classified Advertising

Under this heading Canadian Railway and Marine World will place advertisements for Positions Wanted, Positions Vacant, Equipment for Sale, Tenders Wanted, Dividend, Annual Meetings, Legal Notices, etc.

ADVERTISING RATES.

Rates for advertisements set in uniform style in six point under.
Positions Wanted and Positions Vacant, 8c. per word.
Equipment for Sale advertisements, 4c. per word.
Allow five words where replies are to be sent to a box number. Minimum order—\$1.

For Sale

"We are now prepared and glad to furnish Stueki Side Bearings per Canadian Patents Nos. 187619 and 170780 upon request. Please call—The Holden Co., Ltd., Montreal, Canada."

NOTICE.

The General Railway Signal Company of the United States of America, the owner of the exclusive rights to Canadian patents No. 92323, No. 93127, No. 96256, and No. 97758, issued to Young and Townsend, and covering methods of signaling electrified railways, wishes to call the attention of all possible users of the devices and systems covered by such patents to the fact that it is prepared to sell and furnish, at short notice, all such devices and to install such systems upon any railway in the Dominion of Canada.

All inquiries regarding the above should be addressed to The General Railway Signal Company of Canada, Limited, Lachine, Province of Quebec, Canada.

FOR SALE

H.M.S. "CHARYBDIS"—late 2nd Class Cruiser converted to Merchant use.

As and where she lies at Bermuda Dockyard.

Without guarantee in her present condition.

Length, 320 feet.

Breadth, 49 feet 6 ins.

Depth in hold, 25 feet 6 ins.

Register gross tonnage, 2,730.

Steel hull sheathed with teak and coppered.

Phosphor bronze stern post, rudder and propeller brackets.

Two anchors and cable.

Has refrigerating machinery with insulating space 34,440 cubic feet. Deadweight capacity, 1,460 tons. Bunker capacity, 568 tons. Tenders will be considered inclusive or exclusive of refrigerating machinery.

Main Engines—Twin screw, triple expansion inverted vertical type of 7,000 I.H.P. Fitted with main and auxiliary surface condensers of gun metal with brass and usual auxiliary machinery.

Boilers—Originally fitted with eight; six in number, return tube marine type now on board, and one on wharf.

Propellers (with 2 spare blades) are of gun metal. Offers will be received by the Captain in Charge, H.M. Dockyard, Bermuda, until noon on Saturday, 31st December, 1921, and forms of tender can be obtained from the Commander-in-Charge, H.M.C. Dockyard, Halifax, N.S.

G. J. DESHARATS.

Deputy Minister of the Naval Service.
Ottawa, September 23, 1921.

Unauthorized publication of this advertisement will not be paid for.

CANADIAN PACIFIC RAILWAY CO.

Study Room at Montreal

Of Special Interest to Rail- road Men in the Dominion

STUDENTS of Railroad Subjects taught by the
International Correspondence Schools will appreciate
the convenience, quiet and comfort of the Study
Room that has just been established for their exclu-
sive use at 745 St. Catherine St., W., Montreal, Canada.

The Room is in charge of an expert instructor who
will gladly render every possible assistance to I. C. S.
Students and employees of Canadian railroads in their
efforts to acquire advanced instruction, to prepare
for examinations, etc.

Special charts and illustrated lectures are part of
the equipment and service rendered.

The establishment of the Study Room is evidence
of the co-operation the International Correspondence
Schools are endeavoring to render employees of rail-
roads with which they have instruction contracts.

While any one who so de-
sires is at perfect liberty to
avail himself of the advan-
tages and privileges of the
Montreal Study Room, the
service rendered is particu-
larly adapted to students of
the I. C. S.

Those who desire to know
more of this spare time study
system that is qualifying
men and women all over the
world for advancement, will
do well to mark and mail the
coupon today.

THE HIRAM L. PIPER COMPANY, Limited
Montreal, P.Q.

ESTABLISHED 1849.

BRADSTREET'S

Capital and Surplus, \$1,500,000.
Offices throughout the Civilized World.

Executive Offices:
NOS. 346 and 348 BROADWAY,
N.Y. CITY, U.S.A.

The Bradstreet Company gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying, and promulgating information, no effort is spared, and no reasonable expense considered too great that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished and are available only by reputable wholesale jobbing, and manufacturing concerns, and by responsible and worthy financial, fiduciary, and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

OFFICES IN CANADA:

Halifax, N.S.; Hamilton, Ont.; London, Ont.; Montreal, Que.; Ottawa, Ont.; Quebec, Que.; St. John, N.B.; Toronto, Ont.; Vancouver, B.C.; Calgary, Alta.; Edmonton, Alta.; Winnipeg, Man.; Victoria, B.C., and St. John's, Nfld.

Dominion Oxygen Company's New Plant at Montreal

TO accommodate the rapidly increasing demand for Dominion Oxygen, this new plant has been built and is now operating to full capacity in Montreal. Our customers in Montreal and adjacent territory are using such large quantities of Dominion Oxygen that the Distributing Station has been replaced by this Manufacturing Plant, where ample reserves will be maintained to give you an immediate supply—whether only one cylinder is required or a hundred.

With two Plants and four Distributing Stations, we can fill orders for any quantity of Oxygen the same day as they are received.

Dominion Oxygen Company Limited

Plants at Toronto and Montreal

Distributing Stations — Hamilton, Merriton, Welland, Windsor

Toronto Places Repeat Order for **Wilson Plastic Arc Rail Bond Welder**

Toronto also uses O-B Arc Weld Bonds

O-B Arc Weld Bonds have four fundamental advantages — right angle welding scarf, steel welding surface, steel reinforcement completely encircling the terminal, and a copper vibration-damping sleeve where strand joins terminal.

O-B Bonds may be installed with the Wilson Welder or any other metallic arc welding machine.

After the Toronto Transportation Commission had tried out thoroughly its first Wilson Plastic Arc Rail Bond Welder, an order came in for another machine.

Only actual service can reveal the real character of the Wilson Welder.

Only in actual operation can you see how it holds the current to a constant value and limits the arc to the short length—both essential for a good weld.

Only when it has been used twenty-four hours a day—and day after day—as it was at Toronto, can you appreciate its capacity for continuous service.

But not until you have tested the finished weld do you understand, absolutely, why the Wilson Plastic Arc Rail Bond Welder is The Machine.

Wilson Welder is capable of any welding work—on the track or in the shop.

performance on the job COUNTS

A Wonderful Reputation and Making Good Every Day

The wonderful pulling power, stand-up ability, and low up-keep of the Mighty Fairmont is known everywhere. And because of these known qualities, railroad men are not amazed when they see and hear of Fairmont performance.

Thousands of Fairmont motors have been on the job every day for the past nine, ten, eleven and twelve years.

23,000 Fairmont Motors on over 700 railway systems is an indication of what the railroad world thinks of the Fairmont.

This remarkable record comes only through performance on the job. Fairmont has proved itself consistently for over twelve years. Lower your maintenance cost—Fairmont will do it.

We have some interesting maintenance reports which will be of value to you. Send today for copies.

BETTER SERVICE

"Better Service" in electric railway operation means more cars, shorter headways and shorter running time.

You may not always be able to get more cars, but you can give the shorter headways and better running time just the same.

How? By speeding up the cars you have, so that the same car will come around oftener, get the patrons there faster and carry more of those patrons in the day's run.

With what? *National Pneumatic Door and Step Control*, which eliminates time losses due to manual operation, and with *Safety Interlocking Door Control*, which eliminates time losses due to hand-cord signals, and to delays in starting the car immediately upon closing of the doors.

The Keystone ^{Model 4} Excavator

A 12-ton traction Excavator that is adaptable with 4 different scoops to a very wide range of Excavation work

"It travels and it digs". With a Skimmer Scoop as illustrated, it is a most efficient road maker or grader. With a Ditcher Scoop it is ideal for foundation digging, ditch making, etc. With Clamshell Bucket it is excellent for loading or unloading gravel, stone, coal, sand, etc. With Dipper Scoop, the Keystone is splendid for side hill excavation. Very easily operated. Scoops are readily changed, substantially built, and sold at a moderate figure.

Let us send you our new illustrated catalogue, giving full particulars.

COGLIN *Equalizing Spring*

This is a type of spring to meet the heavy duty demands on passenger and sleeping coaches, baggage vans, etc.

Our research and development work have enabled us to give each Coghlin Spring the exact degree of resiliency and the proper capacity suited to the condition for which it was made.

Spring makers since 1869

CARTER'S

The First Coat

is of paramount importance on steel and wooden hulls, steam pipes and metal and metal work that need protection against rust or corrosion.

Carter's Genuine Dry Red Lead

supplies this protection and supplies it generously at little cost.

It spreads well, is easy to apply and its preservative properties make up for defects or qualities lacking in the wood or metal.

Carter's Genuine Orange Lead, Dry White Lead and Litharge are three other high grade products made by us. Prices on application.

Elimination of waste effort is the secret of complete efficiency—in a filing job as elsewhere.

A file that has lost its keenness wastes a workman's effort and time, and so costs more than a new file.

Keep a new file handy to replace the worn one, and for long-lasting efficiency specify one of these brands:
